Mr. C. Byrd said that last year he had five boys working for him, and one of them, who was 11 years old, drove all his harvest home. He drove three horses, and met a lady's carriage, and drew aside to allow it to pass, and she was so well pleased with him that she gave him a present. He paid that boy 9*l.* 10*s.* for the year; to another, 15 years of age, he paid 12*l.* 18*s.*; and to another, 11 years of age, he paid 8*l.* 16*s.* Boys drove the plough, and he could not dispense with their labour for half the year. On a strong land farm like his they were wanted all the year. He had to plough with five horses, and some times with eight, and he wanted boys to drive. He had once a boy 9 years of age to plough, who was now a policeman. Another boy was four years driving the plough, then he went to be apprenticed to the trade of a shoemaker, but after five years at that he returned to the farm, and now he was a stone and a half heavier than when he left shoemaking. He knew another boy who did not go to work, his parents having been in a rather better position, and after robbing gardens and partridges' nests, he robbed another boy, and was now in a reformatory, and he thought that was the result of his being kept from work.

Mr. Parr, speaking of his experience of the population of the village of Alrewas, asked what was to be done to compel boys to go to school who did not go to work. He observed that of 157 children on the books of the national school at Alrewas, only 54 were the children of agricultural labourers, the parents of the rest being small farmers, tradespeople, shopkeepers, and so on. The children who were running about the streets in rags were not those of steady agricultural labourers, but of a sort of jobbing people, who worked for one person and another, and did not continue in steady employment. Mr. Parr appeared to favour the necessity of adopting compulsion to send children to school who were not at work. He stated that great mischief ensued from the sale of "klink," which was beer which had been returned to the Burton brewers, was worked over again and sold cheap, though it was strong.

The Earl of Lichfield said he was perfectly satisfied to rest on the resolution adopted by the Chamber, two years ago, (1.) "That in the opinion of this meeting it "is desirable that some legislative regulations should "be applied to the employment of children and young "persons in agricultural labour; (2.) that no child "under 8 years of age should be employed for hire "in field labour at all; (3.) that the hours of em-"ployment of all children between the age of 8 and "13 be so regulated as to afford an opportunity for "attendance at school during a certain portion of "that time." But he wished to point out two or three practical objections to the present amendment and the resolution. The one said no child was to be employed up to 10, and the other to 11 years; but there was no guarantee, except by the alternative presented by the resolution, that a child might, after the age of 10, be employed continuously on passing a certain examination, that the child before that age would go to school at all. The objection was still stronger in reference to the amendment, which raised the age to 11 years. In the neighbourhood of towns, where the children of agricultural labourers were not altogether dependent upon employment on farms, they might be employed under the half-time system, from the age of 8, in manufactories, while it was proposed not to allow of their employment on farms until 10 or 11. (Hear, hear.) He had not heard of any proposal to repeal the Factory Acts, and that appeared to be an objection to forbidding the employment of children under 10 or 11, but the strongest objection was the first he had named, that there was no guarantee whatever of the child being either at work or at school before those ages. He was quite sure that it would be much better for them to be so employed, if at the same time they required that a certain portion of time should be spent at school; and he believed that the only practicable way of securing anything like proper education for the children was to require a certain amount of attendance at school up to the age of 13, but if they desired to modify that system in any way, they ought at least to provide that there should be some guarantee that the child should be at work or at school under the ages named. His lordship afterwards added that the resolution had an immense advantage over the amendment, because by making a certificate of having passed an examination a condition of continuous employment, a very strong inducement was held out to parents to take care their children went to school regularly.

Mr. Brawn said he did not approve of prohibiting the employment of a boy before the age of 11, which would be against the interest of the parents. He asked how Mr. Byrd could have got a boy to take charge of three horses at that age, if he had not begun to work earlier. He pointed out difficulties in dealing with children who had very little education, and had no one to support them, by an instance he adduced, and said by a regulation of the nature proposed they might prevent a boy from breaking man's law, "Thou "shalt not work," but they might not be able to prevent him from breaking God's law, which says, "Thou "shalt not steal." (Hear, hear.)

The Chairman suggested that they might take the resolution adopted two years ago, which forbade work under 8 years, so as to make it run parallel with the provisions of the Factory Acts in towns, and then add to its terms that the hours of employment of all children between the ages of 8 and 13 should be so regulated as to afford an opportunity for attendance at school for a certain portion of that time, with the proviso, "unless before that age the child shall be "able to pass a certain examination." That would give an alternative of passing an examination as a means of dispensing with the necessity of partial attendance at school. The Earl of Lichfield opposed this proposition on the ground that if a child passed such an examination as he could be reasonably expected to pass, say at 9 years old, and from that time went to work full time, he would soon lose what instruction he had gained.

Staffordshire.

Mr. Stanhope.

g.

Mr. Stanhope thought it would be a great hardship on many poor families if their children could not be employed at all before 11 years of age. He also insisted that boys who worked continuously would soon lose all they had learnt up to an early age.

The Hon. and Rev. A. C. Talbot strongly confirmed this view from his experience in examining children before confirmation. The girls generally retained some portion of the instruction they had obtained at school, probably because they met with books and papers at the houses where they were servants, but the boys appeared to forget all they had learnt at school. Mr. Talbot mentioned a case of the best boy in the parish school at Church Eaton, who was now the best labourer in the parish, and yet he was astonished to find that he could not now read the large printed name, "Proctor and Ryland," on a bag of their artificial manure. Without continued attendance at school after 10 he was satisfied that boys would forget what they were taught. It was for wiser heads than his to say how that was to be accomplished. The half-time system was, he thought, impracticable. They could not keep two waggoner's boys in the house where they now kept one, for one was bother enough. (Laughter.) He feared the difficulty was an insurmountable one.

The Chairman said the difficulty was great. In answer to a suggestion that they should have night schools, he observed that he thought it would be better to dispense with the afternoon school, and let the master teach in the morning and the evening. He suggested that they might amend the resolution adopted two years ago, so as to read as follows :—

"That no child shall be employed for wages under 8 "years old. That between 8 and 11 no child shall "be employed without a certificate of a certain "amount of attendance at school every year; nor "between 11 and 13 without a certificate of having "passed a certain examination."*

Mr. Smith adopted the amended form, and on its being put to the Chamber it was carried without a dissentient, though only 11 held up their hands for it.

Lord Lichfield congratulated the Chamber upon having made a sound suggestion to Mr. Stanhope, and then a number of the members of the Chamber remained to confer with the Assistant Commissioner.

199 (*b.*) After the above meeting, some of the principal employers of labour discussed some of the remaining questions with the Assistant-Commissioner, amongst whom were Lord Harrowby, Messrs. R. H. Masfen (Pendeford), T. Neville (Shenstone), Parr (Alrewas), J. C. Smith (Blithfield), G. Swift (Fulford), W. Collins (Ashton), May (Elford), Keeling (Penkridge), &c.

Previous to the meeting, circulars of questions had been sent by the Assistant-Commissioner to these and to other members of the Chamber. The following is a summary of the answers received :—

(1.) Only one mentioned continuous employment for boys as young as 9, four mentioned 10, in one case chiefly during spring and autumn, in another in the proportion of one to each farm; one mentioned 11; one 12; one "all ages, and at all times of the "year;" two 13, "except for scaring rooks."

(2.) Girls were in no case stated to be employed in agriculture.

---

* THE STAFFORDSHIRE CHAMBER OF AGRICULTURE.

To the Editor of the Staffordshire Advertiser.

SIR,

At the last meeting of this valuable Institution two resolutions were passed, both of which were intended to serve as suggestions to the Legislature. Which being the case, the last of them requires some comment. For it runs thus :—

"That no child shall be employed for wages under 8 years of "age, that between 8 and 11 no child shall be employed without "a certificate of a certain attendance at school every year, nor "between 11 and 13 without a certificate of having passed a "certain examination."

This seems to me very objectionable for the following reasons :—

1. Because the Legislature should interfere as little as possible with any man's business, which remark applies to the malt tax, &c.

2. Because when it does interfere, especially with the poor, it should (excepting for the repression of crime and the prevention of disease) use encouragement rather than compulsion; for behind compulsion lie penalties.

3. Because the work which children have to do in *agriculture* does not injure their health, but, on the contrary, improves it; and is not necessarily hurtful to their morals, and certainly not so hurtful as idleness.

4. Because a half time system is inapplicable to such a business as farming, since the work cannot be done when a master likes, but when the weather permits.

5. Because some children, through dullness or other defect of intellect, would fail to pass any examination worthy of that name, and yet be useful in farm work, and require to be fed.

6. Because the Legislature should hesitate to set up any new test whatever; and certainly has no right to enact that the results of instruction shall be the sole passport to the employment of the poor at any age *by private persons*, until it has provided the means of instruction gratuitously.

7. Because the work which a farm labourer has to do is not simple, but multifarious, and does not come by instinct, as some suppose, but has to be taught, and is rarely learned well unless learned early.

8. Because it is desirable to encourage the employment of the young in agriculture rather than to check it; since it is obvious that, while many children of farm labourers are drawn away to occupations, apparently (but often only apparently) better paid, the farmer's willingness to teach them (in other words, to take apprentices and pay for them) is unhappily not in proportion to the natural alarm which he feels at the well-known decrease of agricultural labourers of all ages.

9. Because the zeal for education thus exhibited, being without discretion, is not only calculated to damage the interests of the Staffordshire Chamber of Agriculture, which would be a great evil, but also to injure the cause of elementary education generally, which would be a grave calamity.

10. Because all the good contemplated by the interference proposed would be effected by giving to night schools a more liberal and intelligent support than they receive at present.

11. Because the enactment shadowed forth in the resolution would have to be worded with such looseness, and worked with such laxity as to render it ineffective except for evil; and cause it to end, as the Smoke Consuming Act has ended, only in smoke.

These being my views, while I admire the happy acumen with which the Earl of Lichfield destroyed by one blow the original proposal of Mr. Carrington Smith, together with Mr. May's amendment and all modifications of either, excepting, unfortunately, the last, and while I agree with him in thinking that the corresponding resolution of the Shropshire Chamber was, when compared with our's, vague and unintelligible, I cannot agree with him in congratulating our chamber, as if the advantage in this respect was with us. For it seems to me that when suggestions are unsound in principle they become all the more mischievous in proportion to the clearness and persuasiveness with which they are presented.

But it may be asked why I, being a member of the Chamber, and present at the meeting, did not oppose the resolution. This I will explain. I had prepared an amendment, which was worded thus :—"That in the opinion of this Chamber the "Legislature ought not to interfere with the employment of chil-"dren in agriculture until it has provided means of keeping them "out of idleness."

This was actually on its way to the chairman when several voices affirmed that the resolution then before the meeting would receive universal support, and in deference to this statement, which was not challenged, I remained silent. This I regret now, for one whose opinion is valuable told me immediately afterwards that he would have seconded my amendment, and that it would have been carried. Moreover, the voting showed that the compromise, arranged by the chairman, and passed, did not obtain the lively assent of the board of agriculturists which had been predicted, but only the languid acquiescence of agriculturists bored.

I need only add, that the Assistant-Commissioner requested all who were interested in the subject to lay their views before him by letter. And when he said this, I understood him to refer not only to the few people who were around him, but to all, whether members of the Chamber or otherwise, who might wish to influence the Legislature upon the points then under discussion.

I therefore suggest that every one who may approve of this letter will do well to cut it out of the paper. He can then send it, endorsed with his name and address, to the Hon. E. Stanhope, 2, Victoria Street, Westminster.

Of course any further remarks, whether confirmatory or otherwise, can be appended.

R. W. ESSINGTON.

Shenstone Vicarage, Feb. 16th.

[In answer to this invitation I received a letter of approval from Mr. John Simcock (Leek).]

(3.) In every return but one, women were stated to be employed in the fields. Several said "occasionally "during summer and autumn." In one case this employment was stated to be diminishing. At Stonnall none would work if they could obtain employment. At Fisherwick the proportion was stated to be one woman to every 100 acres. They were described, in most cases, as being the wives or widows of labourers. At Shenstone, they were thought to make about half time; from April till after harvest, they work pretty regularly, "chiefly in weeding, twitching, singling "turnips, and hay-making. After this they are em- "ployed occasional days with the thrashing machine "or cutting off turnips."

One return says, "Stop all employment of women. "My mother, though we were very poor, never went "out; she taught her children to read. Mothers "tired with a day's out-door work cannot be expected "to do so."

(4.) In two cases only is complaint made of the want of cottages conveniently situated. In two parishes, labourers go one mile to work; in two, under two miles; in another some go two to three miles.

A discussion then took place on the subject of cottages and gardens.

(5.) *Mr. Keeling* thought that there should be at least one cottage to every 100 acres; the general feeling as to arable farms was that two were necessary.

It was thought generally that a quarter of an acre of garden ground is amply sufficient for a labourer. Mr. Masfen thought it too large, and preferred part of it being given as potato ground by the farmer. Lord Harrowby strictly limits the allotments on his property, which are universal, to between one-eighth and a quarter of an acre. Near Sandon every man has cow-grass, from two to four acres, which system he is extending in the hope of keeping his men at home. It has the great advantage that it is also a sort of retiring pension for a man; and in his district there is no complaint of its interference with regular employment.

Mr. Neville, however, urged that there is the same objection to a man's keeping a cow as a pig, owing to the temptation of stealing which it affords.

(6.) Wages, &c.

Wages were said to be usually paid fortnightly, and on Fridays. No labourers are stated to be hired by the year.

The rate of wages in money paid by the farmers present appeared to be 12*s.*, and in one or two cases 13*s.* or 14*s.*

At Shenstone beer is given all the year round, at Alrewas from March till after harvest, at Blithfield it is rarely given. Mr. Masfen gives 4 bushels of malt for brewing (valued at 10*s.*) instead of beer, besides 2*l.*

Harvest is commonly done by piecework. Some, and large farmers among them, give food at this time instead of money. Mr. Swift estimated the average harvest earnings of his men at 3*l.* One farmer gives 15*s.* instead of piecework at harvest. Another, double their wages for a month.

One of the farmers present gives potato ground free; another gives "five roods" (eight square yards each) at 1*s.* 6*d.* a rood.

Coals were drawn free by six of those present.

Several stated that their labourers were allowed to buy corn of them at cost price.

Several objected to their labourers keeping a pig; one farmer allows them 10 score of pork at 5*s.* a score. In his neighbourhood this is common.

199 (*c*). Stafford Board of Education. State of Church Education in the Archdeaconry of Stafford, 1868.

Early in 1868 the Stafford Archideaconal Board of Education had its attention drawn to the returns recently published by the "National Society for Pro- "moting the Education of the Poor," by which it appeared that in the decennial period from 1856–7 to 1866–7 the number of church week-day scholars, in the county of Stafford, had decreased from a proportion of one in 16 of the population to a proportion of one in 16·6; and that the number of Sunday scholars had decreased from 42,350 in 1856–7 to 39,200 in in 1866–7; though happily in the same period the number of evening scholars had increased from 928 to 3,933.

These facts being deemed unsatisfactory, it was thought advisable that the Board should endeavour to to obtain a more definite knowledge of the state of things in the several parishes of the Archdeaconry, with a view to steps being taken for improvement where required.

Consequently the President consented to issue under his signature a circular to the incumbent of each parish, enquiring:—

I. Whether there was in his parish a sufficiency of church school accommodation, (*a*) in relation to the whole population; or (*b*) in relation to the distance of the population from the schools:
II. Whether the attendance at the day schools was satisfactory:
III. If not satisfactory, to what cause the defect might be attributed:
IV. What proportion of children in the week-day schools attended church Sunday schools:
V. If this proportion were considered unsatisfactory, what remedy could be suggested.

From these enquiries the following were the results:—

Circulars were issued to the incumbents of 317 benefices, as printed in the Diocesan Calendar; but some of these being donatives, and some chapelries, the number from which separate returns might be expected was about 295.

The number of answers received was 231, or 78 per cent. of the 295 (besides a number of anonymous answers, which could not be identified).

Enquiry I. Of these answers 177, or nearly 77 per cent., report a sufficiency of school accommodation; 54, or rather more than 23 per cent., report a deficiency (8, however, to a slight extent); 9 others, whilst reporting a general sufficiency of accommodation, report a deficiency by reason of the distance of parts of the population from the schools. Consequently the total number of districts reporting a necessity for additional school accommodation is 63, or 27 per cent.

Of these 63 however 12 report schools to be either in course of erection or in contemplation; leaving 51 parishes in which a deficiency is reported, and means are not in operation to remove it.

Of these 51 parishes 15 are rural; 36 in towns or manufacturing places.

Three schools are also stated to be in course of erection in parishes where a deficiency is not reported.

To Enquiry II., 200 answers were given, and of these 140, or 70 per cent., report the attendance at the week-day school to be satisfactory; 60, or 30 per cent., report it to be unsatisfactory in a greater or less degree.

In answer to Enquiry III., 43 attribute unsatisfactory attendance to the indifference of parents (four of these adding "drunkenness" or "selfishness"); 21 (6 in agricultural, and 15 in manufacturing districts) attribute it to early employment, 16 to poverty, or depressed trade, and 11 to competition of other schools. Some few other causes are mentioned in individual cases.

The general result is that the hindrances to attendance at week-day schools stand, as represented in these returns, in the following order:—

1. Faults of parents.
2. Early employment.
3. Poverty.
4. Competition for scholars.

* * * * *

It is a matter of regret that the return could not be made complete for all the parishes in the archdeaconry; since in that case it would have been

Staffordshire.

Mr. Stanhope.

g.

valuable as showing how far, in the opinion of the clergy, provision is made under the present voluntary system for the education of the children of the poor, in the important county of Stafford, which from the rapid growth of its population in certain centres, owing to the development of mines, may be considered one of the most likely to show a deficiency. But as the parishes which have not sent any answer to the enquiries are nearly equally divided between the classes "rural" and "manufacturing" (33 being of the former, and 31 of the latter) the *average* results may reasonably be considered to be those of the county generally.

It is the earnest hope of the Stafford Board of Education that this statement of the present condition of church education may stir up a hearty zeal to supply deficiencies, and to remedy defects, in those parishes where means of sound instruction are not yet provided.

JOHN G. LONSDALE, SAMUEL PLANT, } *Hon. Secretaries.*

January, 1869.

---

200. NOTES of a MEETING held at RUGELEY on Feb. 12, 1869.

PRESENT:

Rev. R. M. Grier, vicar and rural dean.
D. H. Monckton, Esq., F.R.C.S.
Rev. J. Howard, curate.
Mr. J. C. Smith, farmer, Blithfield.

It was agreed that in this place there is no difficulty, as a rule, in keeping boys at school till 12 years of age, but in some peculiar cases exclusion from continuous labour up till 12 would be a great hardship—as to widows or to persons with large families.

There would, however, be some seasons of the year when children are employed very much younger at the potato-picking, and setting seasons, and at bird-minding.

Besides this, during the harvest very young boys are taken away to lead a team of horses to help their fathers, but not always for regular wages. These occasional employments of young children cause no physical injury, but do interfere materially with the progress of education. The improvement in their food caused even by the small earnings they may thus obtain, and still more by their being taken into regular service and boarded in the farmhouses, is a great advantage to them. Mr. Grier finds night schools to answer for a certain time, but that unless you can get specially good teachers the attendance falls off after a time.

Mr. Grier is of opinion that it is a small minority of families who do not send their children to school. In these cases it is not the earning wages, but the neglect of the parents, who let them stay at home in idleness. On the question of making school attendance, during (say) half the year a condition of employment up to 12 or 13, Mr. Smith says that he would rather be without the boys from four to six months of the year; that if the boys were to be required to attend school part of a day, or even part of a week, during busy seasons, they could not be available for agricultural purposes. Mr. Grier was of opinion that absence during half of the year would interfere seriously with education. Mr. Smith thought that an educational test would be a very great inducement to children to qualify for work under it.

It was stated that the present system of licensing beerhouses was one of the main obstacles in the way of education.

Women are not much employed. In Blithfield no unmarried women are employed, but married women go to harvest work, picking stones, &c. Probably ten or a dozen women only are employed at all regularly in this parish. No physical evil results from this, and the only objection is the withdrawal of children from school to look after the house in their absence. Women work upon the threshing machines in this neighbourhood, and although a good many accidents occur to men, no accident to women is remembered. The objection to any interference with such labour is the necessity of getting all the extra labour possible on threshing days.

The number of cottages on the farms round does not appear to be very inadequate to the labour required; but in quality great improvement is necessary. Some inspector, armed with compulsory powers, is wanted to remedy overcrowding. Defect of ventilation and outdoor nuisances are dealt with to a great extent already.

HANBURY.

Population - 1,027.

201. Notes of Meeting, February 25, 1869.

PRESENT:

Rev. J. R. Foot, vicar.
Mr. Geo. Hollis, agent to Duchy of Lancashire.
Mr. M. Hollis, farmer.
Mr. Blurton, farmer.
Mr. John Wood, Draycott, farmer.
Mr. Orme, Fauld, farmer.

It was agreed that—

Three-fourths of the parish is in pasture. Some of the holdings are small, and on these the occupiers do the main work themselves.

On almost every large farm a few women are employed, but very occasionally, and mostly in the spring and summer. Their wages are about 10*d.* a day, except at harvest.

Some lads go to regular work as ploughboys as early as 9 years of age, more generally about 10 or 11 years of age. The farmers present employ the following boys, viz.:—

(1.) 14, employed the last half-year only.
(2.) 11.
(3.) His own boys.
(4.) 14, but had been out in other service for some time before.

Mr. Foot thinks there is not much difficulty, except in the case of large families, in keeping boys till 11 years of age; the year following is a very uncertain time.

Besides employment by farmers, there are other things which keep children far more away from school, such as getting cowslips, blackberries, and acorns. This applies also to the girls, who leave about the same age as the boys, but are kept at home a good deal for nursing.

It is thought that it would cause no great inconvenience to farmers in this parish if boys were not allowed to go to continuous labour till 13 years of age, and that cases of hardship from this cause to the parents would be exceptional.

Wages are 12*s.* or 13*s.* a week in winter; some give 2*s.* 6*d.* a week extra during the summer, working several hours a day extra, some give piecework. Some give potatoe ground to regular men; this is sometimes given as a payment for milking, and sometimes food is given. It is not uncommon to give a man all his food in the house and 7*s.* in money. It was agreed that this was better for the men but worse for the family.

NEWBOROUGH.

Population - 788.

203. Notes of Meeting, February 25, 1869.

PRESENT:

Rev. T. Roper, vicar.
L. K. Hall, Esq., Hollybush Hall, landowner and magistrate.
Mr. Wakelin, schoolmaster.
Mr. Hall's bailiff.

It was agreed that,—

The parish contains a good deal of arable land. Farms are not more than 100 to 200 acres. Women are thought indispensable; they top and tail turnips, pick stones, and go with threshing machines; but work with steam machines is not thought safe. There

was a woman killed on one here a year or two ago. On one farm of 440 acres there are two women employed in winter and perhaps six in summer.

Boys of 9 or 10 are taken away from the school and go to regular work in the farm houses; before that age they are taken away for field work much less than they used to be, and are absent only a few weeks in the year, except in a good acorn year, such as 1868. It is thought that it would not be impossible to put off regular employment till 13 years of age, and to require before that an attendance of — days in the year. Some of the families live two or three miles from the school, but distance appears to Mr. Wakelin to lead to better attendance and punctuality.

ABBOT'S BROMLEY.

Population - 1,538.

203. *Rev. J. M. Lowe*, vicar.—Women in this place occasionally hoe turnips or weed, or go to threshing machines, especially upon the smaller farms. Girls are not employed separately or to any considerable extent. A girl is scarcely in her 'teens' before she is drafted off to the neighbouring country towns or to the manufacturing towns. I doubt whether one-quarter of the women work, and in my opinion the labour performed by them is not at all degrading, nor does it lead to neglect of the family, while any serious interference with it would cause great pecuniary hardship. Boys are employed at bird-minding, potato, chestnut, and acorn picking, and in harvest at a very early age, but they do not leave school for continuous work till between 10 and 11. From what I see of them afterwards, at confirmation, I am very much dissatisfied with the state of their education. They appear to me never to have been properly instructed with a view to their understanding what they learn. There are more cottages here than are now required for the supply of labour to the parish, and a good many men work in the neighbouring parish, some going as far as two miles to work. This does not appear to me to be prejudicial to their interest to any great extent. Wages have risen two or three shillings since I have known the parish, but not in proportion to the cost of provisions. The chief improvement has been in the dress of the labourer. Few of the labourers have a pig, and those who have one can seldom afford to eat it themselves. They very rarely can eat bacon, as it is selling at 11*d.* per lb. Their usual diet is tea and bread, rarely cheese. The poor here fall too much into the hands of travelling hucksters. Most of the men belong to clubs, which are here of the old-fashioned description, and are of very doubtful stability. I would suggest, as a means of raising generally the condition of the labouring classes, 1st, a generous increase in their wages; 2nd, that they be encouraged to make use of the Post Office Banks, and also to insure their lives by taking out Government policies, and when they shall thus be enabled to pay for the effectual education of their children, that then, and not before, they should be required, and if need be compelled, to send their children to school and to keep them there for a reasonable time. Landlords should be urged to improve the dwellings of their labouring tenants, but not without reasonable, that is moderate, additional rent for the outlay, the labourers being the servants, not of the landlord, but of the farmer. Properly constituted building societies might do much.

UTTOXETER.

205. Notes of Meeting, Feb. 24, 1869.

PRESENT:

Rev. H. Abud, vicar.
W. Sneyd Kynnersley, Esq.
Mr. J. Bakewell, farmer.
Mr. Bott, farmer.
The Schoolmaster.
The Schoolmistress.

The greater part of the parish being laid down in pasture, few women are employed. Mr. Bakewell has two, who work in spring and summer and sometimes in winter also.

Some of the labourers' wives are employed to milk morning and evening at about 6*d.* a day. Boys are taken for continuous work at 12 or 13. Mr. Bakewell has one of 11, who might go to school but will not. There are thought to be a good many families not sending their children, even though unemployed, to school. It would be no hardship to say that under 12 or 13 boys should not be regularly employed.

Ten per cent. of the boys at school are children of agricultural parents and 30 per cent. of cottage farmers. They leave on the average about 11. Before that age they are irregular, but it would not amount to four months in the year. Between 11 and 12 girls leave us for small places.

The night school here is the only one within eight miles. There are no farm servants attending it.

Younger boys are taken for occasional work. Some very young ones, even under 10, are allowed to ride horses by themselves in the roads.

The farmers employ a great many men who live in their houses or in lodgings, and in consequence the cottages are almost sufficient in winter.

Wages, 13*s.*; some men get 7*s.* and their meat. Irishmen have 10*s.* or 11*s.*, a bed, and supping.

STOWE AND GAYTON.

Population 1,516; acreage 6,559.

206. Notes of Meeting.

PRESENT, Feb. 23, 1869:

Rev. W. Hides, vicar.
Mr. J. Chirus, schoolmaster.
Mr. W. Woolley, guardian, Stone.
Mr. G. James, farmer. } Gayton.
Mr. J. Shaw, farmer. } Gayton.
Mr. Byrd, farmer. } Gayton.
Mr. Bamford, farmer. } Gayton.

It was agreed as follows,—

The cultivation is mixed.

Women are employed on the arable part during the greater part of the year, but they would not work half their time. They are generally married and are thought to keep their houses in better order than those who do not work. They get 10*d.* at day-work and 1*s.* at harvest or when they work longer hours. With most threshing machines there is a women or two. Only one or two accidents have been known to happen from this cause, and no more to women than to men.

The school is at Stowe for both parishes, with a dame's school at Gayton. As a rule boys leave about 12 years old, but are sometimes taken away at 7 or 8 for bird-tenting, &c., and between this and work for their parents are some of them absent for eight or nine months. Some families live three or four miles from school, but few do not send their children. Some are on the free list, but we find it best to send some of the half free. No physical harm is thought to result to lads from early work; on the contrary, their health is much improved by the better food they get. As a rule, they do not go to regular work before 11 years old; some who are unusually strong, or belong to a large family, begin sooner. Those present would rather employ a boy who is not a son of one of their own labourers. One of them employs a boy regularly of 10 years old, two employ boys of 11, one of 12, and the other farmer his own son. Before 10 or 11 they are wanted on the whole not for three months in the year. Most of the labourers live out of the house. Wages are 12*s.* Sometimes potato land is given rent free, sometimes beer is given, sometimes coal is drawn for a labourer, for extra time, when not at piecework, food is given. There are two and a half to three acres of allotments let in six or seven lots. A few men have land enough for a cow, but opinion is divided whether or not this interferes with their usefulness as agricultural labourers. Plough-ground was thought objectionable.

Staffordshire.

Mr. Stanhope.

g.

FRADSWELL.

Population - 220.

207. Note of Meeting, February 22, 1869.

PRESENT:

Rev. T. Worthington, vicar.
Mr. Jos. Elsmore, farmer.
Mr. Jones, farmer.
Mr. Houldscroft, farmer.
Mr. Middleton, farmer.

Very little arable land. About five women are employed a good deal among the turnips, but it is hard to get them. Young boys work constantly at 12. Few men are employed, the farms being very small. Wages are 12*s.*; one man who comes three miles to work gets 8*s.* and his food. Rarely keep boys at school beyond 10 or 11. Before that age the parents constantly withdraw the children for work, especially where they own a cow. One of the farmers present has a dairymaid who has had three illegitimate children. The usual plan at night is to lock the outer door, but to leave the key in the lock.

WESTON-UPON-TRENT.

Population - 502.

208. *Rev. S. Plant*, rector.—The parish is not exclusively agricultural as there are saltworks. It contains 19 agricultural labourers, of whom 12 work in the parish. Seven women work occasionally in the fields knocking manure, or in the turnip lands; a few more go the hay harvest. I never saw one here with a threshing machine. No girls work. Two boys aged 13 and 14, are permanently employed in the parish; two others (over 14) live here and work elsewhere. There is no family of agricultural labourers (though there are some of men employed in the saltworks) with children fit to go that does not send them to school to some extent. The children that attend school most irregularly and are most neglected in this respect are those whose parents have a donkey or a cow. Boys leave school about 11 or 12 years of age; girls rather sooner to go to a girls' school.

SANDON.

Population - 590.

209. Letter form the Rev. W. E. Coldwell, vicar.

1. The system of letting land to labourers to enable them to keep a cow (or two), has been in use for, I suppose, upwards of 30 years in this parish on Lord Harrowby's estate, and so far as I can see is a very good thing for the labourer and his family, and by no means unfavourable to the employer. On the Sandon estate there are about 12 of these little holdings in the hands of labourers (some few are in the hands of tradesmen, blacksmiths, tailors, &c.). Of these, four are held by men who have been working on the same farm from 15 to 30 years, a perfectly good feeling existing between employers and employed. Three by men employed here and there, but in the parish. Two by widows assisted by sons or sons-in-law, who must otherwise have been dependent on the parish or on their children. One by an old man over 84 who worked on a farm as long as he was able.

I have found that these families have attended to the education of their children quite as much as those who are without land, and that their children have in many instances grown up in habits of self respect and thriftiness.

On the whole I value the system, because it seems to raise the labourer from the position of a mere drudge to one of some comfort, because it keeps the wife at home to look after the dairy, and because it is an incentive to thriftiness and good conduct among the labouring class, these little holdings being offered to men of good character who have saved a little money. I may add that in this parish, where the system has been so long tried, there has been a remarkable absence of crime and illegitimacy.

2. The effect of field work on the schools, generally speaking, is that it withdraws the boys entirely at about 13 years of age, and makes the attendance of some irregular at particular times. I do not think it shuts out any entirely from school, nor are girls employed.

(Signed) William E. Coldwell,
March 17, 1869. Vicar of Sandon.

---

210. Extracts from Returns sent in by the Rev. F. J. Bolton, Vicar of Salt. (Population, 808).

Employed in agriculture in the parish, two boys between 8 and 10, and 11 between 10 and 13; six unmarried women over 18.

Boys should not be allowed to be employed under 10, or (better) under 12 years of age.

Women weed or assist at threshing machines or cutting turnips, &c. Going among turnips or corn crops when wet sometimes causes rheumatism of a severe kind. Two young men are without sufficient education; one can read a little, the other not at all.

Our cottages are of various sorts and sizes. Of course where the occupants are too numerous so as to have to consort together, especially in their bedrooms, without sufficient separation of age and sex, bad consequences must often follow. Still it is a difficult problem to solve. Suppose a general rule were made that no cottage should have less than three bedrooms, there would be cases in which such accommodation would be useless waste, *e.g.*, for an old married couple who had no children and did not like to be plagued with lodgers. Tenants vary so much. A young man and wife may begin and take a cottage with only one bedroom, sufficient at first; a family begins to appear and to increase, perhaps he cannot get another cottage in the neighbourhood, and his landlord refuses to enlarge it specially for him because he may leave next year, and an old man and woman may take the house. [I assume that on the whole there is sufficient cottage accommodation on the property.] Or a man and woman may have taken a more roomy house, and when no family is forthcoming they may wish to pay their rent by taking lodgers.

It is difficult to lay down precise rules about separation of sexes, &c. &c. for such lodgers. I should be truly glad to see some remedy devised for the evil, but it appears to me that this, like many other of our social and moral defects, must not look for its cure so much to legislation as to a gradual improvement in the tastes and feelings of the poor. Why has drunkenness become uncommon among the upper classes, and why would a gentleman and his sister shrink from occupying the same room? Let us only imbue the lower orders with something of the same feeling, and then they will take care not to live in houses where their delicacy is not consulted.

I cannot refrain from concluding what I have hastily scribbled with a little anecdote from my own parish. We have some cottages with only one bedroom. One of these, which is now tenanted decently enough, was occupied some five or six years ago by an old widow. A grown up son, unmarried, who had always lived with her took a wife and another cottage. Another son John then came, who was married, with his two youngest children; then a grown up daughter of his, who had been in service, came to be nursed in a decline; then another daughter who had lost her husband came, and brought her little child with her. Soon after all these had congregated I called one day at the house and saw John's wife's mother, who lived a great way off. I said, "Are you come to pay your daughter a visit?" "No sir, I am come to stay altogether if I can make "myself comfortable." I said, "I should think you "would not be comfortable with so many in the house." "O I don't mean that, sir, I mean if we can agree "together." I ought to say that this is an exceptional case here.

211. EXTRACT from a LETTER to Mr. E. Stanhope from Mr. Jno. Yates, farmer for 50 or 60 years near Stone, dated February 11, 1869.

"I will take the average weekly earnings of an able-bodied labourer at 13*s.* per week, with beer and occasional meals. This I consider a full average of wages in this part of the country, and quite as much as the farmers can afford to pay, especially after so disastrous a year as that we have just passed through. Now let us see how far this 13*s.* will go, provided the wife and children are debarred from earning anything:—

	s.	*d.*
Rent - -	2	0
Coals - -	1	6
Flour - -	6	6
	10	0

Which leaves 3*s.* a week for shoes, clothing, and all other necessaries. Now, if our charitably disposed ladies and gentlemen were to establish in agricultural villages infant schools, where children who are old enough to be taught reading, sewing, and knitting could be taken care of during the day, while their mothers were working on the farm, a great boon would be conferred on the labourer and his family, with many additional home comforts, which could not be obtained if the mother were compelled to remain at home with her hungry children. The stronger children might work on the farm, the best thing they possibly could do, both for health, strength, and morals. At the present time there is a great scarcity of strong young girls to assist in milking and other domestic work. Our mothers and grandmothers thought it no degradation to put their hands to such employment, but the education, falsely so called, of the present day produces a practically uneducated set of young women, with high notions, unfit either for farm servants, wives, or mothers. I am of opinion that interference in this matter by Parliament will be injurious to the farmers, and ruinous to the labourer and his family."

212. *The Rev. R. K. Haselhurst*, late vicar of Alrewas, writes in 1867 to Lord Lichfield:—

"In this parish 85 families are dependent on agricultural labour for support. Of these there are 26 unmarried males living, varying in age from 13 and upwards; 12 boys between 8 and 13, and for the most part at work, and one only under 8 years; 20 children under 8; and 18 between 8 and 13 are at school; of these last two only are above 11.

"The number of children between 8 and 13 neither at work nor school would exceed the number at school. Among these families there are a good many of indifferent character, from whom we shall never be free so long as we have so many cottages which no decent family will occupy. The home training of such children is so very bad that I sometimes (for the sake of the other children) feel reluctant to urge their attendance at school."

213. EVIDENCE as to the age at which children leave school in the under-mentioned parishes:—

ABBOTS BROMLEY.—10 or 11, boys.

HILDERSTON.—13. No employment for them, except at potato picking.

FRADSWELL.—10 or 11. Before that the interruption is constant, from the boys being withdrawn to work by their parents. Where parents have a cow they often keep it in the lanes, and their children from school to look after it.—[*Rev. T. Worthington.*]

MILWICH.—13. A little absence in summer, especially where the parents have a cow. Distance from school is a difficulty here.—[*Rev. S. Layng.*]

WESTON-ON-TRENT.—11 or 12.

STONE AND GAYTON.—12. Sometimes later. Many at 7 or 8 for bird-tenting, &c., and are sometimes absent eight or nine months. Distance is a difficulty.

UTTOXETER.—Boys, 11; girls, between 11 and 12

CHECKBY.—Boys, 11, maximum.

HANBURY.—Some boys at 9. More generally at 10 or 11.

GRATWICH AND KINGSTON.—"Boys, 11. Before that age they are very irregular, chiefly from the indifference of their parents."

214. EVIDENCE as to the cottage accommodation in the under-mentioned parishes:—

RUGELEY.

Meeting, February 12, 1869.—The number of cottages on the farms round is not very inadequate to the labour required, but in quality great improvement is necessary. In the country part of this parish there are many cottages, say 20 or 30, with one bedroom, some of them crowded. An inspector, armed with compulsory powers, is very much needed to remedy these evils, but defect of ventilation in bedrooms and out-door nuisances are to a great extent dealt with by the Nuisances Removal Committee.

The majority have gardens.

Rents 1*s.* to 1*s.* 6*d.* a week.

ABBOT'S BROMLEY.

Population - 1,538.

Rev. J. Lowe.—For the most part belong to small owners. A great many are owned by the occupiers, having been originally run up on the waste. They are mostly brick, but many are ill-planned and very bad. Some have one bedroom only. There are generally no gardens, but the labourers working on Lord Bagot's estate have allotments, and some are let by me also. Rents vary from 50*s.* to 5*l.* (with garden).

HILDERSTON.

Population - 448.

Brick. None with one bedroom; the second is, however, in half the cases a passage room. They partly belong to landowners, but are let with farms. All have gardens. Rent, 4*l.* to 6*l.*

FRADSWELL.

Population - 220.

Rev. T. Worthington.—Have been built upon the heath, and belong to small owners, they are therefore wretched. Only three or four belong to landowners. Three have no bedrooms at all, except the living room; nine others have one only, the rest have two. During Christmas especially they are overcrowded. All have gardens. Some have enough land for a cow.

MILWICH.

Population - 567.

Rev. S. Layng.—Mostly belong to landowners. Half a dozen are in a bad state, with one bedroom for a family. Not all have gardens, but there is one acre of allotments. Rents, 2*l.* 10*s.* to 4*l.*

WESTON-UPON-TRENT.

Population - 567.

Rev. S. Plant.—Some very bad, but two just built by Lord Harrowby with three bedrooms. Seven have one bedroom, four have two, and two have three bedrooms. All gardens or allotments, some both. I speak of cottages only that are now occupied by agricultural labourers. Rents very low, often 1*l.* to 2*l.*

GAYTON AND STOWE.

Population - 750?

Meeting, February 23, 1869.—"Two only let with "farms. Most belong to landowners. There are "many, perhaps half, with one bedroom, but improve- "ment is going on. There are none with three. "In Gayton nearly half have one bedroom only. To "one group of six cottages there is no pump, and

Staffordshire.
——
Mr. Stanhope.
g.

" only one privy, erected by one of the occupiers. " They are condemned to be pulled down. All have " gardens, and there are two and a half to three " acres of allotments. Rents, 50*s.* to 4*l.*"

UTTOXETER.

Meeting, February 24, 1869.—" All thought to " have two bedrooms that are occupied by agricul- " tural labourers, but none have three. Almost all " have gardens. Rents, 4*l.* to 5*l.*"

CHECKLEY.

Population - 2,428.

The Vicar.—" Mostly belong to landowners, and " generally have two bedrooms. All have gardens. " Rent, 4*l.*"

NEWBOROUGH.

Population - 788.

Meeting, February 26, 1869.—" Mr. Hall has 52, " among which none have one bedroom only. Some " others belong to small owners and are worse. But " great improvement has lately taken place. All " have gardens. Rents, 3*l.* 3*s.* to 4*l.* 4*s.* Some men " living here work at a considerable distance off."

HANBURY.

Population - 1,027.

Meeting, February 26, 1869.—" Cottages belong " to many small owners, the largest landowner being " the Duchy of Lancaster, who own very few. " Many have one bedroom, nearly half those tenanted " by the poor. In many cases even these are not fit " for the purpose. Lodgers are taken in many cases. " Some houses, in Draycot particularly, have been " built by a building society, and are externally of " the most pleasing character. They, bad as they " are, mostly have two bedrooms. There are several " groups of cottages, with only one privy to each " group. Almost all have gardens. In Draycot " nearly one-half the poor have little bits of land; " the children of this class are the worst in point of " school attendance. Average rent, 4*l.*"

SALT.

Population - 808.

Our cottages have generally, dormitories, a kitchen (say 12 or 14 feet square), a parlour not so large, a small scullery, and a pantry, the last sometimes badly ventilated. The parlour is not always found. There are two or three bedrooms over, generally two, sometimes only one. Drainage often left to chance. No proportion is observed as to family. They generally have good gardens, not always a certain supply. The landowner lets most of them; in two or three cases the farmers sublet to their labourers, a bad plan. Rent, 4*l.* or 4*l.* 10*s.*

215. [For the following return I am indebted to the kindness of Captain Congreve, chief constable of the Staffordshire police.]

RETURN showing the NUMBER of AGRICULTURAL LABOURERS' COTTAGES with one, two, and three bedrooms respectively, and the number of those containing but one bedroom occupied by families with three or more children, in each of the under-mentioned UNIONS in STAFFORDSHIRE.

SUSSEX.—EVIDENCE.

PIERCELANDS, near WEST HOATHLY.

216. In April 1869 (in accordance with the instructions of the Commissioners) I visited the estate of Piercelands, near West Hoathly, Sussex, the property of John Dudgeon, Esq., and now occupied by his son.

The actual farm, exclusive of woodland, comprises 550 acres. The soil is sandy, but sticky, unfit for turnip culture, and best adapted for pasture.

Five years ago, in 1864, Mr. Dudgeon, having previously lived in Roxburghshire, came to reside here, and brought with him, as his principal labourers, some Scotchmen previously employed by him in Scotland, with their families.

For their accommodation he erected a row of five cottages on the Scotch model, which were visited by me. They are all on one floor, and comprise a kitchen with a place for a bed in it, two bedrooms, one of which contained a fire-place (and is used in one case as a parlour), a pantry, and a dairy. The rooms were small. The fifth cottage, containing the bailiff, was larger.

Two of the women occupying these cottages explained to me that the chief advantage of being thus all on one floor was that the children could be watched with less inconvenience to the mother, while the bailiff considered it to be the warmth of the room at night.

Each cottage had a garden about 22 yards by 11 (under one-eighth of an acre).

The first cottage contained a man, till recently a ploughman, now employed in the garden, with his wife and six children. The three eldest were attending school. The eldest (11) was to go to school two more winters, but was expected to get work this summer. The school is two miles off. After that his father intended "to give him a copy" at home.

The family had a bed in the kitchen, and used one bedroom as a parlour. They had a cow and one pig; sometimes two pigs in the year.

In this, as well as the other cottages, was a small library of books.

When Mr. Dudgeon came to the farm there was only one cottage upon it. He considers the seven now upon it, or very near it, to be sufficient for the ordinary labour of the farm. Extra men, as all the men had formerly to do, walk about two miles from West Hoathly.

On the old system the men could not be at work with the horses at 7, and left off at 5, so that there

Sussex.

Mr. Stanhope.

g.

was not only a loss of the men's labour, but of the horses' labour, which Mr. Dudgeon calculated would amount on a farm of 400 acres to the value of one team in the year.

The hours of work observed by the Scotch labourers, both men and women, are from 6 to 11, and from 1 to 6.

The wages paid to the plough and herd men differ from those paid in Scotland, because of the different circumstances in which they are placed. Here no payments are made in barley or oatmeal. The hiring is by yearly agreement; the money wage 24*l.*, payable half-yearly, though advances are made if asked for. Besides this there are allowances, estimated by Mr. Dudgeon at 16*l.* a year, making 40*l.*, or 15*s.* a week.

These include the keep of a cow, valued at 6*l.*, but worth on the average fully 12*l.*; a cottage rent free, valued at 2*l.*; potato ground (about one-third of an acre, that is, one row 1,600 yards long) valued at 4*l.*; and the cartage of coal and wood.

All, except the man with six children, are saving money. They put by for a rainy day, but do not belong to clubs. They send their money to Scotland for investment.

The cow is provided by themselves; if they were provided by the master there might be complaints of the quality of the cow. Nor do the labourers look after them themselves, because it might lead to pilfering. They are looked after by the regular farm herdsman, but some of the labourers buy oil cake or other extra food for their cow.

This is looked upon by Mr. Dudgeon as the great advantage of his system. It provides milk and cheese for the family, besides being a large source of profit.

The foreman, who said he had a specially good cow in 1866, showed me an account he had kept of the profit it was to him, independently of the milk and cheese he obtained for his own use. He sold the calf for 50*s.*, and the sum received for butter sold in the year 1866 (in all 295 lbs.) was 17*l.* 7*s.* 10½*d.*, the only deduction from which was the cost of 4 cwt. of cake (2*l.* 10*s.*) which he bought for his cow. He estimated his ordinary annual profit at 12*l.*

The Scotch people told me that their diet had been somewhat changed since their removal to Sussex. The difficulty of being unable to procure oatmeal was got over by sending for it to Scotland, and with the abundant supply of milk, which their cow could provide, a good wholesome meal was easily obtained for the children, but which did not appear to be much eaten by the grown-up people. Their usual beverage is tea. Before going out to work at 6 a.m. they appeared to eat bread and a little cheese or butter, putting some in their pockets for lunch; at 11 or 12 some bacon, or sometimes butchers' meat; and after work a lighter meal, with a little bacon, bread, and tea. At harvest food and beer is found, according to the Scotch system, by Mr. Dudgeon.

While looking at the cottages the workers came home to their dinner. Two of them were women, dressed as in Scotland, in short petticoats and a sort of trousers. This they had maintained since coming to England, in spite of some ridicule. One of them was sister to the shepherd, and worked with him among the sheep. Lately, she told me, she had not been to bed before 12 at night, as it was lambing time. The other did general work. In one of the cottages was a woman who had worked here regularly, but had given it up on marrying.

This Mr. Dudgeon represents to be the common system of Roxburghshire, and to be the one which he prefers. He sees no objection to young women working in the fields, so long as *they live in cottages on the farm*, and so are sure to know each other. It may be otherwise where they come from a distance, and there is some objection to "barn" work in winter, where they have more opportunities for evil.

That after having being so employed they make good wives in respect of doing the household work is thought by Mr. Dudgeon to be capable of explanation on account of the simplicity of the cooking operation which they have to perform. As to the management of a dairy, which is more complicated, they are brought up in houses where a cow is kept, and cannot help learning something of it. The tendency of the English plan of forcing all such girls out to service is to raise up a class of women hardly fit to make good wives for labouring men.

The two points in the Scotch system which Mr. Dudgeon thinks might with advantage be extended to England are, the building of all cottages upon, or quite close to, the farms on which they work, and the giving them the keep of a cow. It is a very different thing from giving an allotment of land sufficient to keep a cow on, and he characterizes it as a means of benefiting the labourer, without any real expense to his employer.

Mr. Dudgeon remarked also upon the state of intelligence among the agricultural population in his neighbourhood as contrasted with that in Scotland. He expressed his belief that the boys are no less well taught in Sussex, but did not seem to care for knowledge, and forgot it in a surprisingly short time. Of course this was chiefly owing to the negligence and ignorance of their parents, but also to the want of any books, &c. in the cottages; and in this respect he advocated the advantage of the Scotch system of requiring the parents of children to pay for their school books, which enabled them to have books for use at home, and parents having paid for the books would be more likely to take care that the children made use of them.

Rutland.

RUTLAND.—EVIDENCE.

217. *Mr. R. F. Mitchell*, chief constable, and *Mr. Swift*, relieving officer of the Oakham Union.—The number of women employed, except at haytime and harvest, is very small. A few more work in the east of the county where there is less grass land, but as a rule there are very few regular workers. Boys would be taken regularly to work at about 10 years of age, where the parents are of the poor labouring class. They are put to drive horses with the plough, &c. Many fewer boys are taken into the farmhouses than there used to be; they are now for the most part day-boys.

In two or three cases, from Ryhall and Empingham gangs of women and children go to work at some distance from their homes. Mr. Mitchell caused notice to be given them after the passing of the Gangs Act, and they are now hired directly by the farmers. In the case of Empingham the gang consisted this year of 19, namely, six girls, aged 16, 14, 12, 11, 10, and 9; and 13 boys, two of whom were 7, three were 8, three were 9, four were 10, and one was 12. The distance to their work in the case of one gang was four miles, starting at 6 a.m. They are for the most part employed during April and May for weeding and "twitching."

There used formerly to be complaints of men having to go some distance to work, but this is gradually being remedied. The wages vary from 12*s.* to 13*s.*

Decent labourers' cottages are very much wanted. In the old ones there is seldom more than one bedroom; many of them having been built by the ancestors of the present occupiers. The average rent in

the village for good two-bedroomed cottages cannot be less than from 5*l.* 10*s.* to 6*l.* They are in very few instances let with the farms, unless they are actually built upon them.

Some power should be given to some official to see them properly cleaned and inspected; as it is, some of the tramps' lodging houses are, Mr. Mitchell thinks, cleaner than many of the labourers' cottages.

In the country villages there are not many cottages without gardens, and many of them have allotments. Some at Hambleton, Burley, &c., have land enough to keep a cow. Mr. Finch, who owns some of these plots, does not any longer approve the system. But it is thought to make them more respectable labourers, and to enable them to get their children off better, and give an improved education. In these parishes there is very little pauperism. Mr. Mitchell remembers the allotments being started 40 years ago. He is sure that they and the prizes given for their proper cultivation have much improved the condition of the labourers wherever they have been introduced.

Some farmers will not allow their men to keep pigs. Others feed them themselves, and sell them to their men below market price.

Mr. Swift thinks that many of the young married men are not going into benefit clubs. The tendency is rather in that direction. The old clubs are gradually giving way before the Foresters and Odd Fellows.

The best conducted villages are those where there are no public-houses, and no temptation to drink.

218. *Mr. Wortley,* farmer, Ridlington.—I occupy from 500 to 600 acres, and board no men or boys in the house. I find it saves a great deal of trouble. Neither I nor my neighbours employ women, except at haymaking. Sometimes, but rarely, they go to the thrashing machines, but it is only the common sort of women who will do this. For my own part, out of 600*l.* paid in labour I only pay 3*l.* to women. Boys come to us at 8 or 9 for occasional work, and at 10 or 11 they would be kept regularly on. I think 10 years quite old enough for them to be kept at school. Before that I could always spare them in the winter.

The regular wages for my day labourers are 13*s.*, 1*s.* of which is paid instead of beer. Many give 12*s.* and a quart of beer a day. The cottages at Ridlington are insufficient in number. In all the villages about they may be said to be deficient in size and in ventilation. In may cases large families are huddled together. We have allotments which are full large in size. We look over them each year, and award prizes for the best cultivated. They pay 2*l.* 2*s.* a year for them. They are all cultivated by the spade. I think them most valuable, and to have no tendency to draw men from regular work. I say the same of keeping a cow, which eight men in my village do, renting a piece of land jointly. They can save a great deal of money by it. Some say that it leads to pilfering. I never found this, any more than I do in the case of a pig. I have only one labourer who does not keep one, and I give them every encouragement to do so. Providence is on the increase, but it does not lead to the men joining any sounder benefit clubs than they used to do.

219. *Rev. S. Davidson,* vicar of Hambleton and Braunston.—In this district at least one-fifth of the land is arable. In Hambleton there is a little deficiency of labour, some cottages having been lately taken down. In Braunston there is none, but it is a much poorer parish; the land is older and poorer, and the farmers smaller. In the former the cottages belong mostly to two proprietors; in Braunston the property is more divided. In one part of the parish some six or eight cottages are very indifferent indeed. As a rule, they have improved, and are not generally crowded. There are some, but not many, with one bedroom, and in a tumble-down state. Rents from 25*s.* to 40*s.* Most have gardens, and in Hambleton there are allotments. A number of men also have land enough to keep a cow. The late Lord Aveland disapproved the system, so does Mr. Finch. It is doubtful whether these men work regularly for the farmer.

Women are very little employed, except in harvest and haymaking.

Boys keep birds as soon as they can possibly go, and leave school on the average between 10 and 11; many leave even before 10. Girls leave almost as soon as the boys, because of the knitting, but they do not seem to value education very much. The payment of school pence is sometimes a hindrance.

There is a good deal of drinking, but not much drunkenness; even among the respectable, they can never meet or do any business without it.

220. Out of 24 parishes and townships in the Oakham Union, 10 have schools under a master, eight under a mistress, and six very small ones have no schools.

At Oakham National school boys were said to leave altogether under 11 years of age, and from 9 to be away fully half their time. In the case of the girls knitting takes them away even more.

In the night school there were four boys under 12 of the labouring class, who began regular work at 9½, 10, 10, and 10½ respectively.

In the case of 17 other boys of this class the average time that they had been at a day school was five years, the average age at which they left was about 11. Only two had left under 10 years of age.

MISCELLANEOUS EVIDENCE.

(*a.*) Half-time and industrial schools.

[In addition to Rostherne (Nos. 152-3), Bradwall (No. 154), Oulton (No. 148), and Middle (No. 183), the following instances occur in my district.—E.S.]

QUATT.

221. [On Tuesday, February 9, I visited this *district industrial school* in company with two of its managers, the Rev. F. H. W. Whitmore and Mr. F. W. W. Browne. From the information received I have compiled the following account:—

The district school was first opened for the children of the Bridgenorth Union in 1836; extended in 1849-50 and 1862 for the children of other unions in South Shropshire and elsewhere.

It is managed by a committee of magistrates, landowners, and tenant farmers, which acts independently of the boards of guardians.

Mr. Roach, who is responsible for the whole working of the institution, has been head-master since 1859.

The average number of children during the last few years has been 170, of whom there are from 10 to 15 more girls than boys.

Lessons are given from 9 to 12, and in the winter in the evenings sometimes. The younger children only are taught in the afternoons.

Boys younger than 9 are occasionally put to light work, such as fetching and carrying; but the regular industrial training for boys begins about 9 years of age, They are then put to all the work necessary to cultivate a farm of 10 acres arable, and (nearly) two pasture, under the superintendence of one special teacher in this department. Spade husbandry only is allowed. The hours of work are from 6 till 7.40 (in summer), from 12 till 12.40, and from 2 till 5. The boys take their turns in looking after the stable, and cows, and pigs. These boys rise earlier than the others, viz., at 5 in the summer, and 5.30 in

Miscellaneous.

Mr. Stanhope.

g.

the winter. All over 9 are bound to go through this course.

They leave from 13 to 15, the former being the earliest age. Very few are taken away by farmers and put to agricultural work. During the last four or five years four or five have been sent to this employment, but the demand for them for other sorts of service and for various trades is very great indeed. As a rule, when they leave this school they would write and spell correctly, have a good scriptural knowledge, and have reached about the rule of three in arithmetic. They are thought to be as well taught as in any National school. Some do not go through the whole of this course because they are claimed by their parents and friends.

Girls begin industrial work about the same age (9). They do the household work, washing and ironing, cooking, baking, and dairy work. Three assistants teach these subjects. The girls take it in turns to learn each subject. For this purpose they are divided into classes, and are allowed in turns to be absent from school work in the mornings. They do all the mending, &c. in the house. They leave also about the same age as the boys. Very few of them go to farm houses, most of them to tradesmen.

They are fit to be the only servant in a house where the mistress superintends everything herself, but they are not kept long enough to be thoroughly efficient servants.

It may be said generally that the boys almost invariably turn out well; it is not so universally so in the case of the girls.

Excluding the cost of labour on the farm the receipts for last year were 236*l.* as against an expense of 165*l.*, showing a profit on nearly 12 acres of 70*l.* towards paying the expense of the keep of the 30 boys. Moule's earth closets are adopted here, and result in the supply of good manure to the farm. —E. S.]

Extracts from the General Report for 1857 of the Rev. J. P. Norris, Her Majesty's Inspector of Schools (p. 422).

222. At *Tarporley* (Cheshire) the managers allow each boy or girl above a certain age to be absent two days in the week, provided that the time is spent in industrial work. The boys for the most part are employed to this extent in the school garden, and occasionally by neighbouring employers; the girls in washing, cleaning, or nursing at home. A most accurate register is kept of the time so employed.

Mr. Statham, the rector, writes to me:—

"In adapting the short-time attendance to the Tarporley school the managers were desirous of adhering to their original rule, which requires that every child should actually be in school at the rate of not less than three days a week throughout the quarter, it being supposed that allowance would thus be afforded for prolonged absence under particular circumstances, provided the lost time should be subsequently made up. We are all satisfied that the plan works well, that the whole time is fairly, and for the most part honestly, accounted for; that the children are beginning to understand that time is a 'talent' granted for their use, and not to be abused. The very business connected with the system imparts to the children some notion of individuality, while the combination of instruction and industry strengthens the schools connexion, and is likely to retain the children somewhat longer under our charge. Allow me to add that the industrial department is extremely popular with the boys.

"At Ellesmere, in Shropshire, the school is small, and only three of the boys are at present old enough for the half-time scheme. They work three hours a day on some ground belonging to the vicar. I am glad to learn that, with the promised co-operation of a neighbouring agriculturist, the class is to be increased to 12 in the ensuing year."

Mr. Day, the vicar of Ellesmere, writes to me:—

"Ellesmere Vicarage,
"21st December 1857.

"I am sorry that I have been obliged to delay till to-day sending you a short account of the working of my very small agricultural class. I have kept it going for two years, but with only three boys and a superintendent, and the result of this last year's profit and loss I enclose you a summary of. There cannot be a doubt abaut the good effect which the system has upon the boys who work in this class. They progress in school nearly, if not quite, as well as though they had no loss of school time (for which paradox many good reasons may be given). Then, again, from continuing under supervision they become more humanised and better mannered, and certainly would present a strong contrast to the clownish dolts of their own age who present themselves for hiring each Christmas time. Indeed, I believe this two years' additional education lifts them over the dangerous part of their lives, and gives them not only a moral superiority over other lads who have not had the same advantage, but also makes them much more generally useful as servants when they leave. The parents, too, like the system, and I have no doubt the good which the lads receive from continual schooling and supervision is to some extent of good influence at home.

"The difficulty about these classes is to make them pay. You will perceive that in any instance the loss must be considerable, for there is no account at all of the supervisor's stipend. Now every class, however small, requires an overlooker, and I find I cannot manage this at a less cost than 12*s.* a week, about four times the amount of balance (to profit) in the account I have sent you; but then the same overlooker could as easily take charge of 12 or 16 as three, and if the plan were enlarged to this extent I have no doubt the balance would be satisfactory."

The Teddesley farm school was continued with the best results during last summer. I visited it several times, and was glad to bear testimony on all hands borne to the improved behaviour and quickened intelligence of the boys. The class numbers from 26 to 30 boys from 11 to 15 years of age.

They receive instruction from 6 to 8 o'clock each morning in a spare room in the farmyard. Lord Hatherton tells me that he sees only one serious objection to the plan, and that is, the difficulty of dispensing with the boys' services first when the men need them most, when they are driving the teams afield. If this difficulty could be met (and I think it may), the plan would answer as well commercially as it does educationally, for the boys' increased steadiness and diligence in the field more than compensate for the curtailment of their hours of labour.*

The following letter from the rector of a country parish is instructive, as showing some of the minor difficulties that hinder the adoption of the half-time scheme:—

"I fear I cannot help you much about half-time schemes. I have made the attempt, but without permanent success. Perhaps I had better give a history of the matter:—In the autumn, Lord ——, having taken into his own hands one of the largest of the farms and committed it to the management of one of his tenants, whose farm was also large, it seemed to me that it would be a good opportunity to try what could be done to further a half-time scheme. I said to myself, 'Here is a farmer, one of our school managers, who has the supervision of nearly 900

* A similar attempt was made in 1865 by the Miss Tollets, at Bettey. Mr. Thomas Lees (farmer), who wrote to me about it, described it as most useful to him as a farmer. Twelve boys worked on alternate days on his farm, when they were wanted. —E. S.

acres, surely, therefore, he can find regular work for a class of boys.' So I went to him, and he at once agreed to try. Our master talked the thing over to the boys, and I quite hoped the thing would have been managed; but, first of all, the farmer was not ready for the boys; then, the biggest of the boys got employment elsewhere; and then, when the farmer said he was ready for the boys, some of them were elsewhere, and some of them did not like the walk (for the two farms in question are at least two miles from the school); and thus, the thing fell through. I am sure that the great difficulty will be with the farmers. As a class, they seldom look forward, and if only they can get boys when they want them, they care not whether they are of an age when they ought to be at school. Besides, so much depends on the weather and the work to be done. At one time of the year, for a few weeks, a farmer can do with many boys; at another, he wants none. If you will engage to send him the boys, and thus save him all trouble, you will succeed. By degrees, perhaps, more may be done. As the class of farmers improves and see the advantage of education to their labourers, you will have a better chance. * * * Besides, there is another difficulty to be surmounted, you cannot work your half-timers in school with your whole-timers, and therefore, you must have a distinct class of half-timers, which would be almost impossible, unless you had at least 20 lads under this system, 10 being always at school. I quite agree with you that the half-time plan *ought* to answer; and it would answer if all would try; but there's the rub. However, don't suppose that I am desponding."

I have given this letter at length because it states very fairly what has happened in many rural parishes where the thing has been attempted without success. There are some other minor difficulties which I have learned from conversations which I have had with practical men on the subject. For instance, one farmer, who was well disposed to try the scheme, stipulated that he should have the boys alternate weeks instead of alternate days. His reason was that it was the custom for the men under whom the boys worked to give them their directions overnight for the ensuing day, and this, of course, could not be done with daily relay. In another conversation I discovered a second reason for preferring alternate weeks to alternate days or half-days: a labouring boy's linen is changed once in the week, and his shoes are cleaned once in the week. After being in the field all Monday, his clothes are thoroughly soiled, and would be unfit for school on Tuesday. If he is to go to school alternate days, he must have his two suits in constant use, and the washing arrangement would be a great difficulty, whereas if he were to go one week to school and another week to work the weekly cleaning of clothes might go on as usual. Another expression has been used which I can well understand, "If a lad came "alternate days, he would never get his hand in." Hints of this sort seem to me particularly instructive, showing how essential it is that in each case where the experiment is tried there should be some one man arranging and directing it who thoroughly understands the agricultural system of that neighbourhood. The secret of the success which has attended the scheme at Acton is that the schoolmaster himself has a practical knowledge of farming matters. The cause of failure in many instances has been that neither schoolmaster nor clergyman was really conversant with the requirements of farm-work; and this leads me to the suggestions which I have to offer to those who wish to try the experiment. We have seen that it is vain to expect the farmers to begin the thing. We have seen that if it is begun, and shown to answer by any one employer of the neighbourhood, they will by degrees take it up. We have seen, too, that the boys must have some previous training in the use of their tools. And we have seen, lastly, that it is essential that the director of the scheme should be practically conversant with farming matters.

Now, unless our mode of training schoolmasters for country places be much altered there is little chance of the principal teacher being able to undertake the thing himself, as is done at Acton; and even if he were competent to do so, the demand on his time would be very great. I would propose, therefore, that in a country school large enough to make it worth while to form a half-time class, a steady skilled labourer should be engaged as agricultural superintendent. A garden of half an acre should be given him, and he should have command of the labour of all the boys above 10 years of age during three hours of each day, provided that he could gain their parents' consent. To the parents he might hold out two sorts of inducements: first, an occasional bonus to the boy out of the proceeds of the garden; and, second, the prospect of being admitted into the field class after a year's training in the garden. This field-class should consist of the most able-bodied of the half-timers, being at least 11 years old, and having, therefore, had a year's training in the garden. Having formed this class he should farm their labour, I mean that he should guarantee them regular wages, say 1*s.* or 1*s.* 6*d.* a week, letting out their services to the neighbouring employers whenever he could at the best terms he could make, and in slack times when they were not wanted in the field employing them himself in garden-work, making nets, carpentering, or the like. It must, of course, be stipulated that the boys shall attend the school half-time (alternate weeks, or days, or half-days), and that the school managers shall have a veto on any part of his arrangements of which they may disapprove.

223. At Stokesay (Salop) the *Rev. J. G. La Touche*, vicar, says, "Up to April last there was an industrial "element attached to the school here. Cooking was "taught by a woman who was paid 3*l.* a year. The "whole expense of the system including this was 8*l.* "a year; this was paid by collection made in the "parish."

"It was taught in the afternoons for two hours "twice a week. Girls from 8 to 12 were selected for "it, and taken two at a time into the kitchen. It did "not interfere with the teaching of needle-work, for "which there was another mistress. They made "little pies, broth, puddings, &c., which were dis-"tributed among the poor; it was all done with the "common apparatus of a cottage kitchen. They "were required to keep accurate accounts of this, "weighing out the provisions, &c. Another im-"portant point is that they should do it intelligently, "understanding the reason for what they do, and on "this point I used to examine them myself; this "would help them to retain the knowledge in after-"life.

"The parents, far from objecting, liked the system "very much, and said their children became very "useful to them at home."

"On the whole I considered it productive of very "great good, and I intend to resume when I can. "The only reason for its being in abeyance was the "unwillingness of the master to let the cooking go "on in his kitchen.

"We hardly taught any washing, &c. in it. Besides "this, there is a workshop attached to the school "where I teach some of the boys a little carpentering, "bookbinding, &c. I don't think it ever made them "fit for those trades, but they liked it, and the chief "advantage has been the bringing them into intimate "relations with myself.

The following shows the way in which the girls have to keep the accounts:—

1863. A. Price, E. Corns,—

Two rice puddings.	*d.*
4 ounces of rice at 3*d.* per lb.	¾
2 ounces of sugar at 4*d.* per lb.	½
2 eggs	1½
1 pint of milk	¼
Total	3

Miscellaneous.

Mr. Stanhope.

g.

Mrs. Butcher, Mrs. Banks,—
Three quarts of broth.

	d.
1 lb. of mutton at $7\frac{1}{2}d.$ per lb.	$7\frac{1}{2}$
1 ounce of oatmeal	$\frac{1}{4}$
Onions, pepper, and salt	$\frac{1}{4}$
Total	8

Mrs. Butcher, Mrs. Banks, Mrs. Webster,—
Mutton pie.

	d.
$\frac{1}{2}$ lb. mutton at $7\frac{1}{2}d.$ per lb.	$3\frac{3}{4}$
Lard	$\frac{1}{4}$
Potatoes and flour	$\frac{1}{2}$
Onions, pepper, and salt	$\frac{1}{4}$
Total	$4\frac{3}{4}$

224. Of this school Her Majesty's Inspector of Schools says (Rep. 1867, p. 127), "The great aim of "the instruction is to practise girls in the most "economical way of preparing food with the aid of "such apparatus only as is to be found in every "family furnished cottage. * * I think that such "a system would be very widely adopted if it were "generally known with how little fuss, how little "expense, and with what success it may be carried "out."

Sandbach Industrial School.

[For the following information I am indebted to the Rev. S. H. Armitstead, vicar of Sandbach Heath, E. S.]

225. A certain number of girls are appointed each week to do the washing connected with the church and the master and mistress's house, and also on three days a week the same girls cook by means of a gas stove meat dinners for all the sick of a parish; both are carried on under the supervision of the regular mistress. The funds for carrying on the kitchen are supplied from a distinct source. In 1865-6 there was derived from the offertory 29*l.* 6*s.*, from donation and subscriptions 22*l.*, and from guardians 2*l.* The meaning of the latter item is that the medical officer of the union instead of ordering the pauper so many lbs. of uncooked meat, &c., puts the patient down at the school for so many dinners, &c.; the account for such dinners is sent in quarterly to the guardians, who pay cost price for the same to the schools. This is found to work so well that the amount received annually from the guardians for food as supplied is now very considerably more than the enclosed sheet.

225*a*. In the parish of Astbury, near Congleton, the Rev. E. Clayton, rector, says, "There is a laundry "attached to the school in which about eight of the "elder girls were instructed in laundry work; in "former years this was found to be of much use, but "for the last few years very few girls have taken "advantage of it, as we do not make it compulsory "on any to attend."

226. *Mr. Diggens*, schoolmaster, Tunbridge Wells, gives the following arrangements as essential to the success of industrial training in a school:—

(1.) A fair market for the produce by selling perhaps to the children themselves at cost price, or to invalids.

(2.) The employment of a woman who is a good plain cook.

(3.) Giving the girls a material interest in the work in the form of a substantial dinner as its result.

(4.) Allowing each girl a suitable dress and apron.

Co-operative Store.

The following which relates to the co-operative store at Whitchurch (Dorset) is due to S. C. Mansel, Esq., Longthorns, near Blandford.

227. At Whitchurch we have established the Pioneer Co-operate Society, which has now been in existence more than two years and a half, and is apparently very prosperous. The shares (10*s.* each) are held by working men for the most part. After payment of expenses and interest, quarter of the balance is put to the same fund, and the rest is divided among the shareholders by means of a per-centage on their purchases. If they like to leave their dividend in the concern they can do so, and so gradually hold more shares. The business is confined to "grocery and drapery." No doubt a great deal of the success of such an institution depends on the man who can be got to manage it. Here we have one who devotes a great deal of time and attention, and is proud of the plan.

The dividend on purchases during the present quarter is 1*s.* $7\frac{1}{2}d.$ in the pound; last quarter it was 2*s.*

[Among the shareholders I found 15 or 16 of the lower class of labourers, one holding eight shares, two held seven, two five, and one four shares. One man, described as one of the poorest men in the parish, because he had a family of girls, only one of whom was old enough to earn anything, held one share of 10*s.* During his two years and three months he had received as dividend on his purchases 2*l.* 4*s.* $9\frac{1}{2}d.$ During the past quarter he has spent 4*l.* 10*s.* in the store, and receives $\frac{1}{2}d.$ a month on his share, and a dividend of 1*s.* $7\frac{1}{2}d.$ in the pound on his purchases, or 7*s.* $3\frac{1}{2}d.$ This would not include all his purchases, because he can only buy at the co-operative when he has ready money to pay with. E.S.]

At Milton Abbey the Rev. R. Roberts says:—"We "have a co-operative store, started in February last. "The shares are held by labouring men; but here "we could never get on without credit, and so I am "not inclined to back up the store, because the small "shopkeepers, who still have to give credit in winter, "lose the benefit of the summer earnings."

Friendly Societies.

228. Extracts from a Pamphlet entitled "Friendly "Societies *versus* Beerhouse Clubs," by the Rev. J. Y. Stratton, Rector of Ditton, Kent.

A few words will suffice to describe the common construction of the friendly society. It is an institution intended to provide support for its members during sickness and old age, together with a sum at death. These benefits, as they are called, are secured by periodical contributions, which are in some societies uniform, in others are graduated according to age. An entrance fee is not uncommonly charged, and the benefit of medical attendance is frequently added to the foregoing, for which an additional charge is made. It will thus be seen that the friendly society is that kind of insurance best adapted to the requirements of the "wage-paid" class. To them, provision during sickness becomes of the first importance; next in their estimation is the burial money. It is a common and excellent practice to secure the double benefit of sickness and burial money by one insurance. For instance, A, aged 20, insures for 12*s.* a week during sickness, together with 10*l.* at death, for which he pays, sick or well, eighteen pence a month. Provision for old age we will not say is as yet unknown, but it is extremely rare among those who live by manual labour. One reason among several for their indifference to this benefit deserves notice. Although many societies offer it, prudent men distrust their ability to make the offer good. They apprehend that, long before the time arrives when their old age pay should begin, the society will be broken up, and its funds dispersed. In the face of the constant and prevalent mortality of these societies, the apprehension is by no means groundless.

Another class of insurance offered by the friendly society, which only requires to be better known among artisans and mechanics to become as popular as it deserves to be, is that called "endowments," by which the insurer may secure, either for himself or for his nominee, a sum not exceeding 200*l.*, which is

payable at the end of a term of years, as agreed, usually not less than seven, or exceeding 20.

By means of this excellent and easily managed class of insurance the apprentice fee for the boy, or the portion for the maiden when the time comes, is obtainable, and that by a better investment than the savings' bank affords. For in the latter case the depositor can easily withdraw his savings, and a slight pressure will often induce him to do so; but an "endowed member" of a society cannot thus readily dissipate his savings. He must prove his inability to continue payments, or show cause why the society should return his deposits. We may add that no persons appear to be better pleased, when they come to receive their money at the expiration of the term, than those who, but for the wholesome stringency of the rules of the society, would have withdrawn their deposits from its custody under some transient pressure. Further, as endowments are calculated at 3 per cent. interest, they have an advantage over the great majority of savings' banks, which seldom pay so much, and over the Post Office banks, which do not pay more than 2½ per cent.

Again, next to the influences of religion, there is probably no lever by which to raise the labouring classes in the moral and social scale, so powerful as the independence to be acquired through the medium of the friendly society. There is, however, a lower though still an important point of view. It is estimated that an annual reduction of two millions is effected in the poor rates by friendly societies as at present constituted and managed; and if it should appear, as is undoubtedly true, that they are for the most part untrustworthy, being in respect both of their funds and management in the last degree insecure, the consideration arises whether an improved system of friendly societies would not, in addition to other advantages, materially lessen the burden of the poor rate. If it is true that in spite of all their shortcomings and mismanagement, which are not the exception but the rule, they reduce the rate by 3*d.* or 4*d.* in every shilling, is it unreasonable to expect that with a trustworthy system of societies such a reduction would soon become much greater? On pecuniary grounds alone therefore, if no higher existed, this question demands attention, and the treatment which friendly societies commonly receive at the hands of the Poor Law, in return for such benefits, may well give rise to unfavourable remark.

There are upwards of 23,000 certified friendly societies in England and Wales, of which their learned registrar may well say that he cannot satisfy himself of the solvency of 20. There can be no doubt that the vast majority of these societies (composed, be it remembered, of persons who prove their desire to secure solvency and good management by availing themselves of the advice and protection afforded by the law) are at this moment eminently unsafe. It behoves the managers and the members of these societies to bestir themselves without delay, and ascertain by means of an actuary what their financial position is. So general is the ignorance both of managers and members on this vital question, that it is a common practice to assume that the few hundreds of *capital*, the bulk of which is probably invested at a high rate of interest in some local speculation, means *surplus capital*. The prospective liabilities are not taken into account at all, and a distribution of a portion of the capital among the members is made. An actuary would tell them whether they were in a position of hopeless insolvency, or of insolvency which by care and prudence and increased contributions might be retrieved. Had the praiseworthy efforts of the registrar of friendly societies been supplemented by the assistance of actuaries, for the purpose not merely of graduating the rates of pay, but of valuing assets and liabilities, much distress would have been already averted from the industrial and labouring classes. One important step in legislating for the friendly society will be to secure the appointment of such a staff, who shall value assets and liabilities at stated intervals of three, four, or five years, as may be thought best.

If such is the evil case of societies which are recognized and protected by the law, what shall be said of the "Brummagem" or "Sharing-out Clubs," which are supposed to greatly outnumber the certified societies, and which, from the terms of their constitution, cannot have their rules certified to be in conformity with the law?

In almost every parish one or more of these clubs will be found, the management of which is usually in the hands of the landlord of the public house or beershop. "Sometimes," says Mr. Tidd Pratt, "the "club is sold with the goodwill of the house." The Sharing-out Club is formed on the principle that a halfpenny a week from each member will secure a shilling a week for each sick member for a term which (independently of all further calculation) is sometimes three, sometimes six months. When this term is expired a similar one commences, during which half the amount only is payable, which is in turn succeeded by superannuation pay, of which more anon. An extra levy is made in case of the death of a member, or member's wife, or child. All the members pay alike, and each one on joining the club makes a verbal declaration that he is in sound health and of good constitution, or states truly and plainly whether he is more than ordinarily liable to sickness or disease. If his statement is false, he runs his own risk, and on the discovery which his continuance in the club would not fail to make, he is expelled and forfeits all his contributions. The clever but unscrupulous device of the annual dissolution of the club deserves notice. This Phœnix of the tap-room, the benefit society, so-called, dies once a year, usually on the first Monday in May, and forthwith arises from its tobacco ashes with new plumage, destined for a speedy plucking. By means of its annual rejuvenescence, it contrives to free itself of old or burdensome members, who are left to the care of the poor-rate. The poor-rate is in truth the virtual superannuation pay of these clubs; and hence the device of the annual dissolution. When a member becomes so infirm as to render him a greater burden than can be conveniently borne, he is reminded that out-door relief at 2*s.* 6*d.* is a better thing than superannuation at 1*s.* 8*d.* The advantage of his leaving the club is obvious, and he goes, generally with a good grace, "to relieve the "club and better himself." He oftentimes receives a donation from the "sharing out" proceeds, but whether he likes it or not, he will be passed over in the new list of members for the year ensuing.

In the course of the last session the Earl of Lichfield moved for a return of the number of paupers, in union workhouses in England and Wales, who had formerly been members of benefit societies. The return was obtained for the last week in August, when the numbers were reported to be 4,015. By the kindness of Mr. Owen, of the Poor Law Board, we are enabled to state that the number of male paupers in the workhouses at that time was 32,497, whence it appears that about 12 per cent. of such inmates were formerly in friendly societies. At first the proportion does not seem to be large; but when it is considered that the workhouse is the refuge of destitute infirm persons, whose constitutions, and also of the idle and vicious whose characters, would alike debar them from admittance to such societies, the per-centage will be thought a high one. At the same time we believe that if returns were forthcoming of the number of out-door paupers formerly in benefit societies, a much higher per-centage would be the result. Of all these poor men, there is but too much reason to conclude that had the money wasted by them in insolvent or fraudulent clubs been properly applied, *they would at this moment have been in the receipt of a sufficient sum to raise them above pauperism*, unless in those cases of exceptional distress in which help, whether from poor rate or parish charities, entails no moral degradation.

Miscellaneous.
—
Mr. Stanhope.
g.

In 1865 the Post Office, which, mainly owing to the zealous and able efforts of Mr. Scudamore, had previously undertaken a considerable share of what may be termed the banking business of the wage-paid classes, came into the field of work of the friendly society. It is true that it was empowered to grant no more than two of the classes of insurance (omitting their sub-divisions), namely, annuities and sums payable at death. The former unprofitable branch of insurance, as the companies have commonly found it to be, was already open to the public, though in a less degree, at the office of the Commissioners of the National Debt. Unpopular as it still remains, it will perhaps ere long be much sought after by the labouring classes. It may be noted that annuities have hitherto been offered at advantageous terms to purchasers, and it is not improbable that as soon as tables can be framed to show the extraordinary length of life which annuitants commonly attain, the rate at which they are sold will be raised.

But however welcome the Post Office may have been to insurances of so unprofitable a kind as the latter, we doubt whether the remunerative business of life insurance is gladly shared with it by the companies. Be this as it may, the Post Office is at present restricted to granting sums payable at death not exceeding 100*l.*, although friendly societies, by the last change which the capricious and troublesome alterations in the law have permitted them, may insure to double the amount. Nor can the Post Office effect insurances on less than 20*l.* Thus this most valuable and trustworthy ally in the great work of extending safe means of insurance throughout the United Kingdom has been grievously crippled at the very outset. Skilled labourers who would gladly insure for upwards of 100*l.* are debarred from going to the Post Office, and their proposals, unless they drop them, which is not unusual, fall into the hands of some keen agent of an assurance company. On the other hand, farm labourers and men of small means are excluded, for they cannot afford to insure so large a sum as 20*l.*, even if circumstances in their opinion justified their securing so much "burial money." And, lastly, endowments, the most easily managed of any class of insurances, requiring no medical evidence or proof of age, and causing no trouble beyond receiving the contributions for them and paying them when due; and which, moreover, are remunerative, and in all respects would have been the best for the Post Office to have started with —are not as yet to be obtained by means of the Post Office.

We have thus endeavoured to show the actual state of friendly societies, certificated and uncertified, together with the facilities for insurance already afforded by the legislature, and it is a true statement *that there is at present no trustworthy system of insurances suited to the requirements of the industrial and labouring classes of this country.* That the higher class of labourers would reform and improve their societies, provided that they had help in the way of valuation of assets and liabilities and of audit, is far from being improbable. But it must be remembered that labourers in husbandry, who have contrived societies which do not debar them from their presumed right to a share of the poors' rate, are not commonly permitted to join the clubs of the more intelligent nnd better educated work-people. The heart aches to record *that their weekly savings, though sufficient if invested in a trustworthy and durable provident institution to raise them above pauperism,* are devoted to the maintenance of treacherous refuges for poor men in distress, all of which have a trap-door through which their members eventually fall into the union workhouse, or otherwise burden the rate.

We lay stress on the statement that labourers in husbandry have sufficient to secure them a better lot than the Poor Law can assign them, and in corroboration of its truth, point to the sums which they contrive to pay in support of their benefit societies. Taking the cost of the club, paying say 10*s.* a week in sickness and 5*l.* at death, at the moderate estimate of 8*d.* a week, which does not include expenditure in beer beyond that provided for in the rules, but not uncommonly incurred at club meetings held on a Saturday night in the tap-room, we have the labourer providing a premium of insurance, *quantum valeat,* of about 35*s.* a year.

On the supposition that the same labourer could join a safe and well-managed institution, *which legislation has never yet offered him,* and which he can do only in a very exceptional way, if he happens to live in a county where there is a trustworthy society with sufficient inducements to join it, we will ascertain what provision he might secure :—

(1.) A man of 21 (most able-bodied men join their clubs at an earlier age), living in a neighbourhood where wages are low, and where the sickness * and burial money will be low also, will pay—

For sickness at 8*s.* a week and burial money 6*l.* - - -	16*s.* a year.
For an annuity at 4*s.* a week, commencing at 65 - - -	11*s.* „
Or an annuity at 4*s.* a week, commencing at 70 - - -	6*s.* „

He will thus pay, dependent on the commencement of the annuity, 27*s.* or 22*s.* a year.

(2.) A man of the same age, in a locality where wages are high and insurance corresponding, will pay—

For sickness pay at 12*s.* a week and 10*l.* at death - - -	24*s.* a year.
For an annuity at 6*s.* a week, commencing at 65 - -	16*s.* 6*d.* „
Or an annuity at 6*s.* a week, commencing at 70 - -	9*s.* „

He will thus pay, according as his annuity begins at 65 or 70, 2*l.* 0*s.* 6*d.* or 1*l.* 13*s.* a year.

The sickness pay in each case is due till he reaches 70 years of age.

Viewing with deep sympathy the struggles which respectable poor people make in order to maintain their families, and the pressure on them when their little ones are numerous, and not yet able to help their father and mother, and bearing in mind that, whether the rate of wages is high or low, they do contrive to pay their contributions to their clubs, we have in the fact of such payments a proof of their ability, so far as the money is concerned, to secure their independence, once give them a safe system of insurances which they might avail themselves of. If this were done, some portion of the parish charities, at present commonly dispensed to the dissatisfaction of all concerned, trustees and recipients alike, might with propriety be devoted to aid honest labourers, struggling with their burdens, in paying a portion of their contributions. At present, whatever difficulty the poor experience in paying their club monies, such assistance would be open to objection.

If, therefore, our farm labourers have the pecuniary means of securing for themselves a much better provision than that assigned to out-door paupers, the inquiry becomes a very important one as to the course which legislation should take on their behalf. It is here submitted that it would be to the advantage, not only of the mass of the labouring population, but of the community at large, if measures should be carried into effect providing them with a trustworthy and easily understood system of insurance, suited to their position in life. That they can be coerced ints leaving their clubs and joining such an institution io not to be contemplated; but that it should nevertheless be offered, and that its advantages should be made clear to them, involves no invasion of the rights of the poor, no interference with their liberties. Give

* Sickness pay should be from ⅔ths to ¾ths of the amount a labourer will earn at weekly wages.

we say, to labourers not debarred by age or infirmity, the free offering of joining a safe and well-managed provident institution, which will secure them at a cost commonly within their reach a respectable, though it may be a humble, independence, and it will then be no longer their misfortune if they do not improve their position.

Effort has already been made, to which it is right to call attention, to induce the authorities of the Post Office to obtain certain alterations in the Act which enables them to grant insurances, and thus empower the Post Offiee to undertake the management of such a system.

There can be no question but that this department would, if the necessary powers were conferred upon it, discharge the duties in a thoroughly trustworthy and efficient manner; and it is reasonable to anticipate that it would slowly, but not less surely, gain the confidence and support of the labouring population.

One of two courses should be adopted by the Post Office; it should either quit the position which it has taken with respect to insurances, and transfer the business to an institution to be formed for the express purpose of managing a National system of insurances, or it should keep the lead which it has already obtained, and devote its great surplus facilities to the management of such a friendly society, or system of friendly societies, as is urgently required for the public good. If it remains content with its present sphere of work, it will soon be found to impede the work of reform which it is yet able successfully to accomplish.

One of the few safe and solvent friendly societies in England, aided by several boards of guardians of unions, clerical and agricultural associations of Kent, has already called attention to the proposal to establish a National system of insurances suited to the industrial and labouring classes through the medium of the Post Office. A deputation, headed by the Earl of Romney, presented a memorial on the subject to the Postmaster General, in the course of last summer, of which the following is a copy:—

To his Grace the Duke of Montrose, K.T., the Postmaster General.

The following Memorial of the Directors of the County of Kent Friendly Society,

Showeth:

1. That your memorialists are managers of a society established in the year 1828, for insuring a sum of money to be paid at the death of a member, for relief or maintenance of members in old age or sickness, and for the endowment of members, and that the rules of their society are certified to be in conformity with the law.

2. That your memorialists desire to represent to your Grace that in the present unsatisfactory state of benefit clubs which are not certified, or which although certified are insolvent, it is their opinion that a trustworthy system of friendly societies is greatly needed, inasmuch as it would furnish the labouring classes of this country with the means of securing their independence, and would thereby promote their moral and social welfare.

3. That relief or maintenance in old age or sickness, together with burial money, can be afforded by means of mutual insurance at a cost not greatly exceeding, and in many cases at a less actual cost, than that paid by labourers for assistance from uncertified clubs, and that the management and proper administration of the sickness fund are in practice easily secured by means of agents empowered to act on the claims for sickness pay being substantiated by medical evidence.

4. That your memorialists submit that by means of an extension and adaptation of the provisions for insurance secured by the Act 27 and 28 Vict. c. 43., a system of friendly societies might be organised through the agency of the Post Office, and that many provident labourers would, as your memorialists believe, avail themselves of its benefits in preference to the assistance offered by unsound and uncertified benefit clubs.

5. That they request your Grace to take into your favourable consideration the subject of establishing such a system as would allow labourers to secure by *a single policy of insurance obtainable from the Post Office, sums in sickness from 6s. a week and upwards, together with burial money from 5l. and upwards*, and they also request that the insurances known as endowments may be granted by the Post Office.

Signed at the Board of Directors held in Maidstone on April 10, 1867.

This is in effect a petition for a Post Office Friendly Society, which being controlled by the same central authority which is already managing the business of annuities and sums payable at death, shall make its way to the labouring classes through the same channels—the country post offices. The memorialists make no allusion to the provision of old age pay, considering that, with some alteration in point of detail, the same may be offered to the poorer class of labourers under the powers conferred by the Act on the Post Office.

There appeared to be a readiness to concede two points in the prayer of the memorialists, a reduction in the life insurances from 20*l.* to 5*l.*, and the granting endowments. For these purposes an alteration in the Act will, it is hoped, be obtained in the course of the session.

The proposal, however, that sickness pay should be granted by the Post Office did not meet with the same good fortune at the outset, and we shall notice the difficulties stated by the Duke of Montrose, the Postmaster General, in the way of this, the vital part of the scheme. Full consideration of them fails to alter the opinions expressed by members of the deputation at the time, that they were not sufficiently formidable to deter the Post Office from undertaking this class of insurance, and conducting it efficiently, and the arguments employed appeared to have considerable weight with his Grace, and further attention was promised to this part of the proposal.

In the first place, there is an apprehension in the minds of some who have interested themselves in the extension of insurance by means of the Post Office, that imposition in claims for sickness pay cannot be properly guarded against, should the proposal of the memorialists be carried into effect. It is alleged that in small societies, the members of which are commonly known to each other, there is an amount of personal supervision which in itself constitutes a check on fraud, and which cannot safely be dispensed with, but which could not be used by the Post Office.

We admit that the amount of personal supervision exercised by the members over each other would not constitute a safeguard against fraud, so far as the Post Office would he concerned; there are, however, good reasons for dispensing with the protection supposed to be derived from such vigilance. It is an invidious and unwelcome task (as any of our readers may satisfy themselves by referring to the stewards of clubs in their neighbourhood) to make one neighbour a detective of the sharp practice of another, and the custom should wherever possible be discontinued. As a safeguard against imposition it is entirely overrated.

The present rate of sickness in the south-eastern district of England is about 27 per cent. per annum, in societies which possess the presumed advantages of such protection. In the old established County of Kent Friendly Society, whose members are scattered over the county, and who as a rule have little personal knowledge of each other, the sickness rate is little more than half that amount. The society's protective measures are soon told: (1), great care is taken respecting the admission of members; and (2), when a member falls ill he must prove his claim. For this

Miscellaneous.

Mr. Stanhope.

g.

purpose he sends a written demand for sick pay to the agent in whose district he lives, which demand is dated and substantiated by a certificate from his medical attendant, who states what is the matter with him. The pay is due at the expiration of one week from the agent's receipt of the demand. The agent is careful to make all needful inquiries, and so long as the medical certificate, for which a printed form may be had, is repeated from week to week, he continues to pay. In the Essex Friendly Society a travelling inspector of sick members is appointed. In the Kent Friendly Society adequate supervision is obtainable in the manner and with the results described. The agents be it remembered are at all times subject to the inspection of the society's officers, their returns are tested with scrupulous care, and any fraudulent use of the sickness fund is as difficult as it is dangerous.

Putting the common honesty and fair dealing of the labouring classes for the moment out of the question, there are but very few inducements for shamming illness among them. The impostors belong to the class of idlers, who spend their leisure time with a few boon companions, boozing in the beer-shop. But when by the conditions of sickness there must be compulsory illness and no beer-shop, but in lieu thereof most likely a scolding wife and a comfortless fireside, the situation becomes in the opinion of the pseudo-invalid infinitely worse than working on the farm on a stormy winter's days. And if he has no honesty, he has sufficient acuteness to see that 14*s.* a week in wages are preferable to 10*s.* from the club, and he soon makes up his mind to keep in good health.

The advantages of the personal knowledge of the members as a safeguard against imposition in sickness are therefore not to be compared with the means of exercising proper vigilance and care of the sick members possessed by large friendly societies which extend over the counties in which they are respectively placed, and it is submitted that such precautions would be equally within reach of the proposed Post Office Friendly Society.

A second objection to be surmounted by the promoters of such a system is found in the statement that, conceding the feasibility of the plan, country postmasters would have a formidable addition to their labours in the duties thereby imposed upon them. We answer that such has not yet proved to be the case where country postmasters undertake the agency of friendly societies. On the contrary, they make very good agents, and find the work both convenient and remunerative. The amount of work in the management of sickness pay is also generally over-estimated. A hundred members of the sickness fund do not constitute a hundred sick members. According to the average of the south-eastern district above quoted (the highest in England), there would be but 27 claimants in the course of the year. They should not exceed greatly the average of the Kent Friendly Society. The payment of such claims is at least as easy as discharging a Post Office order. And even if no travelling medical inspector was appointed to report on sick members, there is neither difficulty nor hardship in requiring the country postmaster to ascertain by personal observation how the claimants are. Any addition to the duties of these officials should be remunerated by a scale of pay which we trust may be on a somewhat more liberal footing than that of the Post Office Savings' Banks. Endowments, sickness, and burial money insurance are sufficiently profitable to allow this without peril to the interests of insurers; and if the sickness pay is in practice dispensed without the trouble and risk commonly supposed, it is no less true that the proposals to join this class entail less work on the officials than that for which the Post Office has already made itself responsible in granting insurances on life.

There are indeed a few details of great importance in settling the terms under which such assistance should be offered to the public, but the consideration of them does not affect the proposal for the establishment of a national system of insurance conducted by the Post Office, nor need they occupy our present attention.

Passing allusion only will be here made to the difficulties in the way of sound friendly societies occasioned by the administration of the Poor Law. That law is antagonistic to provident habits among the poor, both in principle and in practice; and, as we have elsewhere stated, our labourers have framed their clubs with special reference to additional help from the rate. This they secure, and with it their own moral and social degredation. Alterations in the administration of the Poor Law are sorely needed in order to aid in the duty of emancipating them from a thraldom which appears every year to be getting worse. Guardians of the poor, who, contrary to the strict interpretation of the law of destitution before relief, afford some help where the club monies are insufficient, do not succeed in convincing the poor that it is to their advantage to join better societies; while in the majority of unions, as it is believed, the test of destitution is enforced; and no member of a club, whether it be good or bad, can receive one farthing from the rate, be his merits or distresses what they may. While we earnestly deprecate the application of any portion of the rate, however small, towards the maintenance of a better class of societies—inasmuch as the pauperizing influence will be perpetuated, and labourers who have hitherto been helping themselves from its funds, will be confirmed in the belief that they are only getting their rights—there are and always will be numerous cases where the members of safe and well-managed clubs should not be refused help, on a certificate from the managers that their claims require it, or other proof of distress.

Before further alteration in the laws relating to friendly societies is attempted, it would be worth while to adopt the course already taken in the case of trades' unions (with which the friendly society should not be confounded), and to appoint a commission of inquiry which should report upon the whole question, and thus furnish a safe basis for legislation. Or a Select Committee of the House of Lords, in which the subject might be brought forward, might undertake the duty.

229. At a meeting of the West Kent Chamber of Agriculture, held July 7, 1868, the following discussion took place on friendly societies:—

The Rev. J. Y. Stratton then moved "That the "delegates of the West Kent Chamber of Agriculture "be requested to invite the attention of the Central "Chamber to the proposal to establish a system of "insurances suited to the requirements of the wage-"paid classes by means of the Post Office." He said, that any system of insurance which would foster habits of providence among the working classes, and be in itself safe, would be a great boon to the country, as it would raise the moral and social position of the industrial and labouring classes. At the present time the majority of the societies were instead of being trustworthy in an exceedingly corrupt state. They might be divided into two classes. Those which sought the assistance of the Registrar of Friendly Societies in certifying their rules and regulations, which amounted to 24,000, and were of the better class, although of these Mr. Tidd Pratt said he was not satisfied with the solvency of 20. That was to say, not one in a thousand of these societies to which the better class of our labourers and mechanics belonged were trustworthy. Now, if that were the case with the better class, still those which were uncertified and could not face the registrar were much worse. It was said that there were 100,009 sharing-out clubs in this country. At all events they greatly out-numbered the certified societies. Mr. Stratton then pointed out that by an extension of the system of Post Office insurance, the principle of which had been established by Mr. Gladstone, the bill being promoted by Mr. Frank Ives Scudamore, who as a man of Kent he was proud to mention, it was possible to

give all the benefits which the present clubs gave without their disadvantages. Last year a deputation waited on the Postmaster General on the subject, and they were well supported with memorials from several clerical associations in West Kent, and also from several boards of guardians. The Government seemed prepared, although they had not brought in an Act this session, to support two out of the three proposals which they made, those for endowment and for reducing the minimum sum for life assurance to 5*l.*, and he believed that they very much shook the objections of the authorities to the adoption of sickness pay. Mr. Stratton concluded by moving his resolution.

Mr. Hodsoll said, as a member of the deputation to the Duke of Montrose last year he had great pleasure in seconding the resolution. They all felt great anxiety as to some change in the management of village clubs. In those certified there had been some improvement on the old-fashioned club. Many could remember the time when a great number of those village clubs met at Maidstone on Whit Monday to march to the old church, but almost every one of those clubs was now broken up. The reason of that was the want of proper administration. They were not sufficiently looked into, and they were frequently robbed by their secretaries and other officers. The Druids and Foresters' Societies had now large ramifications, and they were in a better position than others, but there was a jealous feeling upon the part of members of benefit clubs about putting their money into the hands of the Government. He was a very great advocate of the plan of Mr. Stratton, and he would have great pleasure in bringing the matter, as one of their delegates, before the Central Chamber. He trusted that they might ultimately succeed in offering to the wage-paid classes of this country a safe and reliable insurance. They did not wish to attack any particular club or society, they only wished to prevent what were evident abuses. In conclusion, Mr. Hodsoll pointed out what is an important fact, that out of 32,000 male paupers in the unions in England and Wales no less than 4,000 have been members of insolvent benefit clubs.

Mr. Hatch said the great difficulty which they would have to contend with was the peculiar jealousy which the labouring classes had as to any interference with them in the matter. There was no doubt that there was an immense number of societies which are in a hopeless state of insolvency, and it was almost impossible to convince the members that if they had a good balance at the bank, their dead weight of years and the liabilities of sickness and death made them practically insolvent. That was the great point which labourers did not understand.

Mr. Stratton said, with regard to the annual holiday, which was made an objection. although there might be much in it which was of an objectionable kind, he should not like to see it stopped, but it might be improved. The poor were very much improving. With regard to the difficulty of paying the contributions, he thought they would find it would be very easily got over by the members sending into the towns and villages agents to pay their subscriptions for them. He believed that the Post Office would ensure confidence. He was not advocating that a Post Office friendly society should swallow up all the friendly societies around it, as some had imagined, but merely that they should put a safe and sound friendly society among the mass of corrupt ones, and let it work its way itself. Even if it did not bring over people to itself, it would be doing good work in introducing good rules, and the principle of competition would have a good effect, and at the same time it would get a certain per-centage of very valuable labourers.

The Chairman said, at the time the agricultural labourer adopted those clubs it was his only possible mode of saving, and they banded themselves together to make a provision for a short time and not for old age. The Poor Law, in its wisdom, offered inducements for poverty, and for old and infirm people to come upon it in their old age. The poorer classes thought that with the *imprimatur* of Mr. Tidd Pratt no earthly contingencies could attack that club, and they could not understand that that signature did not apply to principles. He thought in establishing any new mode of collecting the savings of the working man they should remember that he would think he was about to lose his day's holiday and the enjoyment which his children and wife had for one afternoon at the public-house. He thought they should have an anniversary in each parish, let it be connected with the public-house if they choose, for after all the public-house was the centre of the working classes and necessarily so, for they had no institutions or public buildings where they had the opportunity of meeting as other classes had. For his part he saw no great evil or great harm in the working classes assembling in the public-house. Those were rather peculiar views, and he had been taken to task for holding those views. There were persons who would launch out and commit excesses everywhere, but he considered that the working classes would obtain no great harm from a public-house as a public-house. The chairman then put the resolution, which was unanimously carried.

230. *Mr. J. T. Hatch*, farmer, Lenham, Kent.—Most of the men here belong or have belonged to clubs. Some of the men paid until the club broke up, and were then to old too join another. One reason is that they want at the very least to get back as much as they put in, and they look upon the subscriptions of honorary members as for this purpose and not for insurance. In one club here, a burial club, the funds paid are paid on the death of any member. No new members were, however, taken in, the sum paid got less and less, and in the end those who had paid longest got nothing.

231. *Mr. Lovatt*, tailor, and secretary to the Church Sunday School Children's Friendly Society, Nantwich, Cheshire.—This is a club in which all parents sending children to the Sunday school can enter their children. The dissenting Sunday schools have similar clubs. We take children from the time of birth till 17 years of age.

The payment is 1*d.* weekly, with extra payments for deaths, &c.; in return 1*s.* 6*d.* a week is allowed for sickness, 4*l.* for the funeral of children of 5 years, and 2*l.* for younger ones. At Christmas every year the balance is divided. We have now about 1,350 members.

232. *Rev. W. H. Egerton*, rector of Whitchurch, Salop.—The population of Whitchurch (without Ash and Tilstock, which are severed for ecclesiastical purposes) falls short of 5,000, and yet our clubs contain the following members, viz.:—Tradesmen, 1,700; union, 852; Old Friendly, 300; Foresters, 259; Odd Fellows, 150; Female Friendly, 130; and Ladies Club, 300; total 3,261 males and 430 females. These clubs attract members from many of the surrounding parishes, and though I cannot call any of them really sound, they are doing a great deal of good. They have no disinterested auditor, and depend entirely upon getting new members every year.

We have tried to prevent the meeting at public-houses, and have provided a room, but none of them yet meet there, though we hope it may soon be the case. There is no longer any rule as to so much money being spent in beer either at the monthly meetings or the dinner, but in fact it is almost a point of honour that they should do so. In more than one case the public-house belongs to the club, and so everything that is drunk is supposed to be for the good of the club.

The competition between the clubs is dangerous to their safety. One club has its age of superannuation at 70, and the next to beat the other will fix it at 65, which the scale of payment will not justify.

233. *Mr. W. Minor*, chairman of the Market Drayton Board of Guardians.—Most of the men belong to clubs, except perhaps the older ones whose clubs have broken up. The relief to the rates is very great, and for that reason (if for no other) they ought to be sup-

Miscellaneous.
Mr. Stanhope.
g.

ported by farmers. The full pay of the clubs is 10*s.*, and when they get less pay and come to the board for relief we are disposed to be more liberal to them by way of encouraging the system; we should reckon 3*s.* a week as if it were 2*s.* in estimating the amount of relief. I act as treasurer to one club here which was formerly in an unsound state. It is one of the old clubs, and has some difficulty in contending with the attractions of such clubs as the Foresters or Odd Fellows.

There are evils attending the meeting in a public-house as all the clubs do here, but on the whole I think that the loss of popularity which would ensue from its being given up would be too great, so with the annual dinner, but neither the beer at the meetings nor any part of the expenses of the dinner are paid directly or indirectly out of the funds of the club. After the dinner the remnants are sold, and are commonly bought by the members to take home to their families.

234. *R. G. Jebb, Esq.*, The Lyth, Ellesmere.—The "County Provident" is making but little progress, because the county is occupied by local clubs which offer great inducements by meeting in public-houses and by promising higher benefits than it is safe to pay. I do not see much harm in their meeting in public-houses.

This society has done good in putting some check to compulsory payments for ale, &c., which has been to some extent given up.

CLUN.

Population - - 2,338.

235. "Very few belong to clubs; they have no independence, and are not ashamed of getting relief. Mr. Creswell, the clergyman at one of the hamlets, says that none of the men there belong.

"Six or seven years ago the Peoples' Society broke down through the defalcations of an officer; now there is only one club with 28 members." (Dr. Morris).

BISHOP'S CASTLE.

236. "There is no independence in this place among the labouring class. Anyone who is ill a day or whose child is sick, as a matter of course applies for the parish doctor, and a week's illness sends him to the parish." (Dr. Lemon).

"Clubs poor and rotten. If you were to take away the annual feast and display you would divest them of their chief attraction."

237. The following extract is from a paper in the "British Medical Journal" (Feb. 6, 1869), D. H. Monckton, Esq., M.D., of Rugeley.

"It is essential that the bread-winner or winners should belong to a sound, safe, and well managed sick pay assurance society; and of the many forms of such clubs (the Government at present declining the responsibility), the writer gives the preference neither to the small village pot-house club, nor to the universal association with its central metropolitan management, but rather to the district society, founded and arranged by a committee of noblemen, clergymen, &c., with the aid of competent actuaries. Such an association is usually large enough to be safe, and small enough to be well within the cognizance and control both of managers and members. It is inexpedient, however, that women and children should subscribe for sick pay; the mother may be ill, yet able to prepare the meal, to dress the children; her illness or her child's is mainly a loss as involving a doctor's bill. For these, therefore, and to include men too old or unhealthy for the sick-pay clubs, a dispensary is highly advantageous. Some of these have been purely gratuitous charities, subscribers giving tickets to their sick neighbours who are then attended free of charge; others, again, divide the cost of attendance between subscribers and the sick they recommend, the latter paying a small sum when requiring medical aid; but neither of these encourage providence and independence in those of limited yet regular incomes, while this is accomplished by the self-supporting provident dispensary or purely medical club. The mechanic should not, and does not as a rule, desire the unremunerated services of a doctor, or wish the rich to pay for such services rendered him; bring the article within his reach, and he will prefer to pay for it. As an arrangement between medical man and working man the provident dispensary is undoubtedly equitable and convenient, although, like the best of everything, liable to some abuse. As affording an opportunity to the benevolent to aid the deserving poor at their time of greatest need, it is most valuable; for while the members choose to pay their own medical attendants by small weekly contributions, in health as well as sickness, an honorary fund, administered by a committee and the medical officers, may be the means of affording an immense amount of comfort to those who have proved themselves worthy of assistance by their provident connection with the institution. Abuse of, and imposition upon, such a dispensary may perhaps be feared in large towns in which the inhabitants must be but little known personally to any committee; but even in such, the medical attendant would be well able to assist the committee, to prevent its being as much imposed upon as are the large hospitals of large towns.

"Such provident self-supporting dispensaries are especially suitable for smaller towns, and the district within a radius of four or five miles, including a population of perhaps less than 10,000 inhabitants. In August 1866, such an institution was founded in a town containing 4,362 inhabitants, and extending its operations over six parishes, containing in all 7,615 souls; and, although a number of men, women, and children were already members of sick-pay clubs, yet so rapidly did the new institution become popular with the working class, that 500 enrolled themselves members within six months, 1,000 within 12 months, and, at its second anniversary, 1,400 members were connected with it; and in proof of the good opinion entertained of the working of this dispensary by the benevolent lookers on, it may be mentioned that its honorary fund amounted in the first year to 61*l.* 13*s.* 6*d.*; in the second, to 59*l.* 4*s.* 6*d.*; and, at the commencement of its third year, a bazaar held in its behalf, conjointly with a cottage hospital, realized a clear profit of 500*l.*

"The rules of the institution referred to are annexed to this paper, but the main features are the following:—1. That its members shall be strictly of the working class. 2. That the payment shall be one penny a week, made in advance weekly, monthly, quarterly, half-yearly, or yearly, at the option of the member. 3. That large families are assisted by all their children being free members of the institution, so soon as five of the family have been enrolled as paying members. 4. In these five, members of other clubs may count. 5. That, while every discouragement is given to delay in entering until illness occurs, yet, under certain regulations, admission may be gained even during sickness. 6. For married women, being members, the midwifery fee is partly paid from the fund in aid. 7. That all duly qualified medical men within the district are, if willing, medical officers of the society. 8. Each member, when sick, may choose his medical attendant, no change being allowed during the current year. 9. That the contributions of the benefit members be divided among the medical officers, in proportion to the number of cases attended by each. 10. That the honorary fund, arising from donations and subscriptions, be employed by the committee to defray the expenses of management, and in providing nursing, food, stimulants, &c. for the needy members during illness. 11. That local secretaries (generally the schoolmaster) be appointed for each village to receive the contributions of both benefit and honorary members, their remuneration being 5 per cent. on the amount passing through their hands.

"In its practical working, such a provident dispensary is found to present numberless advantages;

medical assistance is early resorted to; the working man's liability to his doctor is limited to a regular and definite amount; the doctor finds his booking work and doubtful debts greatly diminished; the poor but honest man gladly ceases to accept the gratuitous assistance of the medical profession; the dishonest have no longer an excuse for neglecting a Christmas account; the benevolent of the neighbourhood may assist the very poorest by enrolling them as members.

"From the honorary fund, or by special gifts, a variety of useful appliances, conveniences, and sick-room comforts may be accumulated at a depôt for sending out to sick members. If a cottage hospital be at hand to receive a diseased or injured member the weekly payment for board may be defrayed by the fund in aid. And to complete all, it remains only that skilled nurses be employed and an invalid kitchen provided, from which they may draw supplies for the sick members.

"With regard to that portion of the question proposed, which relates to public hospitals, it must be borne in mind that, however preferable a large cleanly and well ordered hospital may be to the small, close, filthy attic, living room, or cellar home, the statistics of mortality in such institutions do not bear comparison with those of patients treated in country cottages; and so apparent is it that the aggregation of patients in large wards of large hospitals is disadvantageous to them, whether regard be had to their comfort, quietude, or chances of recovery, that Sir James Simpson and other able thoughtful men of the day are advocating the distribution of sick people in smaller wards or pavilions over a larger area than is usually covered by a hospital. The multiplication, therefore, of small village or cottage hospitals throughout England (even to their being as many as its steeples) must be correct in principle, and tend to diminish mortality and suffering. Perhaps the advantage, next in importance, accruing to the public from such institutions, is the improved standard of medical and surgical skill which they tend to create by enabling provincial medical men to retain under treatment cases of severe illness or accident, which would otherwise be transferred to a county or metropolitan hospital, and so affording opportunity for the exercise and advance of that skill and knowledge with which so many young men annually leave the London schools of medicine for the provinces.

"A class of patients may be induced to submit themselves to systematic medical and surgical treatment in a comfortable small hospital near to their own homes and friends, who would not consent to enter the more distant and dreaded portals of the city hospital.

"It is well for a community to feel and know that there is always ready in its midst, a bed, a nurse, a medical staff, for the prompt care of the maimed, the crushed, the burnt, of whatever rank or station.

"The village or cottage hospitals may be made a depôt for the supply and a humble school for the education of nurses for duty in the surrounding neighbourhood."

238. *Rev. F. S. Bolton*, vicar of Salt, near Stone (Staff.) says:—The old clubs were chiefly originated by the publicans, with a view no doubt to get custom for their houses. They proceeded upon no scientific principle, but some one having started a club on certain given terms, others simply followed in it, the rates of payment being evidently made rather to tempt persons to join by their moderate amount than with any precise idea as to whether the concern would or would not pay. The common monthly contribution was 1*s.*, a sort of round sum accommodated to the pocket of the agricultural labourer very much as the ordinary guinea subscription is to that of the gentleman. For the 1*s.* the member was usually promised 6*s.* a week in sickness, with medical attendance; at least 5*l.* at his death; and perhaps 2*s.* a week when he passed the age of 70. If such a club prospered while its members are young and tolerably numerous, it always showed signs of decay when pressure from sickness or age of members came upon it, and it could only survive by either increasing the members' contributions or diminishing their benefits, or by inducing some wealthy neighbours to subscribe or help it in some way to live. I had a case a few years ago of an old man who entered what was once a very large and flourishing club in this neighbourhood [I believe it once had upwards of 400 members] when he was a young man; he began by paying the 1*s.*, and looking forward to all the benefits; in course of time the club began to totter, when the committee determined to increase the monthly contributions to 1*s.* 6*d.* This served for a while, then there came another totter and the sick pay was reduced; by-and-bye the club shook again and the pay after 70 was disallowed. In the last year of the old man's life he paid 3*s.* 6*d.* a month into his club, and received no old-age pay, and only a part of his sick pay. I need scarcely add that this club has since broken up altogether.

It was the dissolution of another and smaller club on his estate that led the late Lord Shrewsbury to promote the establishment of the "Talbot and Anson Club."

The best clubs next to such as the "Talbot and Anson," and now perhaps the most flourishing in this neighbourhood, are the "Odd Fellows," though great authorities have however pronounced them to be unsound. They certainly have the defect of holding their meetings at public-houses, and though no money is spent (as by some of the old societies) necessarily in drinks, yet the members are led to indulge, and no doubt are thought shabby if they do not spend something "for the good of the house."

Then there is a want of close connexion between the various lodges. If the so-called "Manchester Unity" were one vast society of which the various lodges were so many limbs, and if the receipts of the lodges all went into one great central treasury, from which again all payments were made; there would be more confidence to be placed where one weak limb could calculate upon aid from those that were stronger. But the lodges being rather so many little independent societies united by little more than a covenant to represent one another. When members move about the country the unity that seems at first sight to promise so much really dissolves into thin air.

I have always wished that Government could extend its Post Office savings' bank and annuity and life assurance system to the general objects of benefit clubs. A Government club would soon enlist all classes, and hence I suppose the difficulty of establishing one on account of the opposition of all present societies, and of the publicans that would probably be ruined thereby.

HIXON.

239. *Mr. Holbrook* says:—"There are two uncertified clubs, one for men, and the other for women. Both meet at public-houses. In the former a certain sum is allowed every club night for beer. In the ladies' a jug is put out for those who come a distance. Everybody is expected to dine at the annual feast. The cost of the band, the room, and the singers is paid out of the funds of the club."

WESTON.

240. *Mr. Yates* says:—"Our club broke up three years ago, dividing out the balance. Several old men are suffering now from it. The rate fixed here is too high for agricultural labourers to pay."

241. Letter on the employment of children in canal boats, from a working man at Stoke-upon-Trent, dated January 6th, 1869:—

"Sir,

"By your letter in the 'Warrington Guardian,' December 10th, you are about to commence an inquiry with the view to better education of children in the agriculture of Cheshire, Shropshire, Staffordshire.

"i beg to call your notice to the children employed on the canals in the above countys, as there is not such a poor neglected class in England. You will

Miscellaneous.

Mr. Stanhope.

g.

find, if you can see into it, there is hundreds of children from 6 to 12 years old that work 14 or 16 hours a day, and never go to school in their lives; there is plenty of familys brought up in cabins 11 feet long by 7 wide and 5 feet high, and 6 or 7 children, and it is awful to hear and see the immoral state they are in. i could say a deal more, but being brought up a boatman myself i am but a poor writer; i have been away from boating 16 years, and begun again, and since i commenced again i have had it topmost in my mind with seeing the wretched state the boatmen children are in.

"When i was of the canal i worked as porter on the North Stafford Railway 6 years, the Midland Railway 3 years, Sir John Brown, Sheffield, 5 years, and any of these managers of the above will say that my word is to be relied on. Please to excuse my freedom, but i feel it my duty to do all i can in this matter.

"Sir,

"Your obedient servant,

"GEO. BENTLEY.

"My address is New Basard, Stoke-on-Trent.

"To Mr. Edward Stanhope,

"Assistant Commissioner."

THE EMPLOYMENT OF WOMEN IN BRINE WORKS.

242. Letter dated May 26, 1869, from H. Neumann, Esq., Winnington, near Northwich, Cheshire (an owner of salt works, but not a manufacturer):—

"I beg to acknowledge the receipt of your favour of the 18th inst., from which I gather that you wish to have an informal statement of facts and an expression of my opinion respecting the employment of females in salt works in this district.

"In the manufacture of salt women are employed chiefly in two processes: taking the salt out of the pan and carrying it in to the stove; and, when dry, breaking the lumps, putting them into sacks, and sewing up the latter ready for shipment.

"The system pursued:—A man contracts to work a salt pan as far as the labour is concerned at so much per ton of salt made, and hires a young woman at 8*s.* to 10*s.* per week to assist him.

"The *work* consists in the man filling square wooden forms with salt out of the boiling pan. After they have been allowed to drain a short time the woman turns out of the form the consolidated lumps, and carries them into the stove. When dry these lumps are broken, put into bags, and sewn up, the women assisting.

"The *hours* of labour are from 5 a.m. to about 3.30 p.m., with an interval of one hour for breakfast and another for dinner. The work is laborious, especially when the heat is considered. A man makes from $4\frac{1}{2}$ to 5 tons of salt in 12 hours. The girl turns the lumps weighing from 15 to 40 lbs. out of the forms, and carries them from the side of the pan in to the stove, a distance of from 10 to 40 feet. A strong active young woman can do the work, though sometimes two are employed.

"The *danger* in the work.—I am not aware that there is anything injurious to health, or that tends to shorten life, in the manufacture of salt. The work is performed in a heated atmosphere (usually from 80 to 100 degrees Fahrenheit); perspiration is therefore constant, which of course produces emaciation, but does not seem to have any other evil effect. Accidents are not, however, unfrequent: within the last few weeks, one woman fell into a pan and was scalded to death; another narrowly escaped with her life from the same cause. The people work in a narrow passage which runs round the pan between a wooden platform (from 2 to 3 feet high, on to which the salt is lifted) and the boiling pan, the rim of which is in some cases raised 18 inches above the floor of the passage, and in others is on a level with the floor. The latter being wet and slippery, the room half-lighted and the hands engaged in carrying the lumps, accidents easily occur.

"With regard to morality, the employment of females in salt works is to be deplored. A man, generally married, and a young woman are left for hours together unobserved, in semi-daylight, in a house so obscured by steam that they cannot be seen at a few yards distance. The man works in a state of nudity, with the exception of a pair of drawers. The woman has very little clothing on, her petticoats being necessarily short, so as not to impede her work. The constant perspiration engenders thirst, which is the probable cause of the great intemperance which is almost habitual to this class. These causes combined easily account for the degraded state of the women, who begin to work at an early age, having previously received little or no education. Instances of young women, who have had two and even three illegitimate children by different married men can be easily pointed out. The records of the union workhouse prove this to some extent, but not fully. The friends of a girl, under such circumstances, usually protect her when it is in their power, for owing to the low standard of morality the offence is looked upon as venial, and is simply termed 'a misfortune.' The prostitutes in the neighbourhood, and those who remove to the larger towns to continue their vicious course, have generally commenced it in the salt works.

"I do not know whether you wish me to suggest a remedy. I will venture, however, to add that, in my opinion, nothing short of total prohibition of female labour in salt works, or nearly so, will answer. They are not employed in all salt works. In some they are not required; in others, where females are not admitted by the manufactures on account of the immorality, the work is done by boys or young men. There is no reason that I am aware of why the same system should not be adopted in all salt works. During the summer months boys prefer working in brick fields and other out-door labour; there might, therefore, at first be a little difficulty in obtaining the requisite number. This, I think, would be easily overcome, though it might involve a slight increase in wages, which would not however be felt, for the manufacturers, not being subject to foreign competition, but only to rivalry among themselves, the prohibition would simply place them on an equality."

Mr. Parsons' Address to the Hants Chamber of Agriculture	196

Hampshire.

HAMPSHIRE.

1. MEETING of HAMPSHIRE CHAMBER of AGRICULTURE at the Town Hall, Basingstoke, on Saturday, 5th December 1868.

W. W. Beach, Esq., M.P., in the Chair.

A large attendance of gentlemen and others interested in agriculture.

The following resolution was carried :—

"That in the opinion of this Chamber it is expedient that boys under the age of 10 years and girls under 13 years should not be employed in agriculture for hire, except for hay or corn harvest."

In the course of the discussion Mr. Chute said, "Schools should be judged by results, not upon the question of having a certificated master or not; he believed if the Government would relax the stringent regulation not to recognise any school but those under a certificated master it would prove very advantageous."

The Hon. and Rev. S. Best said, "He did not think that that education which could be given up to 10 years of age was sufficient for duly instructing boys in the knowledge of those implements which would afterwards be placed in their hands. * * * That they must not only improve the cottages, but teach the people who would reside in them how to appreciate them and how to live in them."

Mr. Trask thought "it might be taken as a rule on the high Hampshire farms that wages averaged 15*s.* or 16*s.* a week."

Lord Carnarvon expressed his objections to the employment of women in field work, as unfitting them for the domestic purposes of life.

Mr. Curtis advocated a national system of compulsory education up to a certain specified age.

Lord Northbrook said, "That the question of limiting the age for work must also be looked at from the labourer's point of view, when it became a very serious subject for consideration. Legislation on this point would probably be accompanied by a rise in labourers' wages."

The *Chairman* (*Mr. Beach*) impressed "on the Chamber that agriculturists should, as far as they could, meet the requirements of the age in the matter of education for the poor. He expressed an opinion that it would be extremely desirable to relax the rule as to grants-in-aid for schools with certificated masters only, in the case of small parishes."

2. MEETING of HAMPSHIRE CHAMBER of AGRICULTURE at Winchester, 12th December 1868.

W. W. Beach, Esq., M.P., in the Chair.

The following resolutions were carried :—

1. That, in the opinion of the Chamber, it is expedient that boys under the age of 10 years and girls under 13 years should not be employed in agriculture for hire, except for hay and corn harvest.

2. That this Chamber is of opinion that great encouragement would be given to the education of the agricultural population if the existing restriction of grants-in-aid to small country schools and also to night schools were modified or altogether removed.

Several of the speakers referred to the difficulty of fixing a limit of age for children's work without inflicting some injury on the parents.

Mr. Twynam said on this point, "Their (the labourers') position must be improved by an increase of wages, or by grants of land, or by some other means."

Mr. W. Spearing thought a system requiring the production of a certificate, either of attendance or of examination, was necessary for securing the education of the labouring class, and that their education should be continued by means of night schools. Between the ages of 10 and 12 or 13 an attendance of six hours a week at night school during the winter should be required.

3. MEETING at Lord Northbrook's, at Stratton, November 18, 1868.

PRESENT :

Lord Northbrook.
Mr. Neate.
Mr. Trask.
Mr. Stratton.
Messrs. Paine (2).
Mr. Richards.
} Farmers.

It was considered that there would be no objection to fixing 10 years as the limit below which no child should be allowed to go to field work; but that in consideration of the present progress in education a compulsory system was not desirable.

It was said that the labourers had a feeling against the fixing of a limit of age for their children's labour.

The district between Bishopstoke and Basingstoke, Alton and Stockbridge, *i.e.*, the whole of the large farm arable district, was fairly represented by those present. Within this area Lords Northbrook and Ashburton held from 30,000 to 40,000 acres.

Women are employed in stone picking at 8*d.* a load; they gather a load and a half per day; they are occasionally employed in winter, but not regularly.

The labour of children under 10 years of age was not thought to be of any value to the farmer.

Increased aid to night schools would be most acceptable to the farmers.

WAGES.

Mr. Richards.—Shepherd, and boy at 4*s.* a week, *yearly earning*, 55*l.* 15*s.* 6*d.*, with house and garden; day labourer, 41*l.* 13*s.*; ditto, with thatching, 53*l.* 13*s.* 6*d.*

This may be a higher rate than ordinary, but 15*s.* a week may be taken to be the average *earnings* of a day labourer.

Ordinary wages, 10*s.* a week for men, *no truck;* for a woman, 1*s.* a day.

Women earn by **dock-picking* 4*d.* per 1,000, in which work children can help; at stone-picking, 8*d.* a load; at a long day in harvest, 1*s.* 6*d.* a day.

Children at bird-keeping earn 6*d.* to 8*d.* a day.

HOURS OF WORK.

Summer.

Men, 6 a.m. to 5 p.m.; 1½ hours out.
Women, 8 a.m. to 5 p.m.; 1 hour out.

Winter.

Men, 7 a.m. till dark; 1 hour out.
Women. Same as summer.

Under-carters' wages:—5*s.* 6*d.* and 6*s.* a week and lodging; 2*l.* 10*s.* or 3*l.* at Michaelmas; no board; they sleep over stables.

Farmers would like to have a third bedroom in the cottages attached to their farms for the purpose of accommodating these lads.

An agreement is signed by the carter lads at hiring. Some would like to get rid of the system of yearly hiring of lads, and have married men for under-carters.

The cottages in the district are sufficient in number for the population, but there are not enough attached to the farms and under the farmers' control; they are well supplied with gardens and allotments.

One cottage per 100 acres was considered enough. There should be one cottage for each carter, and one for each shepherd, in the farmer's hands.

It was thought that savings banks would be more beneficial to the people than clubs, though the latter are very popular, and there is not much money put by.

---

4. *Capt. Forrest*, chief constable, Winchester.—I often have to reject able-bodied applicants for police on account of their inability to read and write.

5. RETURNS OF POLICE SUPERINTENDENTS.

H. C. Station, Alton, Dec. 18, 1868.

CHILDREN and young persons and women are not employed in gangs for farm operations in this division.

Boys receive from 3*s.* to 3*s.* 6*d.* per week throughout the year when employed in agriculture.

Girls receive from 3*s.* to 3*s.* 6*d.* per week, and are only employed in the summer months weeding corn, haymaking and harvesting, and hop-picking.

Women and girls are employed in weeding corn, haymaking, harvesting, tying hops, and picking them.

WM. CHEYNEY.
Superintendent, H. C.

6. *Superintendent Campbell*, Andover division.—There are no gangs.

Boys earn 2*s.* per week pig minding, and the like in the latter part of the summer. There are not many little girls employed in the fields except during harvest.

Women help their husbands at harvest; other parts of the year they are engaged weeding, stone-picking, and spreading dung. Good-sized girls work at the same place as their mothers, but the great majority of girls go into domestic service.

7. *Superintendent Kellaway*, Basingstoke division.—There are no gangs.

Boys are employed by the year for ploughing; wages from 3*s.* to 4*s.* per week.

Women are employed for haymaking, harvesting, and manure spreading; they are generally the wives of the labourers who work on the farm.

8. *Superintendent Drew*, Fareham division.—No organized gangs employed in this division.

Wages range from 3*s.* upwards for male children, who are principally employed all the year.

Female children seldom employed.

On some of the larger farms the labourers' wives and daughters are occasionally employed stone and weed picking and haymaking, but not to any considerable extent.

9. *Superintendent Hornigold*, Alverstoke division.—Children, young persons, and women are employed for farm operations, but not in gangs, in Alverstoke division.

Girls and boys earn from 6*d.* to 8*d.* per day, women 10*d.* per day all the year round in agriculture.

Women and girls are employed during winter time picking stones, couching; summer time, weeding, harvest work, picking up potatoes in the fields.

10. *Superintendent Fey*, Kingsclere division.—Young persons and women are employed, but not in gangs; children are not employed.

Girls are not employed. Boys are employed all the year at about 3*s.* per week, and 1*l.* 10*s.* at Michaelmas.

Women are employed to a great extent in spreading of dung, planting of beans, weeding of wheat, assisting in steam thrashing, and cleaning the ground.

11. *Superintendent Cook*, New Forest division.—Children, young persons, women are employed in gangs for hay and harvest work on farms in this division.

Wages are 6*d.* to 8*d.* per day at all times of the year. Children of both sexes being employed.

Women and girls are employed, several in a gang, at harvest and haymaking, weeding corn in summer, pulling turnips; in winter months in agricultural work from 8 a.m. till 5 p.m.

12. *Superintendent Troke*, Odiham division.—No children employed for farm operations.

Women are employed.

In the summer women are employed at farm work, viz., couching, weeding corn, haymaking, and harvesting, by gangs of three and four, according to the size of the farm, at from 8*d.* to 1*s.* per day.

13. *Superintendent Bennett*, Petersfield division.—Young persons and women are employed in this division for farm operations, but not in large numbers or gangs.

Children are employed with their parents during the hop-picking season.

Women are used for weeding, haymaking, harvesting, and hop-picking.

14. *Superintendent Stephenson*, Ringwood division.—In the Fordingbridge sub-division only are such persons employed in gangs, and then during the summer months only.

As a general rule, boys only are employed all the year round, the average wages being 3*s.* weekly.

In the *F. Bridge* division girls are also employed in the *summer*, the wages being 3*s.* per week.

In the spring and summer *women* are employed respectively in weeding and harvesting. As a rule, *girls* are not employed.

The exception being in the F. Bridge sub-division (see answer to query No. 2), where they are employed in harvesting.

The term boys used in answer to question No. 2, includes all under 14 years of age. Some, however, are employed whose ages are not more than 11 years.

15. *Superintendent White*, Romsey division.—There are no gangs.

Boys from 2*s.* 6*d.* to 3*s.* 6*d.* per week, and are employed the whole year. Girls from 2*s.* 6*d.* per week, and are employed in the summer months.

From 4 to 6 on large farms, spreading manure, weeding corn, cutting off turnips for cattle, haymaking, and harvest work.

16. *Superintendent Stannard*, Southampton division.—There are no gangs.

A few women and children are employed weeding spring of year and haymaking and harvest time at from 6*d.* to 1*s.* per day.

Very few women or girls employed in this district. A few are employed in weeding, haymaking, and harvest time.

17. *Superintendent Everitt*, Winchester division.—Women and children are not employed in gangs to my knowledge in Winchester division.

* Dock-picking is picking dock roots off the land after it is ploughed and harrowed.

Hampshire.

Mr. Portman.

h.

Children's wages are about 6*d.* or 8*d.* per day, and employed chiefly in spring and summer.

Women are employed in haymaking, harvesting, weeding, &c.

18. *Superintendent Horan*, Isle of Wight division.—1. Women and children are not employed in gangs for farm operations in the island.

2. Boys from 10 to 14 years of age get from 3*s.* to 5*s.* per week. On some of the farms they board and lodge them, and in addition they get from 1*l.* to 3*l.* at Michaelmas.

Boys are generally employed the year through, and are employed driving plough, cow-keeping, sheep-minding, keeping birds from the corn in the sowing season. Girls are not employed. The farms are generally small in the island, and not many boys are required on a farm.

3. Women and children are not employed to any great extent in the island; occasionally two or three women are employed on a farm, haymaking, turnip pulling, stone picking, and assist in harvest work.

ODIHAM.

Population, 2,833. Acreage, 7,287½.

19. *Rev. T. G. Clarke.*—The cultivation is chiefly arable, partly pastoral and hop-ground, with 894 acres in commons, roads, and waste land.

There are no private gangs in this parish. There are about 1,000 young persons and women employed in the parish,—in spring in weeding, stone-picking, and rod-stripping; in summer in hay-making and turnip hoeing; in autumn in harvesting, hopping, and acorning; and in winter in spreading dung. They either live on or near the farms on which they work. The hours of work upon the land are from 8 a.m. to 5 p.m.; an hour is allowed for dinner. Those not living on the farms are employed from 7.40 a.m. to 5.20 p.m., from the time of leaving home in the morning to the time when they come back. Their health is certainly not injuriously affected by their work in this parish; they are not subject to any ill-treatment. I do not think the employment of females in agriculture has any bad effect upon their morals; on the contrary, staying at home appears to be more detrimental to the morals. I do not think it works injuriously upon the performance of domestic duties. Many women who go to work regularly in the fields keep their homes and children quite as clean and tidy as those who do not. I would not place any restriction upon the employment of females in field work, nor upon the age at which boys should be employed. I do not consider any restriction of distance desirable. The parents do not allow their children to be taken to work at a distance beyond their strength; they are very careful upon this point. I see no reason for any restriction upon the hours of work. I know of no cases where children or young persons employed in agriculture are overworked. It is a matter perfectly optional with their parents whether they go to work or not. I do not consider that any mode of enforcing education in this parish would answer; all classes would set themselves against compulsory means. The school attendance is materially affected in this parish in bad weather and winter by the distance the children have to come to school. Several children have to come from a distance of two to three miles in various directions, the National school being in the centre of the parish. The attendance is not much affected by the pecuniary resources of the parents. The payment is only 1*d.* a week, and the parents often say that they save the penny in wear and tear of clothing when the children come to school. The girls are trained also in needlework.

Proper cottage accommodation has undoubtedly an important effect on the morality, health, and comfort of the poor. There is so much woodland, copse, and common land in this parish that it is difficult to say what is the proportion of cottages sufficient for the accommodation of the persons employed on the land, but I should think there are quite sufficient here for the farm work, and generally speaking they are conveniently situated. The cottages generally have two bedrooms, in some cases three, a sitting room, a small back kitchen or wash-house, and a pantry; as a rule, they are not crowded with members of the family or with lodgers. The cottages in this parish average from four to five rooms, two of which would average 10 feet by 10 feet. The other rooms are smaller. There is, in general, good ventilation and drainage. There is fair accommodation, good water supply, good gardens in the rural parts (there are none in Odiham town), fair out-houses. Some belong to landowners, some to private individuals. Sometimes they are attached to the farms, and are sub-let by the farmer. A few are in the hands of tradesmen in the town. The rent averages from 1*s.* 6*d.* to 2*s.* 6*d.* a week. In a few cases, where needed, fresh cottages have been built on the farms. The Union Chargeability Act is having no effect whatever in causing an increase of cottage accommodation.

Schools.

——	On the Register of some School.	In average Attendance.
Boys:		
Under 10 - -	170	150
Between 10 and 13 -	35	30
Total - -	205	180
Girls:		
Under 10 - -	145	130
Between 10 and 13 -	50	35
Total - -	195	165

In Winter.

Boys:		
Under 10 - -	170	160
Between 10 and 13 -	35	35
Total - -	205	195
Girls:		
Under 10 - -	140	110
Between 10 and 13 -	50	35
Total - -	190	145

The acorn-picking this year has been most productive. Some families have gathered 100 bushels, others 90 and 60, at 1*s.* a bushel.

I give some lads industrial training when they leave school. The children go to field work at 8 years; some even at 7 years. There are very few big boys in the school. Young men who have had some education go off into police and other employments not agricultural.

A limit of age for commencement of field work would be opposed by the farmers and objected to by the labourers on account of the loss of earnings; and the parents would not send their children to school any the more, if prevented from sending them to work.

A man's wages are 11*s.* a week.

There are hardly any children neither at school nor at work. There are a very few males growing up with insufficient education. There are three evening schools in the parish; they are open two nights a week, from November to March, for two hours each night; about 50 or 60 attend. Reading, writing, arithmetic, and Scripture are taught. It is only in the country districts night schools answer. In the town we have a mechanics' institute, with

maps, library, games, and lectures, open to all males above 12; penny readings; church choir and choral meetings; all these attract.

More boys are in education in this parish than girls, because, in addition to National schools, British schools, and dames' schools, we have a free school endowed foundation, with apprenticeships for poor boys only, from the age of 7 to 14 years.

Stephen Smither.—The cultivation is mixed. In this parish generally boys are employed in agriculture from the age of 10 years; they are employed in the summer months. Girls from 13 years of age are employed in hay-making and such like employments. Women are employed in light employments during the summer months. The children, young persons, and women in this parish go to a distance of one mile to their work; their hours of work are from 8 to 5 o'clock. I do not think it desirable to place any restriction upon the age at which boys should be permitted to work on the land, nor upon the employment of females in agriculture.

There are in this parish a National school, a British school, and other local schools; the agricultural labouring class take advantage of these.

The cottages generally are good; they are not overcrowded; they have sufficient accommodation, are well supplied with water, and are well ventilated. Nearly all the cottages have good gardens, and when not, they have allotments of land conveniently situated for the use of the labourers and their families.

DOGMERSFIELD.

Population, 250; acreage, 1,728.

20. *Sir Henry Mildmay, Bart.*—The cultivation is mixed. There are no private gangs. Single women are not generally employed. The children, young persons, and women employed in agricultural labour in this parish are engaged in spring in weeding and bird-keeping; in summer in hay-making; in autumn in harvesting and hop-picking; and in winter casually; they either live on or near the farms on which they work; they usually work from 6 a.m. to 5.30 p.m., or, in summer, to 6 p.m.; one hour is allowed for dinner, and half an hour for breakfast; their health is not injuriously affected by their work. Neither the young nor females are subject to any ill-treatment; nor do I think there are any special employments which injuriously affect them. I think a restriction should be placed upon the employment of single women in field work. I do not think there is any necessity for restriction on the hours of work of children and young persons employed in agriculture. It is not usual to employ any under 13 years of age.

The school attendance is not at all affected either by the distance the children have to go to school, or by the pecuniary resources of the parents.

The cottages are the property of the landowners; they are in good repair. There are three bedrooms to many. The rent is 1*s.* 6*d.* a week. Lodgers are not permitted.

School.

In Summer.

Total - -	25	21

There are no children in this parish neither at school nor at work, and there are no young persons growing up with insufficient education.

There is an evening school in the parish, open during the months from October to February; it is opened two nights a week, for an hour and a half each night.

There are—

—	On the Register.	In average Attendance.
Under 12 - - -	None.	None.
Above 12 - - -	17	14

Reading, writing, arithmetic, and dictation are the subjects of instruction. I consider that the evening school adequately supplies the deficiencies of the day school.

21. *Mr. Eggar*, steward to Sir Henry Mildmay.—Women earn 8*d.* a day in weeding and spreading dung. Girls are not employed in the fields. Boys, for bird-tending, earn 2*s.* to 3*s.* a week. A man's wages are 11*s.* a week, all money. Lads are sometimes lodged by farmers, but not boarded. A lad of 15 or 16 years gets 8*s.* a week.

Hay and harvest are let per acre; grass, 6*s.* an acre; wheat, about 11*s.* an acre.

In the spring men can earn 4*s.* a day at felling oak and bark stripping. There is a good deal of piecework in the district.

The cottages have half an acre of ground attached to them, and all the new ones have three bedrooms.

If children were forbidden to work before 10 years of age the loss to the parents would be very trifling.

All the younger generation of labourers can read and write, and most of the *men* among the older ones.

There are many small benefit clubs, but I do not know of much saving by labourers.

The Hampshire Friendly Society is a very good one.

HECKFIELD.

22. *Mr. Tait*, steward to Lord Eversley.—Men's wages are 11*s.* a week. The carter and best men have usually also a cottage and garden rent free. Cottage rent varies from 1*s.* 2*d.* to 2*s.* a week, according to the size of the garden.

Women earn 8*d.* a day in weeding. Turnip-hoeing is done by the acre, 5*s.* an acre the first time over, 4*s.* an acre the second time. Harvesting is mostly done by the acre.

Boys from 10 years to 13 years of age are hired by the year, and live for the most part in the farmhouses as carters and cow-boys. They get 4*s.* to 5*s.* a week and lodging, and 2*l.* 10*s.* at the end of the year, but no board, except, perhaps, a few vegetables. There is a little employment of small boys for bird-keeping at 2*s.* a week. The loss of earnings of children under 10 years would not be of any consequence to the parents. The education of the rising generation is improving.

23. *Mr. Mark White*, farmer.—The hours of work for women are from 8 a.m. to 5 p.m. I employ several

Hampshire.
Mr. Portman.
h.

women and boys, but not under 10 years of age, except for bird-keeping.

The hiring of lads is for the year from Michaelmas. It usually takes place at the first market after the 11th of October, though they are more often engaged in the parishes adjoining the farms. They change places from year to year. The night-school is well attended by these lads.

The earnings of little boys under 10 years of age (say 2*s.* 6*d.* a week) in the case of a large family of an able-bodied man are in my opinion a very great consideration and assistance. I pay 25*s.* a week to one family at certain times of the year, and the children go to school in the winter.

Women earn 8*d.* to 10*d.* a day.

Boys earn 2*s.* 6*d.* a week bird-keeping.

Men earn 10*s.* a week, but most of them work by the piece.

There are not many farms in this district of less than 100 acres.

The children of small farmers are worse off for education than those of the labourers. There is no school of a grade between the village school and the boarding school that would meet the wants of the farmer at a cheap rate, and I think such a school is very much needed.

There is a district school at Crondale for three unions, where the workhouse children are educated up to 16 years of age.

Men in the winter have plenty of employment in the woods, and in spring in stripping bark.

HASELEY HEATH.

Infant School.

24. Under care of Miss Lefevre.

On books, 54.

In attendance on 10th November 1868, 46.

They begin at 2 years old. The youngest in attendance, 3 years; eldest, 11 years, a girl; the distance to Heckfield girl school being three miles.

Some pay 1½*d.* a week. The elder girls can read, write, and do arithmetic up to simple division. They then go to service at Lord Eversley's to be trained, and soon to other places.

The mistress is careful, and the children are under good control.

Two cottages (Lord Eversley's). In each—

Downstairs.—Two rooms, scullery, and pantry.

Upstairs.—Three bedrooms.

Privy, pigstye, outhouses, and garden.

Rent, 5*l.* 4*s.* a year.

One fire-place in bedrooms, chimney running through centre of house.

HECKFIELD.

Girls' School.

25. *Mrs. Cox* mistress.

On register, 48.

Attendance, November 11th, 41.

Attendance previous week, 16, the children being engaged in acorn-picking.

I have been here for 17 years.

The eldest girl in the school is 15 years; but it is quite an exception to have one so old. There are none who have ever worked in the fields except at harvest and bean-pulling; 10 or 15 years ago the girls all went to the fields, now they very rarely go.

*The bean-pulling comes after harvest; it is taken by the acre; the children go with their parents; they go out at 9 years of age; it is hard work for them, and hurts their hands.

†"Peas-hacking" comes before harvest.

26. *Louisa Turvey*, 9 years old.—I have been out "peas-hacking" with mother for six days. I got no money. Worked from 9 a.m. to 6 p.m. The peas are thrashed not stripped.

27. *Jane Woolford*, 9 years old, has also been out to fields for similar work; the money was paid to her father.

Cattle Copse Cottages.

(1.) (Old). Two rooms down.
Two rooms up.
Garden and outhouse.
Rent, 3*l.* a year.

(2.) (New.) Two rooms down.
Two rooms up.
Garden.
Rent, 3*l.* a year.

(3.) One room and backhouse } 2*l.* 10*s.*
Two bedrooms - - }

29. *Mrs. Grantham.*—I get 8*d.* a day on farms pretty regularly; my husband works in gravel pit.

30. *Brown's farm.*—Four cottages in row; in each there was one good-sized room, and pantry downstairs, and two bedrooms upstairs. Rent, 3*l.* a year each. Garden on opposite side of road; held under farmer; there were privies, but the dirt was thrown in front of house-door. The buildings were not bad, but very untidy and badly kept.

31. *Mrs. Turvey.*—I work regularly on the farms at 8*d.* a day. I have done peas-hacking at 3*s.* or 3*s.* 6*d.* an acre, and took my own two girls with me, who also used hooks for cutting peas. The children were of some use to me.

MATTINGLEY.

Population - 630.

32. *Rev. John W. Blackwell.*—The cultivation is chiefly arable. My own experience, founded upon 12 years' observation, is that the employment of females in agriculture decidedly lowers the tone of morals, and utterly unfits them for domestic duties, besides inculcating a most undesirable coarseness, and craving for freedom from indoor work. I decidedly recommend that restriction be placed upon the employment of females in field work. The agricultural labourer would be far better off if the women would stay at home and give their attention to baking, cooking, &c., so as to provide a more economical style of living. It would be a great boon to have female labour entirely prohibited, we believe also again, as many females will acknowledge that nothing is made by it. I do not believe the least benefit would accrue from restricting the employment of boys to over 8 years; 10 years is the lowest limit that would do good in this parish. Distance does not affect us much. Of course I should greatly prefer a higher limit than 10 years, and believe the result would be most beneficial. Parents who care for their children will not hear of their children going to work at 10. The State must look after those who are neglected by their proper guardians, or who are forced by the farmers that employ their fathers, &c. to work for them. I am inclined to think that legislation, preventing the farmers from employing children under a certain age, would be followed by a greatly increased attendance at school in the agricultural districts. The school attendance is only a little affected, in very bad weather, by the distance that the children have to go to school. It is very little affected by the pecuniary resources of the parents. In most instances the people who earn most wages are the least careful in keeping their children at school.

Under 10 - -	25	—
Between 10 and 13 -	15	—
Total - -	40	32

In winter the attendance is nearly the same as in summer. There are no children here who are neither at school nor at work. There is an evening school held in the parish during the winter months, from November to February. It is opened two nights for an hour and a half or two hours each night. There are six scholars under 12 and 49 above 12; the average attendance is $39\frac{7}{12}$. Reading, writing, and arithmetic are the subjects of instruction. I do not think the evening school supplies the deficiencies of the day school, but I think an evening school most indispensable, as, restrict the employment to any age you please, the boy who leaves school at 10 soon forgets unless the evening school keeps him in mind of what he has learnt. The difficulties in the way of maintaining an efficient evening school are the want of co-operation of the farmers, the distance of the school from many of the homes, and the general inefficiency of the paid schoolmasters to adapt their manner, &c. to boys who look upon themselves as almost men.

Girls of 16 years of age who go to field work get such a love of "liberty" that they will not go to domestic service.

Some families go to the hop-picking from this parish; they go together, and generally work for the same employer from year to year.

MATTINGLEY GREEN.

33. *Goodchild*, labourer.—Some of my family are at work, some at school. The farmers will have the boys, master has asked for my boy of 9 years now at school. The children's wages are 2*s*. 6*d*. and 3*s*. a week, and 6*d*. a week is put by for them by the employer, to be given at Michaelmas. They go *from* home to their daily work.

My cottage has two bedrooms and a little place upstairs.

HASELEY HEATH.

34. *Mrs. Nevill.*—My children are out at service. Husband is a carter, earning 10*s*. a week. House rent, 4*l*. a year. I used to work in the fields. I would never send a girl of mine there. I got no good by it, as I had to pay some one to look after the house and children, and things wasn't done, and the wear of clothes was great. I used to get 8*d*. a day weeding corn, spudding thistles, and cutting turnips.

Some girls of 16 years of age now go to field work, but not necessarily those who have been in trouble.

HARTLEY WINTNEY.

Population - 1,746; acreage - 2,405.

35. *Rev. F. O. Giffard.*—The cultivation is almost altogether arable, unless the commons or waste land be considered. No private gangs exist in this parish. Children, young persons, and women are employed here in spring in minding birds, bean-dibbing, pig-minding, copsing, and stripping off oak bark; in summer in weeding and hay-making; in autumn in harvest and gathering acorns; in winter in pig-minding.

There are so employed—

Males:		
Between 10 and 13 - -	perhaps	12
„ 13 and 18 - -	from	30 to 40
Total - - -	from	42 to 52
Females:		
Between 10 and 13 - -	perhaps	10
„ 13 and 18 - -	about	30
Over 18:		
Married - - -	about	24
Unmarried - - -		20
Total - - -	about	84

I wish it to be borne in mind that this village is almost a town, and that a considerable number of boys are employed by the builders and tradespeople as helpers to the workmen and as errand boys, and in other capacities. There is no opening for girls except as domestic servants or nurse girls; their only occupation is agricultural. In the acorn season the poor live *al fresco*, old, young, and middle aged, even toddlers of two or three years old, all work at it. Most of the labourers live near the farms. Their hours vary with the season, but they are not excessive, from 8 to 4 or thereabouts. About an hour is allowed for meals. I think the demand upon their physical powers does not injuriously affect their health, excepting bad weather and its effects. There are no special employments in this parish that I know of, which injuriously affect females or the young. I think that the less employment of women and female children in field labour the better. The older and worse conducted women injure the younger and purer. The moral scabies has thus opportunity to do mischief. I should not recommend that any restriction be placed on the employment of females in field work, unless great restriction were put on the beershop, which, from lengthened experience and great opportunities for observation as prison chaplain, as workhouse chaplain, and parochial minister, I believe to be at the bottom of more than two-thirds of the crime, ignorance, and pauperism of the rural districts in the south of England. Shut up two-thirds of the beershops, and the thing will right itself. *These* lessen the available wages, lower the rate of wages, and make children's wages indispensable. I think boys younger than 10 years should not be employed, and these only at certain times. I would not restrict the distance to which children and young persons should be allowed to go to work according to age; it may sentence them to the union or starvation.

Cottages superabound in this parish; it is not so in the neighbourhood. I do not think the hours of work excessive. I think our employers are fair and humane in their treatment of the poor. I would not, therefore, place any restriction upon the hours of work. We have three schools in this parish subject to my superintendence. No child need go more than a mile to one or other of them. The school attendance is very slightly, if at all, affected by the pecuniary resources of the parents. The children are affected very greatly by their parents' habits. Our schools are good, and well attended. If you could force our absentees to go to school, it is questionable whether you would do them good, such is the influence of a vicious home. Girls are trained here in plain needlework. The practice of allowing young men lodgers where there are young girls in the family, is attended with great danger to morality.

We have more than 300 cottages in a parish of 1,900. They are conveniently situated. Nearly all have at least two bedrooms. There are too many lodgers. The cottages are of various ages and size, but, speaking generally, there are two bedrooms, a good front room on the ground floor, a small back room on the same, wash-house, coal-hole or wood-house, &c. The ventilation is fair. The water supply is variable; the drainage fair. The gardens are so different that I can give no general description; some are very good, some moderately so, some very poor; a few cottages have scarcely any. Our parish, from the good schools and general liberality of residents, is very popular; the people flock here in great numbers. I cannot too often repeat that the beershops are our greatest curse. There are cottages in this parish which return close upon 25 per cent. for the

Hampshire.

Mr. Portman.

h.

first 12 years of their existence; afterwards the rate of interest is lowered from the necessity of repairs, but I think that in this, as in other things, our parish is exceptional.

School Statistics.

36. BRAMLEY SCHOOL.

Population about 500.

Mixed. On books, 86.

Average attendance:—

Lowest, 23, autumn.

Highest, 77, between November and Christmas.

In the school on November 12 - 54.

The attendance is rather irregular, and some of the parents are indifferent about their children. Acorn picking this year has kept many away.

Boys leave school about 11 years old.

Two of the girls in the school had been out peas-hacking with their father and mother; were paid by the acre, and worked from 6 a.m. to 6 p.m.

Payment to school, 1*d.* a week for one.
„ 2*d.* for three children.
„ 3*d.* for four „

Greatest distance to school for any child, one mile and a half. The attendance in proportion to population is very fair.

37. *Samuel Clift.*—Father farms 300 acres. Carter-boys of 16 years of age get 5*s.* a week, find their own food and clothes, but lodge in the farmhouse.

WOODMANCOTE AND POPHAM.

38. *Rev. F. W. Mant.*—The effect of field work upon young girls, especially between the ages of 12 and 20, is very demoralising; it frequently makes them coarse in manners and loose in behaviour; no mother in the parishes will, if possible, keep her girls at home after 12. They try to get them little places, in order to keep them out of the fields, or, if they are at home, will take the out-door work themselves in order to save them. The married women, as a rule, are not injured by out-door labour; some of the most respectable females in the parish who keep their houses the neatest and manage their families best, are employed as occasion requires in the different occupations of field work.

In my two small parishes no restriction on female labour is necessary; the women with large families are glad to allow all their young children to make a little as soon as they can. The girls go to weeding early until they can be got away from home.

Boys are seldom employed before they are 10 years old. In large families they must begin to earn something for themselves, and unless they go to the plough early they never make good carters. Their first employment is generally "pig" or "crow keeping." In the case of small village schools like mine, conducted by a mistress, they are just as well at work as at school, as there are not a sufficient number of their own age to keep them orderly and diligent. There is no difficulty about "distance" with us.

The subject of cottage accommodation is a very serious one. It is perfectly impossible that young people can grow up untainted if they are all mixed up together without regard to sex or age. In some cottages, consisting of two sleeping rooms only, there will be found a man and his wife, two or three grown-up boys, and two or three growing-up girls. On the other hand, very often, if you give them another room, they will take in lodgers. The evil cannot be corrected by legislation, but only by the supervision of the landlord or his agent.

I have an evening school twice a week for two hours each night; there is no difficulty as long as I attend and my family can help; a hired teacher would be a failure.

NORTH WALTHAM.

Population - 484; acreage - 1,938.

39. *Rev. W. L. Blackley.*—The cultivation is mixed. There are no private gangs. About eight males are employed here between the ages of 13 and 18. No boys under 12 are employed. In the winter, numbers of men with their boys are employed in cutting wood and making it up into hurdles, hoops, &c. In the summer they are employed in hay and corn harvest, hoeing turnips, &c. Some few females are employed. The usual hours of work upon the land are from 6 a.m. to 3 p.m. in summer, and from 7 a.m. to 3 p.m. in winter. Sufficient time is allowed for meals; 30 minutes for breakfast, and one hour for dinner. All the labourers live close to their work. The demand on their physical powers does not injuriously affect their health. Females and the young are not ill-treated. There are no special employments injuriously affecting females or the young generally. Nearly all the females employed are married women; all young females obtaining situations as domestic servants, provided they are of good character. I am not prepared to recommend that any restriction should be placed on the employment of females in field work. Boys under 12 should not be permitted to be employed in farmwork. As far as this parish is concerned there is no reason for restricting the hours of work of young persons employed in agriculture. In this parish the school attendance is not at all affected by the distance the children have to go to school, and scarcely at all by the pecuniary resources of the parents.

The cottage accommodation is on the average very bad. Large families frequently have but a single bedroom. There is a sufficient number of cottages for the families, and they are conveniently situated. They are for the most part old-fashioned, rooms very small, chimneys very wide, ventilation of dwelling rooms enormous and involuntary, of bedrooms practically nil, except when a square of glass has fallen out. A number of the cottages here were run up on speculation for railway excavators. They are now falling to pieces, and some are in a dangerous condition. The drainage is, in many cases, bad, but the occupiers are most to blame for this. Nothing better than surface drainage exists. The accommodation is very insufficient in bedrooms. The water supply is from deep wells. The gardens are for the most part small, but all cottagers requiring it can obtain allotment gardens. The ownership used to be divided among a number of petty landlords. This is now

chiefly in the hands of a few, and there is a fair prospect of some of the worst cottages being replaced by new ones. No progress is as yet being made towards increasing the cottage accommodation. The Union Chargeability Act is causing no increase.

School Statistics.

In Summer.

	On the Register.	In average Attendance.
Boys:		
Under 10 - -	17	12
Between 10 and 13 -	12	10
Total - -	29	22
Girls:		
Under 10 - -	26	24
Between 10 and 13 -	19	16
Total - -	45	40

In Winter.

Boys:		
Under 10 - -	21	18
Between 10 and 13 -	19	17

Girls:		
Under 10 - -	26	24
Between 10 and 13 -	20	18
Total - -	46	42

About five males and three females are growing up with insufficient education. An evening school is open 15 weeks during the winter season. It is open three nights a week, one hour and a half each night. The number of scholars is,—

	On the Register.	In average Attendance.
Under 12 - - -	4	3
Above 12 - - -	18	14

The subjects of instruction are reading, writing, and arithmetic. I consider that the evening school adequately supplies the deficiencies of the day school.

MICHELDEVER.

Population - 1,150; acreage - 9,000.

40. *C. Pain.*—The cultivation is arable. There are employed here,—

Males:	
Between 8 and 10 - - -	4
„ 10 and 13 - - -	3
„ 13 and 18 - - -	4
Total - - - -	11
Females:	
Between 13 and 18 - - -	2
Over 18, married - - -	8
Total - - - -	10

The males are employed with horses and sheep. In spring the females are employed in weeding; in summer in hay-making and harvesting; in autumn and winter one or two help in the barn. They live near the farm on which they work. They usually work nine hours; reckoning from the time of leaving home to the time of returning their hours are 10. An hour is allowed for meals. Their work does not injuriously affect their health. Females are not ill treated, and are not injuriously affected by any special employments. I would not place any restriction on the employment of females in field work. No boys below 10 years of age should be permitted to be employed in farm labour. I see no reason for restricting the distance to which children and young persons should be allowed to go to work. I would not restrict their hours of work. I think the mode of enforcing some amount of school attendance most applicable to the circumstances of this parish is by attendance at a night school. The school attendance here is not affected by the distance that the children have to go to school, nor by the pecuniary resources of the parents.

I think every cottage should have three bedrooms. One cottage and a half per hundred acres is a sufficient proportion for the accommodation of the persons employed on the land in this parish. There is that proportion here. The cottages are conveniently situated with respect to the farms on which the work is to be done. There is not a sufficient number of cottages containing two or three bedrooms and a sitting room. The cottages are crowded. The accommodation of the cottages is generally very good. They belong to landowners. The rent ranges from 2*l.* to 2*l.* 10*s.* Cottage accommodation is being increased.

There are in this parish—

In Summer and Winter.

Between 10 and 13 -	1	1
Total - -	58	41
Girls:		
Under 10 - -	60	50
Between 10 and 13 -	5	3
Total - -	65	53

There is an evening school in this parish, which is opened in the winter for 18 weeks. It is opened three nights a week, one hour and a half each night. There are—

In Winter.

	On the Register.	In average Attendance.
Under 12 - - -	6	4
Above 12 - - -	42	30

The subjects of instruction are reading, writing, arithmetic, and English history. I consider that the evening school adequately supplies the deficiencies of the day school. There are no difficulties in the way of maintaining an efficient evening school.

Girls' School.

41. *Miss Strickland*, mistress.—Nearly half the girls are absent from school now (Nov. 17), some for dock-picking, some for getting up the potatoes. Some have been absent since the beginning of harvest. Children who go to field work lose much of the knowledge previously acquired, and in some instances do not regain their former place in the school for nearly six months.

Girls of 16 years of age go to field work at 9*d.* or 1*s.* a day for stone-picking, or are employed in the barns untying sheaves for the thrashing with a flail, in which case they usually work with and for their parents. In the case of stone-picking, the children

Hampshire.
Mr. Portman.
h.

get their money individually, though sometimes a "company" takes a field and divides the money.

42. *Mr. James*, boys' schoolmaster.—The boys go out at an early age for dung-cart work. I know a case of one under 7 years of age who never comes to day school, but attends night school. They get 6*d.* a day for job work.

I have been master here for six years. The school is fullest in the winter. If regular attendance at school could be secured up to 10 years, even up to 9 years, the children would be able to read fluently, write a letter, and gain some knowledge of arithmetic, and if such school attendance could be supplemented by a night school, they would get an education sufficient for their position.

The under-carters, of ages from 16 to 20, do not come to night school on account of "racking up" the horses between 7 and 8 p.m. The head carters don't like to spare them or do their work for them.

I think that if children were prevented from working before 10 years, the loss of earnings would be serious to many families in this parish.

STRATTON.

43. *Mr. Adnam* (an old man holding a few acres of land).—I began life as a shepherd lad at 7 years old, when I could hardly drag a hurdle. I have seen girls and women working in the fields, and never knew it do them much good, but girls are not much employed now.

I think 10 years would be a good age at which to fix the limit for work, and the loss of earnings under that age would not be serious to the parents. The labourers *might* object to such a regulation at first.

When I was young not 1 in 10 could read or write, now almost all the young people can do both.

44. *Mr. Potter*, schoolmaster.—Boys leave the day school at 8 years, and do not return during any part of the year, but attend night school. If they would come to school for five months in winter, it would be a great gain.

Small boys are employed in bird-keeping, cow-keeping, sometimes in ploughing, the highest wages being 1*s.* 6*d.* a week.

The question of a restriction as the age for commencing work is really a question of earnings,—"the "1*s.* 6*d.* or 2*s.* a week against the schooling." I do not think the parents would lose as much as they think by the stoppage of the children's earnings. The labourers *might* object to the Government controlling their children.

I have kept a night school for 58 years, 52 years of which have been in Stratton. I have generally had all the lads from 12 years to 21 or 22 years in attendance, and several married men; 29 have been in attendance this winter.

I should like boys earning wages to be made to attend day school from October to March. I think that is the best method of securing some school attendance, though a general system of compulsory education would, in my opinion, be very difficult to carry out.

Girls should never be sent to field work.

Friendly societies and clubs, if on a proper footing, do much good in a village. The poor people like to manage their own affairs, and would not like the control of the funds of their clubs to be taken by Government.

---

45. Potatoe picking in a field belonging to Mr. Longstaff of Micheldever.

The crop is sold to a stranger, who sends down two men and horses for getting it up. The man in charge hires the necessary amount of labour, but makes no profit out of the wages given. Women and children of both sexes are employed. The women earn 1*s.* a day, girls and boys from 6*d.* to 9*d.*, according to age.

The foreman who overlooks the workers gets 16*s.* a week, and two men who stack the potatoes get 13*s.* a week, and lose wet days.

There were many women and eleven girls at work, the youngest being 9 years old. They were paid every week by the owner of the crop.

STRATTON AND MICHELDEVER.

46. (*Lord Northbrook.*) There is sufficient cottage accommodation and a sufficient number of cottages with three bedrooms, much attention having been paid to the comfort of the labourers by the late Lord Northbrook. The cottages have gardens attached to them and the rent is usually 1*s.* a week including garden. Almost all the cottages are my property and most of them are in hand, a certain number only being left with the farms. Most of the cottages have allotments of one-eighth of an acre each for which they pay 5*s.* a year.

The question of the provision of good cottage accommodation on self-supporting terms is a very difficult one. The rent of 1*s.* or 1*s.* 6*d.* a week, which is the usual rent charged by landowners and farmers in my neighbourhood is in itself quite unremunerative. The greater part of the money invested in the building and spent in the maintenance of cottages is really paid in aid of wages, and so should and probably does, when spent by the landlord, raise the value of farms and tend to increase rents.

The system therefore is an artificial one; and, as regards labourers living in cottages let at an unremunerative rent, it nominally lowers the rate of wages. For example, if a labourer gets 10*s.* a week wages and pays a 1*s.* a week for a cottage, the remunerative rent of which is, say 3*s.*, he receives the same real wages as if he had 12*s.* a week and paid the remunerative rent of 3*s.* for his cottage.

If all the cottages were the property of the landowners and the artificial rate of rent was the same over considerable districts so that every labourer could rely on obtaining a cottage at that rent this system would not be open to much practical objection, but this is not so. Many cottages are held by persons who are not landowners and who cannot let them at unremunerative rents; and, moreover, the rent charged by landowners is not always the same. The rate of weekly wages is practically fixed by the large farmers who usually have the advantage of employing labourers who live in cottages let at an unremunerative rent, and consequently it is fixed at a sum below that which would have to be given if a remunerative rent was charged for the cottages. To take the example given above if the rate of wages is 10*s.* with cottages at 1*s.* it would be 12*s.* with cottages at 3*s.*

The effect of this system seems to me to be injurious to those labourers who cannot find accommodation in the landlords or farmers cottages, for they receive the same wages as the others and have to pay more rent for their cottages. It must also tend to discourage the building of cottages as an investment by persons other than landowners or farmers; for only those labourers who cannot find accommodation in the low rented cottages and who are usually the worst tenants, can be expected to take those for which a remunerative rent is charged.

My strong impression is that the condition of the agricultural labourer as regards cottage accommodation will not be put upon a sound footing so long as this artificial system continues; at the same time it would be a work of extreme difficulty to change it, for it would require the co-operation of landowners and farmers over a large extent of country.

47. *Mr. Lancashire*, farmer.—I have no females at work. Those females who work much in the field never seem to keep their cottages so tidy and clean as those who stay at home.

Most parents are wishful that their children should have education; they are quite willing to pay a small acknowledgement, say 2*d.* a week. The great consideration of the parents is to provide for their families; if education was enforced and children

obliged to devote half the day to it it, would seriously cripple the labourer's means; ample time may be found for the instruction to be given, say from 4 p.m. to 6 p.m. or later.

When in Derbyshire I built six cottages and found that good dwellings had a beneficial effect on the labourers. Give them a comfortable home and let them see that if they leave they cannot better themselves.

KIMPTON.

PRESENT:

48. Mr. Fowler, Kimpton.
Mr. Fowler, Wallop.
Rev. A. H. Ashworth, Lower Wallop.
Mr. Childs, Weyhill.
Rev. E. Randolph, Kimpton.

Girls are not employed in the fields, except in very rare instances. Women chiefly do the weeding of the corn.

Mr. J. Fowler pays women 1*d.* an hour; the supposed hours of work are from 8 a.m. to 5 p.m., but they take as much time as they like to go home in the middle of the day. Mr. Fowler of Wallop pays them 8*d.* a day.

Mr. J. Fowler.—Wages, spring 1868—

Foreman -	14*s.* a week, cottage and fuel.
Carters -	12*s.* 6*d.* each, and cottage.
Boys - -	3*s.* 6*d.* to 6*s.* 6*d.*
Shepherd -	11*s.* to 12*s.* 6*d.*, and cottage.

Day labourer, 10*s.* a week, pays 1*s.* for cottage.
Machine work, 6*d.* a day extra.

[Mr. Fowler has 15 cottages, and allows the people to live rent free from Michaelmas to Lady-day.]

In the harvest month a carter and boy earned above regular pay 7*l.* 16*s.* Another by himself earned 6*l.* 10*s.* extra. The foreman, his wife, and boy, had double pay to the amount of 2*l.*, 16*s.*, 10*s.*, and 12*s.* respectively. The carter boys here all live at home with their parents.

The women earn in long days from 9*s.* to 10*s.* a week. Sometimes at hay cart they work till 9 p.m. at 1*d.* an hour overtime.

Total of wages paid on a farm of 1,000 acres (900 arable), 812*l.* 16*s.*, about 16*s.* 3*d.* an acre. On a farm of 500 acres, 420*l.* a year. A rise of 1*s.* a week in wages is equal to nearly 100*l.* a year.

One cottage per 100 acres was thought to be sufficient on the light lands.

It was thought that one good school for two or three small parishes, if conveniently placed, would be sufficient for the educational wants of the district; that a restriction might be put on the work of children under 10 years of age; that night schools would be the best mode of continuing the lad's education; and that it is very desirable that grants in aid of schools should be given to rural parishes for results, and independently of the question of the teacher being certificated or otherwise.

The requirement of any certificate of school attendance or attainment before hiring was not thought advisable; and a compulsory system of education was deprecated.

49. *John Matthews*, carter.—I think it would be hard to keep children from work till they were 10 years of age. Though the earnings are hardly more than the wear of clothes, still they are glad of the money. My eldest boy began work at 6 years of age; he cannot write, and can only read a little.

I once worked for 6*s.* a week, 18 years ago. The price of provisions was then much lower. My house rent is 1*s.* a week.

50. Dame's School.

Boys and girls present, 21.
Eldest boy, 8 years old.
Eldest girl, 9 years old.
The payment is 2*d.* a week for each child.

[The writing and reading were both very fairly good.]

[The cottages in Kimpton and Tedworth are many of them built of mud, and have one room and pantry downstairs; generally two bedrooms upstairs, and are warm and dry. Estimate for double cottage, three bedrooms to each, 200*l.*—E.B.P.]

51. *J. P. Fowler.*—The cultivation is chiefly arable. There is no system of gangs known about here. There are 19 boys, 2 girls, and 10 married women employed in this parish; 9 boys and 6 married women are employed on my farm. The particulars of their age are—

Males:	
Between 8 and 10 - - -	1
„ 10 and 13 - - -	4
„ 13 and 18 - - -	14
Total - - - -	19
Females:	
Over 18:	
Married - - - -	10
Unmarried - - - -	2
Total - - - -	12

I have on my farm one shepherd boy, three ploughboys, who only drive, four under-carters, who hold the plough, and one learning to make hurdles. The women are employed, in spring, in weeding corn and spreading manure; in summer, in hay and corn harvest; in autumn, in making thatch and spreading manure; in winter, in cleaning corn and seeds in barns, not in much out-door work. They are employed on my neighbours' farms in much the same way as on my own. They all live within a quarter of a mile of their work. The usual hours of work for women are seven hours, and for boys nine hours, except in hay and corn harvest, when they work overtime, and are paid by the hour. The women go to work at 8 a.m., and stop at 11 a.m. for two hours, and then work on until 5 p.m. The boys work from 7 until 4, and are allowed half an hour in the middle of the day. All have their breakfast before they go to work. Their work does not injuriously affect their health. I and my neighbours take care that the young and the females are not subject to ill-treatment. There are no special employments which injuriously affect the young or females. I consider if girls are fit for domestic service they ought not to be encouraged to work in the fields, but I always find in the parish some not so suited, and if such are prevented from working in the fields they would be driven to the workhouse. I would not allow girls under the age of 13 to work in the fields, except when helping their parents in harvest time. I would not place any other restriction upon the employment of females in field work. I, as a farmer, could not do without some married women, and it would be a great hardship to debar widow women with families and women who are not fit for domestic service from working in the fields. I often find a man or a widow with a family of four or five children from the age of 5 to 13 years, mostly girls. It would be hard to say they should not go into the fields to work in the spring, weeding corn even, if suitable work can be found them. I know instances in which it would be impossible for the parents to support them without it. I think boys should not be employed under 9 years of age. I do not want them before 10. The parents would rather they went to work younger. If they do not go to work before they are 12 years of age it would be injurious to the master, the parents, and the boys, because after that age you cannot well train them. No boy or girl ought to live more than a mile from the farm on which they work. I think that every farm should have cottages situated on it, which should be let with the farm to the tenant. I let my carters and shepherds and some of my other labourers, such as have large families, live rent free; by this means I am provided with boys on my farm. Many of my neighbours have not sufficient cottage accommodation; some none at all. I consider that educa-

Hampshire.

Mr. Portman.

h.

tion amongst our labourers has, during the last few years, made much progress. We ought to have schools in every small village for children before they go out to work, and night schools for the working boys and young men during the winter months. I hope Government will give grants to other than certificated masters. I do not think the principles of the Factory Act would apply to agriculture. I think the subject of cottage accommodation is a most important one. Very much is done to improve the cottages of the poor, but very much more is required. I am sure if good cottages are built on the farms, each having three good bedrooms, and then let to the farmers, gentlemen would find them most ready to pay five per cent. on the outlay. The farmers would feel a greater interest in the labourers, both as to their moral character and as to the education of their children. There is not in general a sufficient number of cottages with two or three bedrooms and a sitting room. My cottages are not crowded, as I never allow a lodger to be taken without my sanction. Many of my cottages are old, but large, and well suited for a labouring man; some have three, others only two bedrooms; few of the rooms are less than 12 feet square; many of them are much larger. I arrange the cottages (having the entire control) to suit the size of families. As to ventilation and drainage, no village can be more healthy; there is good water, and the cottages have good gardens. Most of the cottages in the parish are owned by the proprietors of the farms; a few by tradesmen; but no compulsion is used to induce them to deal. The rent is 1*s.* a week. I have 16 cottages for 1,000 acres. Many of my neighbours are badly off for cottages. I think there should be, for the accommodation of persons employed on the land, one cottage to 100 acres, if the land is light; two, if heavy. The Union Chargeability Act is not causing an increase of cottage accommodation. I think many landlords might avail themselves of the power given to the Enclosure Commissioners by the Act 27 & 28 Vict. c. 114., July 1864, to advance money for the improvement of land, &c., very much to the benefit of the labourer. If gentlemen would build good cottages on their estates, and let them to their tenants, they would find it add so much to the value of their property that farmers would pay a good per-centage on the outlay. It would give the farmer more interest in the labourer, for instead of finding, as they often do now, bad cottages occupied by men who have no interest in the farmer's welfare, or the farmer in theirs, a much better feeling would exist. Nothing concerns a good tenant in taking a farm so much as having a good class of labourers to contend with. A good labourer will always command a consistent tenant's kind consideration. Good cottage accommodation will always be self-supporting; it is a great advantage to the farmer, and tends more to improve our class of labourers than any Government legislation. The parish of Kimpton is divided into three villages, the village of Kimpton and Upper and Lower Sheddeston, about a mile from the village of Kimpton. The village and parish of Tyfield is about a mile from the village of Kimpton. About midway is a school for boys and girls, kept by a schoolmistress, to which *all* the children who are not at work and are old enough go. We have a dame's school in one of my own cottages, kept by the wife of one of my labourers; 25 children under 7 go to this. I get a night school as often as I can attend to it for the working boys. I consider it would be a great advantage if we had a master to take a night school two nights a week in each of these small villages during the winter months. Our Sunday schools are well attended to by our most worthy clergyman and his sisters; he lives at a distance from us, or I am sure he would help us still more. I am fully satisfied all my labourers (many of whom, I am sorry to say, cannot read) are most anxious that their children should go to school. I do not know a single instance to the contrary. I, as an employer of labour, am most anxious for it.

ABBOTT'S ANN.

PRESENT:

52. Hon. and Rev. S. Best.
Rev. Mr. Monkhouse, Oakley.
Rev. Dr. Parker.
Mr. Canning, farmer.
Mr. Parsons, farmer.

It was thought that no child should be employed in field work before 10 years, such an age not affecting the hiring of carter-boys. Night schools were thought to be the only mode of continuing education after that age. Boys being then hired by the year could not attend day school a quarter of the year. A system of half-day or alternate days is not applicable to agricultural districts; the population is not sufficient to supply the requisite number of boys for the purpose.

Children under 10 years of age are very rarely employed; if so, their wages are 2*s.* 6*d.* to 3*s.* a week, hardly enough to balance the wear and tear of clothes.

There *is* a need of boys just above 10 years for farm work. More are required on a clay farm belonging to Mr. Canning, at Ramsbury, than on the light land at Wallop.

There are no gangs in Hants; women do the weeding; their health does not suffer, nor are they employed as much as they were a few years ago.

If an Act was passed to prevent children's work before 10 years, two years should be allowed before it came into operation. Any such restriction would be disliked at first by the labourers.

Night Schools.

The attendance should be regular for three nights a week during the winter months, between the ages of 10 and 13.

Mr. Parsons. — It would be difficult to get the farmers to give energy to it. Boys who had attended such school regularly would be better in their work for the farmers.

Mr. Canning. — Educated labourers are, in my experience, more contented with their lot than "the clod."

Mr. Parsons. — Farmers in Abbott's Ann cannot get carter-lads in the parish, and are forced to seek them elsewhere, as those in Abbott's Ann are too highly educated for agricultural labour, and go away from the parish. There is a prejudice existing in the minds of the farmers against extended education. A certificate showing too much knowledge on the part of the lad would be rather an objection than an inducement to the farmer to employ him. "Though he has been to school, yet he has good moral character," would be the words of a large class of farmers. The education of the labouring class should be partly technical, partly moral, and partly religious. At present the moral education is very defective when the children are out of school. If a certificate is required from a lad seeking employment it should comprise:—

1. School attendance.
2. Moral character.
3. Proficiency in work.

53. *Joseph Parsons.*—The cultivation is chiefly arable. There are no private gangs in this parish. I employ on my farm of 500 acres one male between 10 and 13, four males between 13 and 18, one married female and one unmarried female, both over 18. The males are employed with horses. The females are employed in spring in weeding corn principally; in summer in haymaking, thinning turnips, &c.; in autumn in harvest work; and in winter in picking turnips. They live near the farm at which they work. The usual hours of work upon the land are from 8 a.m. to 5 p.m.

From the time of leaving home in the morning to the time of return in the evening their hours are about nine and a half. One hour is allowed for meals. Their health is certainly not injuriously affected by their work. The young and females are not subject to any ill-treatment. On my farm there are no special employments which injuriously affect females or the young. I have observed that well-trained domestic servants generally make better labourers' wives (*i.e.*, more cleanly and thrifty) than those who have been brought up to work entirely in the fields. I think no restriction should be placed upon the employment of females in field work. I should not object to the age at which boys should be employed in farm labour being restricted to above 10 years. It is only during hay and corn harvest that young persons work longer than from 8 a.m. to 5 p.m. I think that half day at school and half day at work, alternate whole days at school and whole days at work, and school attendance for a certain number of hours during the preceding six months, are all inapplicable to agricultural labour. If compulsory school attendance be enforced, let it be from the age of 7 till 10, and after that age let encouragement be given to their attendance at night schools in winter, and Sunday schools throughout the year. Our parish is favourably circumstanced in respect of cottage accommodation, still exceptional cases exist in which it is believed that defective cottage accommodation has led to unhealthiness and to immorality also. I think one cottage on large farms and two on smaller ones sufficient for the accommodation of the labourers in this parish. The cottages here are conveniently situated, but the proximity of a large foundry interferes, I think, with cottage accommodation. Several new cottages have been recently built. The Union Chargeability Act is not having any effect in causing an increase of cottage accommodation here.

I give you the rate of wages on my own farm.

Head carter, 11*s.* a week, with cottage and garden rent free, 3*l.* at Michaelmas, 1*s.* each journey from home, beer when drilling and during hay and corn harvest.

Head shepherd, 11*s.* a week and cottage, 5*l.* at Michaelmas, and 1*d.* a head for all lambs bred from 400 ewes.

All labourers have fuel carted free. Carter, shepherd, and one cottager have 100 faggots.

Under shepherds and carters receive from 6*s.* to 9*s.* a week, with their lodgings paid, and sums varying from 30*s.* to 3*l.* at Michaelmas.

Day labourers at present have 10*s.* a week at day work, but average more than 11*s.* at piecework.

Women have now 9*d.* a day.

COTTAGES.

Little Ann.

54. *Rev. T. Best.*

(1.) Large; two rooms and pantries, down.
Four bedrooms.
With garden. 10*l.* a year.
Lodgers taken in at 1*s.* 6*d.* a week.

(2.) Property of small owner.
Down—1 room and pantry.
Up—2 bedrooms.
Very comfortable.
Small garden. 5*l.* 10*s.* a year.

(3.) Double cottage (small owner).
Cost about 300*l.*; mud walls, slate roof, with chimney in centre.
Down—1 sitting room, pantry, and woodhouse.
Up—2 bedrooms.
Small garden. 5*l.* a year. No rates.

Allotment fields, adjoining.

(1.) Property of Mr. Fowler, let at 6*d.* a lug.
(2.) Property of Hon. and Rev. S. Best, let at 2½*d.* a lug.

Abbott's Ann.

55. Cottages the property of Mr. Best, of Red Rice, let at 1*s.* 3*d.* a week, with garden. All have two bedrooms.

Stonehanger Cottages.

56. Double cottages; mud walls and slate roof.
Down—1 room and pantry } in each.
Up—2 bedrooms }
Outhouse and garden.
Rent, 3*l.* 5*s.* a year.
Very dry and comfortable.

Down Farm Cottages.

57. (1.) Double cottage; new.
Down—1 room and pantry.
Up—3 bedrooms.
20 lug garden.
Rent, 1*s.* 6*d.* a week, and 6*d.* a week deducted for lodging of carter-boys.

(2.) Double cottage; old. Mud and slate roof.
Down—1 room and pantry.
Up—2 bedrooms.
Garden.
Inhabited by the carter rent free, reckoned at 1*s.* a week.

Both these set are attached to a farm.

On the estate of Mr. T. Best, of Red Rice, many new cottages are being built *on* the farms at some distance from the villages, in all cases *double*, in some, two or three double cottages close to each other. The old cottages are not so bad inside as the outside appearance would lead one to believe.

AMPORT.

Population - 706; acreage - 3,933.

58. *William Richard Poore.*—The greater part of the cultivation is arable. There are no private gangs in this parish. There are 85 children, young persons, and women employed in agriculture in this parish. 14 are employed on my farm.

The particulars as to number and age are,—

Males:	
Under 8 - - - -	3
Between 8 and 10 - - -	3
„ 10 and 13 - - -	19
„ 13 and 18 - - -	24
Total - - - -	49
Females:	
Between 13 and 18 - - -	7
Over 18:	
Married - - - -	23
Unmarried - - - -	6
Total - - - -	36

Their employment in spring is bird-keeping, weeding, and general farm work; the boys as carter-boys; in summer, spreading dung and haymaking; in autumn, corn harvest and cleaning roots; in winter, assisting shepherds, raking up leaves, and general work. They live on the farms at which they work. As a general rule the hours for females are seven and a half, for males from nine to nine and a half. Reckoning from the time of leaving home to the time of returning, the females are employed from 8 to 5, and the males from 6 or 7 to 5.30 and 6. Half an hour is allowed for breakfast, and an hour for dinner. Females are not ill treated. I do not think their health is affected by their work generally, or by any special employments. I think the employment of females in agriculture is decidedly injurious to their morals and their proper training for domestic duties. This is especially the case with young and unmarried females. I would prohibit all females under the age of 18 from being employed in field work, and I do not recommend that they should be employed even at hay and corn harvest. If it were practicable I should like to prohibit female labour in the fields altogether, excepting at harvest time, and the majority of the

Hampshire.
Mr. Portman.
h.

farmers in this parish concur in this remark, believing that in the long run the families are no particular gainers, all things considered. Females could, however, be employed at sundry work under cover of the homesteads. I would not allow boys under 10 to be employed in farm labour. The work lies pretty close to the cottages in this neighbourhood. The mode of enforcing school attendance most applicable to the circumstances of this parish is, I think, by alternate whole days at school and whole days at work. In my opinion this mode interferes less than any other with the children's duties. The attendance at the parish school is affected by the distance the children have to come, as Amport is a wide spreading parish, and has cottages at three extreme points; but the schools of the neighbouring parishes provide the children with instruction. I should say the school attendance was very little affected by the pecuniary resources of the parents. No efforts, that I am aware of, are being made for the industrial training of the girls. The greater number of the cottages is owned by the Marquis of Winchester, who has done everything in his power of late years to improve them, and render them comfortable for the occupiers; nevertheless, there are too many with only two bedrooms. I consider the proportion of cottages here, which is three to 100 acres, sufficient for the accommodation of the persons employed on the land. The cottages are conveniently situated. Cottages have lately been erected by the Marquis of Winchester on most of his farms. The cottages are not overcrowded. Lodgers are not permitted without the consent of the owner. 25 cottages are modern, some brick, some mud built, and slated or tiled. The remainder of the 94 are old ones, but well sustained, 21 being of flint and brick, and 48 mud built; all are thatched. They all have a kitchen (or living room) and a pantry, with outhouse; 30 have three bedrooms; 57 have two bedrooms; and seven but one bedroom. Rents are as follows:—nine from 70*s.* to 80*s.* per annum; 35 from 60*s.* to 65*s.*; 40 at 52*s.*; and 10 from 20*s.* to 40*s.* As regards ventilation, the cottages are built high and dry, but there is no regular system of drainage. There are casements to most of the windows, and the windows are kept in good repair. The cottages are periodically whitewashed. The water is invariably supplied from wells. The gardens to the cottages belonging to the Marquis of Winchester average 24 perches each, and to those belonging to the other owners 16 perches, but this includes the site of the cottages. There is also a field in the centre of the village let out as garden allotments. It contains 6 acres 1 rod 29 perches, and furnishes as much garden ground as there is a demand for. Since the year 1845 the Marquis of Winchester has expended in building and repairing his cottages (30 new ones, including those for mechanics, have been built) over 6,000*l.*; he found them all in so dilapidated a state. Now they are in good repair. It would be feasible in a few cases to increase the bedroom accommodation.

School Statistics.

In Summer.

Between 10 and 13 -	9	6
Total - -	33	24
Girls:		
Under 10 - -	19	15
Between 10 and 13 -	20	17
Total - -	39	32

There are here two boys between 8 and 10, and one girl between 10 and 13, of the agricultural labouring class, who are neither at school nor at work. There are about 21 males and 11 females growing up with insufficient education. The greater part of these can read and write, but imperfectly only. An evening school is open 16 weeks in the year, from November to February. It is opened for one hour and a half or two hours, two nights a week. There are about 35 scholars, 20 under 12, 15 above 12. The subjects of instruction are reading, writing, and ciphering. The evening school only in a measure supplies the deficiencies of the day school. The principal difficulty in the way of maintaining an efficient evening school is to be found in the proper want of support of the better classes.

GOODWORTH CLATFORD, ANDOVER.

59. *Letter from F. R. Loscombe to Hon. E. B. Portman.*

"Dear Sir, November 16, 1868.

"With reference to the subject of your inquiries, I only feel competent to speak of this immediate neighbourhood.

"1. As to the age at which children are usually employed. Boys are seldom put to constant work till 10 years or more, often 11 years old. Younger boys are sometimes employed in the harvest, which I consider preferable to their being engaged in gleaning, which often conduces to much lawlessness. My experience leads me to believe that if boys are not put to agricultural work early they never take an interest in it, and they become idlers and lawless.

"2nd. Few girls are employed in field work, except in haymaking and harvest. Married women do light work, such as weeding, haymaking, and harvest work. They are rarely exposed to bad weather, and always expect to be allowed to remain at home on such days as they may wish to do so. The hours of work are from 8 to 5, and one hour is allowed for dinner. Many are the wives of the labourers on the farm, and their earnings are a great assistance to their families. The average distance they have to go to their work would rarely exceed a mile, and they generally consider their health improved by employment in the fields.

"Nearly all the boys in this neighbourhood can read, write, and spell fairly well, and also do the common rules of arithmetic. The women employed in the field are generally circumspect in their conduct.

"Yours truly,

"F. R. Loscombe."

60. Extract from Letter from H. Thompson, Esq., of Andover, to Hon. E. B. Portman.

"Sir, Andover, December 16, 1868.

"I beg to acknowledge your note and the accompanying papers. * * * * *

I will, as far as my imperfect ability to do so will permit, give you a general outline of the inhabitants

of our town. The population of the borough is about 5,000, one-fifth of which is rural, and I would leave that part out of the question. The town is inhabited by 200 to 250 tradesmen, shopkeepers, and a few professional men; a portion of the rest are mechanics, and the residue, a very large bulk, labouring poor, some respectable, some the contrary.

"The schools are—*National*, boys, girls, and infants, 210 on the books; *British*, mixed, about the same number; two other infant schools, say 100. So there must be a long lot uneducated, and the general attendance, as a whole, is irregular. The difficulty as regards attendance lies with the parents, not with the children. Children are, as a rule, sent to work at whatever age they may be if any employment is offered them. Boys are taken as errand boys, shop-helpers, &c.; they are also employed as plough-boys, cow-boys; for instance, I have one of the latter, say 10 years old, if I were to turn him adrift he would go somewhere else, but *not to school*, if work could be got.

"Women, from girlhood to old age, are employed in the fields in a desultory way; few are in regular farm employ; this, I fear, has a degrading influence on morals, but perhaps not more so than many other employments. The great evil on that point is the wretched and unhuman way in which the poor are lodged, and the dreadful and promiscuous crowding in their miserable dwellings. My opinion is that a Building Act would obviate much of this. There is no actual system of ganging here; the nearest approach to it is in the work of bark-cleaning. A man undertakes this sort of work, and employs women and children under him to clean the bark by scraping from it the moss, &c.; they are paid so much per cwt., a very small pittance. A good 'woman-hand' may earn 8*d.* a day; a child (doing the work badly) perhaps 3*d.* a day; they work in a desultory way, coming and going just as they please, leave for a week, and come on again; there is no regularity in the employment; sometimes a dozen are at work, sometimes two or three; only the lowest class undertake it. This sort of people go out hop-picking in the season, and migrate to that employment; in winter some of them pick up a precarious penny gathering watercresses and such like. They are a sort of local and parochial gipsies, getting through life anyhow. I have come to the conclusion that the remedy necessary for these evils (and very necessary it is) is to frame enactments restricting both the employers and the employed, and attach no light penalty to the contravention of those enactments. I hold the idea that this would have the effect of keeping the children at school to a proper and sufficient age from lack of other employment, and thereby fit them better for work. At any rate I would try it, and if the plan should not succeed, then have recourse to compulsory education.

"Yours, &c.
"H. Thompson."

TUFTON.

Population - 142; acreage - 1,552.

61. *George Butler.*—The cultivation is mixed. Boys are employed in agriculture here from 11 to 13 years of age; some are employed yearly, others of them occasionally during the hay gathering and harvest. No girls are employed. Women are employed in weeding, haymaking, and in the harvest, commencing in April or May. The young persons and women employed here go to work to a distance of a quarter of a mile or half a mile, as the fields may be situated; they work from 8 until 5. In a small village like this I would not place any restriction on the age at which boys should be permitted to work on the land. The agricultural labouring class avail themselves of a day school in this parish, and also of a school supported by the Countess of Portsmouth in an adjacent village. The cottages in this neighbourhood are good and sufficient; they are well ventilated, and well supplied with water; they have good gardens, and likewise convenient allotments of land.

OVER WALLOP.

Population - 508; acreage - 4,632.

62. *Rev. H. Fellowes.*—The cultivation is arable. 78 children, young persons, and women are employed in agricultural labour in this parish. The particulars as to number and age are—

Males:	
Between 8 and 10	2
„ 10 and 13	18
„ 13 and 18	8
Total	28
Females:	
Between 8 and 10	6
„ 10 and 13	3
„ 13 and 18	1
Over 18—Married	40
Total	50

They are employed, in spring, in weeding, minding horses, &c.; in summer in haymaking; in autumn in harvesting and pig-keeping; in winter in stone-picking and machining; they live on the farms at which they work; their hours of work are 6 to 5 in summer, 7 to 5 in winter; they are allowed half an hour for breakfast, and an hour for dinner; their work does not injuriously affect their health. The females are not subject to ill-treatment. Exposure to the weather in weeding and pig-keeping acts injuriously upon females and the young generally. The employment of females in agriculture is decidedly injurious to their morals and their proper training for domestic service. I would not permit females to be employed in the fields *when men are to be had.* I would not allow boys under 10 to be employed in farm labour. I think it advisable to restrict the distance to which children and young persons should be allowed to go to work in farm labour. I think that no boy between the ages of 10 and 13 should be taken to work beyond a distance of two miles; that no young person between the ages of 13 and 15 should be taken beyond three miles; and that none between the ages of 15 and 18 should be taken more than four miles. I think boys under 12 should not be allowed to conduct horses and waggons. As long as wages are at the present rate neither the half-day at school and half-day at work, nor alternate whole days at school and whole days at work, nor school attendance for a certain number of hours during the preceding six months, would be satisfactory to the farmer or beneficial to the children. Very few of the children live beyond a quarter of a mile of the school. The school attendance is not at all affected by the pecuniary resources of the parents, as all can afford 1*d.* a week. No efforts are being made here for the industrial training of girls. The immorality consequent on the crowding of bedrooms is notorious. There are in this parish two cottages to 100 acres; this is not sufficient for the accommodation of the persons employed on the land. There should be $2\frac{1}{2}$ to 100 acres. The cottages are conveniently situated, but there is not a sufficient number with two or three bedrooms. The cottages here mostly have a sitting room and one or two bedrooms; some have a back kitchen. The ventilation and drainage are fair. There is a good water supply. The cottages have gardens or allotments. They are owned by landowners and tenant farmers. The rent varies from 2*l.* 10*s.* to 3*l.* 10*s.* Some of the cottages are *lifehold*, which is very injurious, neither the lessee nor the

Hampshire.
Mr. Portman.
h.

landlord being interested in repairing them. The Union Chargeability Act is working most mischievously; it causes a decrease of cottage accommodation.

School Statistics.

In Winter.

—	On the Register.	In average Attendance.
Boys:		
Under 10 - -	51	39
Between 10 and 13 -	2	1
Total - -	53	40
Girls:		
Under 10 - -	36	25
Between 10 and 13 -	10	10
Total - -	46	35

There is nearly the same number in summer as in winter. There are about 10 girls between the ages of 10 and 13 who are neither at school nor at work. There are about 6 young persons growing up with insufficient education. There is an evening school in the parish, open 16 weeks in the year, two nights a week, two hours each night. The number of scholars is—

In Winter.

—	On the Register.	In average Attendance.
Under 12 - - -	3	3
Above 12 - - -	39	25

The subjects of instruction are reading, writing, and arithmetic. I consider that the evening school adequately supplies the deficiencies of the day school. The principal difficulties in the way of maintaining an efficient evening school are that some boys work late, and that in some seasons there is a deficiency of teachers.

SOUTH TEDWORTH.

Population - 240.

63. *Rev. H. Delme Radcliffe.*—The cultivation is mixed. 4 males between the ages of 10 and 13, and 6 between 13 and 18 are employed here, and also 12 married and 3 unmarried females, all over 18. They work 9 hours a day, and are allowed an hour for each meal. Their health is not injuriously affected by their work, and they are not subject to ill-treatment. I find that the employment of females in agriculture is very much on the decrease in this parish. As a rule, the girls all go out to domestic service. It is only some few girls who have not done well at service, or married women without incumbrance, who wish for employment in field work. I would not place any restriction on the employment of females in field work, as I consider the evil is curing itself as fast as possible. Boys under 10 should not be permitted to be employed in farm labour. I see no reason, in this parish, for recommending any restriction as to the distance to which children and young persons should be allowed to go to work in farm labour. I think that no child should be employed in agriculture until he has learnt to read and write fairly. The school attendance is not affected by the distance the children have to go to school; at the present time the children who have farthest to go to school (about two miles) are most regular. I think that none find the weekly payment a serious impediment to sending their children to school. The cottages here are very much improved of late; most are provided with three bedrooms. One or two more, with three bedrooms, might be added with advantage. The cottages are conveniently situated, and are not overcrowded; they are well supplied with water and other necessaries; they all belong to one landowner; and the rent charged is 1*s.* a week.

School Statistics.

In Summer and Winter.

Total - -	18	14
Girls:		
Under 10 - -	15	13
Between 10 and 13 -	5	4
Total - -	20	17

An evening school is held from October to March; it is opened four nights a week, 2½ hours each night; about 20 scholars attend, 10 under 12, and 10 above 12. The subjects of instruction are reading, writing, and arithmetic. As a rule, the boys are very willing to come during the winter, and are very attentive. I consider that the evening school adequately supplies the deficiencies of the day school.

WEST TYTHERLEY.

Population, 461 - acreage, 2,270.

64. *Rev. J. A. Scott.*—The cultivation is mixed. There are no private gangs. 35 males (13 between the ages of 10 and 13, and 22 between the ages of 13 and 18), and two unmarried females over 18, are employed in this parish. Their work in spring is ploughing, sowing, &c.; in summer, haymaking and harvest; in autumn and winter, ploughing, sowing, keeping sheep, &c. They live on or near the farms on which they work. Their usual hours of work are 9 or 10 hours a day, with half an hour for breakfast, and an hour for dinner. Their health is not injuriously affected by the demand upon their physical powers, or by any special employments. They are not subject to ill-treatment. I would not allow a boy under 10 to be employed in field work. The only way in which it seems practicable for lads employed in agricultural districts to attend schools, is by attending night schools during the winter months. The school attendance here is not at all affected by the distance the children have to go to school, or by the pecuniary resources of the parents. The cottage accommodation is good. The proportion of cottages here is rather more than three to every 100 acres. Two cottages per 100 acres is fully sufficient for the accommodation of the labourers. The cottages are conveniently situated, and are not overcrowded. They have good sized rooms, good ventilation and drainage, good gardens, outhouses, and water supply. They all have two rooms downstairs, and two bedrooms. Very many have three rooms below and three above. They are owned by the landlord. The rents are from 2*l.* 10*s.* to 3*l.* per annum.

Nearly all the children that can do, attend school. An evening school is open about 18 weeks in the year, from October to March inclusive. The hours are two for each of three nights a week. The number of scholars is—

	On the Register.	In average Attendance.
Under 12	7	6·1
Above 12	26	19

They are instructed in reading, writing, arithmetic, and Scripture. I think that the evening school very fairly supplies the deficiencies of the day school. There is no difficulty in maintaining an efficient evening school.

---

65. *Rev. Geo. J. Davis*, Hall Place, near Romsey.—We are a simple village here, with ordinary schools day and night. All my labourers live in my own cottages on the farm, four cottages to 250 acres. I only employ women a few days in the spring, weeding corn with long-handled spuds, and very seldom except at these times and in hay time. In harvest they tie up sheaves for their husbands.

Boys under 13 are sometimes used to drive plough or keep off birds, but we like not to have too many together, on the principle "that one is a boy, two "boys is half a boy, and three boys is no boy at all."

Two cottages to 100 acres would no doubt be good. * * * * There are, I suppose, counties in which gangs of children are employed, and where inquiry may be necessary; but as far as my personal knowledge goes, it seems to me unnecessary.

HEADLEY INCORPORATION.

	Acreage.	Population.
Bramshott	6,486	1,366
Headley	7,090	1,319
Kingsley	1,752	441

66. *C. Bridger*, clerk.—The population of the three parishes is almost entirely employed in agricultural pursuits.

Children are employed at about 12 years of age.

Women and girls are employed in harvesting, hopping, &c. The hours of work are about eight; the distance to work about a mile on an average.

There are available means of education in each parish.

OLD ALRESFORD.

Population, 526. - Acreage, 3,608.

67. *Rev. George Henry Sumner.*—The cultivation is chiefly arable. There are no private gangs in the parish. About 37 children, young persons, and women are employed here in agricultural labour.

Males:	
Between 8 and 10	3
„ 10 and 13	6
„ 13 and 18	12
Total	21
Females:	
Over 18, married	16
Unmarried	—
Total	16

In spring they are employed in weeding, &c.; in summer in turnip hoeing with their husbands; in autumn in mangold cutting and stone picking; and in winter in leafing and stone picking. They live near the farms on which they work. The usual hours of work are from 9 to 5 in summer, 9 to 4 in winter. From the time of leaving home in the morning, their hours are about eight and a half. An hour is allowed for dinner. I think exposure to all weathers makes them prematurely old. The females are not subject to ill-treatment, and are not injuriously affected by any special employments. In this parish those who are going out to domestic service rarely go into the fields except at hay time; it is the married women who go. I would not place any restriction upon the employment of females in field work. If a woman is left a widow, and is in fair health, the Board of Guardians allow for the children, but suppose that she will earn her livelihood. Unless she can take in washing, she can earn it only in the fields. I would restrict the age at which boys should be permitted to be employed in farm labour to 10 years. I think it is impossible to restrict the distance to which children and young persons should be allowed to go to work according to age. I do not think in practice you would get so complicated a machinery as the plan proposed, constantly fluctuating in individual cases, to work well. A month or two might make the difference legally, but a parent making the objection might very likely receive warning himself from the employer. Speaking for this parish, there are no reasons for placing any restrictions upon the hours of work of children and young persons. I do not myself think that the half-time system of enforcing school attendance could for many reasons be worked in *ordinary* agricultural parishes. The only chance of retaining the lads under education is by night schools. The school attendance is very much affected here by the distance to which the children have to go to school, but not at all by the pecuniary resources of the parents because no fees are paid. There is an industrial home in the parish for training girls with especial reference to domestic duties. The cottage accommodation in this village is inadequate. Undoubtedly the way in which grown-up members of a family occupy the same room gradually lowers their sense of decency and propriety. I do not see that in this parish their health is affected by overcrowding. In addition to the 3,600 acres, there are 490 acres of grass fields, extra-parochial, worked by the labourers of this parish. In these 4,000 acres we have about 90 cottages; these are not sufficient. Generally

Hampshire.
Mr. Portman.
h.

speaking the cottages are conveniently situated; they are too small, and some are overcrowded. The cottages in this village, with the exception of four built by one of the landed proprietors, are not good. They are thatched and low; many of them have only one sleeping apartment. A non-resident propietor owns the larger number. The parish some years ago raised a loan on the security of the rates, and built some to provide more accommodation, and to these in the spring, I hope, unless anything unforeseen occurs, to add an extra sleeping apartment. The rent is in many cases 1*s.* a week, in others 1*s.* 3*d.*, in a few instances 2*s.* Almost all have fair gardens. Several cottages have been built here within the last few years. The Union Chargeability Act is not causing an increase of cottage accommodation. When three sleeping apartments are provided, and no lodgers allowed to be taken in, you often find one of the bedrooms used as a lumber room. Building is dear in this neighbourhood, and I do not think good cottage building would ever pay as a speculation.

We have about 140 on the books of our school here, and one at Armsworth. There being no school fee, all our children come to school, and leave only when they are fit for service. We take them at 18 months old at the school. About 15 males and 10 females of the agricultural labouring class are growing up with insufficient education. I find that those who live at a distance from the school, say one mile and a half, are not properly educated; and then lads come at Michaelmas from their places who are ill educated. There is an evening school.

68. *Mrs. Parris.*—I used to work in the fields, turnip hoeing, couch pulling, dung spreading, and topping mangel. I never did any piecework except at harvest.

Wages for women are 8*d.* a day.

I would never let my little girls go to field work; it ruins them and makes them idle.

Boys earn 2*s.* 6*d.* a week at 9 or 10 years of age. Men's wages are now 10*s.* a week. My husband is a shepherd, and gets 11*s.*, and 2*l.* at lambing time.

Mrs. Parris' Cottage.

Downstairs, one room and back house; two bedrooms, inhabited by man and wife, three lads of the ages of 17, 14, and 11, and one girl of 14 years. Rent, with garden, 3*l.* 3*s.* a year; repairs done by tenant.

Miss Onslow's Cottages.

69. Row of four.

1. Two end cottages, rent 5*l.* a year. Downstairs, one room and pantry; upstairs, three bedrooms; pigstye and large garden.

2. Middle two. One room and pantry downstairs; three small bedrooms upstairs; pigstye and fair-sized garden; 4*l.* a year.

The inhabitants have allotments also.

70. *Mrs. Merrit*, wife of a labourer.—My cottage is a "parish one," with garden, rented at 1*s.* a week. One room downstairs and one upstairs, man and wife and four children living in it; the two eldest boys are 13 years and 12 years of age, *the boy of 13 years* is a shepherd boy, earning 4*s.* 6*d.* a week, and lives at home. The hours of work in summer are very long. The one of 12 years drives plough, 3*s.* 6*d.* a week, lives at home, attends night school.

INDUSTRIAL SCHOOL, WINCHESTER.

71. *Mrs. Horniblow*, matron.—There are 12 girls in the school, of ages varying from 12 to 15 years. They remain generally for two years. They are allowed to go out for a job of work. There is no schoolmistress; the teaching is done by ladies. Five of the girls go out for school.

Some of them have gone out to good places.

Girls are taken from all places. The school is not exclusively for Winchester.

There was one girl of 9 years, one of 10 years, one of 11 years.

INDUSTRIAL SCHOOL, OLD ALRESFORD.

72. Built and supported by Miss Onslow (under Industrial Schools Act).

There are 34 girls now in the house, of ages varying from 11 to 19 or 20. They are taught reading, writing, and arithmetic under a schoolmistress.

Payment, 12*l.* a year.

Eight girls are taken every fortnight for the work of the laundry. They go to lessons every evening and on Saturday morning. There are two girls employed in the kitchen who are changed every fortnight, and one kept regularly. These go to school in the evening.

The house work is done by two girls working all the morning, and three others who are only employed till school time, *i.e.*, 11 o'clock. These also are changed every fortnight.

Washing is done for 113 people.

The officers are a matron, a governess, and a laundress. The building is excellently arranged, and there is a good garden attached.

CHILCOMB.

73. *J. Stratton.*—The cultivation is chiefly arable. No gangs, public or private, exist in this county. Ten males between 10 and 13, and 10 between 13 and 18, and six married females are employed here in spring in weeding and hoeing corn, in summer also in hoeing turnips and haymaking, in autumn in turnip hoeing and harvesting, and in winter in threshing, hedging, &c. They live mostly near the farms at which they work. The usual hours of work are 10 hours in summer and eight in winter, enclusive of meal times. I do not think their work injuriously affects their health, nor do I think there are any special employments injuriously affecting females or the young. I think any restriction placed on the liberty of females to work in agriculture would be unnecessary and prejudicial, for I consider that they are the best judges of what is best for themselves; they do not work at any other time except hay time and harvest time, unless in exceptional cases necessity drives them to do so. In fine weather farm work is healthy; it is this alone that counteracts the evil influence of their unhealthy and demoralising cottages. I see no reason for recommending that the distance to which children and young persons should be allowed to go to work in farm labour should be restricted according to age. Boys under 10 and girls under 13 are of no use in agriculture, and they are so seldom employed that it is not worth the consideration of the legislature. I would not place any restriction upon the hours of work of children and young persons employed in agriculture.

The inhabitants of off-lying cottages are often prevented from attending school by reason of the distance. No efforts are made for training girls with especial reference to preparing them for their domestic duties. The bad cottage accommodation is the root of nearly all the evils which affect the farm labourer and his family. It is absurd to spend so much money in schools when the evil influence of a disgusting home more than counterbalances the good that can be instilled at school. I think that the first expenditure under the head of education should be laid out in improving the cottages. The present system seems to me like building the roof of a house before the foundation. The proportion of cottages in the parish is one and a half per 100 acres. This is sufficient for the accommodation of the persons employed on the land. The cottages are conveniently situated. Many of them have only one bedroom, and they are overcrowded. The cottages which are inhabited by farm labourers have from one to three bedrooms. The few new ones are good, containing two downstair rooms and three bedrooms, with enough garden for growing vegetables for an ordinary family. The old cottages are as bad as any I have ever heard described. They are slowly being replaced by good new ones. The Union Chargeability Act is having no effect in causing

an increase of cottage accommodation. I think that the present unjust law, which causes the poor rate to be levied from only land and houses, acts most prejudicially against cottage building, inasmuch as directly money is taken from the funds to build houses, or in any other way to improve an estate, it is burdened with a 10 per cent. tax.

Mr. Stratton's Farm.

Cottages.

Four very bad and old. Ground floor only. Rent, 1*s.* a week. No garden. One of these has only two rooms, with no pantry or other place.

Two together.

(1.) Ground floor only. 1*s.* a week.

(2.) 1 room down.
2 rooms upstairs.
With garden. Rent, 1*s.* a week.
No back doors to any of them.

The parish of Chilcomb has no school, the children go to Winchester.

Mr. Stratton holds 1,700 or 1,800 acres under the Dean and Chapter of Winchester, and had 15 cottages attached. They are all in want of repair.

---

74. *Mr. Dear*, farmer.—Holds 900 acres.

The carter lads are hired at Michaelmas by year, formerly at fairs. They sign a written agreement, generally at the end of a week after entering service. A lad of 16 years to 18 years will get 7*s.* a week and 6*l.* or 7*l.* at Michaelmas; younger ones get 5*s.* a week and 3*l.* at Michaelmas. They are lodged in the carter's house and pay for their board. A carter with a team of six horses has two lads under him.

Women are employed, but not nearly so much as formerly; they earn 8*d.* a day.

I do not think that a restriction on the employment of children under 10 years of age would inflict any injury on the labourers or the employers.

I should like night schools more generally established. The carter lads attend pretty well when there is one near enough.

I do not know of the existence of any gang system in this county, or of any contract for weeding corn, or piecework being taken by one person and underlet.

More cottages are wanted for the farms, though I do not know of much overcrowding on Lord Ashburton's estate.

The cottagers generally have gardens or allotments.

Men's wages, 10*s.* a week, lately reduced according to price of bread.

BURITON, near PETERSFIELD.

Population - 1,050; acreage - 6,305.

75. *S. Seward.*—There are about 2,000 acres of down here; about two-thirds of the rest is arable, one-third pasture, and about 50 acres of hops. Boys begin to be employed in agriculture about 11 or 12 years old, and are employed all the year. Girls are not employed, they all go out to service. The labourers' circumstances have much improved in the last few years, and their wives in consequence will not work so much as before; they are employed in tying hops, weeding corn, haymaking, &c. Women will go no distance to work; children and young persons live mostly close to their work, but I have three boys of 13 years of age who live a mile off. I would place no restriction on the age at which boys should be permitted to work on the land. From 10 to 12 years old a boy could mind birds, sheep, or pigs, or do other light work, and earn the rent of the cottage and garden, and be kept out of mischief himself. When a man has piecework in hop-ground, dibbling corn, harvest, &c., his young girls would be safe and a great help to him. But there are very grave objections to their working with other men and boys, or where they have far to go home afterwards. There are infant and Sunday schools as well as National and British schools. The children all go to school. The cottages are generally very good and conveniently situated, well supplied with water and ventilated. They are not quite sufficient for the demand from labour, but there is not much overcrowding. The cottages have all good gardens or allotments close at home. A well-built brick double cottage was put up in the parish 10 years ago. The family in the south end was never free from fever, and two children died. Four years ago the south end wall was weather tiled, and there has not been a single case of illness since.

BOTLEY.

Population - 860; acreage - 1,817.

76. *William Warner.*—The cultivation is chiefly arable. There are no private gangs in this parish. I employ on my farm 17 young persons and women, three males between 10 and 13, 10 between 13 and 18, and four married women over 18. The boys are employed all the year with horses and in minding sheep. The women are rarely employed in the winter, but the rest of the year they are engaged in weeding. They live on or near the farms on which they work. The males work from 6 a.m. to 5 p.m.; the females from 8 a.m. to 5 p.m. They are allowed half an hour for breakfast, and an hour for dinner. Their health is not affected by their work; they are not subject to ill-treatment, nor are they injuriously affected by any special employments. I think it highly objectionable that unmarried females should work in the fields at all, as it is highly injurious to their morals, and unfits them for domestic duties. I am not prepared at present to go so far as to recommend legislative restriction. I should recommend that boys under 10 years of age should not be permitted to be employed in farm labour. I think it very injurious that not only children, but also able-bodied men, should have a long distance to and from their work. I would not place any restriction upon the hours of work of children and young persons employed in agriculture. I think that neither of the modes of obtaining school attendance provided by the Factory Act and the Printworks Act would be applicable to the circumstances of this parish. The school attendance here is not at all affected by the distance that the children have to go to school, there being two night schools in the parish, one at each end. It is scarcely at all affected by the pecuniary resources of the parents. The girls are taught needlework in the school.

Generally speaking the bedroom accommodation of the cottages is insufficient. There are not enough cottages with three bedrooms. Some are overcrowded with families, some with lodgers. The proportion of cottages in the parish is three to 100 acres; this is sufficient for the accommodation of the persons employed on the land. They are conveniently situated with respect to the farms on which the work is to be done. If landlords would be content to receive the same interest for their money on cottages as on the land, it would be an advantage to both landlord and tenant, as cottages might be built to pay 3½ to 4 per cent. interest.

School Statistics.

In Summer.

	On the Register.	In average Attendance.
Boys:		
Under 10 - -	47	38
Between 10 and 13 -	3	2
Total - -	50	40
Girls:		
Under 10 - -	53	44
Between 10 and 13 -	12	9
Total - -	65	53

Hampshire.
Mr. Portman.
h.

In winter the attendance is much the same as in summer. There are very few indeed who are neither at school nor at work. It is impossible to ascertain the number of young persons growing up with insufficient education. Some can read imperfectly, but do not appear to have much understanding of what they read. This number, however, is diminishing year by year. There are two evening schools in the parish. They are open about 20 weeks in the winter. They are open three nights a week for an hour and a half each night. There are 25 scholars above 12 on the register, and 20 in average attendance. The subjects of instruction are reading, writing, and arithmetic. The school by no means supplies the deficiencies of the day school. The principal difficulties in the way of maintaining an efficient evening school are (1) that men will not attend with boys, (2) an insufficient staff of teachers of a grade above that of the scholars, (3) the difficulty of maintaining discipline when the attendance is voluntary.

77. Capt. Best, Chairman of Stoneham Board of Guardians, W. Warner, Esq.

Mr. Warner's wages paid on a farm of 700–800 acres, small enclosures :—

One boy, 11 years old, 3*s.* a week.

Two boys, 12 years old, 4*s.* 6*d.* a week each, carters.

Two boys, 13 years old, 5*s.* 6*d.* and 5*s.* a week each, carters.

One boy, 14 years old, 5*s.* a week, carter.

Four boys, 15 years old, two 5*s.*, two 5*s.* 6*d.* a week each, carters.

One boy, 16 years old, 5*s.* 6*d.* a week, carter.

Two boys, 17 years old, one at 6*s.*, and one at 7*s.* a week, who works on Sundays.

In the South Stoneham union house there is a separate place for girls of 14 years and upwards, where eight at a time are taught cooking and household work ; while at school they learn washing.

There is a school at each end of Botley parish, 1½ miles apart, both under Government inspection.

Mr. Warner has from 20 to 25 cottages ; he finds great difficulty in preventing the taking in of lodgers.

The inclosure of commons has led to the building of many more cottages than formerly existed on the same acreage.

The provisions of the Lands Improvement Acts are too expensive.

Wages for men, 11*s.* and 12*s.* a week ; they have also a great deal of task work.

Women earn 10*d.* a day.

Turnip hoeing is done by the piece by men.

Weeding of corn by the day by women.

There is no payment in kind.

Carter boys are hired by the year at Michaelmas, and are lodged in the house of the head carter. Mr. Warner pays the carter 1*s.* a week for "doing for" each lad ; they board themselves, and get vegetables in exchange for work done in the carter's garden.

There are no hiring fairs in this part of the county.

The cottages for the most part have gardens sufficiently large to supply the vegetables for the use of the family during the greater part of the year.

There are some holders of small pieces of land cultivated for market produce rented at 45*s.* an acre, worked by men and their children. These men work occasionally for the farmers.

Many of the cottages in Botley are owned by speculators and small shopkeepers, are let at 2*s.* 6*d.* and 3*s.* a week, and are much crowded.

There are several benefit clubs in the place ; we think the labourers would be very jealous of any interference by Government in the management of their money.

There are two brickyards.

SOPLEY.

78. *Rev. W. H. Lucas.*—Nearly all the cottages in this parish have been in the hands of two proprietors, one of whom, the late Colonel Fane, made it a condition in letting a cottage that the children should be sent to school, and the other has had education still more at heart, consequently we have had exceptionally good attendance at the two schools here. Nor are the farmers at all anxious to take the boys away from school at an early age. We have no agricultural gangs, nor is the employment of women in farm work, except at harvest, at all prevalent.

The difficulty we meet with is what I am afraid no legislation can reach, the total indifference shown by the ordinary farm labourer to any knowledge beyond the bare mechanical act of writing.

I have had during this winter a night school of about 30 lads of all ages, from 18 to 21. They delight to come and write copies, but I have the greatest difficulty in coaxing many of them to attempt the simple rules of arithmetic. Some who have been fair cipherers at day school have nearly forgotten addition, and don't care to renew their acquaintance with it. They meet with very little encouragement from the farmers to improve their minds, and "they don't see "the good of it."

NEW FOREST BOARD OF GUARDIANS.

January 4, 1869.

79. A committee of nine gave the following evidence :—

Boys are employed in bird and sheep keeping at 8 years of age, at a wage beginning at 3*d.* a day, rising to 2*s.* 6*d.* a week at 10 years, when they go to plough. It was thought that 8 years would be a good age to fix as the limit below which no child should be employed in field work. If boys were not allowed to work before 10 years they would hereafter be bad labourers ; the labouring parents would suffer more loss than the employer by the limit being placed at 10 years.

Girls are not employed in the fields. Women weed the corn. Men hoe the turnip crop by the piece, sometimes taking children with them. Hedging and draining are also done by the piece. Carter boys are not hired by the year, nor do they live in the farmhouses, but at home.

Wages.—Ordinary labourer, 10*s.* to 12*s.* a week throughout the union.

Carter gets 1*s.* a week more, and house and garden rent free.

The average weekly earnings throughout the year were said to be 14*s.* or 15*s.* a week.

Farms vary in size from 100 to 600 acres. There are also some small holders working their own land, and rarely employing a labourer, except in summer, these men are too often worse off than many a man who comes for parish relief.

Cottages in Fawley are rented at 1*s.* a week, with a garden ; they are dearer in other parts of the union. Gardens are usually attached to the cottages, the allotment system is not much in vogue.

Fuel on the borders of the new forest is cheap, cottagers having rights of cutting turf, &c.

The union is well supplied with schools, and people are beginning to take advantage of them, and to be more careful for the education of their children.

A system of half-day or alternate days for work and school is impracticable in agricultural districts. Night schools are popular as a means of supplementing the day school.

The inclosure of commons is beneficial to the poor ; more land being put under cultivation, more dwellings built for the labouring class, and a more civilized mode of life introduced.

Many people in the New Forest live entirely on forest rights, they keep pigs and cows running on the forest.

FAWLEY DISTRICT.

80. *Fredk. Fry*, relieving officer.—The district is very thinly populated. About 4,500 inhabitants in the Fawley division, which is nearly one-half of the union. There are schools at Dibden, Hythe, Fawley, Beaulieu, and Exbury.

The cottages are pretty good, though scant in number in Dibden and Exbury; where they are crowded there is much demoralization. A few children begin work at 7 years of age. Men's wages, 10*s.* a week.

Women do not work in winter, except occasionally for turnip pulling at 6*d.* or 8*d.* a day. They do not hoe turnips in the spring, sometimes they weed corn; the children do not weed.

BRAMSHAW.

	A.	R.	P.
Population - 746; acreage -	1,720	3	9

81. *Isaac Fielder*, relieving officer.—The cultivation is mixed. There are no private gangs in this parish. About 13 males between the ages of 13 and 18 are employed on the farms all the year round, as carter boys, and also in other light work suitable to their ages and strength. Single and married women are employed "individually" in hay and harvest seasons. They live on or near the farms on which they work. Their usual hours of work upon the land are from 7 a.m. to 5 p.m. from November to February; from 6 a.m. to 6 p.m. during the rest of the year. Half an hour is allowed for breakfast, and an hour for dinner. The demand upon their physical powers does not at all injuriously affect their health and constitution. I never heard a single complaint made by any one as to ill-treatment. There are no *special* employments on the farms in this parish; there is one usual routine of work of a healthy character. I would not place any restriction on the employment of females in field work. I would not allow boys under 10 years of age to be employed in farm labour. I think that no labourer ought to reside at a greater distance than one mile and a half from his work. Taking into consideration the ages of the young persons employed here (between 13 and 18), the hours they work, and the easy distances they have to go, I do not recommend that any restriction should be placed upon the hours of work of children and young persons. I think no alteration is required for this parish in the present system of obtaining school attendance of the children. The school attendance is not at all affected by the distance the children have to go to school. Gentlemen and ladies who live in the neighbourhood, and who study the interests of the poor, assist the parents of large families in their school payments. No efforts are being made here for the industrial training of girls in connexion with elementary education. The cottages of the labouring class are, on the whole, good and sufficient. I think *here*, where the land is "mixed," one cottage per hundred acres is sufficient for the accommodation of the persons employed on the land. There is that proportion here. The cottages are conveniently situated. Those occupied by large families have two bedrooms, and in some cases three. They are not overcrowded. They are constructed of brick, with rooms 11 feet by 10 feet. The ventilation and drainage is sufficient. They have two rooms, with a back room for washing purposes; sufficient supply of good water; large gardens (adjoining in most cases) or allotments of garden land near. The cottages on the farms are the property of the landlord. Other cottages in the parish, occupied by farm labourers, belong to gentlemen and others living in the parish. The average of cottage rent is 4*l.* a year.

The boys' schoolroom is new, lofty, dry, and well ventilated, 40 feet by 18 feet. The girls' schoolroom is attached to the teacher's residence, and is 40 feet by 16 feet. There is a suitably sized room adjoining for "infants." All are in good condition. There are—

	On the Register.	In average Attendance.
Boys:		
Under 10 - -	21	
Between 10 and 13 -	13	
Over 13 - - -	2	30
Total - -	36	
Girls:		
Under 10 - -	36 (20 in infant school.)	
Between 10 and 13 -	14	64
Over 13 - -	5	
Total - -	75	

There is a night school open 13 weeks in the year. It is open two hours a night for two nights a week, and is attended by 32 scholars, 10 under 12, and 22 above 12. The subjects of instruction are reading, writing, and arithmetic. This school supplements the other by giving boys who have left the day school an opportunity of retaining what they know. I find no difficulties in the way of maintaining an efficient night school.

BEAULIEU.

Population - 1,300; acreage - 8,888.

82. *George Richardson.*—The cultivation is mixed. There are no private gangs. 100 boys and 75 women are employed in agricultural labour in this parish. I employ on my farm four boys and three women.

The following are the particulars as to age, &c.:—

Males:	
Between 10 and 13 - - -	80
„ 13 and 18 - - -	20
Total -	100
Females:	
Over 18, married - -	60
„ unmarried - -	15
Total -	75

In spring they are employed in weeding; in summer in weeding, haymaking, and harvest; in autumn in turnip cleaning; and in winter in threshing. They live on or near the farms at which they work. Those who do not live on the farm leave home at a quarter to 8 and return at a quarter past 5. Their hours of work upon the land are from 8 to 5. They are allowed one hour for meals. I do not think their health is affected by their work. I do not think any special employments injuriously affect females or the young generally. Females are not subject to ill-treatment. No encouragement is given to young females going to farm work in this parish, as it has a tendency to lower their morals. I think it desirable that no female under 18 should be allowed to go to farm work. I would not allow boys under 10 to be employed in farm labour. Young persons should be employed from 8 to 5, with one hour for meals. Some of the children have to go two miles to school. The school attendance is not in any way affected here by the pecuniary resources of the parents, because when the parents cannot afford to send their children Lady Henry Scott pays for them. Efforts are being made here for the industrial training of girls. Two cottages to 100 acres are sufficient for the accommodation of the persons employed on the land in this parish. There is that proportion here. The cottages are conveniently

Hampshire.

Mr. Portman.

h.

situated and are not overcrowded. Every cottage in this parish belongs to Lord Henry Scott, and has a living room 12 feet square, scullery 9 feet by 12 feet, pantry and porch 12 feet by 9 feet; three bedrooms. Every two cottages have a water supply and thorough drainage. Every cottage has at least 20 perches of garden, with pigstye, privy, and turf-house. The rent is 1*s.* a week, and is paid direct to the landlord. The Union Chargeability Act is causing no increase of cottage accommodation.

PUBLIC MEETING AT FORDINGBRIDGE, January 14, 1869.

83. Sir Edward Hulse, Bart., the High Sheriff of the county, occupied the chair, and the following other gentlemen were also amongst those present:—The Hon. and Rev. S. Best, the Rev. W. J. Yonge, the Rev. R. P. Warren, the Rev. H. W. G. Awbrey, the Rev. E. Dew, the Rev. S. Harvey, Messrs. J. Egremont, W. J. Jeans, J. Ridley, Major Absalom, R. M. Davy, J. Stanford, C. Pinniger, J. Lewis, W. T. Chubb, H. Hall, J. Morrice, J. Coombs, W. F. Haydon, H. Hayter, &c.

Mr. John Ridley, of Damerham, thought the employment of girls in that neighbourhood was so very little that they could form no opinion of it. They hardly ever saw young girls at work, and as to young boys, it was only for about four months of the year that they were of use on the arable lands, in weeding and cleaning turnips, so that they had eight months of the year left for their education.

Mr. Portman.—Between what ages?

Mr. Ridley replied, between the ages of 8 and 12. It was not only his own opinion, but that of many others whom he had asked about it, that it would be undesirable to make any legal restrictions as to the employment of those young children in agriculture, because, as he had said, the comparatively short period of the year during which they were employed left ample time for them to learn reading and writing, and a moderate amount of arithmetic. He had had some experience in the employment of girls, though not there, and he had always found that girls of from 10 to 13 were serviceable, and the work had no bad effect upon their after-life, though it had upon girls above that age. In a place with which he was connected in another county they had a private gang. Now they were told that the gang was a very bad system, but his personal experience was to the contrary. They had a gang for about eight or ten weeks in the year, of boys and girls promiscuously, and varying from 8 years old to 12. They met at the farmhouse at 8 o'clock in the morning to go upon the lands to work. They had an interval for dinner, and they were bound to be back at the farm at 4 o'clock in the afternoon. They were put under the care of a respectable man, and they had generally found, during the last four or five years, that a man of about 25 years of age was by far the best hand to manage those children. The clergyman of the parish in which the place was, had never raised the slightest objection to the system there. It was in Essex, on the estate of Lord Bristol.

Mr. Ridley proceeded to say that he did not think parents could do without the earnings of their children; and as to the children themselves, he thought their health was not only not injured, but actually benefited by being in the fresh air so many hours of the day. The question of education was certainly a most open one, and his own opinion was that in a very great degree education must be forwarded by voluntary efforts, assisted by Government grants. Certainly with regard to agricultural labourers, he should advocate that it be to a great extent voluntary, and under local management. He thought the employers of labour were quite alive to the benefit of education amongst their labourers, and they were the most fit persons to have the management of the schools, though of course they might be duly under Government inspection.

The *Chairman* asked Mr. Ridley if he thought it was really necessary that there should be a certificated master, which of course meant a higher style of education than they had in their neighbourhood—a dame's school, as it was called?

Mr. Ridley said that was a very different question, but in many parishes where there was a small school it didn't pay to get the Government grant. If they had only 30 children they were best without the Government aid and interference; it didn't pay unless they had 40 or 50 children.

The Hon. and Rev. S. Best.—Because you would require to have a certificated master?

Mr. Ridley said yes; it would be more expensive to have the grant, which paid so much better when they had over 50 children than it did with a smaller number. With regard to cottages, there was no doubt that as an investment they didn't pay; but as an employer, for the sake of getting good men under him, he would give 5*l.* a year for a cottage for a man, whereas he knew the man himself could only pay 4*l.* a year. He had several for which he paid 5*l.* a year, and let out at less, besides giving each a piece of land. As to the number of cottages, he considered that on light land the farmer ought to have two good cottages for every 100 acres of plough land, and two-thirds of the cottages should have three bedrooms. (Hear, hear.) The price of labour was a most difficult question to deal with. Some people reckoned it by the nominal weekly wages, and others by piece-work. His experience in that district was that the men he employed averaged 13*s.* to 15*s.* a week, or in the year 35*l.* to 40*l.*, though the nominal wages were 10*s.* a week. The skilled men, including, of course, the head shepherd, earned 16*s.* to 18*s.* a week. In reply to Mr. Portman, Mr. Ridley said his farm was in South Wiltshire, adjoining Hampshire on the one side and South Wilts on the other. He would remark in reply to Mr. Jeans's observations about the parishes which had no grants, that it did not at all follow that those parishes were not properly supplied with the means of education.

Mr. Jeans.—No, certainly not. In all probability they were doing well, and preferred being without the grant.

Mr. Ridley said in another district in which he was concerned he lent part of a malthouse for a school, and it was most successfully carried on by the ladies of the neighbourhood. There were about 80 children there, but they had not the Government grant, the building not being good enough for them to get it. The general feeling of the country, amongst all classes of farmers, he thought, was in favour of schools. (Hear, hear.)

The Rev. W. J. Yonge said the tone had very much altered on the subject, for they used to be asked, "What's the use of teaching the children? The "result will be that they won't work."

Mr. Jeans then moved the following resolution:—"That preferring voluntary action to compulsory legislation on the subject of the employment of children

in agriculture, inasmuch as such legislation would be regarded as an undue interference between farmers and agricultural labourers, this meeting expresses a strong opinion that children should not be employed generally in agricultural labour before 10 years old, or unless they can read and write sufficiently, which should be certified by a certificate from the clergyman, or some other authority of the parish where the child lives, and this meeting pledges itself to use its influence in all legitimate ways to secure this rule being acted upon."

The Rev. R. P. Warren seconded the motion.

Mr. Portman said he should very much like to hear some expression of opinion upon that clause of Mr. Jeans's motion, which said that it was their opinion that children should not be generally employed in agriculture before they were 10 years of age, or unless they could read and write sufficiently, which should be certified by a certificate from the clergyman or some other competent authority of the parish in which the child lived. Supposing they established that system, unless the farmer would carry it out it would be like the law now in force, which said that no child under 13 years of age should be allowed to lead a horse, but they knew well enough that much younger children did do so. Would farmers help to carry out such a system if it were adopted?

Mr. Jeans thought such a plan as he had suggested would induce parents to keep young children at school, and to endeavour to push them on in their education, so that they might attain the necessary state of efficiency.

Mr. George Kent and others said they employed young boys, and the parents could not do without such assistance.

The Rev. W. J. Yonge said unless the wages of the labourers were increased, he did not see how they could support their families without the wages of the children.

Mr. Portman asked if they really thought the earnings of a boy under 12 years of age anything like met the wear and tear of the clothes with which he went to work? (Cries of "Yes.")

Mr. Jeans explained that there were clothes clubs established in the various districts, from which, by a weekly payment of from 3*d.* to 6*d.* a week, the children obtained nearly all the clothes they wanted, so that the 2*s.* or 2*s.* 6*d.* a week which they earned left a balance towards the support of the family after the clothes were paid for.

Mr. Portman urged, however, that as the clothes clubs were supported by charitable contributions of the gentlemen of the neighbourhood, it was hardly fair to take those into consideration.

The Rev. S. Harvey did not see how it was possible that some of the boys could live unless they went to work in the fields as early as possible. If they were not sent into the fields under 10 years of age, they would go into the factory.

Mr. George Morrice said he had a labourer working for him who had a family of six, and he had repeatedly offered to send those children to school, but the parents had refused, saying they could not do without the earnings of the children. The man said, "I am in "your service, and you must employ my boys," the consequence being that they received 5*s.* a week more towards the support of the family. He knew very well that that man would not like any interference to prevent his putting his sons to work. As to the rate of wages, he found that his best men earned 13*s.* 6*d.* a week all the year round. He had not an able-bodied man who earned less than 13*s.* a week, taking everything into account. There might be about two who were not able-bodied men, and who were not capable of reaping and mowing, who did not earn so much. He spoke of well-ordered men who could go to work all the year round. That did not include the "taskers" that he brought up from Shaftesbury every year to do the harvest work. His men paid 1*s.* a week for their cottages; he had got none who paid over that, and they had potato land quite free. On Lord Shaftesbury's estate he had several cottages for which the tenants did not pay a penny rent. In addition to the wages the men had beer and as many potatoes pretty well as they could use.

The Rev. H. W. G. Aubrey said the clothes clubs which had been referred to were only a second-hand way of supplying the poor with what they did not get by their wages. (Hear, hear.) The wages were so low that for the necessary wants the gentlemen of the district had to club together to meet the requirements. The disease was low wages, and the charities, clothing clubs, coal clubs, and poor rates were only ways by which those who were better off had to pay at last what they ought to pay in wages—(hear, hear)—and they ought not to look upon these things as permanent institutions on which to rest; but on the contrary, they ought to try to make the labourer an independent man, who could feel that what he had he had earned by the sweat of his brow. (Hear, hear, and applause.)

Mr. Ridley thought the plan of certificates for the children would not work with the employers and labourers.

The Rev. H. W. G. Aubrey said the question seemed to be whether they would make the attendance compulsory, or have a compulsory test of proficiency. A plan had been suggested by the vicar of Downton —a very practical shrewd man—which seemed to have the minimum of compulsion, and to be well worthy of consideration, and that was that when the children went to ask for employment they should produce a certificate that they had passed a certain examination. What that examination should be would be another question, and they might fix it at as low a standard as they pleased, so as to allow boys to pass it between the ages of 9 and 10, and so avoid the difficulty about fixing any specific age. He (Mr. Aubrey) had had an opportunity of discussing the matter with a very practical, intelligent man, Mr. Jeans, who agreed with him that there would be no opposition to it on the part of the farmer. He thought, too, the clergy would agree with him that up to that age a sufficient elementary education would be obtained to enable the child to carry on practical education at a night school. If they asked the views of the clergy as a class, they would like the boy to be kept at school till he was 13 years of age, but they were quite aware that that would be impracticable, and seeing the wants of the parents they were quite satisfied they could not live without the 2*s.* or 2*s.* 6*d.* a week which at that age the children were enabled to bring in.

Mr. John Hannen said a great many children went out bird-keeping and doing such like work at 7 years of age.

Mr. Ridley moved as an amendment, that in the opinion of the agriculturists of that neighbourhood, the last clause in Mr. Jeans's resolution, having reference to a certificate being obtained by a child before he went to farm work, was very undesirable, and in their opinion it could never be carried out. It would lead, he said, to a great deal of ill-feeling between men as to getting the certificate for their children, and it would be a most difficult matter satisfactorily to settle.

Mr. John Egremont seconded the amendment.

Mr. Jeans and the Rev. H. W. G. Aubrey explained that the clause did not interfere with the interest of the parent after the child was 10 years of age, being merely protective up to that age. Would the farmers, asked the rev. gentleman, concede that education of the children of the agricultural labourers was desirable, and then that it was necessary that the children should be allowed till 10 years of age to acquire that education?

Mr. Jeans next moved that the meeting was further of opinion that great encouragement would be given to the education of the agricultural population if the existing restrictions to grants in aid to small country schools and also to night schools were altogether removed.

Hampshire.

Mr. Portman.

h.

The Rev. H. G. W. Aubrey seconded the motion, which was also unanimously adopted.

DAMERHAM.

Population - 698 ; acreage - 4,310.

84. *Rev. William Owen.*—The cultivation is chiefly arable. There are no private gangs in this parish. 44 males and 10 females are employed in this parish, of the following ages :—

Males :			
Between 10 and 13	-	-	11
„ 13 and 18	-	-	33
	Total	-	44
Females :			
Between 13 and 18	-	-	3
Over 18, married	-	-	6
„ unmarried	-	-	1
	Total	-	10

The males are employed all the year round in general farm work. The females are employed in spring in weeding corn and grass, and in cleaning land for "lenten" corn, and turnips; in summer in haymaking, &c. ; in autumn in harvesting ; in winter they sometimes help with the threshing machines. They live at no great distance from the farms. The usual hours of work are for the males, in summer from 7 a.m. to 6 p.m. ; in harvest, 5 a.m. to dark, and in winter from 7 a.m. to 5 p.m. ; for the females, from 8 a.m. to 5 p.m. all the year round, except harvest time, and then from 7 a.m. to 7 p.m. It takes them on the average about half an hour to go to and from their work. One hour is allowed for dinner ; in harvest time one hour and a half more are allowed for breakfast and lunch. The young and the females are not subject to ill-treatment, and their health is not injuriously affected by the demand upon their physical powers. I think weeding amidst the high corn, when wet, is injurious to the health. Young females are put to work in the fields with young and old men ; and they see and hear things which are likely to have a bad influence upon them. It is, moreover, a serious hindrance to their proper training for domestic duties. I would prohibit female labour in the fields altogether, except during hay and corn harvest. The demand for labour does not require female employment. The pecuniary resources of the labourers are small, but I do not consider they are improved by female labour. The females do that which men ought to do, and so depreciate the men's labour. The mothers ought not to leave home (except at harvest time), and the daughters should go out to domestic service. Boys under 11 years of age should not be permitted to be employed in farm labour. I think the distance to which children and young persons should be allowed to go to work should be restricted according to age. No person, as a rule, should be compelled to walk three or four miles to and from work. At the end of a hard day's work such a walk is exhausting, and takes too much out of the labourer. I think that children and young persons should not be employed before 7 a.m. or after 5 p.m., except in hay and corn harvest. I do not think that the Factory Act or the Printworks Act, separately or in combination, could be beneficially applied to children intended for agriculture. No child, in my opinion, ought to be employed before 11 years of age, and all below that age should be *compelled, if possible*, to attend school. I am satisfied that the observance of these rules would tend greatly to improve the condition of the labourer physically, intellectually, and morally. The school attendance is not at all affected by the distance the children have to go to school, except in very tempestuous weather, when a few of the more distant children might be detained at home ; nor is it much affected by the pecuniary resources of the parents, the charge being so low (1*d.* a week to the ordinary labourer), and that charge being defrayed in certain instances by the liberality of others. Efforts are not being made in a direct specific way for the industrial training of the girls. Sewing is carefully taught in the school in connexion with the parish working society, and deserving girls are occasionally employed to help an experienced cook before going to regular service. No cottage ought to have less than three bedrooms ; otherwise young persons of both sexes are compelled to sleep in the same room. Obviously this must have a very bad effect upon the morals of the people. The moral sense being impaired, progress in education is *sure* to be impeded. Of course the health and comfort of the poor are most seriously affected by the careless, injudicious, and painfully selfish spirit too often evinced in the construction of their dwellings. The proportion of cottages in this parish is about three to 200 acres. This is not sufficient. There should be from two to three per hundred acres. The cottages are conveniently situated, and as a rule not overcrowded. Most of the cottages have small rooms. A great number have only two bedrooms, with a kitchen and pantry. The average dimensions are—

Kitchen,	12 ft.	long,	13 ft.	wide,	6 ft. 4 in. high.
Pantry,	8	„	13	„	6 ft. 4 in. „
1 bedroom,	12	„	13	„	6 ft. high.
2 bedroom,	8	„	10½	„	6 ft. „

The rooms, especially the bedrooms, are distressingly low. Boys and girls often sleep in the same room, or some in the room with the parents. The ventilation is defective. The drainage generally pretty good. The water supply is good. There are good-sized gardens, and outhouses generally adequate to needs. There are various classes of owners. Some of the poor have cottages of their own ; some are rented from the landlord. The majority are rented from the occupiers of the farms. Some are rented as high as 5*l.* The rent generally is from 4*l.* to 5*l.* Very little progress is being made towards increasing the cottage accommodation. The Union Chargeability Act does not cause any increase of cottage accommodation. The fact that the principal estate in this parish is in the hands of trustees who reside far away is against hope of much improvement, and the owner of the remaining portion shows no interest in such matters.

School Statistics.

In Summer.

—	On the Register.	In average Attendance.
Boys :		
Under 10 - -	56	42
Between 10 and 13 -	9	5
Total - -	65	47
Girls :		
Under 10 - -	41	27
Between 10 and 13 -	21	11
Total - -	62	38

There is no material difference in the numbers in the winter. Some of the elder ones are away at spring, potato planting, and in the autumn, picking up potatoes. In winter some of the little ones are away, owing to the weather. There are very few indeed, if any, who are neither at school nor at work. About 20 males, but scarcely any females, are growing up with insufficient education ; they cannot read sufficiently well to *enjoy* a book ; they cannot write legibly, or spell well ; and they have not mastered the first four rules of arithmetic. An evening school is held in the parish about 16 weeks in the year, from the middle of October to the middle of February ;

it is opened four nights a week, 1¾ hours each night. There are—

—	On the Register.	In average Attendance.
Under 12 - - -	9	4
Above 12 - - -	37	20

Reading, writing, and arithmetic are the subjects of instruction. The evening school most certainly does not adequately supply the deficiencies of the day school. In spite of some serious obstacles we have been enabled to maintain a fairly efficient evening school. The attendance has been, on the whole, good; behaviour, excellent; examination, good and encouraging. The principal hindrances are (1), the direct or indirect opposition or the entire lack of sympathy shown by farmers; (2), the difficulty of getting a good staff of suitable teachers in a parish where there are no resident gentry; (3), the natural fatigue and disinclination for study to be looked for in farm lads at the end of a long day's work.

By way of summing up, I will venture to express my firm conviction that Government should aim at—1. The inhibition of all female labour in farm work except at *hay* and *corn harvest*. (I am prepared to prove that in the course of a few years a family loses *cash* as well as *credit* by the females engaging in field work.) 2. The inhibition of the employment of boys in farm work under 11 years of age. 3. The education of children in schools up to 11 years of age. 4. The construction of dwellings in which the health and morals of the poor shall be duly considered. 5. The raising the wages of the labouring man to a *minimum* of 12*s.* a week all the year round.

A *nation* is but an assemblage of *families;* to ensure the stability and prosperity of a *nation*, you must legislate and labour for the well-being and well-doing of each *family*, and of each *member* of the family. The Government is bound to give to all, specially to the *simple dependent poor*, every reasonable protection and opportunity of thriving.

The farmers, as a class, ought not to be intrusted with the oversight of the education and general treatment of the poor; even a kind-hearted farmer has a strong natural tendency to regard the *labourer* very much as he would regard a *horse*—as a machine out of which he is to get as much work as possible. He is too apt to forget the original design of the *Creator* in making the former, as shown in Genesis, first chapter.

Legislation is difficult, but surely attainable in so holy and just a cause. Government, I think, would do well to assist certain schools *other* than those under *certificated* teachers, if regularly inspected and approved by Her Majesty's inspectors. I am disposed to think that after a certain space of time allowed for the desires and intentions of Parliament to be promulgated, and weighed and prepared for, *laws* as to *female* labour, employment and education of *children*, and building of *decent* dwellings, should be *penal*. Inflict a small fine, and in case of a farmer, should he offend a *third* time, deprive him of his vote at elections and power to fill municipal offices. I would let public opinion permeate the country thoroughly, and the will of Government be known *first*, and *then* see that the *laws* were *strictly* and *invariably* enforced.

85. *John Egremont.*—The cultivation is chiefly arable; there is some down and pasture. Boys are very seldom employed under 12 years of age. No girls are employed regularly. Women are employed very little. All the children, young persons, and women employed here live close to their work. The hours of work of the boys are from 7 to 5; of the girls, from 8 to 5. I do not think it necessary to place any restriction upon the age at which boys should be permitted to work on the land. I do not think it desirable to place any restriction upon the employment of females in agriculture. There is a National school here, and a chapel school. The agricultural labouring class take advantage of these as far as they can. Some, however, are not allowed to attend the National school and the night school, because they happen to go to chapel of a Sunday evening; they are therefore obliged to go to the chapel school, where there are only females to teach them. The cottages here I consider good and sufficient. They are all conveniently situated, and are well supplied with water. The cottages mostly have good gardens; if not, they have good allotments of land near them.

The extent of my farm is 1,000 acres arable, and 160 acres pasture and down. The soil is clay, chalk, and gravel.

I employ—

—	Males.			
	Between 10 and 13.	Between 13 and 18.	Over 18.	Total Males.
In spring - -	4	8	23	35
In summer - -	4	8	28	40
In autumn - -	4	8	28	40
In winter - -	4	8	23	35

—	Females.
	Between 13 and 18.
In spring - -	2*

SOUTH CHARFORD.

Population - 70; acreage - 777.

86. *George Read.*—Boys are employed from 9 years and upwards all the year round. Women are employed in haymaking and in the harvest. Those children, young persons, and women who do not live on the farm, have to go about a mile to their work. Their hours of work are from 8 to 5. I would not limit the age at which boys should be permitted to work on the land, as parents with large families are anxious to get them out young to earn something to keep them. There is a day and night school in the next parish, one mile from here. The cottages in this parish and neighbourhood are good and sufficient. All have good gardens.

My farm contains 400 acres arable, 138 acres pasture.

I employ—

—	Males.				
	Between 8 and 10.	Between 10 and 13.	Between 13 and 18.	Over 18.	Total Males.
In spring - -	—	3	3	18	24
In summer - -	2	3	3	24	32
In autumn - -	—	3	3	18	24

—	Females.		
	Between 13 and 18.	Over 18, married.	Total Females.
In spring -	1	—	1
In summer -	4	6	10

* They work only occasionally, when they like to come.

Hampshire.

Mr. Portman.

h.

NORTH CHARFORD.

Population - 60; acreage - 800

87. *John Taunton.*—The cultivation is chiefly arable. Boys are employed all the year round from 10 years old and upwards. Girls are employed at 14 years of age in weeding and haymaking. Women are employed about a fourth of the year. The children, young persons, and women employed here have to come about a mile to their work, in some few cases two miles. Their hours of work are from 8 to 5. I would limit the age at which boys should be permitted to work on the land to 10 years and upwards. I would not place any restriction upon the employment of females. There are good schools in the adjoining parish, where most of the children attend until they go to work. The cottages here are very fair and sufficient. They are situated within one and two miles of the farms. They are not overcrowded, and are well supplied with water. All the cottages have good gardens and allotments near them.

My farm contains 420 acres arable and 110 acres pasture. The soil is chalk.

The number and age of persons employed on my farm are as follows:—

—	Males.			
	Between 10 and 13.	Between 13 and 18.	Over 18.	Total Males.
In spring - - -	5	4	22	31
In summer - -	5	6	26	37
In autumn - -	5	4	22	31
In winter - -	5	4	22	31

—	Females.				
	Between 10 and 13.	Between 13 and 18.	Over 18.		Total.
			Married.	Unmarried.	
In spring - -	2	2	2	1	7
In summer - -	4	2	4	1	11
In autumn - -	2	2	2	—	6
In winter - -	2	2	—	—	4

TOYD.

Acreage - 650.

88. *George Waters.*—The cultivation is mixed. Boys from the age of 11 years are employed at all times of the year in this parish. No girls are employed. Women are employed in weeding, haymaking, &c. They never have to come over a mile to their work. They work eight hours a day. I do not think it desirable to place any restriction upon the age at which boys should be permitted to work on the land, or upon the employment of females in agriculture. This is a small parish without a school. There is a school in the next parish, which is within half a mile of this; but in many cases when the children are not at work they are not at school. The cottages here are good and conveniently situated. There are not cottages enough; they are not overcrowded. All the cottages have either gardens or allotments of land.

Nature of soil.—Chalky.
Extent of farm.—500 acres arable, 150 acres pasture and down.

Number and age of persons employed on farm.

—	Males.				
	Between 8 and 10.	Between 10 and 13.	Between 13 and 18.	Over 18.	Total Males.
In spring - -	—	5	4	10	19
In summer - -	2	5	4	30	41
In autumn - -	2	5	4	20	31
In winter - -	—	5	4	10	19

—	Females.
	Over 18, married.
In spring - - -	3
In summer - -	8 or 10.
In autumn - -	8 or 10.

GODSHILL.

Population - 244; acreage - 256.

89. *W. T. Chubb.*—My connexion with the parish is a peculiar one. I am not an occupier nor immediately an owner of any property in it. I believe the state of the poor generally to be unsatisfactory from the absence of any resident gentry, and the almost entire absence of any means of education. There is no place of worship of any description that I know of, the nearest church being three miles off. I am unable to speak with accuracy on other points.

MARTIN.

90. *Matthew Aldridge.*—The cultivation is chiefly arable. Boys are employed in agriculture here all the year round from 10 years old. Girls are not generally employed. About two or three women are employed on a farm. The children, young persons, and women have to go a very short distance to their work. Their hours of work are from 8 in the morning till 5 in the evening. I do not think it desirable to place any restriction upon the age at which boys should be permitted to work on the land, or upon the employment of females in agriculture. There is a National school in this parish. The condition of the cottages in this parish is much the same as cottages generally are in country villages; there are plenty not overcrowded, and there is a good supply of water. All the cottages have either gardens or allotments of land.

Nature of soil.—Light chalky.
Extent of farm.—410 acres arable, 35 acres pasture.

Number and age of persons employed on farm.

WHITSBURY.

Population - 204; acreage - 1,850.

91. *T. S. Ruddle.*—The cultivation is chiefly arable. One or two boys may commence to work at 8 years of age where there is a large family. They are chiefly employed as scarecrows. No girls are employed in this parish. A few women are employed, chiefly at haymaking and harvest. The distances to which the children, young persons, and women employed here have to go to work do not average a mile. They work from 8 a.m. to 5 p.m., less an hour for dinner. I do not think it desirable to place any restriction on the age at which boys should be permitted to work on the land. Boys that commence working early, say from 8 years old, make the best labourers. They in fact do no work that is injurious to them, and a few shillings is a great assistance when there is a large family of young children. No young girls even apply to me for work; in fact they do not work here in the fields, and women are getting more scarce yearly, so that I see no necessity for any restrictions on the employment of females. I should like to see better means of education provided in this parish; some of the children go to Fordingbridge, over three miles. There are some very good cottages here. If there were more they would let. They are, however, badly off for water. The greater proportion of the cottages have gardens or allotments.

Hampshire.

Mr. Portman

DEVONSHIRE.

Devonshire.

Mr. Portman.

MEETING AT TAVISTOCK,

Oct. 16, 1868.

92. Rev. Dr. Tancock in the chair; a large attendance of influential persons from the neighbourhood.

The following resolutions were carried:—

1. That 10 years is the lowest age at which children ought to be employed in agricultural labour.

2. That it is desirable that the cottage should be as near the farm on which the labourer is employed as possible, due regard being paid to good water supply, schools, and places of worship.

3. That it is desirable that increased facilities should be given in rural districts for providing education for the children of the labouring classes.

Mr. Pratt stated that the wages of the district for a man were 12*s.* a week with perquisites. He also advocated night schools for lads in summer in preference to winter, as during the latter period the boys were wanted for the cattle in the evening.

Mr. Parsons advocated industrial training for boys, and quoted a case of a school at Bridgenorth where satisfactory results had been attained, the children coming to the school at 9 years of age and going out to farm service at 12 years.

Mr. Turner thought female labour in agriculture was degrading and would not in the long run increase the earnings of the family, as by such labour the wages of the husband was likely to be lowered.

Rev. T. Parris said 10*s.* a week was nearer the average rate of wages than 12*s.*

Mr. Collard said he paid his men 12*s.* a week; the labourers usually have a garden or allotment and a piece of potato ground manured for them. Women should not work in the fields except at harvest, "they take in 8*d.* to throw out 1*s.*" To a great extent the fault of non-education rested with the employer, who hired their boys as they bought their cattle and hought no more about them.

Mr. Martin, of Bratton, said the wages in his district were 10*s.* a week and perquisites, making it equivalent to 12*s.* Boys were hired out as soon as they were capable of performing the ordinary duties on the farm at from 1*s.* to 2*s.* 6*d.* a week with food. Most of the labourers had gardens attached to their cottages and potato ground in addition.

On the third resolution Rev. T. Parris said they wanted to get the benefit of the Government grant for results, and not only for schools where there were certificated teachers.

DEVON CHAMBER OF AGRICULTURE.

MEETING AT EXETER,

Oct. 23, 1868.

Earl of Fortescue in the chair.

93. The following resolutions were carried:—

(1.) That in the opinion of this meeting it is advisable that Parliament should not interfere in our rural districts with the education of the poor as regards their age or attendance at school, but that assistance from Government would be very beneficial for building schoolhouses and paying schoolmassers in our small parishes.

(2.) That the chamber does not think Parliamentary legislation necessary, yet they will ever be willing to

Devonshire.
Mr. Portman.
h.

continue their help for the amelioration of the condition of the poor in their education and welfare.

(3.) The following resolution was *negatived*:—

"That the chamber will render all assistance in its power to the prosecution of the inquiry by the Assistant Commissioner sent down under the Royal Commission."

In the course of the discussion,

Mr. W. Holley said that boys were not required by the farmers before 10 years of age. He thought it would be difficult to carry out any scheme of school attendance during a portion of each year between 10 and 13 years.

Major Porter thought the education of a farm boy ought to be finished by the time he was 9 years old.

Mr. Norris and Mr. Ward thought 9 years too early an age for children to go to farm service; the latter thought Boards of Guardians should allow relief for children up to 10 years.

Rev. W. Karslake said in South Molton Union 10 years was the age for relief. Female labour in his district was hardly to be obtained; the habit of women going into the field to work was gradually dying away. He spoke in favour of an alteration in the present regulation as to Government grants to schools.

Mr. Radmore thought the class whose education was most neglected was the small farmers. In his parish the children of many of them never went to school. The children of the poor were attended to, and the difficulty was to get them to work on a farm.

Mr. Risdon said "any scheme of education that the Legislature might attempt to enforce upon the rural population would be found very difficult to carry out, but it was quite certain that no nation could be said to have done its duty unless opportunity was given for every poor man's child to be taught to read and write." He thought that might be achieved by the time they were 10 years old.

Rev. H. W. Toms said that night schools if properly conducted were of the greatest possible advantage. He considered them as supplying the missing link between the time the children left the elementary schools and the time when they went to permanent service. He had had one for 12 years; when it was free it failed, when he required a payment of 1*d.* per night it answered very well.

Mr. Leatt was in favour of compulsory education.

Earl Fortescue said they had had a very lucid explanation of the points on which the Assistant Commissioner wished for information, and he ventured to think that from such a practical assembly he would carry away with him some valuable information. It seemed to him that great misapprehension had existed on the part of the public generally until very recently, and indeed it continued to a great extent now, as to the hardships suffered, as regarded ill-health, bad lodging, and defective education, by the rural population as compared with that of the town. He did not happen to have with him a valuable return which was moved for in the House of Commons, with regard to the signatures of persons to the marriage register, and as to the per-centage of mortality in boroughs and non-boroughs, or rural districts, but the results with regard to education had struck people with greater surprise, considering that the residuum of the country was supposed to be found not in the town, but in the rural districts, than even the statistics with regard to mortality, which implied health. Lancashire with its large towns got much larger grants from the Imperial exchequer in aid of education than Devonshire, with its small and thinly peopled parishes, and was thus better able to maintain certificated schoolmasters; yet notwithstanding that the signatures by marks to the marriage registers in enlightened Lancashire were 26 per cent. of men and 46 per cent. of women, whereas in poor, benighted Devonshire, with hardly any aid from Government, the per-centage was 18 men and 22 women. Sanitary matters too were better in the country than in the towns, and overcrowding in towns was infinitely worse. He thought ten years of age was a very reasonable limit under which no child should be systematically employed in agricultural work. Before that the great thing to do was to lay the foundation of a sound knowledge of reading, writing, arithmetic, and religion. He had no doubt that evening schools were most beneficial, although he could see in some localities there must be very great difficulty in carrying them on. It was quite clear that the schoolmaster who did his duty and worked hard in the day ought not be called upon to tax his energies by keeping school at night, for an overworked system would not do any good. Though it might be desirable that Government should grant support to evening schools where established, he did not think it would be desirable to have any legislation insisting on their being established anywhere. (Hear, hear.) Still less did he think that any standard of learning as a condition of help should be established. He thought that it would be very desirable that encouragement should be given by employers, but no compulsory power, to the production of certificates, such as giving the preference to those servants who brought them. He thought it would have a good influence in encouraging education amongst the children, and would overcome some of the reluctance on the part of the parents to send their children to school. He thought a modified renewal of the apprenticeship system would be a most desirable thing, and he thought the Legislature might encourage it by taking off the stamp duty of half-a-crown that was now put on apprenticeship indentures and substituting a penny stamp. Proper control over the young persons seemed to be one of the greatest deficiences in the working of the present social system in agricultural districts. With regard to women working it was a practice, whether desirable or not, that was fast dying out in Devonshire, and it seemed to him, as Mr. Karslake had said, that it was a matter that ought to be left to the discretion of the labourer and his wife, and the less the Legislature interfered in petty details the better. He was not the one to undervalue education, and he always looked upon that as having the first claim upon him wherever he had property, but he did feel most strongly that nothing would be so undesirable as having compulsory education at the public expense. Providing the school buildings did not seem to him to come under the same category, but the payment of the working expenses of the schools seemed to him should be mainly defrayed by the parents themselves. His lordship concluded by pointing out there was danger while giving book instruction of giving a bad education in those principles of independence and self-reliance which were even of more importance to the well-being of the community than book learning.

DEVON CHAMBER OF AGRICULTURE.

MEETING AT EXETER,

April 9, 1869.

94. Mr. Kennaway's motion,—

"That the improvement in the condition of the agricultural labourer, which it is the desire of this Chamber to advance, will be furthered rather by individual efforts, resulting from an increasing conviction on the part of his employer of the community of their interests, and of the absolute necessity to the farmer of an adequate supply of trustworthy and intelligent labour, than by any general recommendation of this Chamber on the subject."

In moving the above resolution Mr. Kennaway stated that the supply of agricultural labour had decreased considerable between 1851 and 1861. He was of opinion that in many parts of Devon the cottages were not either sufficient in number for the population or good in the accommodation provided.

He descanted on the evils of overcrowding in the dwellings of the poor, and the difficulties of improvement on account of the expense of building. He considered 5*l.* should be the highest annual rent for an agricultural labourer's cottage, and expressed himself in favour of a garden being attached to each, as tending to make the labourer more contented with his lot. The educated labourer was, in his opinion, of great value to the employer, not only on account of the daily increasing use of machinery in farm operations, but also for the better care of stock. The school education ought to be continued and perfected on the farm. He submitted to the Chamber, that as they had on a previous occasion expressed their opinion that legislative interference was not desirable, the improvement of the welfare of the agricultural labourer should be effected by individual exertion and by the pressure of public opinion.

Mr. Risdon stated that one of his labourers had told him that he could not do without the earnings gained by his children at a tender age in turnip-hoeing and other similar work.

Mr. Moore-Stevens was of opinion that a boy's education should be such as to fit him for his station in life. He considered boys under 10 years of age valueless to the farmer.

Mr. Davy stated that in the South Molton Union-house a half-time system had been introduced, and that the number of applications for boys under that system by the farmers had much increased. He thought the same system might be beneficially introduced into all schools, and that if girls had some industrial training given them at school the comforts of the labourer's home would be much increased.

Mr. J. Dace thought a reform in the present system of Government grants to schools was much needed.

Dr. Budd considered that the gist of the resolution was to leave things as they are. The labourer now must come eventually on the parish for relief and maintenance.

EAST BUDLEIGH.

Drake's Charity School.

95. *William Fletcher*, master.—Boys go to work very young. An agricultural labourer's child begins at 8 years of age, sometimes younger. The oldest boy in the school is 10 years old. A boy earns 6*d.* a day, sometimes with cider, in weeding corn, potatoing, and apple-picking. The cider is reckoned at 2*d.* a quart. An ordinary labourer gets 10*s.* a week and two quarts of cider a day; they prefer an allowance of cider to extra money. The average rent of a cottage with one room and a closet on the ground floor, two bedrooms, a garden, and pigsty, 3*l.* 10s. a year. Field work makes the boys rough in their manners, and when once they begin work it is hard to get them to school again. The poverty of parents is often pleaded as an excuse for the non-attendance of the children. There is no night school.

96. *Mary Millyard*, mistress of girls' school.—The girls begin to leave school at 6 years of age. The oldest girl at present in the school is 9 years of age, and she only comes on alternate mornings. When the lace trade is good they do not come to school at all. They go to the lace school for twelve months at a payment of 6*d.* per week, and find their own cotton, and are not considered to bring in any earnings. After twelve months they begin to earn 2*d.* or 3*d.* a day, and at 12 years old they will get 8*d.* a day. The lace trade causes a want of domestic servants, and demoralizes the girls. This village is worse than a parish where there is no lace work. The parents are uneducated themselves and consequently do not trouble about the children. I do not think that without compulsion the limit of age for children's work would do any good. We once had a night school for girls, but it only succeeded while it was a novelty, and as long as the boys' night school was held at the same time.

97. *Emma Vooght*, lace maker.—A child of 7 years old can earn ½*d.* or 1*d.* a day; when they have worked three years, 3*d.* or 4*d.* a day, if kept at work all day. At 13 or 14 years of age, if they are quick, they can earn 9*d.* a day—as much as a woman. They have to find their own thread and silk. The girls do not go out to field work.

EAST BUDLEIGH.

Population, 2,530 - Acreage, 2,622.

98. *Henry Leatt.*—The cultivation is 1,705 arable land; 226, meadow and pasture; 106, orchards; 209, moorland, plantation, and furze; 338, commons. Boys are not generally employed earlier than 9 years of age. A few younger boys may be employed during the summer months either keeping sheep on the commons or keeping birds from the crops. No girls are employed in the fields. There is no woman so employed in this parish. Boys have in very few instances, if any, to go more than a mile to their work. They work in summer from 7 to 5, and in winter from 7.30 to 4.30. I do not think it desirable in this parish to place any restriction upon the age at which boys should be permitted to work on the land. Since ploughmen have been accustomed to drive the horses themselves I think it quite unnecessary to put any restriction on the employment of children in agriculture in this neighbourhood. There is a school at East Budleigh, a large village on one side of the parish, and another at Budleigh Salterton, a large village on the other side. There are also two smaller villages, each of which is one mile from one or other of the schools. The parents by no means take advantage of the schools as they should. One reason of this is the great indifference with which education is treated by many of the parents; another reason is the little attention given by the teachers when the children are at school. This is especially the case at East Budleigh school, the teacher of which fills the office of secretary to the gas inspectors at Budleigh Salterton, two miles from his school, and assistant overseer of this large parish. The trustees living at a distance, the vicar has the management.

The number of cottages in this parish is not sufficient for the supply of the labour required. They are conviently situated with respect to the farms. They are overcrowded in several instances; I have known no evil results directly from this cause. They are for the most part well supplied with water, but many of them are not well ventilated. All the cottages have good gardens or allotments of land.

99. *R. Lipscomb, Esq.*—The education in this district is at a very low ebb indeed, many of the farmers are quite unable to write correctly. The boys do not work much in the field before 10 years of age; their earnings are very small; they get their food and perhaps a 1*s.* a week. The women do not work in the fields at all, and lace making occupies all the girls and leads to a considerable amount of illegitimacy. The men's wages are from 8*s.* to 10*s.* a week with two quarts of cider a day, or 11*s.* a week without cider; hours 8 a.m. to 5 p.m. The best men in the parish go away elsewhere. There are a large number of small occupiers who work with their own hands and employ but little labour. The cottages are bad; in my opinion some should have two and some three bedrooms, but not all to be built on the same plan. The cottages on the farms which are under the control of the tenant are stipulated for at a rent of 1*s.* a week for the labourer. It is a doubtful point whether a village or scattered cottages on the farms are best for the labourer; some labourers do not like to live in outlying cottages.

There are allotments in Otterton of half a rood each, rent 5*s.* a year free of rates, to be paid in advance; we had for these 69 applications.

In Budleigh there are 82 portions of allotments; in Knowle two or three acres divided into portions.

Devonshire.

Mr. Portman.

h.

BROADCLYST.

PRESENT:

Rev. L. Acland.
Mr. Ware,
Mr. T. Wish,
Mr. Cockram,
Charles Norris,
Richard Burton,
Richard Merry,
} Farmers.
Daniel Harris, Clerk.
Mr. Ham.

100. It was stated that boys are very rarely employed in this district under 10 years of age, and it was thought 10 years would be a good limit to be fixed by law as the age below which no boys should be employed. They are occasionally employed younger for apple-picking and bird-tenting. The wages are 4*d.* to 6*d.* a day and a quart of cider. Apple-picking is considered the same as harvest, and in acorn-picking they get 4*d.* a peck and can generally pick three pecks a day. Twelve years should be the youngest age for permanent employment on the farms. Girls are not employed at all in the fields, nor are children generally employed so much as they were 20 years ago, as the farmers are beginning to think it is the dearest labour they can have. Women are generally employed when they choose to work; they get half a man's wages and shorter hours, 8 a.m. till 5 p.m. Boys work with the men from 6.30 a.m. The women do not, as a rule, work more than four days a week. The wages of a carter or a shepherd are 10*s.* a week and 4*d.* a day for cider; and as a rule they get wood firing for nothing, a house and garden free. An ordinary labourer's wages are 10*s.* a week with two quarts of cider, not including Sundays, and no extras. The rent of cottages attached to farms is 1*s.* a week, and for those in the village 4*l.* and 5*l.* a year. Task-work men get 2*s.* a day and cider; for a day's work they would expect to earn 2*s.* 6*d.* to 3*s.* at piecework. There are gardens attached to most of the cottages, and allotments in the parish usually of a quarter of an acre each rented at 10*s.* a year free of rates and charges. Many of the best educated lads and young men go away from the place elsewhere.

A system of half days or alternate days for work and school would not answer, nor would a certificate of school attendance between the years of 10 and 13 be fairly carried out by the employer. Boys that leave school at 10 years old do not after that attend Sunday or night school and lose what they have learned. There are, however, 19 boys over 10 years of age on the books of the Broadclyst school and who attend pretty regularly four and a half days a week. Farm lads are not hired by the year and there are no hiring fairs. Under the old apprentice system lads become better agricultural labourers.

The farms in this district are large for Devonshire; the land is about one-third grass, and two thirds tillage. Two to three cottages per 100 acres would be sufficient. Cob cottages are going out of fashion; the price of a double cottage with two rooms below and two above in each, built of brick and slate, is about 200*l.* In this parish, with a population of 2,385, there are 485 cottages, giving an average of five persons to a cottage, which is sufficient accommodation. At the same time there are a few cottages crowded. In our opinion the cottage of the labourer whose wife works in the fields is quite as tidy (and sometimes even more so) as that of the woman who does not work.

The labouring class do not save much money. They have their clubs; one has been in existence for 100 years, and has about 180 members. The sick allowances from these clubs for those in bed is 10*s.* a week, but if they are able to get about at all, or are able to be out of bed, 5*s.* a week. 10*l.* is allowed for funeral expenses, and the payment to the club is 1*s.* a month, and when this payment is made by the members, the public-house keeper deducts out of each shilling so paid three half-pence for himself.

101. *Mrs. Finnimore*, labourer's wife.—I used to work in the fields regularly after my marriage, and I do not think I ever got any profit out of it, as the things were wasted at home, and the children could not get to school. I was compelled to go to work. The cottage was let by the farmer on condition that the wife and children of the labourer went to work when wanted. I think the same system goes on now among the farmers. I used to get 8*d.* a day, and a quart of cider, and work from 8 a.m. to 6 p.m. I could earn 1*s.* 6*d.* a day pulling mangold and turnips by the piece. I have had six children; a few girls go out to field work now. My cottage and garden is rented at 5*l.* a year, and has one kitchen, two back places on the ground floor, and two small bedrooms upstairs.

POLTIMORE AND HUXHAM.

102. The *Hon. and Rev. J. Fortescue.*—There are eight women at Poltimore who go out to work in the field. No unmarried girl goes to the field, and the children leave school as soon as they are able to earn anything. I think field work for women makes the cottages untidy, and the women often take to drink. I fancy there is an arrangement made by the farmer to have the labour of the wife when he wants it. The farmer has the cottages, and lets them to the labourers. I do not think that any system of compulsory school attendance or an educational rate would be listened to by the farmer.

Lord Poltimore's Cottages.

103. A block of four front rooms, and back kitchen on the ground floor, three bedrooms upstairs very good. Two with fire-places and wash-house among the four, with two ovens. There are privies, but no other outhouses, no pigsty, a good garden. Rent 5*l.* a year and rates.

104. *Mr. Benson*, late agent to the Duke of Bedford.—A great many children of all ages are employed for apple-picking. As a rule women and children are not much employed throughout Devon in the fields, though they are so in mines and paper mills. I think that 10 years would be a good age to fix below which no child should work, and between the ages of 10 and 13 a certain number of days' schooling in the year should be required, though I think a system of certificates would be difficult to work. The state of education in this county is better than it was. Aid is wanted from Government to start a good school in smaller parishes. For outlying cottages on the farms a small school might be placed to suit certain districts till children are old enough to walk two or three miles to a better one.

Some few lads live in the farm houses, and are hired by the week or month. The wages of a labouring man in this district are 10*s.* a week, and in the neighbourhood of Tavistock 12*s.* and 13*s.* In some cases there is a tendency to put money by in the savings bank, and I have known cases of a man saving enough to take a small portion of land; but the means of saving are very small. The piecework done in Devonshire is not equal to that done in Lancashire, whereas in Lancashire a man would get 2*s.* 6*d.* a day, and in Devonshire 1*s.* 8*d.* a day, the former would do for 7*d.* the same amount of work as the latter for his 1*s.* 8*d.* It is very desirable to give the labourer as good a cottage as possible. I have often seen a man reclaimed by being removed from a bad to a good cottage with a garden attached to it; he becomes more comfortable, and then turns his thoughts to educating his children.

HONITON UNION.

Population, 80,866. - Acreage, 20,870.

105. The cultivation is mixed. The land is chiefly divided into dairy farms, with proportionate arable. Boys are employed as farm servants permanently

from the ages of 11 to 15 years, and occasionally during the weeks of harvest. Girls are likewise commonly employed as farm servants of the like age with boys, but are very seldom seen in the fields. Women are employed to a very small extent. The distance they have to go to work does not exceed a mile. Their hours are from 8 to 5 generally, with an allowance of half an hour for breakfast and an hour for dinner. We are of opinion that legal interference as to the age at which boys should be permitted to be employed, and as to the employment of females, is unnecessary.

There are generally sufficient local means of education, but indifference upon the part of the parents, and occasional inability to provide suitable clothing for their children, above all, the prevailing habit of encouraging the manufacture of lace at home, interfere with their due attendance at school.

The amount of cottage accommodation and the quality is in some cases unsatisfactory, but a general improvement is taking place in this district. The cottages by no means generally have gardens. Some of the inconvenience resulting from this deficiency is met by the custom of farmers underletting small allotments of land for the purpose of potato culture, &c.

By order of the Board,
CHARLES GORDON.
Chairman.

BOARD OF GUARDIANS, HONITON,

October 24.

106. *Mr. Gordon* in the chair; 12 guardians present.—Some women are employed hoeing turnips, for from 8*d.* to 10*d.* a day; at piecework they will earn 1*s.*; in some cases cider is given. The hours of work are from 8 a.m. till 5 p.m. The boys begin work at 10 years of age; if by the day, at the rate of 2*s.* a week; if they live in the farm house, they get food and lodging only. If a child comes out of the union he has a suit of clothes given him. Men's wages, 9*s.* a week and cider. Many have half piecework and half day work. The upper class labourer gets 9*s.* a week, his breakfast, cider, a house and a garden free. The hours of work are from 7 a.m. to 5 p.m. The best men earn at piecework, draining, &c., 15*s.* to 16*s.* a week. The harvest is often let by the acre to a man with a machine, who will earn from 15*s.* to 18*s.* a week. Turnip-hoeing is let by the acre at 6*s.* the acre. In lace-making children will earn from 1*s.* 6*d.* to 2*s.* 6*d.* a week, and a good working woman about 9*d.* a day.

OFFWELL.

107. *Rev. J. Coplestone.*—Agricultural labourers' children leave school at 10 years of age. There are many parishes in this neighbourhood without any advantages either of a squire or of an active clergyman. The small farmers' children go to a National school. If the limit of age for work were placed at 10 years, this district would not be much affected, and the earnings could well be spared. But some compulsion for school attendance is absolutely necessary. I do not think that the requirements of a certificate for a certain amount of school attendance during the year between the ages of 10 and 13 would have much effect. The best educated lads leave the parish. Girls are not much employed in field work, and women but very little. They earn 10*d.* a day, and work from 8 a.m to 5 p.m. Boys go to live at the farms at 10 years of age, and get their food and lodging, washing and mending the clothes being found by the parents. A boy of 11 years of age gets 3*s.* a week and cider, Sundays included, and lives at home. A man's wages are, for those in the house, 3*s.* 6*d.* and 4*s.* a week and keep, and those living at home, 8*s.* to 10*s.* and privileges, that is, cider, cottage, &c. Men prefer clubs to savings banks. There is a great want of cottages in the district towards Colyton and Widworthy. There is a night school here kept by my daughter, and well attended. The young girls are principally occupied in lace-making, at which they frequently begin at 7 years of age.

OFFWELL.

Population, 390. - Acreage, 2,000.

RETURN.

108. *The Same.*—The cultivation is mixed. There are no private gangs in this parish. In this parish two women, five boys, three girls, and four young men are employed in agricultural labour. There are only two boys employed who are not inmates of the farm, being either children of labourers or of the farmer. Those two, as well as the others, are mostly drivers of three-horse ploughs. One of the two boys lives close by; the other goes a mile to and fro. The hours of work on the land are from 6 to 6. An hour and a half is allowed for meals. The work does not injuriously affect the health of the labourers, nor are they subject to ill-treatment. The young females usually work at home, or at a small school, at lace-making. I do not think that lace-making, which we have, is better for morals than farm work, which we have not; but lace-making does not conduce to health and strength of body. I think it would be well to limit the age at which boys should be permitted to be employed in farm labour to 10 at least. Some go at 9, or even 7 and 8. I do not think the provisions of the Factory Act and Printworks Act, as to school attendance, applicable to this district, where the boys' chief employment is driving, and does not admit of interruption. Schools here are in general conveniently situated, so that few have far to go. The school attendance is very considerably affected by the pecuniary resources of the parents.

Cottage accommodation is very bad in some parishes, attended with the usual evils, and counteracting education. The cottages here that belong to the landlord are too often let with the farms, and kept in bad repair; and those built new (the landlords build none) are very cramped as to rooms and gardens and back premises. I can suggest no other remedy for bad cottage accommodation than the action of public opinion on landlords who neglect their duty.

There are no children who, throughout the year, are neither at school nor at work; there are a few in winter. About 10 or 12 males, and three or four females are growing up with insufficient education. An evening school is open from October to March, excepting a few weeks at Christmas. It is open

Devonshire.
Mr. Portman.
h.

four nights a week, an hour and a half each night. There are about six scholars. The instruction is chiefly in reading and writing. It is difficult to find a teacher who is in earnest in the work, and bears the drudgery cheerfully. The school is at present kept by my own daughter, the master not relishing it.

LYMPSTONE.

Population, 1,111 - Acreage, 950.

109. *Rev. W. H. Curtler.*—The cultivation is mixed, more pastoral than arable. No females at all are employed in agricultural work. Five boys between 10 and 13, and four between 13 and 18, are employed. They are made generally useful, and are put to all kinds of work. They live on or near the farms at which they work. Their hours are from 7 a.m. to 6 p.m., with half an hour for lunch and one hour for dinner. They are not subject to ill-treatment, and are not injuriously affected by their work. I see no reason for recommending that any restriction should be placed upon the age at which boys should be permitted to be employed in farm labour, upon the distance to which they should be allowed to go to work, or upon their hours of work.

I think any mode of enforcing school attendance in my own district unnecessary and inadvisable. The schools here are within very easy reach of all. The parents can and do afford to pay for their children's schooling. We regulate the payments according to the parents' means. The girls are taught plain needlework.

Nothing more injuriously affects the morals of the people than the want of proper cottage accommodation. Most of the people in the parish reside in the village. There are very few cottages on the farms. The cottages are sufficient in number, and, the area of the parish being small, well enough situated. The quality is indifferent, and in cases of large families they are overcrowded, not with lodgers, but with members of the family. There are scarcely ever three bedrooms, the accommodation therefore is insufficient, especially in sickness. The cottages are owned by various owners of small means, often residing at a distance. The rent is 5*l.* per annum, with a small bit of garden; 4*l.* 10*s.* without garden. Very little progress is being made towards increasing cottage accommodation; none whatever through the Union Chargeability Act.

Boys:		
Under 10 - -	12	12
Between 10 and 13 -	5	5
Total - -	17	17
Girls:		
Under 10 - -	9	9
Between 10 and 13 -	5	5
Total - -	14	14

There is not a child in this parish who is not either at school or at work. I do not think there are more than two or three young persons who cannot read and write, and these are learning to do so.

There is an evening school in the parish, open from October 1st to March 25th. It is open four nights a week, two hours each night. There are 30 scholars on the register (two under 12, and 28 above). The average attendance is 18. The subjects of instruction are reading, writing, and arithmetic. I consider that the evening school adequately supplies the deficiences of the day school. The area of the parish being small, and the great bulk of the population residing in the village, we have not the great difficulty of distance to contend with.

Children are employed on the beach as young as 7 years, this being a fishing village.

The farms are small, and the farmers for the most part an ignorant set of men. The better educated among the labourers go away to London or other places for higher wages.

The wages of an agricultural labourer in this parish are 11*s.* a week and cider; the upper men 12*s.* and cider; jobmen get 2*s.* 6*d.* a day.

Lympstone School.

Boys.

110. 1. Boy of 12 years, earned 9*d.* a day planting mangel. Passed examination in sixth standard.

2. *Passmore*, 10 years old; worked for a farmer at 8*d.* a day stripping mangel. Hours of work from 7 a.m. to 5 p.m., with one and a half hour out for meals. Began to work last year.

Girls' School.

111. *Miss Langdon*, mistress.—Girls are not employed here in the fields. They go to the lace schools at 10 or 11 years of age, after leaving the National school.

UPLOMAN.

Population, 444 - Acreage, 2,577.

112. *Rev. C. S. Bere.*—The cultivation is mixed; two-thirds arable. There are no private gangs. There are employed here in agricultural labour, nine males between 13 and 18; 13 females (married) and one (unmarried) over 18. Their occupation in spring is weeding corn, stone-picking, &c.; in summer, haymaking; in autumn, corn harvest; and in winter, digging and cutting turnips. They live near the farms on which they work. They work from 8 a.m. to 5 p.m., and are allowed an hour and a half for meals. They are not injuriously affected by their work. As far as the morality of the women is concerned, the work they do by themselves (as turnip cutting, &c.) is better by far than the work of the hay field or harvest field. Cases constantly occur in which the mother leaves the younger children in the care of an elder child (of 9 or 10, perhaps, who ought to be at school), so that she may go to work. Here, I think, restriction is necessary. Mothers, where children can all go to school, might go to work an hour later, at 9 a.m., and be home a little earlier than 5. I should fix the age below which boys should not be permitted to be employed at 12. Restriction is not necessary as to distance or hours of work. Farmers are strongly opposed to either of the modes for obtaining school attendance contained in the Factory Act. The method of school attendance for a certain number of hours during the preceding six months, or six months throughout the year, would be just feasible. I see nothing short of compulsory education as a real and effective antidote to the present indifference and labour-interest of the parents; by labour-interest I mean, the interest which parents have in keeping their children at home that *they* may work. The school attendance here depends on the weather, which involves the state of the roads. The people are (and must be to some extent) "weather Christians" on the Sunday; and the children are "weather scholars" in the week. I do not think the parents feel the penny a week at all. No efforts, of which I am aware, are being made for the industrial training of girls.

There are few overcrowded cottages here, but there is much want of comfort, which the outlay of a little money might procure to the poor. There is not quite a sufficient number of cottages. There are 35 instead of 50. Two to 100 acres is the proper proportion.

The cottages are conveniently situated. There are very few with three bedrooms. They are chiefly built of "cob," and have usually two rooms downstairs, the chief room being about 12 feet square, the other of the same size or smaller, for wood, &c. They are *too* well ventilated, being very draughty. Draughts (arising from badly made or badly hung doors, imperfect casements, &c.), *and want of proper light*, are the worst features in Devonshire cottages. There are generally two bedrooms, sometimes as large as the downstair rooms, sometimes smaller (where the second room downstairs is very small). There is always a garden attached of an average of 30 perches. The supply of water is fair. The drainage is imperfect, but the cottages are too isolated to make this a cause of infection. They are generally let with the farms. The rent is generally 1*s.* a week, seldom more than 4*l.* a year. The Union Chargeability Act is causing no increase of cottage accommodation. I think it is impossible for good cottage accommodation to be provided on self-supporting terms, unless groups of eight or six, or at least four, could be built together.

School Statistics.

In Summer and Winter.

—	On the Register of some School.	In average Attendance.
Boys :		
Under 10 - -	19	—
Between 10 and 13 -	6	—
Total - -	25	20
Girls :		
Under 10 - -	29	—
Between 10 and 13 -	7	—
Total - -	36	24

There are two girls between 8 and 10 and three between 10 and 13 who are neither at school nor at work. About 10 or 12 are growing up with insufficient education. The young persons forget what they have learnt; they seldom read at home, even if they have books occasionally. An evening school is open 20 weeks in the year, from October to April. It is held two nights a week and is open one hour and a half each night. There are eight scholars on the register; the average attendance is six. The subjects of instruction are reading, writing, and arithmetic. It does not supply the deficiencies of the day school. The chief difficulty in the way of maintaining it is the distance the boys have to come from their farms to the school.

Uploman School.

113. Boys who have been to field work.

1. 11 years old; had been out bird-keeping at 2*s.* 6*d.* a week and his meat.
2. 11 years old; had been one year at work driving horses at 6*d.* a day, meat, and a quart of cider. Hours from 8 a.m., to 7 p.m., with one hour and a half out.
3. Had worked with his father on a job of thistle-picking on the grass lands; *got* no money.

Girls are only occasionally employed in stone-picking with their mothers.

114. *Mr. Pearce*, vice-chairman of Tiverton board of guardians, farmer, Uploman.—Boys are not much employed before 12 years of age in this parish; girls not at all; and of the women, perhaps one in three go to the fields.

I think the law should not place any restriction on the work of children above 10 years of age. The Tiverton board of guardians does not give relief for children above 10 years; they must then go to work.

Carter boys live in the farm houses. At 12 years of age they get 1*s.* a week, food, and lodging; their wages are raised at the rate of 3*d.* or 6*d.* a week per year till they become men. At 20 years and upwards the pay is 4*s.* a week, board, and lodging. I think the system is a good one for the lads. The hiring is broken at a month's notice.

I calculate the average weekly earnings of an agricultural labourer throughout the year at 10*s. in cash*; in addition he has grist-corn, food at harvest, cider always, and potato ground at 1*s.* a perch, the potatoes being put in for them; the whole may be calculated at 14*s.* a week. The grist-corn is of the same quality as that used by the farmer; tailings are now given to the cattle.

The wages of an ordinary labourer are now 8*s.* a week; of carters, &c. 10*s.* a week. The cottages are usually let with the farms and repaired by the landlord. Where a labourer has his cottage and garden of 20 perches free, it is calculated at 1*s.* a week.

Women's wages are 8*d.* a day and cider, or 9*d.* without cider.

A man can earn 12*s.* a week at task-work.

Two cottages per 100 acres are sufficient in this district for the working of the farms.

I think a system of half day at school and work, or of alternate days, is impracticable in agricultural districts, and I should prefer direct compulsion in the matter of education to any quasi-compulsion by a system requiring the production of any certificate of attendance at school or of attainment before hiring. State aid for education may be dispensed with when a child reaches 12 years, and further improvement may be left to private aid. No child should be employed at all before 10 years of age.

Whitnage, Uploman.

115. *Mr. R. Pearce*, farmer.—Boys do not go to work before 10 years of age. I see no reason why they should not be prevented doing so by law. Women do not work in the fields as much as they formerly did.

The land belongs to many small owners. Cottages are usually let with the farms. I farm 300 acres, but should like to see the farms enlarged.

Men are employed all the year round at 8*s.* a week and privileges. My men do not earn 14*s.* a week on an average through the year. They do not take as much task-work as they might. They are content to earn 2*s.*—2*s.* 6*d.* per day; the task-workmen have no privileges. Turnip-hoeing is done by men; children are not employed here for singling behind the hoe.

Women earn 8*d.* or 9*d.* a day.

The hours of work for men are, in summer, from 6 a.m. to 6 p.m., two hours out; winter, 7 a.m. to 5 p.m., one hour and a half out. Women begin work at 8 a.m.

I do not approve of compulsory education. A system of half days or alternate days for school and work is impracticable. Lads in farm service cannot well be spared to attend night school, as they are wanted for foddering the cattle, &c. at 8 p.m.; the difficulty would be greater where the farm is at a distance from the school.

Cottages.

116. 1. Property of Mr. Squire, farmer; one room and back house down, two large bedrooms up. Inhabited by man and wife and five children. Rent, with fair-sized garden, 4*l.* a year. Built of cob.

2. Two rooms down, two up.

Rent, with garden, 3*l.* 10*s.*, also the property of Mr. Squire.

[The cottages in Uploman are fairly good; they are mostly built of cob, with substantial walls, and lime ash floors, but not *well* ventilated; some have three bedrooms, and all have gardens.—E. B. P.]

117. *Mary Arthurs, married woman.*—I work regularly in the fields. Women's wages are 7*d.* per day and

Devonshire.

Mr. Portman.

h.

cider, or 8*d.* without cider. My husband gets 9*s.* a week and cider; no other privileges. Hours of work are 7 a.m. to 5.30 p.m., with one and a half out. "Farmers' times is very early." Most women work from 8 to 6, with one hour and a half out.

The weeding of the corn is sometimes let by the acre; one or two women will take a job among them. Some farmers screw down the price of the piece-work, so that you cannot make much by it.

Boys are not employed much before 12 years. Most of the ploughing is done with reins now, and the little boys are not wanted to lead the horses. I do not think it would do any harm to the labourer if his children were prevented from working before 10 years of age. No allowance is made by the Board for children over 10 years of age.

I do not hold my cottage under a farmer; those who do so are under the compulsion of their employer. I never heard of any arrangement between a farmer and a man for the work of the wife and children; "but there, they might say I shall want the wife."

118. — *Ware*, jobber or task-work man.—I earn, by hedging, turnip-hoeing, harvest, and other task work on an average 12*s.* a week throughout the year.

In turnip-hoeing I can do nearly half as much again in the day if I employ a boy; I pay him 6*d.* a day.

Boys do not go to work much before 10 years; we can't exactly afford to keep the children at home, but the farmers won't employ them earlier.

Jobmen get no privileges. I consider farmers' regular men with privileges better off than job men; I've tried them both. Very few men earn 14*s.* a week through the year, perhaps a shepherd might. I pay for my cottage 4*l.* a year, and rates and taxes 10*s.* or 11*s.* a year. There is not much chance for a labourer to get a bit of land, the small farms are being put into big ones.

Some clubs part the money every seven years, keeping back some in the box to pay for sickness. I think a deposit system, with a repayment to the family of a portion of the money at the death of the depositor, would be acceptable to the poor. Men pay 12*s.* a year to the club. There is not much to spare out of a poor man's earnings for a savings bank.

Wages of ordinary labourer, 7*s.* a week and cottage; of a carter or shepherd, 9*s.* and 10*s.* a week and cottage. Farmers don't care what sort of cottages the men live in; we can't get them to do anything in the way of repairs. I suppose the landlord knows nothing about them.

ASHBRIDDLE.

119. A cement preparation applied to tile, slate, or thatch roofs, rendering them air-tight and water-tight, and composed of two-thirds Portland cement and one-third wash sand, is much used here. Mr. Cotterell, mason, will undertake to do any roof at 5*s.* a square; a square is $10 \times 10 = 100$ feet.

HALBERTON.

Population, 1,663 - Acreage, 7,602.

A very large and straggling parish.

120. *Rev. Canon Girdlestone.*—The cultivation is—

3,397	acres	arable land.
3,187	„	pasture.
366	„	orchard.
151	„	garden.
387	„	coppice.
9	„	common.
35	„	
70	„	waste.
7,602		

The children, young persons, and women employed in agriculture in this parish number about 810.

Males:	
Under 8 - - - -	30
Between 8 and 10 - - -	12
„ 10 and 13 - - -	78
„ 13 and 18 - - -	375
Total - -	495
Females:	
Under 8 - - - -	30
Between 8 and 10 - - -	15
„ 10 and 13 - - -	60
„ 13 and 18 - - -	125
Over 18—Married - - -	55
„ Unmarried - -	30
Total - -	315

Their employment in spring is weeding and bird-keeping; in summer, hay and corn harvest; in autumn, threshing; in winter, turnip pulling and cutting. The average distance to which they have to go to work is a mile. Their hours are nominally from 7 to 5, but *really* they are very often more. Reckoning from the time of leaving home in the morning to the time of returning in the evening, their hours are, for those who live on the farms, from 6.30 to 6; for those who live at a distance, from 6.30 to 6.30. One hour is allowed for dinner. Their health is injuriously affected by the demand on their physical powers, especially on account of the wet climate and soil of Devon. The young and females are not particularly subject to ill-treatment. Turnip pulling and cutting is injurious to females and the young. Out-door employment interferes much with the proper discharge of domestic duties by women. The number of bastard children is considerable, but how far the joint employment of the sexes in the fields conduces to this I cannot say. Out-door work for women and girls ought to be abolished as both morally and physically unfit for them. The gain to the labourer's family, owing to wear and tear of clothes, is almost nothing, and would be more than compensated by the rise of men's wages which would result from its discontinuance. The farmers cling to it tenaciously, as cheaper than male labour, and tending to keep down wages. I would prohibit female labour in the fields altogether, except at hay and corn harvest. I would recommend that boys under 13 years of age should not be permitted to be employed in farm labour. The low wages of the father are no valid reason for the employment of the boys at an age when they ought to be at school; raise the father's wages, and keep the boys at school. I would restrict the distance to which children and young persons should be allowed to go to work according to age.

I should say that—

No boy of 8 years of age and under 10 - - - - -				½ mile.
No girl under the age of 13 -				
No boy of	10 years of age and under 11			1 „
	11	„	12	
	12	„	13	
No young person of	13	„	14	1½ „
	14	„	15	
	15	„	16	2 „
	16	„	17	
	17	„	18	

should be taken to work beyond a distance from his or her home of

If the age of 13 be adopted as the earliest age for work, there would be no need of restriction as to hours; if children continue to be permitted to be sent to work before 13, then such restriction of hours must be adopted as will allow of the education of the mind with a body unfatigued.

The plan of obtaining school attendance by alternate whole days at school and whole days at work

would be most applicable to the circumstances of this parish. The school attendance is affected by the distance the children have to go to school. A great number of children are kept from school in consequence of the extreme poverty of the parents. As it is, the vicar pays the school fee for many, always for one when three in a family are sent, and often for all where there is a large family of young children. No efforts are being made here for the industrial training of girls.

Sleeping and cottage accommodation here generally is bad; many so-called cottages are mere ruinous hovels. In visiting the sick I am often obliged to take great care that my legs do not go through the holes in the floor of the sleeping room to the room below. Some of the cottages are conveniently situated with respect to the work, and some are not. Few have more than two bedrooms; many have only one. They are overcrowded with the family; the rooms are small, low, and badly ventilated; the drainage is bad; the water supply is usually good; the gardens good; the outhouses bad, and generally without doors. They are chiefly rented from tenant farmers, otherwise from persons who have bought up, and live on the rent of, cottage property; the rents are from 1*s.* 2*d.* to 1*s.* 6*d.* a week. No progress is being made towards increasing cottage accommodation; the Union Chargeability Act does not cause any increase. Just as the landowner always provides a good house and outbuildings for the tenant farmer, which form part of the let for which the rent is paid, so he ought to see that on or near the farm which he lets to his tenant farmer there is a sufficient number of good cottages for the labourers employed on the farm, which he, and not the tenant farmer, ought to keep in repair. These should form part of the let for which he receives his rent, the value of which ought to be included in the let, for which he ought not to expect any separate profit, and the control of which he should, to a certain extent, keep in his own hands. Tenant farmers seldom keep the cottages in even decent repair, and are apt to evict the labourers from them most tyrannically at a moment's notice.

Total	71	44

The schools are excellent, as witnessed by the reports of the Committee of Council on Education, but the attendance is small compared with the amount of population; partly owing to the distances some of the children have to travel to school in a parish of 7,602 acres, but chiefly in consequence of the low wages of the labourer, and his inability on that account to pay school fees, to do without his children's earnings in the field, or even to clothe them decently. Some farmers force their labourers to send their children into the fields. Some children are kept at home to nurse while the mother is in the fields. A labourer's wages are 9*s.* a week, sometimes 8*s.*, with cider; carters and shepherds have in addition house and garden rent free.

An evening school has been tried more than once in this parish, but without success, for want of appreciation and attendance.

HALBERTON SCHOOL.

121. *Mary Jane Goodding*, 10 years old.—I worked in the fields when I was 8 years old with mother, weeding corn; it was not high or wet. I got 1*d.* a day and dinner most days at the farmhouse. Mother got 7*d.* a day.

122. *Thursa Wright*, 9 years old.—I have been out pig-keeping at 4*d.* a week.

123. *Sarah Osmond*, 10 years old.—I have been out cutting turnips. I worked from 8 a.m. to 5 p.m. Mother came in the afternoon.

124. *Emily Sloman*, 9 years old.—I went out weeding corn two years ago with 12 others. We were looked after by a women who came to ask us to go to work and paid me a 1*d.* a day; we worked from 7.30 a.m. to 6 p.m. with 1½ hour out for forenoon and dinner. The woman found dinner for us all; on three days in the week we had cabbage, potatoes, and bacon hot, on the other days bread and cheese. I was out for two months on different farms in Sampford.

125. *W. Morrish*, 8 years old.—I have been out bird-scaring at 3*d.* a week, wet and dry, from 5 a.m. to 6 p.m. I took my dinner with me. It was near home.

126. *H. Lovell*, 9 years old.—I have been out bird-scaring; got my meat; for breakfast, teakettle broth; for dinner, meat and hot potatoes; forenoon, bread and cheese; supper, bread and meat. I was out wet or dry from 4 a.m. to 8 p.m. and went three-quarters of a mile to work.

127. *George Hodder*, 12 years old.—When I was 9 years old I went out thinning turnips with a man by whom I was paid 6*d.* a day, and I found my own food. I left home at 5.30 a.m. and got home at 8 p.m., going six miles to work. The man got 4*s.* an acre for the job. At 11 years old I went out leading horses, got 6*d.* a day, lived at home, and found my own meat. I expect to go to service next Lady-day at 1*s.* a week board and lodging.

128. *Mrs. Sloman.*—I have eight children. My husband is a farm labourer earning 9*s.* a week and three pints of cider a day; he comes home on Saturday. The rent for my cottage is 1*s.* 4*d.* a week (one room down, one upstairs) with small garden; the landlord is a small tradesman in Tiverton. My husband has 15 yards of potato ground free and finds the seed. We had parish relief for two elder children, one a cripple the other a girl of 14 years very delicate; the relief for the latter has been stopped. We consume 1 lb. of bacon a week; bread costs us 1*s.* a week. We eat treacle and lard, and greens from the garden.

Women work in the fields a good deal; their work does not pay for wear and tear of clothes. The earnings of a child under 10 years do not pay for the outgoings.

It is the custom here for a man to take turnip-thinning by the piece and to employ a child to work behind him. The man gets 7*s.* an acre, the child 2*s.* to 2*s.* 6*d.* an acre.

Devonshire.
Mr. Portman.
h.

The woman who employed my child used to take weeding by the piece and get the little ones to work; sometimes she made a profit out of them.

129. *Ann Hodder.*—My husband is a farm labourer but a job man; he earns 9*s.* a week, gets nothing on wet days. I have five children under 11 years of age earning nothing. I get a bit of meat, perhaps 2 lbs. of mutton, once a week for my husband; the children and I usually live on tea, bread and treacle, from 9 to 12 loaves in a week=4*s.* 6*d.* to 6*s.*

130. *Cottage.*—One room down.
Two rooms upstairs of a fair size but cold; small garden, no potato ground. Rent 4*l.* a year.

POND HALBERTON.

Cottages.

131. (No. 1.) Two rooms down.
Two „ upstairs, no garden.
Rent 1*s.* 6*d.* a week; man and wife, two grown up lads, two little children.
(No. 2.) One room down.
Two rooms up, very small.
Inhabited by two old people. Rent 11½*d.* a week.

ASH.

Hamlet of Halberton.

132. *Sarah Ascott.*—I have lived in this cottage for 40 years; there are my husband and myself, one child, and two old men lodgers living in it. (Downstairs one room and backhouse, upstairs two bedrooms; no ceiling to either floor.) We have a large garden with the cottage, rent 4*l.* a year, held under a farmer. My husband earns 9*s.* a week. He put 18½ yards of potatoes in farmer's field at 1*s.* 3*d.* a yard, found the seed himself, the farmer found the dressing. We don't often get butchers' meat. My daughter goes to a dame school in Ash on week days and to Halberton Sunday school.

133. Cottage, with one room down, one „ up } 1*s.* a week.
Another with one room down,
one „ up,
small garden, no conveniences, 9*d.* a week.
These cottages are all in very bad repair; they belong to small proprietors.

HUNTSHAM.

Population, 240.

134. *J. W. Kemp*, agent to Mr. Troyte.—The cultivation is mixed. There are no private gangs. There are 30 children, young persons, and women employed in agricultural labour in this parish; six on my farm. There are 12 males between the ages of 10 and 13 and 6 between the ages of 13 and 11; there are also 12 married females over 18. They are employed in spring in weeding and picking stones, in summer in hay-making and harvesting, in autumn in picking apples and cleaning mangel, and in winter the males are employed in feeding sheep and cattle and in the general work of the farm. They live on or near the farms. Their hours, reckoning from the time of leaving home, are 10; 1½ hours are allowed for dinner. They are not subject to ill-treatment and their health is not injuriously affected by their work. I believe agricultural employment to be beneficial to the morals of married females when they have no very young children to care for, as when they have nothing to do they spend their time in gossiping and often make strife. I would not place any restriction upon the employment of females in agriculture, but I would not allow boys under 11 to be so employed. I do not think any restriction is necessary as to distance for boys above 11. In this neighbourhood no restriction is necessary upon the hours of work of children and young persons.

The school attendance in this parish is not at all affected by the distance to which the children have to go to school. It is also not affected by the pecuniary resources of the parents, as they pay only 1*d.* a week and get well clothed every Christmas. Girls are taught sewing and knitting. Great improvement has been made in cottage accommodation in this neighbourhood during the last 20 years. The proportion of cottages in the parish is two to 150 acres. This is sufficient for the accommodation of the persons employed on the land. The cottages are conveniently situated, but in some cases overcrowded with lodgers who are employed on extra jobs. They are generally built in pairs, one containing three bedrooms and the other two. Each has a kitchen about 14 feet square, a pantry 6 ft. by 10 ft., a woodhouse at the back, a rood of garden, a pigstye, and a watercloset. Each room has a casement in the window for ventilation and one bedroom has a fire-place. There is also an oven in each cottage. Water is supplied by pumps where it cannot be brought by pipes. Drainage is effected by tile or stone gutters supplied with stink traps. The cottages belong to the landowners, but are let to tenant farmers with their farms. In most cases the rent is 1*s.* a week. Where there is deficient cottage accommodation progress is being made towards increasing it. I think it is impossible to provide good cottage accommodation on self-supporting terms and involving no disadvantage to the tenant.

In this parish there are no persons growing up with insufficient education. Wages of labouring men are 7*s.* and 8*s.* a week and privileges, viz., grist corn at 6*s.* or 7*s.* a bushel, fuel free, and garden. The average weekly earnings throughout the year are 13*s.* for carters and upper men and 12*s.* for ordinary labourers.

Cottages on Mr. Troyte's property with quarter acre of garden are let at 1*s.* a week. A pair costs 200*l.*; the repairs are done by the landlord and the rates paid by him. We have lately built several pair.

Cottages placed on the farms and at a distance of one or 1½ mile from the village are in my opinion an advantage to the labourer. The men usually go home to dinner, for which 1½ hour is allowed.

It is the custom to have lads living in the farm-houses and I believe it is good for them. The hiring is by the year with a month's notice on either side.

The working expenses of a farm of 300 acres, part pasture, including manure, ploughs, horses, and men, are 2*l.* per acre.

HEMYOCK, near WELLINGTON.

Population, 1,068 - Acreage, 5,437.

135. *Rev. F. J. Kitson.*—The cultivation is mixed, grass and arable; the grass is chiefly used in dairy farms. Boys from 10 to 13 years of age are employed all the year round. The greater number are employed at the age of 11 to 13, but in some cases as early as 10. Girls do not go out to service as early as the boys, nor are they employed in the fields; but they seldom remain at school beyond 13. There is very little employment of women in field work, very much less than 10 or 12 years ago. They then worked at stone-picking or storing roots and at hay harvest, but are now seldom seen. It would be desirable for boys to remain longer at school; but it is very difficult to induce parents with large families and small wages (9*s.* a week with three pints of cider) to keep children at school as soon as they are old enough to contribute ever so little to the weekly earnings. In this district it is not necessary to place any restriction upon the employment of females in agriculture.

There is a parish school here supported entirely by myself (with the exception of 3*l.* per annum); the farmers contribute nothing. The parish is scattered, and the attendance is consequently intermittent, and partially dependent on weather. Nursing and errand going also sadly interfere with punctual attendance.

The condition of the cottages, as a rule, is not good. Many of them are in the hands of small proprietors who cannot be induced to keep them in good repair. There is a sufficiency for the supply of labour. Many

have been pulled down, or have fallen down within the last 10 years. Many families have left to get better wages elsewhere. Occasional instances of overcrowding occur. The water supply is excellent. Attention to sanitary matters has improved. Most of the cottages have more or less garden ground attached to them; and an endeavour to introduce allotments of land completely failed; none cared for them.

CHEVITHORNE.

Part of Tiverton parish.

136. *James Bragg*, farmer.—The cultivation is for the most part arable. Boys are employed from 12 years of age; they for the most part live in the farm house. Girls are not employed in agriculture; women are employed from two to four days a week in fine weather during the summer, less in winter. Their cottages are for the most part on the farms at which they work; they are not employed more than eight hours. I do not think it desirable to place any restriction upon the age at which boys should be permitted to work on the land, or upon the employment of females in agriculture.

The cottages are not very good; they are sufficient in number; there are rooms enough for the most part; they are well supplied with water; they have good gardens in general. A boy of 13 or 14 years of age would earn 1*s.* 6*d.* a week; we have them in the house on yearly hiring.

I should like to pay all wages in cash, but the men will have cider and less money.

Girls do not go out to field work at all.

137. *Thomas Mugford*, formerly schoolmaster.—Men's wages are 7*s.* and 8*s.* a week and privileges; carters get 9*s.* with privileges. The privileges are cider and firewood, free or *led* for them, house and garden equal to 1*s.* 2*d.* and 1*s.* 4*d.* a week deducted every week from their wages, and potato ground 20 yards, free. All houses have gardens. Boys in the farm houses agree by the year, with a month's notice. Farmers do not take them now till they are big. The employment of children is much less than it was 10 years ago. Married women go to fields to work. Girls are not hired by the farmers, but some may occasionally go with their mothers if they have a job of cutting turnips. The farmers' sons are very often uneducated, and they think that the poor are too much educated now.

Chevithorne School.

138. *Mr. Frisby*, master.—This is a school for the districts comprising East and West Mare, Crazeloman, Chettiscombe, and Chevithorne.

On the books:

Infants - - -	20
Boys over 6 years of age -	36
Girls over 6 „ -	37
Total	93
Average attendance for the year -	58
The oldest boy in the school - -	14

The oldest girls (two) in the school 12 and 13

There is one farm in this parish of 800 acres, one of 600, one of 500, and one of 250. The wages average 7*s.* a week with cider and garden with a cottage. The fuel is stopped out of the pay, and *led* by the farmers.

139. *John Bowden*, 8 years of age.—I have been leading horses at the plough for two years. My father works all the year round as an ordinary labourer, and I am forced to go when I am wanted. I get no money and no food for my work.

140. *John Walker*, 10 years of age.—I have been leading horses at plough, and get 1*s.* 6*d.* a week and a pint of cider a day. My father earns 8*s.* a week; there are seven in the family. I began work last year. (This boy attended school 223 times.)

141. *James Hawkins*, 11 years old, earns 1*s.* 6*d.* a week.

142. *Sarah Roe*, 11 years of age.—I went out at stone-picking at 8 years of age with my mother; we were paid separately; I was paid by the load of 12 barrows. I was out for a month, and earned 6*s.* I had a new pair of boots when I went out, which cost 6*s.* 6*d.*, and when I came back from my work I had completely worn them out. My father is an agricultural labourer, and earns 7*s.* a week; we have five children at home. There is no extra pay in harvest; I got 6*d.* a week for tying corn, and food found. I have been out topping and cleaning turnips at 4*d.* a day, which is very hard work. The high corn is weeded by the women; I have been out weeding corn at 8*d.* a week. I have seen six children together, with a man to look after them. Girls go out to service at 12 years of age; often get 6*d.* a week and their food.

143. *Mr. Frisby.*—The cottages are let with the farms; the farmers have perfect control over the labourers. The rent of the cottages is reckoned at 1*s.* a week. I have very few children above 10 years of age in the school. The farthest distance that they come is two miles and a half. A night school did not answer, the farmers did not like to let the lads come.

Milum's Cottage.

144. Two rooms on ground floor, one of which is used for ashes and rubbish; two bedrooms; a very small garden; 10 yards of potato ground rented under a farmer at 4*l.* a year; five children at home.

145. *Maria Levercombe.*—Cottage.—Two rooms down, two rooms up; only uses one on each floor, the others are used for rubbish, and to store potatoes in. Man and wife and three children; the husband looks after the farmer's bullocks at 8*s.* a week; garden and house rent free; cider and fuel free; and the woman works in the field stone-picking and in the barn.

CHETTISCOMBE.

Part of Tiverton parish.

146. *Henry Haydon*, farmer.—The cultivation is mixed. Boys are employed from about 12 years of age, generally as in-door servants, and throughout the year. Girls are not employed. There is always plenty of work for women in fine weather. There are labourers' cottages on most farms, sufficient for nearly all employed. The children, young persons, and women are employed eight hours a day. It is not desirable to place any restriction upon the age at which boys should be permitted to work on the land, or upon the employment of females in agriculture.

There are plenty of schools here at easy distances, which are generally well attended.

Some of the cottages are good, and some very bad; they are sufficient in number, and conveniently situated. Not many are overcrowded; nearly all have good gardens adjoining.

The women earn 8*d.* a day, and work from 8 a.m. to 4.30 p.m. Man's wages, head workman's, with machine, &c., 9*s.* a week and extras. A carter's wages, 8*s.* a week, cottage and garden rent free, with 20 yards of potatoes, equal to 1*l.* a year, and fuel. Best wheat at 5*s.* a bushel, one bushel a fortnight; if they want more grist they can have it at the same price; two quarts of cider a day, equal to 1*s.* 3*d.* a week; and a run for a pig. Average weekly earnings over the year, 14*s.*; harvest pay makes 1*s.* a week on the year. I have also two men at 7*s.* a week, and the same privileges, except three pints of cider instead of two quarts; they have extra time and piecework; no day is lost for bad weather, and man agrees for all the year round. My cottages are let with the farm; the tenant does the outside repairs, and the landlord the inside. A pair of cottages let with the farm have two rooms down and two up, with fire-place. Man and wife, brother, and two small children in one.

I think that 10 years of age would be a good limit, if any, to place for children to work in the fields. We have no hiring fairs. I have two boys in the house of

Devonshire.

Mr. Portman.

h.

10 and 12 years of age, taken on charity, who get their meat and clothes. There is no night school. If attendance at night school is made compulsory after 10 years of age, farmers would not employ the boys, as it would be very inconvenient, as in the mornings and evenings boys are most wanted. You may over-educate the poor children.

THORVERTON.

Population, 1,211 - Acreage, 4,050.

147. *Venerable Archdeacon Freeman.*—The cultivation is mixed. There are no private gangs in this parish. About three or four males between 10 and 13, and about 40 between 13 and 18, and also about six unmarried females over 18, are employed here in agricultural labour. Some live on the farms at which they work, most near, two miles distant at most. Their usual hours of work are from 7 to 5.30. Half an hour is allowed for breakfast at 10, and one hour for dinner at 1. The demand on their physical powers, joined to scantiness of food, injuriously affects their health in after life. I have heard of a case or two in which the young have been ill-treated.

There are no special employments which injuriously affect females or the young. I think very ill of the employment of females in agriculture; I should be glad to see it discouraged. I do not think boys below 12 should be permitted to be employed in agriculture. No boy from 12 to 13 ought to go beyond one mile to his work. I think it desirable to place restriction on the hours of work of children and young persons employed in agriculture.

There are great disadvantages in introducing such a system as that in the Factory Act or Printworks Act at all into a parish where the whole-time system works well as here; it discourages the regular and *suggests* half attendance. Out of an average of about 60 children six live less than three miles from the school, nine less than two miles, and 45 less than one mile. The attendance is affected by the distance in bad weather, but not seriously. All but the very poorest parents and the most ill-conditioned can and do send their children to school. No efforts are made for the industrial training of girls.

There is often scanty cottage accommodation, dangerous to morality, and the wretched condition of many cottages directly tends to teach untidiness and disorder, and discourages cleanliness and healthy ways. There are about 150 cottages to 4,000 acres, which is about sufficient. In most cases the cottages are conveniently situated, but in some cases they are crowded with members of the family. There is not a sufficient number with two or three bedrooms.

They generally consist of one large room below, paved with round stones or "lime-ash" floor, say 16 feet square, and two rooms above half that size. The water supply is fair, gardens rare, outhouses bad. They are mostly owned by farmers or tradesmen. Rents are from 1*s.* to 2*s.* a week. Better cottages are being built. The Union Chargeability Act is causing no increase.

School Statistics.

In Summer and Winter.

—	On the Register.	In average Attendance.
Boys:		
Under 10 - -	57	40
Between 10 and 13 -	21	16
Total - -	78	56
Girls:		
Under 10 - -	28	20
Between 10 and 13 -	29	19
Total - -	57	39

There are about three boys and three girls between the ages of 8 and 10, and six boys and six girls between the ages of 10 and 13, who are neither at school nor at work. There is an evening school open four nights a week for 42 weeks; it is open an hour and a half each night. The average number of scholars is 14.

In Winter.

—	On the Register.	In average Attendance.
Under 12 - - -	1	1
Above 12 - - -	38	17

In Summer.

Under 12 - - -	1	1
Above 12 - - -	38	6

The subjects of instruction are religious knowledge, reading, writing, and arithmetic. I consider that the evening school supplies the deficiencies of the day school. The late hours of work in winter for such as have the care of horses and cattle are an obstacle in the way of maintaining an efficient evening school.

There are Sunday classes of recent formation, in which some 20 males from 13 to 18, and 12 girls from 14 to 18, are taught to read, &c.

148. *Mr. Rodmore* and *Rev. Baynon.*—Charities, money is not given to children over 10 years of age; they are then expected to earn something for themselves.

The population has decreased lately.

[The schoolmaster said that of late several farm lads had been forbidden by their employers to attend night school, on account of such attendance interfering with the arrangements for foddering the cattle and doing-up the horses.—E. B. P.]

CADBURY.

Population, 241 - Acreage, 1,899.

149. *G. Turner*, farmer.—The cultivation is mixed. There are plenty of roots grown, and cattle and sheep are bred and fed. Boys are employed here from 11 years old. Girls are not employed in the fields. There is only about one woman in 20 who will work on the farm. The young persons and women do not live half a mile from their work. Their hours are from 7 to 5, with half an hour for lunch and an hour for dinner. It is needless to restrict the age at which boys should be permitted to work on the land, as they generally learn reading, writing, and arithmetic before they go to field work; but at 12 they are useful to the farmer and to their parents, and they generally work for their first master four or five years. I do not think that girls ought to be employed in the fields at an early age, and there is plenty of employment for them in farmhouses as indoor servants.

There is a good parochial school here, at which nearly all the children in the parish are instructed, according to their age, in reading, writing, arithmetic, knitting, and sewing.

There are good cottages for all the labourers and their families on every farm. I have a dozen on my farm. They have separate sleeping apartments in good repair. There is also a good supply of water. There ought to be two or three bedrooms in each cottage. There is sufficient garden ground attached to each cottage and close to it. The rent of each cottage and garden is 1*s.* a week. I think that the labourers are better fed, better housed, and better clad than I ever remember, and I also know that labour on the farm is full 50 per cent. higher than it was 50 years ago, or in 1820.

Culver Park Cottages.

150. *Rev. E. Fursdon.*—Double cottage.

(1.) *Roach.*—Down—kitchen, small room, and back house.

Up—Three bedrooms, one fire-place.

Man and wife and three children. Rent with pigsty, outhouse, and 16 yards of garden 1*s.* a week. The cottage is attached to a farm.

Eldest boy 11 years old; earns 6*d.* a day taking up turnips for the bullocks.

151. *James Elsworthy,* labourer.—I earn by thatching 2*s.* 3*d.* a day and cider reckoned at 6*d.* An agricultural labourer's wages are 8*s.* or 9*s.* a week and cider. 1*s.* a week drawback for cottage rent. Most of the cottages have gardens.

Boys go out to work at 10 years; they should not go till 12 years. Girls are not employed in the fields, nor do women go out as much as they formerly did.

Cottage.

Mr. Fursdon's.—One room and back-house down.

One bedroom up.

With garden, 2*l.* a year and "outs."*

Hill's Cottages.

Row of five.

152. Hill is a carpenter by trade and owns this row; he once had a small farm of 26 acres. They are built of cob; the gardens attached are very small. Three of them with kitchen and back-house down, and two bedrooms upstairs are let at 1*s.* a week. Two others at 4*l.* a year, (1) with three bedrooms, (2) with two bedrooms.

153. *Mrs. George Elsworthy.*—My husband is shepherd under Mr. Turner; he gets 10*s.* a week and cider; no extra pay for lambing. He pays 4*l.* a year for his cottage and garden.

154. *John Elsworthy,* waggoner.—I get 10*s.* a week, two quarts of cider a day, and a house rent free. If I had to take it all in money I would not take less than 12*s.* a week.

CADELEIGH.

155. *Rev. P. F. Britten,* rector.—The school has been shut up since Christmas for want of support.

There is no resident squire; the properties are very small, and I cannot get any subscriptions or support from the farmers.

A labourer's wages are 9*s.* a week and cider, without privileges.

Slade's Cottages.

Row of five.

156. Downstairs,—kitchen and back-house.

Upstairs,—Two bedrooms.

Rent 3*l.* 10*s.* to 3*l.* 12*s.* a year and outs. Small garden. They are in bad repair.

157. *Mrs. John Blackmore.*—My husband is a job man; his wages for constant work are 9*s.* a week and cider, without privileges; 2*s.* a day when working with thrashing machine. I used to work in the fields when I was a girl, and got 7*d.* a day; the money was a help to the family.

Cottage, property of a farmer.

Down,—kitchen and back-house.

Up,—two small bedrooms.

Pigsty, privy, and small garden. Rent 4*l.* a year and outs.

[Cadeleigh parish is a very poor one, and cottages are in bad repair.]

BAMPTON.

158. *Mr. Periam,* farmer.—I farm 150 acres of land and have also some lime quarries. I employ five men and two women on the farm. Boys begin farm work about 12 years of age; some few at 9 or 10 years are employed for driving horses at the quarries at 4*d.* or 6*d.* a day from 7.30 a.m. to 6 p.m. in summer, with 1½ hours out for meals.

Girls are very rarely employed in the fields.

Agricultural labouring men get 10*s.* a week in money, or 9*s.* and a house. Women earn 4*s.* a week; they often take weeding corn by the piece. I prefer paying my people all in money, and they like it better than part in kind.

Children attend school pretty regularly; there is a free endowed school and an infant school.

I see no objection to placing a restriction by law on the employment of children under 10 years of age, and I do not think there would be any injury to the heads of the families by reason of the loss of children's earnings before that age.

There are 19 or 20 acres of allotment ground let in plots of one-eighth to one-fourth an acre, at a rent varying from 6*d.* to 1*s.* a perch, according to the quality of the land. There are also gardens attached to many of the cottages.

The cottages are pretty good. Most of them belong to tradesmen; they are for the most part built of stone with slate roofs.

You can build a double cottage with kitchen, back-house, and two bedrooms in each for 120*l.* Each would let with a garden for 4*l.* a year.

MOREBATH.

Population, 430 - Acreage, 4,130.

159. *Rev. S. Berkeley.*—The cultivation is mixed with a preponderance of arable. There are no private gangs. The children, young persons, and women employed in agricultural labour are too few to be worth enumerating. I do not think employment in the fields by any means necessarily injurious to the morals of women, but it cannot fail to interfere with their fitness for and the fit performance of domestic duties. I would not place any restriction upon the employment of females in field work, but I have heard a farmer say that he would rather see a woman turniping than haymaking. I would not let boys under 11 be employed in farm labour. In this neighbourhood it is not necessary to place any restriction upon the distance to which children and young persons have to go to their work. I would suggest the requirement of *regular* attendance at school during the winter half, and of a certain number of days during the summer half; the methods contained in the Factory Act are entirely impracticable in agricultural districts. The school attendance in this parish is very slightly affected by the distance the children have to go to school. The distant children are often the most punctual and regular. Poverty is not seldom pleaded as an excuse for not sending children to school, especially where there are three or more children to be taught; but I do not consider the plea a good one, or in most cases a sincere one, for if I pay for the children, or one of them, they are *not sent a bit more regularly.* Girls are not trained industrially beyond receiving instruction in needlework.

The accommodation of the existing cottages in this parish is fairly satisfactory. No progress is being made towards an increase of cottage accommodation. The Union Chargeability Act is causing no increase.

School Statistics.

Devonshire.

Mr. Portman.

h.

Older children come best in winter; younger in summer. There are neither at school nor at work,—

In Summer and Winter.

Boys:	
Between 8 and 10 - - -	3
„ 10 and 13 - - -	1
Girls:	
Between 8 and 10 - - -	1
„ 10 and 13 - - -	1

I should say about two-thirds of the total number of persons between 13 and 18 are growing up with insufficient education. In most cases they have no education whatever. There is an evening school open 20 weeks in the year during the winter. It is open for an hour two nights a week. Hitherto it has been carried on only by the clergyman in person and alone. There are 19 scholars above 12, of whom eight attend on the average. They are taught reading and writing. The evening school does not supply the deficiencies of the day school. The difficulties in the way of maintaining an evening school, are generally the indifference of the lads themselves, and some hindrances on the part of employers, especially when the work is about horses, which have to be attended late in the evening.

School Statistics relating to the parish of Bampton.

Population, 1,971 - Acreage, 7,997.

—	On Register.	In average Attendance.

Between 10 and 13 -	20	11
Total -	50	36

The number of children neither at school nor at work is very small. An evening school is open 25 weeks in winter. It is open five nights a week, one hour each night. There are,—

On the Register.	In average Attendance.
(Age, 14 to 30.) 27	15

The subjects of instruction are reading, writing, arithmetic, and dictation. It does not supply the deficiencies of the day school. The difficulty in the way of the evening school is indifference to education.

With the view of making this return as complete as possible, I have sent to all the managers in my district of diocesan inspection (and one or two out of it) a circular, of which the following is a copy.

"To which of the following causes do you mainly attribute the irregularity of attendance at elementary schools?

1. Fair claims of labour for hire.
2. Fair home claims.
3. Caprice or indifference of parents.
4. [Any other cause, which please name.]"

A very large proportion of the answers assigned "3" as the main cause of irregular attendance. One correspondent, of very considerable experience as diocesan inspector of a large district in the adjoining county, modifies this opinion by attributing the prevalence of cause "3" to the apathy of teachers and clergy, and a consequent indifference to the efficiency of their school or their people's estimate of the benefit of education.

No doubt this was painfully true in past years, and may be true to a great degree in some districts still, but I do not think it is more than exceptionally the case in this district.

160. *Mr. Stoneman*, farmer.—The people are well off here, and the women do not go out much to field work. Wages for men vary from 8*s.* to 11*s.* a week; they generally prefer money and cider to money and privileges.

There are not enough cottages for the work of the farms, much of the labour comes from Bampton, two miles distant. Some farms have no cottages attached to them; in that case men live in the farmhouses, and get 3*s.* 6*d.* to 4*s.* 6*d.* a week, and lodging, food, and washing.

Emigration has thinned our population, and the best young men go away to the police, railways, &c.; those are the best educated.

I have always found educated men the best labourers. "A man who has got a bit of learning has more "reason about him, you can talk to him."

I see no objection to preventing children under 10 years of age from going to work. The earnings before that age are of no importance.

161. *Mr. Pine*, farmer.—I employ one lad of 16 years at 2*s.* a week, meat and lodging. I prefer having my carter in my house. Small children are not much employed in the fields. This year they have earned a good deal of money at acorn-picking. My farm is about 200 acres, chiefly grass. The land about here is mostly arable and very poor.

I have one cottage where my labourer lives rent free; he gets 7*s.* a week and privileges. I pay wages part in money and part in kind. Grist corn at 6*s.* a bushel, and at a reduced price if wheat is lower than that.

My man gets 7*s.* a week, cottage and garden rent free, cider, bread baked for him in farmhouse, 20 yards of potato ground, and piecework, and when hedging he gets the wood for firing.

Hours of work are from 7 a.m. to 5 p.m. I never heard of a gang of children in these parts working under the charge of a man or a woman.

162. *Mr. Goodding*, farmer.—I hold 300 acres. Two cottages per 100 acres is not quite enough for the requirements of my farm.

I think that where the master is a good one, the labourer with privileges is better off than the man who gets all his wages in money. If a man gets all money he has to buy at the shop, and loses to the amount of the profit made by the tradesman.

Ordinary wages are 7*s.* to 9*s.* a week with privileges. A man the other day refused 11*s.* a week without privileges. I consider a man's average weekly earnings through the year are 12*s.* a week. Yearly servants get board, lodging, and washing, and from 3*s.* to 5*s.* a week.

Boys do not go out to work young, they should not go till 12 years. I do not think if the limit was placed at 10 years there would be any injury done to the parents.

Women are employed when they can be got; they are paid 8*d.* a day, but sometimes work by the piece pulling turnips. In harvest wages remain unaltered, but all meals are found by the farmer. Some few pay one and a half day's wage for a day's work.

In the Dulverton union relief is not withdrawn till children are 12 years old.

I do not think much money is saved by the labourers, except, perhaps, by a few young men; they used to be more saving. The single men do not stay long in one place.

There is usually a garden of one-eighth to one-quarter of an acre with each cottage, besides which the labourers have from 20 to 25 yards of potato ground in a field; they find their own seed and one planter, the farmer finds horses and plough and dress-

ing; afterwards the labourer has to reap the crop clean, and take it up.

I should not make any difference between two men of equally good character because one was better educated than the other. I do not find much difference between the work of an educated and an uneducated man, except in case of a carter who has to fetch and deliver goods. The benefit of education is to the labourer, and not to the employer. I am decidedly in favour of educating the labourer.

The small farmers on poor land, and with small tenements, are worse off than the labourers.

There is a class called dairymen. A labouring man takes a dairy from the farmer at per cow, depositing a quarter's payment in advance. If the dairy is 20 cows he does no other work, if under that number he usually works on the farm three or four days in the week; he keeps a horse on same land if he has 15 cows and upwards, he also keeps pigs. The take is by the year; each cow being in the dairy 40 weeks; dairyman gets the calf; the rent per cow is usually about 10*l.*

This is the only way in which a labourer here can rise. A man who lived with me as a labourer raised himself in this way, and is now renting a farm at 100*l.* a year, and has put by some money.

163. *Jane Quartley*, old woman.—I have always been a field worker. My husband lived in a farmer's cottage rent free, and the agreement was that I was to work when wanted. I used to earn 8*d.* a day. I would never send a girl of mine to field work, it is not good for them.

Morebath School.

164. *J. Aldred*, master.—The attendance of boys over 10 years of age is irregular. The school is most full between Christmas and Lady-day. Irregularity of attendance is more often caused by the necessity for keeping some of the children at home when the mother is at work in the fields, than by any constant employment of the children themselves. I should like to keep children regularly at school till they have passed the fourth standard, which might be done by the time they reach 10 years of age. 12 out of 90 attended three-fouths of the year.

165. *John Court*, 9 years old.—I went out driving bullocks at plough last year and got 6*d.* a day; had to go a mile to work, and went home to dinner for which an hour was allowed. My father is a dairyman with seven cows, he works on the farm as an ordinary labourer.

166. *Henry Court*, nearly 8 years old.—I went out pig-keeping last year, got 2*d.* a day; was out from 8 a.m. to 6 p.m. I also went stone-picking with mother.

167. *Emma Stephens*, 12 years old.—I have been out weeding corn with mother, and got 6*d.* a day; I have also been stone-picking with her.

168. *Robert Thomas*, 80 years old.—I have been a planter and hedger. I used to earn 15*s.* a week planting at so much per 1,000. I went about to different places for work. I do not hold to women going out to field work, they don't gain much and they are wanted at home.

Young men go away from the parish for work more than they used.

I do not think it would be any hardship on the labourers to prevent children working till they are 10 years old.

169. *Firway cottage* (Mr. M. Bere's) in good order, two rooms, down.

Three bedrooms, with fire-place.

Half acre of garden, 5*l.* 5*s.* a year.

170. *Cottages* property of Mr. Hancock, farmer, built of cob.

(1.) One room and backhouse, down, lime-ash floor.

One bedroom, up.

With garden, 1*s.* a week.

(2.) Keepers house:—

One room and backhouse, down.

Two bedrooms, up.

1*s.* 6*d.* a week with garden.

MESHAW.

Population, 250 - Acreage, 1,745.

171. *Rev. W. H. Karslake.*—The cultivation is mixed. Four males between the ages of 13 and 18 are employed here, and one female between 10 and 13, two between 13 and 18, and four married females over 18. Neither private nor public gangs are in existence in this parish or neighbourhood. The farms in this parish being as a rule small the children of farmers of both sexes for the most part do the work suited to their age and sex on the farms, and are generally so employed from about the age of 12 years. The boys and girls that are hired servants live in the farmhouses on which they work and are treated pretty much as members of the family. The farmers children so employed are often sent for a quarter or half year at a time to school as opportunity and leisure are afforded. The children are employed in driving the cattle to and from pasture, foddering them night and morning, weeding corn and roots, driving the horses, going on errands, &c. according to sex. The women are employed in tending pigs, milking, weeding, assisting in threshing, planting, and storing roots, &c. The distance they have to travel to their work does not much exceed one mile in any case. The children of both sexes suffer not unfrequently from chilblains and sore feet, from badly made boots, neglect of cleanliness, and wet. Obviously these are evils which may partially be remedied by attention from day to day, but it is presumed they can hardly form the subject of legislative interference. There are no special employments injuriously affecting females or the young generally. It cannot with truth be asserted that no cases occur in which the morals of females are injuriously affected by their employment in agriculture; but from the experience which I have had as a clergyman and magistrate I can safely say that the morals of females brought up as agricultural servants do not contrast unfavourably as compared with those of females employed in the few factories which exist in this district or with those kept at home as glovers and lace workers. So also as respects the training of females for domestic duties. The best wives and mothers are those who have been trained in domestic service either in farmhouses or those of gentlemen, and none are so ignorant and slovenly as those whose early life has been spent at home. The amount of female labour in the fields has so materially diminished of late years that the question of its restriction as regards adult women may safely be left to answer itself. I am not prepared to advise legislative restrictions even as respects girls. The out-door work of young females seldom goes beyond those duties connected with the dairy, and the tending of pigs and poultry in the farmyards, or taking these creatures to and from their feeding ground. The greatest risk to which the virtue of young females employed in agriculture appears to be exposed, arises from young females being frequently the only hired servant in families where there are grown up sons of the farmers, or it may be where her companions are male farm servants in and about the house and yard.

It does not seem necessary to restrict the distance to which practically boys are required to go for farm labour. They are not employed at an unduly early age. I see no reason for recommending any restriction upon the hours of work of children and young persons employed in agriculture. The question of school attendance is a most important one, as undoubtedly there is at present great danger of young persons losing to a great degree the advantages they have obtained during their early school days, say up to 10 or 12 years of age, through subsequent neglect. There are no doubt very many honourable instances of

Devonshire.

Mr. Portman.

h.

farmers and their wives taking much and deep interest in their young servants of both sexes; and it is believed that these instances would be multiplied to a very great extent but for the difficulty experienced by employed labour in enforcing reasonable submission to domestic discipline on their young male and female servants. These seem to consider that when not actually engaged in the employer's ordinary work they have a right to be masters or mistresses of their own time, and ordinarily are disposed to resist even any restriction on their hours of being in the house at night or in the disposal of their time on the Lord's day.

I am not fond of multiplying legal enactments which are too often oppressive and therefore inoperative, but I am inclined to believe that a statute requiring a return as respects all servants employed in agriculture, of the number of their attendances during the past six months at school and at *some* place of divine worship, would be advantageous and would be hailed as a boon by agriculturists. The school attendance here is considerably affected by the distance to which the children have to go to school. This should never exceed two miles. The cases in which the pecuniary recources of the parents prevent the attendance of the children at school are generally met by private charity. No efforts of a public character are being made for the industrial training of girls.

The cottages generally in rural districts contrast favourably with the accommodation of the poor in towns. All have two rooms, viz., one bedroom and one sitting-room or kitchen; most two bedrooms; several three rooms. The number of cottages at present occupied by labourers in agriculture in this parish is 15, and as there are several other cottages which are unoccupied it may be considered that the supply is at least equal to the demand. It is however believed that additional labour (if procurable) could be profitably applied to the land. The cottages are conveniently situated, and there is a sufficient number with good bedroom accommodation. But some families are contented to live in cottages without sufficient bedroom accommodation, and it is always difficult to avoid overcrowding when sufficient accommodation is provided. The water supply is scarcely sufficient in quantity, and is inconvenient as to distance from many cottages. Gardens are universal. Privy accommodation is insufficient. Landowners are generally the owners of the cottages. The rents are about 3*l.* per annum. The Union Chargeability Act is having no effect in causing an increase of cottage accommodation. No result has followed 27 & 28 Vict. c. 114. It is believed that no system can be devised by which cottages can be made really self-supporting as the habitations of agricultural labourers, but that landowners must be content to provide cottages for the labourers on the same principle as they provide for the stock on a farm and a residence for the farmer, as necessary, that is, to the profitable occupation of the land.

There are none who are neither at school nor at work.

CHAWLEIGH.

Population, 800 - Acreage, 5,359.

172. *Samuel Trick*, farmer.—The cultivation is mixed, arable and pasture. Boys are generally employed about the age of 10, if they are employed younger it is at harvest time and the spring of the year. Girls are not employed except as indoor servants. Women are employed to a small extent. Their hours are from 8 a.m. to 5.30 p.m. No restriction is necessary upon the age at which boys should work upon the land. It is not desirable to place any restriction upon the employment of females; girls are not employed in agriculture, their occupation is mostly making lace.

A good school is provided by the Earl of Portsmouth for the children of the labouring class by their paying 1*d.* per week. Some do not send their children regularly to school, and so do not take full advantage of it.

The cottages here are much improved of late. They are not overcrowded. No evil results to morality have arisen in our parish. They are well supplied with water and well ventilated. They have very good gardens or allotments of land.

Women are not employed regularly, but in the spring they go out weeding corn. The girls are occupied with lace making. There is no night school. I should like to see an alteration made in the mode of giving Government aid to schools, especially as regards the necessity for having a certificated master. There is a reading room in the parish.

A man's wages 10*s.* or 11*s.* a week or 8*s.* in money with a bushel of barley a week at 3*s.*, or a bushel of wheat at 6*s.* I should prefer to have them on money payment only. Turnip-hoeing is done by the piece by the men at 6*s.* an acre; some men will earn 2*s.* 6*d.* to 3*s.* a day. Children are very seldom taken out for this work. The limit for children's work should be placed at 9 or 10 years of age.

The rent of a cottage is usually 1*s.* a week with a garden. My cottages have a quarter of an acre of garden and a quarter of an acre of land in fields manured for potatoes.

KENTISBURY.

Population, 385 - Acreage, 3,000.

173. *Frederick Smyth.*—The cultivation is arable. The produce consists of oats, roots, and grass. Boys are employed all the year round. No girls are employed. About one in twenty of the labourers' wives is employed. They do not have to go more than a mile to work. Men work from 7 a.m. to 6 p.m.; women and boys from 8 a.m. to 5 p.m. Boys should not be employed at an earlier age than 10 years; for my part, I would rather say 12 years of age. I do not think it desirable to place any restriction upon the employment of females in this part of the country. Labourers are very well off, consequently women do not care to do agricultural labour, and young people

are not sent out to work in the fields very early in life, except in a few instances ; young persons never. There is a good parish school here, supported partly by a small endowment, partly by voluntary subscriptions. In most instances parents avail themselves of the opportunity afforded them, and send their children to school.

The cottages here are tolerably good, and quite sufficient. In some instances they are not conveniently situated. The inconvenience is often the result of the labourer's choice ; they prefer living in the village, even when they might have work close to their doors. The cottages are not overcrowded in general ; and they are generally well supplied with water. The ventilation is tolerably good. All have gardens.

The rate of wages for men is 12*s.* a week ; for women and boys 5*s.* The payment is made entirely in money. In this district skilled labour, such as ditching, &c., is done by piecework, and many men earn as much as 1*l.* a week during the summer.

ASHFORD, near Barnstaple.

Acreage, 359.

174. *George Langdon.*—The cultivation is mixed. No private gang exists in this parish. Boys are generally engaged from 10 years of age, and are lodged with and boarded by the farmers. Girls, from the age of 10 years, are engaged generally as domestic servants. No young females are engaged in out door work. Six married women are employed here in agriculture. The work of the young persons and women in spring is weeding corn, planting potatoes, &c. ; in summer, hay harvesting, &c. ; in autumn, harvest work, gathering apples, potatoes, &c. They are rarely employed in winter. They live on or near the farms at which they work. It takes them but a few minutes to reach their work. They are usually employed eight hours. Half an hour is allowed for luncheon, and one hour for dinner. They are not injuriously affected by their work, and are not ill-treated. Here only married women and widows are employed in agriculture. I am not prepared to recommend any restriction upon the employment of females in field work.

The distance to which children have to go to school does not exceed half a mile. The children, as soon as capable of instruction, usually attend the village school until they become of age, or are sought for, for service. In most cases where there are large families some benevolent person assists the parents by paying for the schooling of one or more of the children.

Three cottages per 100 acres are considered sufficient for the accommodation of the persons employed on the land. We have 14 cottages in the parish ; some of the occupiers are employed in the adjoining parishes. All are situated within a mile of the work ; most have three bedrooms, some more ; they are not overcrowded, and there are no lodgers. The cottages are built with stone and cob, covered mostly with thatch. The rooms are from 12 to 14 feet square. The largest room is the living room. There are generally three bedrooms ; some have four. The ventilation and drainage are good. There is plenty of good spring water, gardens, and outhouses. Some cottages are the property of the landowners ; six out of the 14 are the fee simple of the cottagers themselves. Rent is generally 1*s.* a week.

I believe there are no children who are neither at school nor at work.

COMBE MARTIN.

Population, 1,484 - Acreage, 3,815 a. 3 r. 4 p.

175. *Rev. H. W. Toms.*—The cultivation is mixed. A considerable quantity of land is used as gardens. There are no private gangs in this parish. The work of the children, young persons, and women employed here is, in spring, planting potatoes, garden and field work ; in summer, weeding, hoeing ; and in autumn, harvest work, digging potatoes, &c. They live on or near the farms at which they work. Their usual hours of work are from 8 to 5, with one hour allowed for dinner. The females and the young are not ill-treated, nor does their work injuriously affect their health. Very few females are employed in agriculture. I would not place any restriction upon the employment of females in field work, or upon the age at which boys should be permitted to be so employed. I would not restrict the hours of work of children and young persons employed in agriculture.

The school attendance is not affected by the distance the children have to go to school, the parents living near the school. In consequence of having a small endowment the charge for the children of the poor is only 1*d.* a week. No efforts are being made for the industrial training of girls, unless knitting and sewing are considered industrial.

Very few of the cottages here are more than a mile distant from the farms on which the work has to be done. Very few cottages have three bedrooms ; most of them have two. In some cases there is overcrowding. The size of the rooms is generally small. There are open fire-places, and defective windows and doors are the ventilators. Water is abundant in the parish, and almost every cottage has a garden and an outhouse. Many of the cottages are owned by the cottagers themselves ; very few by landowners. The rents range from 2*l.* 10*s.* to 4*l.* and upwards, according to the size of the garden. This being an open parish in the midst of others more or less close no increase of cottage accommodation is now required. It would be an immense advantage if two or three model cottages could be built in the parish. I do not see how cottage property *per se* can be otherwise than unprofitable.

School Statistics.

There is no other week day school in the parish but the National school.

There are in summer—

	On the Register.	In average Attendance
Boys :		
Under 10 - -	97	90
Between 10 and 13 -	67	
Total - -	164	
Girls :		
Under 10 - -	90	
Between 10 and 13 -	52	
Total - -	142	

In winter there are on the register 170 boys and 144 girls ; the average attendance is 160. An evening school is open 24 weeks in the year, from Michaelmas to Lady-day ; it is open four nights a week, two hours each night. There are about 54 scholars.

	On the Register.	In average Attendance.
Under 12 - - -	4	3
Above 12 - - -	50	29

The subjects of instruction are reading, writing, and arithmetic. A few learn a little grammar. It, to a very great extent, supplies the deficiencies of the day school.

176. *Mr. Ward*, Langridge, Crediton.—The women are employed for hoeing turnips and weeding corn in my district at 8*d.* a day. The hours are usually from 7.30 a.m. till 5.30 p.m. They do not work more than

Devonshire.

Mr. Portman.

h.

four days a week. Boys go out at 9 years of age, some to the farmhouses for food and clothes.

177. Copy of a Letter from J. H. Holley, Esq.

Dear Sir, Oaklands, 26th December 1868.

I have the printed form which you sent to me, but I cannot fill it up to my satisfaction, and therefore I prefer writing to you my few ideas on this subject.

Legislative interference between employer and employed, as a rule, is bad, but there are contingencies which justify exceptions, and make it impolitic to maintain this general rule too stringently. Such are education and the health and growth of the young. It is necessary for the security, welfare, and social order of the nation that the labouring classes should be educated suitably to their position in life, and the Legislature should therefore interfere to protect children from being reared in ignorance. The age at which boys and girls are considered eligible for physical labour may be determined by Act of Parliament so as to give time for a certain amount of instruction to be insisted upon; this would not materially lessen the means of the parents from maintaining their children. Compulsory interference to this extent would not only benefit the nation at large, but the employer and employed would derive mutual advantage by realizing a more efficient performance of the work required. After the age sanctioned for going to work easy access to education ought to be provided by night schools. Education, to be effective, must be national and free from all private interference; and I believe when schools are conducted on a good system they will be eagerly attended. Only in a state of gross ignorance would the labouring classes be content to remain in the degraded condition of immorality they exist in at the present time; therefore it seems to me if you give a good sound education you put it in the power of every man to improve his condition, and induce him to exert himself in that direction; consequently after being educated the labourer will work out his own improvement. As regards the erection of cottages and the moral improvement of the labouring classes, I do not see my way clearly to legislative interference. The erection of cottages depends on the requirements of three parties, the owner of the land, the tenant, and the labourer. As soon as the tenant discovers that it is necessary for the profitable cultivation of his farm that the labourer should be resident on it he will induce the owner to build the residences as well as the barn, stabling, and other buildings previous to this period considered requisite. There is a sort of partnership existing between landlord and tenant, the one finds the capital for the working of the land, the other the capital and knowledge for the tillage. There must be a prospect of remuneration to these two parties in realizing the anticipated improvement in the position of the labourer. I do not think the employment of women in agriculture exists in this county to an injurious extent.

Yours, &c.

(Signed) J. H. Holley.

Hon. E. B. Portman.

Cottages belonging to Mr. Holley (double) one with two bedrooms and space to put a third, the other with two bedrooms. The double cottage was built for 100*l.*; the stone was on the spot; the wood cut by steam saw; the roof is slated.

The boys earn 2*s.* 6*d.* a week at a much earlier age than they do in Norfolk. The women will not work in the fields, even for stone-picking or weeding, excepting in a few instances.

[On Mr. Holley's premises there is an excellent girls' school, and 20 children kept and taught by his daughters. I examined them and found them well instructed in reading, geography, and arithmetic, and the writing from dictation was very good, both in the first and lowest class. These children are mostly from Okehampton.—E. B. P.]

OKEHAMPTON.

Population, 1,929 - Acreage, 9,800.

178. *Archdeacon Downall.*—The cultivation is mixed. No gangs exist here, either private or public. 25 males and 20 females are employed in agricultural labour in this parish. There are 10 males between 10 and 13, and 15 between 13 and 18; the respective ages of the females are 12 between 10 and 13 and eight between 13 and 18. Their employment in spring is weeding and stone-picking; and in autumn harvest work. Some live on the farms; some two miles distant; some one mile. Their usual hours of work are nine; from the time of leaving home to the time of returning their hours are from 8 to 6; one hour is allowed for dinner. Their health is not injuriously affected by their work. I know nothing to the prejudice of the morals of the females employed in agriculture, or to their proper training for domestic duties. I think that boys under 10 should not be employed in farm labour. I think the method of obtaining school attendance most applicable to this parish, would be school attendance for a certain number of hours during the preceding six months. I would produce certificate of such attendance, and be acquainted with the three R.'s. Here the distant children are the most regular. All willing to attend are *enabled* to attend, so that the pecuniary resources of the parents need not influence the school attendance. There are no efforts being made for the industrial training of girls.

The cottage accommodation here is most defective, and prejudicial to the health and comfort and morals of the inhabitants. The proportion of cottages required depends much upon the accommodation of the cottages and the developed cultivation of the land; they are, very generally, convenient, but are overcrowded; they have mud or "cob" walls and stone floors; the ventilation is bad; there is only one room on the ground floor, and one bedroom; the water supply is good; there are allotments and garden, *but no outhouses.*

The owners are various, one or two tradesmen, &c. No progress is being made towards increasing the cottage accommodation; the Union Chargeability Act is having no effect in causing any. I think the only way to obtain good cottage accommodation is by legislative compulsion.

School Statistics.

In Summer.

	On the Register.	In average Attendance.
Boys:		
Under 10 - -	40	29
Between 10 and 13 -	12	9
Total - -	52	38
Girls:		
Under 10 - -	38	23
Between 10 and 13 -	14	9
Total - -	52	32

The attendance and averages vary very little in winter.

Perhaps one-third of the whole number of young persons are growing up with insufficient education. Efforts have been made to maintain an evening school, but with no encouraging success; the highest number of scholars was 15. The subjects of instruction were reading, writing, and arithmetic. The difficulty in the way of maintaining the school was indifference.

NORTH TAWTON.

Population, 1,906 - Acreage, 5,814.

179. *R. Fulford.*—The cultivation is arable, with a fair proportion of grass land. There are no private gangs in this parish. In this parish no women or female children are employed to work in the fields. The employment of the boys and youths in spring is attending to the cattle and preparing the land for spring crops; in summer and autumn in preparing the land for green crops, hoeing turnips, hay and corn harvest; in winter in looking after stock, and as carters. They are invariably boarded in the farm houses; their hours are from 7 a.m. to 6 p.m., with a rest between 7 and 12, and an hour for dinner. They are not injuriously affected by their work. I think females should not be employed in field labour, except at hay and corn harvest; as regards this parish none are so employed. As a rule I think no boy or girl should be employed under 11 years of age; if under that age they should reside in the farm house or on the premises on which they are employed. I think no restriction upon the hours of work of children and young persons in this parish or locality generally.

I think alternate whole days at school and work the best mode of providing for the education of boys and girls employed in agriculture. No doubt distance from the school influences the attendance; the attendance is also, no doubt, affected by the pecuniary resources of the parents. If the education were free, I think parents would gladly avail themselves of it. No efforts are made for the industrial training of girls, neither do I think it could be practically carried on in this or any locality.

The cottages here generally are far from such as should be provided. A great improvement is being made. I think every cottage should have three sleeping rooms. Two cottages to 100 acres are sufficient for the accommodation of the persons employed on the land; there is that proportion here. In this parish very few labourers have to travel more than a mile to their work. The farm labourers' cottages have a kitchen and back room (the former having a fireplace), with two rooms over, in one of which would be a fire-place. Cottages in the country all have gardens. In addition to the garden, the labourers in constant employ are provided with a certain quantity of potato ground, which is cultivated and manured by the master. In some instances the Union Chargeability Act has caused an increase; in neighbouring small parishes where cottages had been pulled down they have been rebuilt. I think improved cottage accommodation can only be effectually made through the landlord and tenant. Every estate or farm should be provided with cottages for their labourers, and the owners of land would, I think, find it pay them to do so.

In this parish a considerable number of the children are employed at a woollen manufactory, where there is a school under the regulation of the Factory Act. We have in this parish an infant school, with an average of 80 scholars. The Sunday school is well attended. A night school is being established. The subjects of instruction will be reading, writing, and arithmetic. I think evening schools may be successfully carried on in towns, or small town populations, but where the agricultural labourers are scattered evening schools cannot be carried on.

SOUTH TAWTON.

Population, 1,541 - Acreage, 10,879.

180. *R. Fulford.*—The cultivation is arable, with a considerable portion of common and uncultivated land. No private gangs are employed in this parish. The number of women employed is very inconsiderable, and children are never employed in field labour. Boys and girls from 11 years and upwards to 18 are employed, and live in farm houses, the girls assisting in household work, and the boys attending the cows, pigs, &c., and other light work. Female labour is only employed at hay and corn harvest, and other light work, such as weeding, &c. As regards this district and county, I think no restriction is necessary upon the hours of work of young persons.

The cottage accommodation in this parish is about the average. No doubt many improvements are to be desired, especially as to the number of the bedrooms, which if possible should not be less than three. I think it is the interest both of landlord and tenant to provide sufficient accommodation to the farm tenant for his labourers. I think a tenant would gladly pay 5*l.* interest on the outlay for cottage accommodation for his labourers, and would underlet to insure permanent labourers at a reduced rental to his labourers.

The attendance at school before going to farm service at 11 years of age is about the average, but, no doubt, an improved and extended system of education would be beneficial.

SAMPFORD COURTNEY.

Population, 991 - Acreage, 7,962.

181. *R. Fulford.*—The cultivation is chiefly arable. There are no private gangs. There are very few women employed in agriculture. There are very few boys or girls employed in the fields. Girls from 11 years and upwards are employed to assist in household work, living at the farm house; and boys from that age are also employed to attend the cattle, and do other light work. As a rule no boys or girls are engaged in agricultural labour under the age of 18 years that do not live in the farm houses. No restriction is necessary upon the employment of females in agriculture, as they are scarcely ever employed except in hay and corn harvest, or in weeding the corn in spring. Boys are never employed until they are 11 years old. I think no restriction necessary upon the hours of work of children and young persons. In large scattered parishes there are great difficulties in continuing the education of boys and girls after they enter farm service, the houses of the masters in which they reside being often distant from the village school. If attendance is to be given it should be alternate or certain whole days in the week at school, and the other at work. The distance from school no doubt interferes with the attendance, but this is unavoidable.

The cottage accommodation in this parish is not such as one might wish, but improvements are being made. Generally the cottages have gardens, and the cottagers are supplied with ground, cultivated and manured by the master, for growing potatoes. Directly cottages do not pay for the building, but indirectly it is the interest of both landlord and tenant to provide cottage accommodation in order to secure the constant service of a good labourer.

There is a parochial school for boys and girls in the village of Sampford Courtney, open daily; it is tolerably well attended. There is also a Sunday school in the village, as well as in the hamlet of Stocklepall.

CHAGFORD.

Population, 1,379 - Acreage, 5,743.

182. *Rev. H. G. Hames.*—The cultivation is mixed. The children and young persons employed in agricultural labour number about 62, 12 of whom are between the ages of 10 and 13. Their employment in spring is tilling, minding cattle, &c.; in summer, haymaking, hoeing crops, &c.; in autumn, harvesting, getting in crops, &c.; in winter, minding cattle, threshing, &c. They live mostly on the farms. Their hours of work are from 7 to 5; one hour and a half is allowed for meals. I do not think the demand upon their physical powers injuriously affects their

Devonshire.

Mr. Portman.

h.

health, nor do I think the young are subject to ill-treatment. Females are seldom employed in agriculture, except for haymaking, harvest, and potato tilling, and then only to a small extent. I think that boys under 12 should be compelled to attend school on alternate days. Any restriction upon the distance to which children and young persons should be allowed to go to work is needless here, as is also restriction upon their hours of work.

The mode of obtaining school attendance by half day at school and half day at work is impracticable; alternate whole days at school and whole days at work would be most effective. School attendance for a certain number of hours during the preceding six months would find most favour with farmers. Children from the outlying parts of this parish cannot attend school before they are 7 years of age or thereabouts. No poor child in this parish need stay away on account of the school fees. Girls are taught sewing.

We have a sufficient number of cottages for the accommodation of the persons employed on the land. The proportion is from one to two per 100 acres. Generally they are conveniently situated. They seldom contain more than two bedrooms, and no sitting room. In a few cases, perhaps, they are overcrowded. The labourer's cottage usually consists of two rooms downstairs (a living room and back room or scullery), and two bedrooms; each room is about 13 feet square, and eight feet high. There is no special provision for ventilation, except the casement. The drainage is pretty well provided for in the village. There is usually an outhouse for fuel, and a pig's house; sometimes a garden. Some are owned by landowners, some by speculators. Such a cottage is sometimes occupied by a family of five, six, or seven; rent about 4*l.* or 5*l.* This was never a close parish; the Union Chargeability Act does not affect this neighbourhood. We depend for good cottage accommodation on the law of supply and demand.

School Statistics.

In Summer and Winter.

	On the Register.	In average Attendance.
Boys:		
Under 10 - -	45	35
Between 10 and 13 -	25	20
Total - -	70	55
Girls:		
Under 10 - -	45	25
Between 10 and 13 -	20	15
Total - -	65	40

There are about 10 boys and 10 girls between the ages of 8 and 10, and five boys and five girls between the ages of 10 and 13, who are neither at school nor at work. I do not know the number of those growing up with insufficient education. There are some who read and write a little, others not at all. There is now no evening school in the parish; there used to be one, but it was closed.

DREWSTEIGNTON.

183. *Rev. W. Ponsford.*—Boys go out to the fields at 10 and 11 years of age; the girls go to farm service. Men's wages, including privileges (such as cider, cottage, &c.), is 11*s.* to 12*s.* a week. The parish is about 6,000 acres, and the population about 1,000. The farms have lately been increased in size, and some of the old farm houses converted into cottages for the labourers, to afford better accommodation. There are some farms of 300 acres more arable than pasture. Most of the young who go out to service live in the farm houses, and get very little money payment but food and clothing. There are some apprentices still in the farms bound by the parents, and some from the union. A portion of the girls' work at farms is out of doors, such as pig-feeding, cattle-feeding, &c.

There are allotments for the villagers of an eighth of an acre each; the farm labourers living in outlying cottages would have one-fourth of an acre for potatoes, manured in the farmer's fields, or half an acre attached to the cottages; most of them have a small garden attached, and one-fourth of an acre in the field.

184. *Elizabeth Way.*—My husband works all the year round for his employer; he gets 9*s.* a week, house rent free, and a garden and 40 yards of potatoes in his employer's fields; he finds the seed, and the manure is found for him. He also gets a quart of cider a day, and he grows enough potatoes usually to last through the winter. A farm labourer would get 10*s.* a week and a house free; a woman would get 8*d.* a day. They sometimes work at potatoing, and go weeding the corn in the spring. Children are not used for weeding.

185. *Elizabeth Oads.*—My husband works regularly for all the farmers throughout the year; his wages are 10*s.* a week in money, and a quart of cider a day, but no other privilege; he gets no piecework. During harvest, meat is given in addition, but not extra money. I never go out harvesting, or for any other field work myself. Women who go out to the fields usually neglect their cottages and children. I never had much schooling; I cannot read and write much, but I find it a great benefit to have my children taught. Hy husband can read and write well. The children here do not go out to work before 12 years of age.

Cottage.—One room downstairs, one up; rent 3*l.* a year, and rates 3*s.* a year; inhabited by a man, wife, and their five children.

Fuel is very dear. I sometimes get a little meat on Saturdays; sometimes eat bacon. We keep a pig, but have to sell it to pay our rent, "as the money "won't keep to it." We have an allotment of 20 yards in Mr. Ponsford's field at 6*s.* 8*d.* a year. This year I have got a piece of potato ground free from the master. Last year I had 40 yards in the farmer's field, and had to pay 2*l.* for it; the manure was found.

NEWTON ABBOT.

Board of Guardians.

March 24, 1869.

Rev. R. R. Wolfe, chairman.

186. The following resolution was carried:—

"That no boy should be allowed to work in the fields under 10 years of age, nor any girl under 16 years in the fields or in out-door work."

The chairman stated that in Devon they could hardly get a woman to work in the fields, and it was very rarely that girls were employed. He believed that the inadequate house accommodation was the chief cause both in town and country of the loose morals of the people. He did not see what there was in agricultural employment *per se* to make it injurious to the morals of any person, and if the women so employed were immoral, they brought the immorality with them, the cause of it being the insufficient accommodation in the houses where they had been reared.

He expressed himself in favour of compulsory education, and protested against the system of the Council giving aid to schools only which had certificated teachers. He considered a half-time system for school and work impracticable in agricultural districts, but thought education might be continued after boys leave the day school either by a system similar to the system under the Printworks Act, or by improved organization of night schools.

Devonshire.

Mr. Portman.

h.

Mr. C. Mallock was opposed to any interference with the parents or the children in the matter of their employment, as he considered that the loss of the earnings of young children would be much felt by the parents. He thought education would concentrate people in the towns.

Mr. J. Creed was against any compulsory system of education, but thought that grants in aid of schools should be given for results only. There is a need of inducement to education after lads begin to work either by night schools or in some other way.

Mr. E. Ford, a large farmer, was in favour of compulsory education. He thought 10 years was quite young enough for a boy to go to work; he had seen lamentable physical ailments brought on by children of a tender age being placed on a farm. The best men on his farm were educated men; it is necessary to educate the labourers if the farmers wish them to be good workmen and to remain on the farm.

Rev. F. Taylor said there was a lamentable want of interest on the part of parents in regard to the education of their children, and he thought some compulsory system must be adopted. If possible, a combination of labour and education would be the best thing.

Mr. W. Sowton, farmer.—Boys under 10 years are useless on a farm; girls are not employed, and women less than formerly. He did not know where good labourers would be obtainable if the youths are not well educated.

Mr. Stook, farmer, expressed himself in favour of a system of compulsory education with a small rate and a local committee of management. A restriction on the work of children under 10 years would not inflict any real hardship on the parents.

Mr. Vivian said the question was, whether the labourer should be used up in his early days. He thought that children if not protected by the State would at times be ill-used by the employer and the parent in the matter of early work, perhaps more often by the parent.

Mr. C. J. Wade expressed himself in favour of an alteration in the present rules of the Committee of Council, by which grants in aid are given only to those schools having certificated teachers.

DEVON CENTRAL CHAMBER OF AGRICULTURE.

14 April 1869.

187. THE REV. R. R. WOLFE ON THE AGRICULTURAL LABOURER.

The rector of Upton, the Rev. R. R. Wolfe, addressed the members of the Devon Central Chamber of Agriculture last Wednesday, at Newton, on "The Agricultural Labourer." There was a large attendance of members.

The rev. gentleman stated in the course of his address that he laboured under two difficulties. First, he was not in the pulpit, and the people would have the right of replying, which they would not have in church; secondly, the subject which he had chosen had lately been pretty well ventilated at a large and influential meeting in the county, and what he had now to say might be considered stale news. But he had not altered his notes since reading the account of that meeting. They had to consider the questions of legislative interference and restrictions in the employment of women and children in agriculture, and how best to provide for primary education. He should divide the subject into three heads—its physical, moral, and intellectual aspects. Regarding the employment of women in agriculture, they must remember that he referred to agriculture exclusively; for on a former occasion he had been misunderstood on that point. Should there be any legislative interference? Well the principle of restriction was applied to every other description of labour. All the industries in this kingdom, except farming, were under legal restrictions, under the control of Acts of Parliament. The Factory Acts provided for "half time" schooling; and the Printworks Acts for schooling for the period of one hundred days in a year. The Workshops Act, past last session, regulated the time of labour of women and children in the workshops of London. There had been a great necessity for such enactments as these. When he was a "journeyman parson," at Leeds, he had ample opportunity of seeing the evils of excessive work in the factories, which by the means of artificial light was indefinitely prolonged. Working in a close atmosphere, amid oily machinery, dust, and bad smells, was prejudicial to health; and when the time was indefinitely prolonged, it became imperative that the Legislature should restrict it. But it appeared that for this restriction there was not the same necessity in the agricultural districts—(hear, hear). Except in the stables or the piggeries young persons could not be put to work at night by the farmer; they could not plough by gaslight. Therefore restrictions as to long hours were unnecessary. The gang system was not in operation in Devonshire; rather it was a difficult thing to get women and girls to work on the farm. The only restriction perhaps required—and he was not going to say that it was absolutely necessary—was that boys under 10 years of age, and girls under 16, should not be employed. He fixed the latter age because medical men said that the employment of girls under that age was prejudicial to health, and might ruin their constitution. He had drawn up a resolution to the effect that the Chamber were of opinion that the employment of women and children in agriculture in this county was not of that excessive amount at to require restrictive legislation. He now came to the question whether field work was degrading to women and girls. On this there was a conflict of opinions. He had looked carefully over a blue book on the subject, and found that from the counties of Norfolk, Essex, Sussex, and Gloucester, the answer was in the affirmative, while from Northumberland it was in the negative. Women were largely employed in Northumberland and the borders of Scotland with most favourable results. He had occasion to go into Scotland in October, when he saw women working in the fields; they had on a most appropriate dress of linsey wolsey—a sort of bloomer costume; they had on gaiters or trowsers—he did not examine so closely to tell which—(laughter). The dress was so appropriate that he asked to have a group of the women photographed. He held that where women did not work in gangs there was nothing of an immoral tendency. Of all occupations agricultural was the most innocent—(hear, hear). Immorality had been brought into the fields; field occupation itself had not led to immorality. The condition of the agricultural labourer at his own house lay at the root of the evil—(hear, hear). Imperfect cottage accommodation was the prime evil. What were the reports from other counties? Why from Norfolk, that cottage accommodation was one of the most prolific sources of immorality; and from Gloucester, that it was a disgrace to the Christian community. Until there was improved cottage accommodation there would be immorality in the field. How to get over this difficulty was a question for consideration. Occupiers of cottages ought to be limited with respect to the extent of accommodation; he would advocate the system of an inspector going round and seeing that certain prescribed conditions respecting the cottages were complied with. It might be said, as an objection to this, that the Englishman's home was his castle, and that an inspector had no right to intrude. But the time had gone by when every man had a right to do as he pleased. So long as men did right, they should not be interfered with; but when they did things tending to crime and poverty, the case was far different. He would curtail the liberty of the subject when there was a disposition to do wrong. The Bible said, 'No man liveth unto himself;" and everybody should be

Devonshire.
Mr. Portman.
h.

made to respect the sentiment contained in those words. The liberty of the subject was already curtailed with regard to vaccination; was there any tyranny then in curtailing it with regard to the overcrowding of his cottage? Landlords should see that lodgers were not introduced into houses to the detriment of the families; this difficulty should be got rid of in some way or the other. He thought that every cottage ought to be well drained, well ventilated, and supplied with plenty of water. Let this be done and overcrowding prevented, then the complaints as to immorality would cease. What was the use of the National schools, if there was a counteracting influence at home? Children were trained at home for good or evil. School influence was often nullified by that exercised at home. In Norfolk, crime resulted from overcrowding to an alarming extent, for one child out of every 10 was illegitimate; and Sir William Jones, of that county, stated that three-fourths of the affiliation orders which he had issued were for domestic servants, and not for agricultural labourers—persons who never went into the field to work. There was nothing in agriculture *per se* to give it in any way an immoral tendency. Coming to the intellectual aspect of his subject, Mr. Wolfe dwelt on the importance of education to the agricultural labourer. He would have direct or indirect compulsory education, or the voluntary system. By direct compulsion, he meant adequate legal provision to secure the regular attendance of children at school. Such was the law of Prussia, America, and Switzerland; nor would it be introducing a new principle into this country, for it was the principle of the Factory Act. Were boys engaged in trade to be sent to school, and a few idle little vagabonds to go scot free who were not occupied at all? He would make it penal for parents not sending their children to school. It appeared to him to be monstrous that the law should compel those who were engaged in industrial pursuits to go to school, and not to compel those miserable street arabs to go there also. It might be said that there were not so many idle boys in the streets as was thought—(hear, hear). But, according to recent statistics made in the House of Commons—(March, this year)—there were at Liverpool 25,000 or 30,000 children in the streets, learning nothing except evil; at Manchester, 20,000 to 25,000; at Birmingham, about the same number. In the three towns, from 65,000 to 75,000 children were growing up uneducated. These are astounding facts. (Mr. Hawker: They refer to towns, and not the country.) But there are similar facts concerning the country. The rev. speaker then contended that school instruction must not be defective or insufficient, and that the poverty of the parents must be considered. It had been said that improved education would deprive the farmers of the services of many of the young people, but he could not see that this would be the case if education were equally distributed throughout the whole kingdom. Another objection was, that children of farmers would be left behind. That might be so in a few instances, in which the middle classes were not fully alive to the necessity of education. To such persons, he would say as the police said to loiterers on the highway—"Move on." Humility in its proper place was an excellent virtue; but he would say to those who were contenting themselves with the "lowest room" of the intellectual standard, "Friend, go up higher." Are labourers' children to be kept in ignorance because some of their betters care not for education? Again, it had been said that if there was to be compulsory education, there must be a compulsory rate; but he could not see that. From a recent paper, moved for by Mr. Acland, he found that 583,794*l.* 5*s.* 4*d.* were granted for education last year by the State, but 1,021,184*l.* 0*s.* 1*d.* were raised by voluntary contributions and school pence in the same period. Now, if you had compulsory rating for educational purposes, you must of necessity sacrifice the payments from voluntary contributions and from school pence, which, he saw, amounted in 1868 to 1,021,184*l.* 0*s.* 1*d.* The country could ill afford this. Besides, if they were to have a rate for this purpose, how should it be raised? Real property ought not to be saddled with it. Education was an imperial and national question, and the whole nation ought to bear its expense. The consolidated fund, therefore, was the most just, and the fairest source from whence to derive the expenses of national education. The present system, by which voluntary efforts and school payments were aided by Government grants, was the best. But, he would have much of the present conditions and restrictions removed or greatly modified. Why should a certificated teacher be considered, a *sine qua non*, to State assistance? Why not have free trade in educational matters, and grant aid according to "results," no matter by what instrumentality accomplished? Under the present system of granting aid, rich localities, who were able to pay certificated teachers, got all; and poorer, who were not, got none. Poverty stricken (?) Torquay was, under the present system, in the receipt of State aid to the amount of several hundreds a year, while the poorer parishes of its neighbourhood got nothing. Throughout England there are 8,761 parishes whose population was under 500, of which only 981 receive annual grants from Government—*i.e.*, there are 7,780 parishes, so conditioned, without any aid whatever. The present system is most objectionable, and must be modified, because it is diametrically opposed to common sense and justice, giving all to the rich and nothing to the poorer localities. Mr. Wolfe then referred to the admirable system of Miss Coutts, whereby, through the instrumentality of a "perambulating certificated "schoolmaster," groups of country schools were brought within the letter of the conditions of Government aid. The difficulties as to management, and the conscience clause, could be easily got over and fairly adjusted by mutual consideration and concession. Mr. Wolfe went on to vindicate the church of which he was a minister, and asked what had dissent done for the education of the masses? Of the whole number of children throughout the country under education in day schools, 75 per cent. were educated by the church. Mr. Wolfe alluded to a system of *indirect* compulsion, namely, that before boys or girls should be permitted to work, they should be obliged to procure a certificate of their being able to read and write and cipher. He concluded by showing that the amount of school accommodation was at the present time sufficient, and that whatever system of national education might ultimately be adopted, he was sure there was that religious instinct pervading all classes of society in this country that would never tolerate any "godless system," but would insist upon sound morality and religious sentiments as the basis of national education.

The Rev. J. M. Hawker said he could not agree with the lecturer in reference to compulsory education in the agricultural districts. There was a thirsting for knowledge at the present time in the country districts, and it would be necessary as things advanced to have agricultural labourers educated, on account of machinery, &c. But he believed the agricultural labourers would see the necessity of educating themselves. He was of opinion that the great intelligence possessed by the Americans was owing to the thirst for reading the newspapers; and if we could get the newspapers more thoroughly circulated among the lower classes we should soon find them far better educated.

Mr. Creed expressed disapproval of compulsory education.

Mr. G. Stooke approved of compulsory education, for he considered it a mercy to children to have them educated. It was the educating children up to 10 years of age that would qualify them for reading the newspapers.

Mr. Bowden was of opinion that if we had compulsory education we must have sectarian schools. He thought that the Established church should be more liberal, and allow the children attending their day

schools to go to any Sabbath school that their parents may wish. He suggested that children in the agricultural districts should go to school three days in the week and three days to work. He advocated having certificated masters, as before they could act as schoolmasters they must have a certificate of competency to teach.

Mr. Coulson said that women were very rarely employed in the fields in Devon. Boys earn in the summer something to pay for schooling in the winter. He thought grants should be given to schools for results, and not only in the case of certificated teachers.

Mr. Ford advocated a system of inspection of cottages, the present state of the dwellings of the poor being such as to require the attention of the Government.

Mr. Wills said there was often great difficulty in obtaining locally funds for schools in rural districts, and this difficulty was partly caused by the profits of the land being taken away from the district and spent elsewhere. He would support compulsory education on the ground that it is the duty of the State to provide for the moral health of the children and for the prevention of crime.

ILSINGTON.

Population, 1,209 - Acreage, 7,653.

188. *George Wills.*—The cultivation is mixed. Boys from 12 years of age are employed all the year round. There is not one girl in the parish so employed to my knowledge. Women are chiefly employed in weeding corn, picking stones and apples, and they assist in the harvest. On my farm the women live within three-quarters of a mile of my house; my only boy is a servant in the house. Some others may have a little further to walk. In my opinion it is not desirable to place any restriction upon the age at which boys should be permitted to be employed. As there are no young females employed here to my knowledge, there can be no need of any restriction upon the employment of females.

There are four or five charity schools situated in different parts of the parish, and I believe them to be tolerably well attended.

I should say we have cottages enough, very well dispersed throughout the parish in hamlets. Some are very good, others small, and some, I fear, overcrowded. Most have a small garden attached, and most farm labourers have allotments of potato ground, if they choose to avail themselves of it.

WHEDDON.

Population, 437 - Acreage, 1,461.

189. *John Creed, Esq.*—The cultivation is partly pastoral and partly arable. Boys are employed from the age of 12 years. Girls are not employed. Women are occasionally employed for weeding and picking stones. They live at the most a mile from their work. Boys are employed from 7 a.m. to 5 p.m., and women from 8 a.m. to 6 p.m. It is not desirable to place any restriction upon the age at which boys should be permitted to be employed upon the land, as boys are not employed at too young an age. I would not place any restriction upon the employment of females in agriculture.

There is a day school here supported by subscriptions, which is open to all on payment of one penny weekly. This is well attended.

The cottages are generally good and sufficient. I am not aware of any overcrowding. All have gardens or allotments.

TEIGNGRACE.

Population, 172 - Acreage, 1,400.

190. *E. Bearne.*—The cultivation is mixed. No boys are employed under 13 years of age. Neither girls nor women are employed in outdoor work on the farms. The hours of work for the boys, &c. are from 7 to 5. I would place the limit of age below which boys should not be employed on the farms at 12. There is a school in this parish supported by the funds of a charity. It is well attended. The cottages are in good condition, and there are sufficient for the supply of labour required. They are conveniently situated, and are well supplied with water and well ventilated. All have good gardens.

IPPLEPEN.

Population, 812 - Acreage, 3,070.

191. *W. Sowton.*—The cultivation is mixed; orchard, pasture, arable, and common land. Children seldom work on the farm until 10 or 11 years old, and generally live in the house on small wages. They are hired more or less all the year. The young men as labourers on the farm are very unsatisfactory. They are not bound after 14 or 15 years of age, when they should be useful labourers on the farm, and they prefer being their own masters, and too often are found spending their evenings at the public-house, where their morals become corrupted, and instead of being useful citizens they are too often a nuisance to the public. Girls are not employed in agriculture, and women to no great extent. The labourers have to go from one to two miles to their work. Their hours of work are from 8 to between 5 and 6. I think no restriction is needed upon the age at which boys should be permitted to be employed in agriculture. I would not place any restriction upon the employment of females.

There is a Wesleyan Sunday school here and a day school, taught by a trained master, under Government inspection. There are about 120 on the books. The average attendance is 90. The school is open to all children; the only restriction is that the children shall attend some place of worship on the Sunday.

The cottages are of a middling character. They are sufficient in number. Each has a small garden. They are situated at distances varying from half a mile to a mile and a half from the farms on which the work has to be done. They are well supplied with water and well ventilated. Some few are overcrowded. In addition to the garden the labourers on the farms are supplied by their masters with a portion of ground (manured for them) for potatoes free of expense.

LUSTLEIGH.

Population, 322 - Acreage, 2,900.

192. *Thomas Wills.*—The cultivation is mixed;

about 1,000	acres	arable,
200	„	grass,
1,000	„	woodland,
700	„	open commons.
2,900		

I never employ boys under 10 years of age, and very seldom under 12, they are useless under 11. This is the case generally in the parish. Girls are rarely employed in the parish; they are usually indoor servants. Women do but little work on the farm except at potato-sowing, stone-picking, hay and corn harvest, and apple-picking, not exceeding six weeks in the year. There is not, on the average, one on each farm employed. The average distance to which they have to go to work does not exceed a mile. They work seven hours a day. I should not let boys work under 10 years of age, and not then until they can read. I do not think it desirable in my parish and district to place any restriction upon the employment of females in agriculture, as girls do not work in the fields.

The education of the children of the agricultural labouring class is provided for by a small endowment of 6*l.* a year, with about 10*l.* a year subscription by the clergyman, and the pence of some of the children

Devonshire. Mr. Portman. h.

who learn to write, making in all 18*l*. Not much progress is made. There is no Government grant or examination. There are 40 on the books. The chief cause of non-attendance is that so little is taught. A complete supervision by an inspector is wanted.

The cottages are all very old. They are kept clean and well ventilated. They are either detached or in pairs. They are chiefly situated on the farms where the men work. All have two bedrooms, a living room down stairs, and a back house. There is plenty of water near each (a good spring generally). They are not overcrowded. All have good gardens and large allotments, which fatten on the average two pigs each, one always granted by their master; and men get their work not more than a mile on the average from their homes, some much nearer, living close to it.

DENBURY.

Population, 410 - Acreage, 1,068.

193. *Mr. W. Salter.*—The cultivation is a mixture of white and green crops. Boys from 12 years old are employed in agriculture, generally through the year. The principal employment of girls of the labouring class is running about the streets. Very few women are employed in outdoor work, and these mostly in the spring of the year. Their employment is stone-picking and weeding. In the months of June and July they are employed in hay-making. In October and November some may be employed in picking apples. They do not live more than a mile at most from their work. They work seven or eight hours a day. I do not think it necessary to place any restrictions upon the age at which boys should be permitted to be employed in farm work, or upon the employment of females.

We have a National school in the village, where the children are taught reading, writing, and sewing.

In our parish cottages are good and plentiful, sufficient for the supply of the labour required. There are enough for the occupation of the labourers from one or two of the adjoining parishes. There is in general a good supply of water. The cottages are well ventilated. By far the greatest number have gardens; in default of this they have allotments of land.

EAST OGWELL.

Population, 275 - Acreage, 1,249.

194. *Rev. F. J. Taylor.*—The cultivation is mixed. The boys are generally taken from school as soon as they are able to earn anything by driving horses at ploughing time, often at a very early age, from 10 to 12 years old. Girls are not employed, but are frequently kept at home for the purpose of taking care of younger children. Women are occasionally employed in weeding and in picking up apples in the orchards in the cider-making season, but not in hard field labour. On an average they have to go about one mile to their work. Their hours are from 7 or 8 to 5 or 6. It is very desirable that boys should not be taken from school before 12 years old.

We have a dame's school here under diocesan inspection. The mistress has no certificate, but went through a course of instruction at the training school in Exeter before her appointment. Early labour is the chief cause of non-attendance; also indifference on the part of some parents.

The cottages in the parish are old, but in most respects good, and sufficient for the supply of labour. They are, with the exception of one small hamlet, situated in the village. There are no evils from overcrowding, except in one or two instances. Most of the cottages have small gardens, but there are no allotments.

COFFINSWELL.

Population, 194 - Acreage, 1,126.

195. *Thomas Devonshire.*—The cultivation is mixed, consisting of arable, pasture, and orchard land. Boys are employed from 10 years of age all the year round when the weather permits. Girls from 12 years of age are employed principally in domestic occupation. A few women go out occasionally weeding corn, making hay, picking apples, &c. Their cottages are all contiguous to the farms on which they are employed. They work from 7 to 5, and have 1½ hours allowed for meals. Boys are generally engaged in very light work until they are 14 or 15. I do not think it desirable to put any restriction upon the age at which boys should be permitted to be employed. I would not place any restriction upon the employment of females in agriculture. Young females generally begin by assisting their parents at job work.

There is a village school here aided by a small Government grant. This is well attended.

The cottages are all in excellent condition, and ample for the supply of labour required. All are adjoining the farms. Most of them have three sleeping rooms and two living rooms. They are well supplied with water and well ventilated. Nearly all have good gardens attached, and it is the general custom of the farmers to allow their labourers allotments in addition, for the cultivation of potatoes.

MORETON HAMPSTEAD.

Population, 1,460 - Acreage, 7,656.

196. *Elias Cuming.*—The cultivation is for the most part arable. Boys are employed in agriculture here from 11 years of age. Girls are not employed. Women are employed to a small extent in harvest; they live on the farms where they work. Their hours of work are from 8 to 12, and from 2 to 5. I would certainly not place any restriction upon the age at which boys should be permitted to work on the land, or upon the employment of females in agriculture.

There is a National school, which the parents to a certain extent take advantage of. Nothing but the apathy of parents prevents their doing so to a greater extent. There is a sufficient number of cottages in the parish, in decent condition, conveniently situated, and not overcrowded. Water is very plentiful, and the ventilation good. The cottages, with but few exceptions, have gardens.

IDEFORD, near CHUDLEIGH.

Population, 358 - Acreage, 1,471.

197. *Rev. J. M. Hawker.*—The cultivation is chiefly arable. No women are employed in this parish. Farm boys are employed of various ages from 9 to 13. They live on or near the farms on which they work. They work from 7 a.m. to 5 p.m., and are allowed half an hour for breakfast and an hour for dinner. When females used to be employed in agriculture the effect upon their morals and proper training for domestic duties was always bad. I see no reason for recommending any restriction upon the hours of work of children and young persons in agriculture. If any of the modes suggested for obtaining school attendance would be applicable to this parish, it would be that of half day at school and half day at work. An inquiry even from an employer as to whether a child could read and write, as in the navy, would, I think, make the parents more careful about their children's attendance at the schools available. The school attendance is a good deal affected by the distance the children have to go to school, but scarcely at all by the pecuniary resources of the parents either in this parish or in the neighbouring ones. The girls are taught sewing and knitting, and also receive a little instruction in cookery. The cottages in this small parish are fairly commodious, I think. They are conveniently situated, and not overcrowded. The buildings are old, but generally the accommodation is fair; always two bedrooms, and sometimes three. They are owned by private owners and feoffee property, managed by the clergyman. The rent is about 1*s*. a

week. There is very little garden ground. The Union Chargeability Act is not causing an increase of cottage accommodation.

There are no children here who are neither at school nor at work. About 20 males and 8 females are growing up with insufficient education ; they are, for the most part, in a state of appalling ignorance. There is an evening school here on Sundays, open for about an hour ; about 15 boys and lads attend it. They are instructed in Bible reading, and have some amusing book read to them. An evening school was tried on week days here for some years until about two or three years ago ; it always failed after a little. The farmers dislike to have their boys and lads out ; bigger lads do not like to have their slowness and ignorance shown up before the younger ones ; and I have found it extremely hard to interest them sufficiently to enable them to overcome the first difficulties of hard work ; it is a pity. I find, as diocesan inspector, that evening schools diminish in this neighbourhood instead of increasing.

BERRY POMEROY.

Population, 500 - Acreage, 4,500.
Rev. A. Everett.
Mr. Mortimer, } farmers.
Mr. Moysey, }

198. The farmers in the neighbourhood are large. Boys used to be employed at 9 years of age ; 11 years is now the earliest age, and then only for occasional work ; they do not live in the farmhouses. Girls are not employed in the fields. Women occasionally for stone-picking ; there is now great difficulty in getting them, probably owing to the rise in men's wages.

An ordinary labourer's wages are 11*s.* a week and cider, and 15 yards of potato ground, dressed. Hours of work for men are from 7 to 5.30 p.m. ; for women from 8 a.m. to 5.30 p.m. ; 1½ hour out for meals. Turnip-hoeing is taken sometimes by task-work in morning and evening by the men regularly employed on the farms in addition to their regular work ; in other cases it is let by the acre.

In harvest 21*s.* to 25*s.* are given beyond the regular wages.

The supply of labour depends a little on the town of Totnes, there not being a sufficient number of cottages in the village or attached to the farms.

A restriction on the age at which boys should be employed might occasionally be inconvenient ; for instance, small boys are sometimes wanted for bird-keeping, or for taking care of a horse at the bottom of a hill to be used as leader up a steep place ; these earn 6*d.* a day ; the parents of long families would also suffer from the loss of the earnings.

Mr. Moysey thought labourers are by no means the better for education ; the best young men go away from the parish to the police, &c.

Children should be taught to read and write, but as a matter of supply of labour for the farmer education shortens such supply.

There is a night school in the parish open twice a week in the winter. Yearly hirings are not the custom here.

The oldest boy in the school was barely 10 years of age. The school is a mixed one under a mistress, and has no Government aid.

There is another school in the parish at Bridgetown, Totnes.

Cottages.

199. 1. Cob and thatch ; very old and bad. One room and back house down ; two bedrooms up. Small garden ; rent 1*s.* a week. Man can have 15 yards of potato ground free.

2. Stone and slate ; lately repaired. Down, one room and back house ; up, two small bedrooms, one with fire-place ; garret above. Very small garden. Rent, 3*l.* 3s. a year. Stone very porous and wet.

3. A pair ; new. Down, large room and back house ; up, three bedrooms. With garden, 4*l.* a year.

COLLATON, near PAIGNTON.

200. *Rev. P. Lilly.*—The farms are large, mostly over 400 acres, and the farmers less obstructive than the older generation.

Farm boys usually live at home, but have to go and do up the horses at night ; the farmers are not very willing to make it easy for boys to attend night school.

Girls do not work in the fields for farmers. Women are employed, and the result is untidiness in their homes. There are gardens attached to the cottages here, and allotments at Paignton and Marsdon. A

Devonshire.

Mr. Portman.

h.

man's wages are 11*s.* a week and cider. Small boys are first employed for taking cattle to and from the fields.

COLLATON SCHOOL.

Oldest boy in school about 8 years, March 2nd, 1869.

201. *W. E. Penwell*, 9 years old.—Is regularly employed by a farmer in the fields from 6 a.m. to 5.30 p.m., and has been at work since November 1867. His earnings, including the value of meat, are calculated at 2*s.* a week. He lives with his mother. He once got first prize at school for regular attendance; has now nearly forgotten all he learnt.

202. *Partridge*, 16 years.—Came to prepare for confirmation; could not read or write, or remember a single fact connected with our Saviour. He had been in farm service since he was quite small.

203. *C. Penwell.*—Cottage, property of farmer. Down one room; up, two bedrooms. With garden, 4*l.* a year. Woman works in the fields; cottage very untidy.

204. *Mrs. R. Penwell.*—Cottage. One room down; one bedroom divided; small garden; 3*l.* 10*s.* a year. It does not belong to the farmer for whom my husband works. I whitewash it myself once or twice a year. My husband is an ordinary labourer, and earns 11*s.* a week and cider. Thrashing is taken by the piece at 2½*d.* a niche=one bundle; the hours are long for that work. Harvest is let sometimes by the piece. Ordinary hours of work are from 7 a.m. to 5.30 p.m.

My son, 12 years old, works for same master, gets 1. 3*d.* a week and all his meals, sleeps at home. He looks after cattle, drives horses, and does odd jobs. He gets home at 7, 8, or 8.30 p.m., and begins at same time in the morning as his father.

Women work a good deal in the fields here, and "things go back at home" in consequence. Girls very seldom go out to field work.

Husband has 15 yards of allotment, quite a mile away; pays 6*d.* a yard for it, and can grow vegetables enough for the year's consumption. He has a bit of meat every day.

I do not think it would hurt the parents if children were prevented working before 10 years of age, and I am quite sure the farmers make a difference in favour of an educated lad. Many boys who are well educated don't care to go to farm service if they can get anything else.

My husband pays 2*s.* 4*d.* a quarter to his club, without funerals; if there is a funeral in the quarter there is an extra payment of 1*s.* in case of a man, 6*d.* in that of a woman; there is 2*s.* 6*d.* a year more to pay for the doctor, and 1*s.* 6*d.* for the dinner. Allowance for sickness is 7*s.* a week. He often says he wishes he had begun to put into the savings bank when he was young instead of into the club.

BLAGDON BARTON, PAIGNTON.

205. *Mr. Lewin.*—I farm 450 acres. I should not employ a boy regularly under 12 years old; I think 10 years would be a good limit. Boys are useful in spring and summer for stone-picking, apple-picking, &c.; they might easily go to school in the winter, or after 12 years of age attend night school. I began work myself in Northamptonshire when I was 7 years old.

Devon labourers take no interest in their work, and want a deal of looking after. Midland-county men are better than the Devon men by 10 to 12 or even 14. An educated labourer is far better for the employer than an uneducated one; he takes more care of things.

Girls are never employed in the fields here. The usual rate of wages for men is 11*s.* a week and cider. I give my regular men 12*s.* a week, cider, and potato-ground manured free.

206. MEETING OF CHAMBER OF AGRICULTURE, KINGSBRIDGE,

April 12, 1869.

J. F. Earle, Esq., chairman.

It was stated that the employment of women in the fields was daily decreasing in consequence of the rise in men's wages, and that if those wages were increased another 2*s.* a week, there would be no women in the fields; that the homes of those women who work in the fields are as tidy as those of other women.

As to the age at which children should go to work it seemed to be the unanimous opinion that 10 was the proper age for boys, and 13 for girls. The hours of work were stated to be seven and a half to eight hours for men and boys, and seven hours for women.

Wages for men were 10*s.* a week, and taking into consideration the piecework, potato-ground, and extra money in harvest, the chairman calculated the average weekly earnings at 13*s.*, which calculation was confirmed by some others. Mr. Adams gave an extract from his wages book, showing that he paid eight regular men 260*l.* in the year. It was said that many labourers preferred having corn supplied by their employer at a fixed price, as they could not buy it so well from the millers, but that this system of truck was being abandoned in that district.

As to the amount of accommodation in the cottages the accounts varied. It was stated that in many instances there was only one bedroom in a cottage, that there were not sufficient with two bedrooms, and very few with three bedrooms.

Rev. A. Earle expressed an opinion that every landowner is bound to provide a sufficient number of decent cottages for every 100 acres he possesses.

The average rent of cottages was said to be from 2*l.* to 3*l.* Where a labourer has one rent free under his employer it was reckoned at 1*s.* a week. Gardens are almost always attached to the cottages, in some cases allotments also, though the latter system does not prevail to any extent in that neighbourhood. It was stated that there was great want of privies for the cottages in all the villages.

On the education question Mr. Popplestone stated that the supply of schools was not sufficient, and that the small parishes were in want of aid, and he suggested that good schools should be established at convenient centres.

Mr. Cornish wished for more Government aid for small rural parishes. Under the present system help was given to those which were quite able to help themselves, and none to those which really needed it. He was in favour of night schools as a means of continuing education for lads earning wages. Boys should be kept at school till 10 years of age.

Rev. A. Earle, as diocesan inspector, admitted that small rural parishes were in want of more Government aid. He would utilize the present agencies through the chambers of agriculture, &c., and wished for a system of education under local management and supervision; all schools to be inspected by Government, and payment of grants in aid made for results only.

It was stated by Mr. Balkwill, a receiver for the savings bank, that there was a fair proportion of agricultural labourers among the depositors; that the wives now come with money in purses, whereas formerly they used to bring 1*s.* 6*d.* at a time in the corner of their pocket-handkerchiefs. He considered that the agricultural labourers were now far better off than 30 years ago, but from what cause he was unable to say.

It was thought that good clubs were a boon to the labourer.

It was resolved, "That in this district no legisla-
" tive interference is required with regard to the

"employment of young persons, women, and children in agriculture."

---

207. Letter from the Rev. A. Earle to Honourable E. Portman:—

West Alvington, Kingsbridge,
April 6, 1869.

DEAR SIR,

SINCE communicating with you I have done my best to arrive at the facts connected with the three following subjects of your inquiry in our neighbourhood:—

1. Employment of women and children.
2. The labour question and condition of cottages.
3. Educational difficulties.

With the following results:—

The employment of women is on the decrease; it appears to be the opinion of trustworthy persons that their employment is not detrimental to morality, but is injurious to their future usefulness as in-door servants. This I am inclined to doubt, and believe that in many instances the cases brought forward in proof of it fail, because the individuals would never have been likely to prove good in-door servants, out-door service was their *métier*. And again, as to immorality, it is true that in my own experience several habitual field-workers have bastard children, but a very intelligent farmer induced me to believe that in most instances the fall had preceded employment in the fields, and was not the consequence, but rather the *cause* of their seeking such work, from having disqualified themselves by their misconduct for respectable in-door service.

With regard to children I do not think any are employed under 10, nor do I think they suffer in health from their work. What does decidedly injure them is their contact with elder lads of from 15 to 20 years of age, who in my district are a rough, ignorant, coarse lot. There is a marked class of lads, from the ages of 14 to 20 and 24, who are most difficult to handle, shifty in their work, ignorant, very few can read or write, and utterly regardless of authority. I detect symptoms of a similar class in the report on America, under the head of "Juvenile Rowdyism;" it is on the increase, and is a marked and bad feature in our present social position, full to my mind of future evil. * * * * The farmers feel it and are at a loss to control it. The lads take offence and shift service; there does not seem to be any mutual or common interest between employer and employed.

With respect to cottages they are universally bad, very bad. In my home parish very few belong to the landowners, very many to poor persons, who have invested their savings in dilapidated tenements and cannot improve them. Rents are, considering the accommodation, high. Few have three, a large number not two, sleeping-rooms. I can quote instances of five and six people sleeping in one room. Great reform is needed here, and I should like to see every landowner forced to build decent cottages for his labourers where necessary, or to improve where improvement is necessary. I believe it would be most beneficial to all, landowner, occupier, and labourer, if some such arrangement could be made, by which the miserable cottages in poor hands could be bought up and improved. Decency and morality are impossible under existing circumstances; very many have no proper privies; some have no gardens; but I believe all can obtain allotments if they choose.

With respect to wages I give you a table which can, I believe, be relied upon, as coming from one of the most intelligent employers of labour in the neighbourhood; and not content with the mere fact of his high character I have taken it to several employers and find that they agree with it in the main; the *employed have as a rule put a lower rate as the average.* The figures give an average of 13*s.* 6*d.* a week.

	s.	*d.*
Weekly regular wage - -	10	0
Piecework, average per week	1	0
30*s.* for harvest - - say	0	8
Privileges, *e.g.*, potato ground, straw, and dowse - say	0	6
Cider - - -	1	4
	13	6

With respect to education in the outlying small parishes I fear the standard is very low, and I have been surprised to find how this appears to be the case even where fair opportunities have existed for education; but my firm conviction based on much thoughtful experience is, that the real reason why such localities are low in standard and the schools neglected is "they are bad," bad in discipline, bad in teaching power. I find that children will come long distances to a good school; we do not want more schools but better schools. I have five schools under my charge, two indifferent, one fair, two very good; in the two latter I have no difficulty as to attendance, in the others it is slack in proportion to the character of the school. I believe we might improve our present schools at small expense in the following way, I speak only of small agricultural parishes:—If the schools could be brought into union and grouped, say 25 to 30 together, in connexion with a committee of education formed out of the agricultural chamber and placed under a competent organising master who should give all his time, under the direction of the committee to whom he would report every month, to organising the said schools, teaching in them and assisting the present teachers to a better method and discipline the schools would be sure to improve. The cost would not be great, and the salary of the organising master could be paid by contributions from each school in union. The Government inspector could inspect and report, and a smaller grant might be given according to results, and if these results are satisfactory I do not see the justice of insisting upon a certificate. To pay for *results* only and insist upon a preliminary certificate is, I think, a contradiction, and if a good system of organisation, whereby present educational agencies in remote and small agricultural parishes could be fostered, is possible, I believe it would be the duty of Government to give such aid as the inspector's reports might justify. I believe some plan of this kind in connexion with the Chambers of Agriculture would do more to make education general than any compulsory measures connected with an educational rate. * * * * * * Local management would create local interest on a wider scale, Government inspection and interference would prevent false economy and jobbery, and stimulate activity. I believe the majority do feel that something *must* be done or a compulsory system under a rate is inevitable; and I think that some form combining a minimum of Government grant with local voluntary subscription, and a local rate might before long be generally adopted. In my own case several farmers have recently volunteered subscriptions, and though at present I personally pay for education not less than 50*l.* to 60*l.* a year that sum is decreasing, and will, I feel sure, as the usefulness of a good school becomes felt, diminish year by year, partly by increased payments partly by increased subscriptions. Many farmers are beginning to recognise the necessity of a really good school if the time of attendance is to be limited to the age of 10 or 11.

The compulsory system and the secular system would both, I believe, be most unpopular here, so much so that the force of public opinion would override the most stringent legal enactments.

Half time and night schools are not suited to our necessities.

Yours, &c.
A. EARLE.

Devonshire.

Mr. Portman.

h.

WEST ALVINGTON.

Population, 925 - Acreage, 4,120.

208. *Rev. A. Earle.*—The cultivation is mixed. There are no gangs in this parish. There is a decided decrease in the employment of women in this parish. They are employed in spring in picking stones and setting potatoes, in summer and autumn in hoeing and weeding, in winter in trimming roots, &c. They live within a fair distance of their work. Their hours are from 8.30 to 5 or 4.30. An hour and a half are allowed for meals. They are not ill-treated, and their health is not injuriously affected by their work. I put your Commissioner in communication with an intelligent surveyor, who says that in parts of our district where female labour is more common injury is not unfrequent, especially to young married child-bearing women. One such case has come within my knowledge, but she was working for herself potato setting when taken ill. Many persons imagine that the employment of females leads to immorality. I do not. Women who have misconducted themselves take to field work because they cannot get house service, and as a rule the women who take early to field work are not originally suited to house service. I do not think it desirable to place any restriction upon the employment of females. I believe if any injury does arise it arises *during harvest*, which is a time of laxity and drink; but I think the evil has been exaggerated. I should like for boys not to be employed under 11 years of age, but I believe general consent says 10, and no restriction would serve. I do not believe any restriction upon the hours of work would avail; but I believe chambers of agriculture might, if permitted, make bye-laws regulating these and other matters, which are connected with the subject with good effect. They will eventually rule opinion on these subjects, and their moral influence would be great if properly directed. I do not think any of the modes for obtaining school attendance provided by the Factory Act and the Printworks Act would be of any service at present. Good schools and short attendance is our only chance, supplemented perhaps by night classes, but these are not popular. I think village reading rooms and libraries will do some good in keeping up previous education. Our school attendance is considerably affected in bad weather by the distance the children have to go to school; but when the school is good this is overcome. In this parish, as our average attendance proves, we do not suffer so much as in neighbouring parishes. The school attendance is affected by the pecuniary recources of the parents, but it ought not to be. The wasteful parents make this an excuse; but it is only an excuse. Wages average from 12*s.* to 13*s.* No efforts are being made for the industrial training of girls.

The cottage accommodation is bad, and the fewness of the rooms is opposed to decency. Many cottages are in the hands of poor persons who have no power to improve. In my home parish, West Alvington, the landowners *ought* to build new and improve old. They have but few in their ownership. Necessaries and drains are bad. There ought to be three cottages to 100 acres; there is not that proportion. The cottages are fairly situated, but there is not a sufficient number with even two bedrooms; they are overcrowded. It is impossible to give a general description of them; there is no uniformity except in their general wretchedness. Some have only one bedroom, with five persons in it. The water supply is bad; many go some distance. Some have no gardens, but all might have, I think, allotments. The ownership varies in two of my parishes; principally in landlords and feoffees in West Alvington. The rents are very high for so bad accommodation. I went with your Commissioner to a few, but did not take him to the worst, but the average cottages. The relief officer in my presence spoke of the general badness of the cottages in his district. The Union Chargeability Act is having no effect in causing an increase of cottage accommodation. No progress is being made towards increasing it. I hope to try before long a co-operative system, but I fear the interest will at first be very low.

School Statistics.

There are no children who are neither at school nor at work. About 10 males and eight females are growing up with insufficient education; they are very ignorant, and, as a rule, insubordinate and shifty. I tried an evening school for three winters but it failed. The first year and second its success was marked. It was open three night a week, two hours each night, from October to April. I have now closed it. The subjects of instruction were reading, writing, arithmetic, with the Bible read and explained. I do not think, in our scattered hamlets, an evening school adequately supplies the deficiencies of the day school; but I mean to try classes at farmhouses when I can get permission to group the labourers in two or three hamlets together. The principal difficulties in the way of maintaining an efficient evening school are, the late hours of labour, bad weather, long distances, dislike of the farmers to the system, and want of teachers. With respect to education, I venture to hope that Government aid will be brought down to our small rural parishes. I do my best, and so do my brethren of the clergy. My educational bill is never less than 60*l.* to 70*l.* per annum. I have known town schools with balances in hand, and yet receiving every Government aid. I know *no* rural school—I speak as diocesan inspector—that is not struggling for existence. We contribute to the imperial taxation and have a *right* to aid; it is a grievous wrong to keep it from us. Within three years I have set on foot two schools under inspection, and am about to open a third, *but* this I can do only because I have private means. Under existing regulations our rural parishes cannot benefit from our miscalled National System.

S. HUISH, MARLBOROUGH, S. MILTON.

Population, 2,700 - Acreage, 12,136.

209. *Rev. A. Earle.*—The cultivation is mixed. No boys are employed at an earlier age than 10. Girls are not employed. The employment of women is greatly on the decrease. As a rule they do not have to go more than a mile to their work. Women work from 8 to 4.30, with, say, an hour and a half to two for meals. The farmers, at a recent meeting of the Kingshide Agricultural Chamber, expressed a unanimous opinion that children should not work before 10, and that no restriction was necessary. I should prefer 11. I do not think it desirable in this immediate neighbourhood to place any restriction upon the employment of females.

I have five schools in the parish under my care; two of these I have set on foot recently. I find the two good schools well attended, and the other three

in proportion to their goodness. Night schools have failed; not from want of energy, but from the scattered condition of the parish and the dislike of the farmers.

The cottages are very bad. They are overcrowded, and not well supplied with necessary accommodation. I believe them to be so bad that only rebuilding will be profitable. Their condition is adverse to morality and decency. Some have gardens. No one need be without a small portion of ground for potatoes, but there is no regular allotment system. The cottage question is our real trouble. The owners are, as a rule, small and poor people who have invested their savings in numerous tenements; but this applies chiefly to West Alvington, and the overcrowding is caused partially by *artizans* from the neighbouring town of Kingsbridge.

West Alvington Cottages.

210. No. 1 cottage, without garden.
3*l.* and *outs* = 4*l.* a year.
No. 2 cottage, with garden.
3*l.* 10*s.*

Most of them are owned by small proprietors. Many with one bedroom only and much crowded.

Boys are employed "setting tatties" at 3*d.* and 4*d.* a day, at 10 years of age.

Distin, regular agricultural labourer. — I earn 10*s.* 6*d.* a week and three pints cider a day. I get a little task-work, and get 2*s.* a day for threshing. Cottage and small garden, 50*s.* a year and "outs."

A job-man get 2*s.* 6*d.* a day, no cider, and loses wet days.

Huish Parish.

211. Two women, field workers, stated that they got 7*d.* a day for regular work; were now picking stones at 6*d.* an acre; hours of work, 8 a.m. to 5 p.m. The money earned was hardly enough to do more than pay for extra clothes.

Mr. Nicolls, relieving officer, Kingsbridge Union.—Relief is stopped in almost all cases when a child reaches 10 years of age, except in cases of bad health, Payment is made for children's schooling by the guardians, according to age. The cottages in the union are somewhat overcrowded.

LODDISWELL.

212. Letter from Rev. H. Townend to Hon. E. Portman.

Vicarage, Loddiswell,
April 15, 1869.

Sir,

In my parish boys are employed usually at the age of 10 years; girls seldom work on the farm; women are employed mostly in planting potatoes, weeding, and picking up stones; their work is generally near home, and their hours from 8 a.m. to 6 p.m. We have two schools, supported mostly by voluntary contributions. The girls take advantage of the means of education, the boys leave much too young. I attribute their non-attendance to early labour, and also to the want of a good master. The cottages are mostly in pretty good condition; they are sufficient, I consider, for the supply of the labour required and are conveniently situated with respect to the farms. I believe most of them have gardens or allotments of land.

Yours faithfully,
H. Townend.

STOKENHAM.

Population, 1,566 - Acreage, 5,901.

213. *Rev. J. C. Carwithen.*—There are no private gangs.

Females are rarely if ever employed in field work, save some elderly women in the spring weeding corn, planting potatoes, &c.

The hours of work for men are from 7 a.m. to 6 p.m., for women, from 8 a.m. to 5 p.m.; one and a half hours allowed for meals. Owing to the use of machinery women and children are but little employed during hay and corn harvest in this parish.

I would not employ boys under 9 years of age. I think school attendance might be obtained by half day at school and half at work, the attendance to be in the morning.

The school includes a radius of 5 miles. Many of the children are from 10 to 14 years of age before they come to the National school, and know but little, having only attended a dame's school. Labourers children only pay 1*d.* a week, which does not affect the attendance.

The cottage accommodation affects the morality of the labouring poor. They are crowded, both with members of the family and with lodgers; there is certainly not a sufficient number with two or three bedrooms.

The cottages vary must. Ventilation is invariably bad and drainage worse. Rooms—one below, with an outhouse; bedrooms—never more than two, in many cases only one. There is no supply of water in the house; in many cases it has to be fetched from a great distance. The garden varies from one perch to 20. The ownership is in the hands of the landowner, with whom the tenant has to deal with but very few exceptions. Rent, from 2*l.* to 3*l.* 10*s.* a year.

I cannot suggest any mode of providing good cottage accommodation on self-supporting terms, because the wages of the district are not sufficient for the labourer to pay a higher rent for his cottage. I think that cottages may be erected in blocks of four at the rate of 80*l.* per cottage, two rooms below and two above; but in every two cottages I would make a third bedroom, which may be placed to either cottage as circumstances may require.

Boys :	
Under 10 - - - -	65
Between 10 and 13 - -	20
Girls :	
Under 10 - - - -	60
Between 10 and 13 - -	10

There are about 80 males and 60 females growing up with insufficient education. Some have never been at school, others only for six or 12 months. A few, also, have no education except that afforded at a dame's school.

The difficulties in the way of an efficient evening school are the impossibility of working the master for so many hours and the want of funds, as the landowners and tenant farmers will not subscribe, and are, as a body, averse to education.

STOKENHAM SCHOOL.

214. *Mr. Lavers*, master.—Boys go out at 9 years of age for potato and barley planting and apple-picking, and return to school. Girls do not go out to work.

Many children come five miles to school. One boy (Ware), son of a warrener, comes to school in the summer and is absent all the winter ; he loses much of his knowledge, as his parents are ignorant and do not help him to keep it up when at home.

The oldest boy in the school is 14 years of age.

215. *Lamble*, boy 10 years old.—Had been out driving horses for threshing machine. Got 1*s.* a week.

216. *William Trout*, 9 years ; *George Trout*, 8 years.—Had been out "setting tatties." Got their meat but no money. Hours of work, from 9 a.m. to 5 p.m.

217. *John Phillips*, labourer.—I look after master's cattle and work early and late. I get 11*s.* a week and cider, house and garden rent free, and potato ground allowed by the farmer. I do not have any task work.

PUTT'S COTTAGE.

218. One room down.
One „ up.

Father, mother, and four children living in it ; eldest girl at home 11 years of age. Another comes home from service and sleeps there. Rent, with small garden, 2*l.* 13*s.* a year.

COTTAGE IN CHILLINGTON, MR. HELMER'S.

219. Built of cob and stone, with stone floor.
Down—one room and cupboard.
Up—one large and one small room.
Rent, with garden, 50*s.* a year.

TOR CROSS.

The population is engaged in fishing in the summer. The men work at odd jobs for the farmers in the winter.

MR. HOLDSWORTH'S COTTAGES.—New.

220. Two rooms down, two bedrooms, closet. Small garden ; 7*l.* 10*s.* a year.

SIR LYDSTON NEWMAN'S.

221. Small and bad dwellings. Mostly stone with thatched roofs. Average rent, 50*s.* a year.

G. KELLON'S COTTAGE.

222. One room down, two bedrooms. 3*l.* 5*s.* a year. Not in good repair ; landlord will not do any repairs.

MRS. HOBBS.

223. One room down, two very small bedrooms, four yards of garden. Rent, 50*s.* a year. Man and wife and seven children, eldest 12 years old. Landlord won't do any repairs. The roof in a bad state ; no ventilation.

J. CLEMENTS.

224. One room down, one bedroom. 2*l.* 2*s.* a year.

WOOD.

225. One room down, lime ash floor, one bedroom. No garden. Rent, 3*l.* a year. Man and wife, wife's father, and five children always living in it. When some of the others come home from service they sleep there too.

TROUT.

226. One room down, two upstairs, of a good size, but very much out of repair. Landlord does no repairs.

PLYMPTON ST. MARY UNION.

North District.

227. *Henry Pearce*, relieving officer.—There is no gang system. I would prohibit female labour in the fields altogether except during hay time and harvest. Boys should not be employed under 10 years of age. There is no necessity for placing any restriction on the hours of work. Cottage accommodation is very inferior as regards the morality, health, and comfort of the labouring poor. Two cottages per 100 acres would be sufficient for persons engaged in agriculture alone, I think there is that proportion in the union ; they are generally conveniently situated for the work of the farms. There is not a sufficient number of them with two or three bedrooms, and the dwellings are often crowded both with members of the family and lodgers. The construction of the cottages is altogether inferior, and the accommodation totally inadequate ; they for the most part belong to landowners ; rent varies from 4*l.* to 6*l.* a year. There is no progress being made towards increasing the accommodation, nor has the Union Chargeability Act had any effect in causing an increase in the number of cottages.

They do not adequately supply the deficiencies of the day schools. In consequence of the villages being so scattered the distance to school is a great difficulty in the way of securing regular attendance.

PLYMPTON ST. MARY, SOUTH DISTRICT.

228. *Richard Coleman*, relieving officer.—There is no gang system. I do not find that the employment of females in agriculture tends to demoralize or unfit them for domestic purposes, indeed, I find the contrary to be the effect, for I know a great many women who have served an apprenticeship at a farm-house and have been much employed on the farms whose moral character will bear a very good comparison with others who have not been so employed, and I find them more domesticated, their cottages also are particularly clean.

I do not see why there should be any restriction on the employment of women in the fields; their small earnings being added to that of their husbands often prevent them from falling on the rates for sustenance in time of need when otherwise they would be obliged to do so.

Boys under 10 years of age ought not to be employed at all in agricultural labour, for if made to work too young, and exposed to the inclemency of the weather, their health and muscular development would be likely to suffer.

I think a restriction as to the distance to work is desirable. No young person should be required to go a distance of four miles, nor yet even three from his or her home to their daily work. I would recommend two miles to be substituted. There is no need of restriction as to the hours of work.

All labourers' cottages should have at least two bedrooms, both for the sake of morality and the health and comfort of the occupants. Cottages having only one bedroom where a family is being reared up must have a demoralizing effect.

Devonshire.

Mr. Portman.

h.

Two cottages per 100 acres would be, I think, sufficient for persons employed on the land; there is that proportion in my district. They average more than a mile distance from the farm where the labourer works, but there are some instances of cottages being attached to the farms. Very probably there are sufficient with two bedrooms, but it generally happens that those persons who have the largest families are the least able to pay the rent of the largest cottages. In many instances there are five and six persons of one family living in one bedroom.

Labourers' cottages in my district are generally constructed of stone and mud with thatched roofs, with rooms about 10 ft. by 10 ft. and 6 high. Ventilation and drainage very imperfect. The accommodation varies, but there are many with only one room on ground floor and one upstairs, with only one doorway, without any garden, and often without any pigsty or privy. Rent varies from 2*l.* to 5*l.* a year.

Combe Gate.

229. *Mrs. Mears.*—Cottage, one room down, two bedrooms of a good size; large garden. Rent, 3*l.* 10*s.* a year; held with Mr. Hodge's farm.

I have had eight children. My husband works for a farmer at 12*s.* a week and cider; he comes home for dinner. I have worked in the fields myself, stone-picking and weeding at 9*d.* a day. My boys began work at 7 and 8 years old, and lived in a farmhouse; they were paid 6*d.* a week. They had been to school up to that time, and can read and write a little; they never had a chance of keeping up their learning while in farmer's service except on Sunday afternoon. Girls do not work in the fields; I think it very bad for them.

It is the custom to put boys out to work as soon as they can earn 6*d.* Many farmers take them under 10 years of age. I think the loss of children's earnings when the family is large and young would be a hardship on the parents.

Women at hay time get 1*s.* a day and no meat. Men at harvest get all their meals but no extra money.

230. Venton Cottages.

(1.) Old, and built of cob.
Down, one room and backhouse.
Up, two bedrooms. No privy. Rent, with garden, 3*l.* 10*l.* a year.

(2.) One room down, and one bedroom. Small garden. Rent 1*s.* a week.

(3.) Stone cottage. One room down, and two bedrooms. 12 or 13 yards of garden. No privy. Rent 3*l.* 3*l.* a year.

231. *Vincent Parsons*, nearly 70 years old.—I look after cattle, mornings and evenings, and on Sundays, and get 12*s.* a week and no privileges. I go half a mile to work, and begin at 6.30 a.m., get home at 7 or 7.30 p.m. I have brought up a large family. I used to get 8*s.* a week and no privileges except grist corn.

My children began to work at 9 years old in the farmhouses, they did not do much else; there is not much difference now as to being able to keep children at home longer, though the wages are higher. My children have learnt to read and write since they went to service. Boys go out to work now about 10 or 11 years old; they get 9*d.* to 1*s.* a week and board, lodging, and washing. Girls do not work in the fields at all, and women only a little.

Harvest pay is 1*s.* 6*d.* a day above regular wages, or else meat, which is more usually given by the farmers.

Wages for ordinary labourer 11*s.* and liquor; for a woman 9*d.* a day. Stone-picking is done by them at per acre. I do not think there is a privy in the village.

232. Sparkwell Cottages.

(1.) Property of a miller.
Three in row, all the same size.
Down, one room and backhouse.
Up, two bedrooms. Man and wife and one lodger. Rent, with 12 yards of garden, 4*l.* 10*s.* No privy. The man is earning 1*s.* 6*d.* a week, not an able-bodied man.

(2.) A pair, one rented at 4*l.* 15*s.*, the other at 4*l.* 10*s.* a year; built of stone, with stone floor. One room and backhouse down, two bedrooms up; no fire-place upstairs. A pigsty and privy. A garden large enough to grow vegetables. Potato ground in addition rented from farmer at 1*s.* a yard, the farmer finding manure and ploughing in the potatoes.

HEMERDON.

233. The land here belongs to Admiral Woollcombe, but not all the cottages.

Cottage (1.) *Mrs. Wilmot.*—Stone, with slate roof, stone floors. One room down, two small bedrooms; with very small garden. Rent, 3*l.* 10*s.* a year.

There are no privies in the parish. I had four children alive at once and brought them up in this cottage. I keep a small school for infants; there is no other school in the parish; the children go to Sparkwell school. Children are irregular in their attendance at school; most of them go the mines from 9 to 10 years of age, but do not work underground; they get 5*d.* a day at first.

(2.) Next door to No. 1. One room down with earth floor, two bedrooms. Rent, with garden, 3*l.* 10*s.* a year (this is a very bad cottage, almost tumbling down).

(3.) Row of three, two of which have kitchen and backhouse down, two bedrooms, about 14 yards of garden; no privy; at a rent of 5*l.* a year. The other has only one bedroom.

COLEBROOK.

234. *Perseverance Cottages*, inhabited by railway men, artisans, &c.; property of Earl Morley; new and good. Two rooms down, three bedrooms; garden, privy, and pigsty. Rent 6*l.* 10*s.* a year.

Maria Blake, wife of a labouring man, who drives a timber waggon and earns 16*s.* a week. The cottage has kitchen, backhouse, and slip-down; two bedrooms upstairs; very small garden; privy. Rent 5*l.* a year.

I have worked in the fields weeding, stone-picking, potatoing, and sometimes spreading dung, at 9*d.* and 10*d.* a day, from 8 a.m. to 6 p.m., with one hour allowed for dinner in the field. The big girl stayed at home to mind the little ones when I was out. My present eldest is 10 years old; she has been kept away from school for 12 months while I have been working; she can't write. If there was a school that would take her for three days a week she could be spared to attend it.

COMPTON, near PLYMOUTH.

235. Cottage. Stone and slate roof. Very damp. One room down, one upstairs; no garden; 4*l.* 10*s.* a year. Man an agricultural labourer earning 11*s.* a week and meat; his wife and two children live in it; there is one privy for seven cottages in an orchard at some distance; slops are thrown outside the front door.

Row of seven; property of a publican. All have one room down and one bedroom, and are rented at 4*l.* 4*s.* to 4*l.* 10*s.* a year.

Mr. Soltau says many cottages have been pulled down in Crabtree and Knacker's Knoll for purposes of the fortifications, and the families are crowded into Plymouth.

236. Children entered in the Plymouth Public Free School during the year 1868.
Boys' Department.

Boys are not generally employed on farms under 10 years of age ; but, with few exceptions, the work is done by the farmer and his own family. Girls are not usually employed. They are occasionally employed at hay and corn harvest. Women are employed to a very limited extent indeed. Their hours of work are from 7 a.m. to 5 p.m., one hour being allowed for dinner. I think that boys under 10 years of age should not be permitted to work on the land. I am of opinion that it is desirable not to employ females, and especially the young, in agriculture at all if possible.

There is a National school here with a certificated master. There are also other schools partly supported by voluntary contributions and partly by the parents of the children. The parents take advantage of these. Most of the persons under the denomination of agricultural labourers are small occupiers themselves. The cottages are sufficient and well ventilated. There is an abundance of water. The cottages generally have good gardens.

238. Schools on Dartmoor.

1. Dartmeet, used also as a chapel for the labouring classes, between Prince Town and Dartmeet. Highest number attending is 39 out of a population, say, of 150.

2. Postbridge (dame's school). Building being erected to serve as a school and chapel, taking in a population of about 250, including the parish of North Bovey. The children of small farmers attend these schools.

3. Lidford parish, 54,000 acres; 4,037 under cultivation. Tithe rent, 144*l.* Population in 1861, 2,599, exclusive of the warders and prison attendants. The school at Princetown has very few agricultural children, but most of them come from the powder mills.

4. Powder mills school, Matthew Rouse, master, three miles from Princetown, two from Postbridge. Mixed school, 37 on register.

There are a few agricultural labourers' children, but most of them come from the powder mills. They are the children of farm labourers mostly, the other agricultural children are those of farmers. I can keep some children till 12 years of age, but the principal cause of irregularity in the attendance is through preparing peat in the summer.

HORRABRIDGE.

Population, 1,250 or 1,300.

239. *Richard Willis, Esq.*, surgeon.—The cultivation is mixed. Many copper and tin mines have been worked in this neighbourhood, and the children (boys and girls) have been employed upon them on surface work at the ages of 10 and 12 years. Latterly I knew some boys who worked underground as early as 12 years old. There is also a woollen factory in this village at which young girls are employed, although (in consequence of an alteration in the manufacture by the introduction of machinery) not so numerously as in former years. Some of these girls have been worked at night. In this neighbourhood it is usual to employ boys in agriculture as early as 12 years, but earlier if the parents can get situations for them. I do not know any farmer who employs girls on his farm, *i.e.*, in the cultivation of the soil. Very few women work on the farms ; in the summer a few work in the hay fields. I think boys under 12 should not be permitted to work on the land. I think that female labour in agriculture is wrong.

In the ecclesiastical district of Horrabridge there is a school having a certificated master. Some of the cottages in the parish are good ; many very bad. There are now quite sufficient, as the working of many mines has been stopped. They are not overcrowded as a rule, although some are. The village is well supplied with water, but no labourer's house has water supplied to it by a service pipe. Cottages are very badly supplied with privies ; some have no ground on which to throw the ashes and other refuse, and are permitted to be occupied though brought under the notice of the proprietor and board of guardians. Any labourer can have an allotment of land for a garden on application to a landowner in the neighbourhood a quarter of a mile from the village, and many avail themselves of it. Many of the cottages have small gardens attached to them. In my opinion a valuable aid to the improvement of the labourer and the diminution of taxation for the maintenance of the poor would be the establishment of a benefit society under the control of the Government, and attached to *every* post office as the savings bank is, at which any labourer with wages not amounting to more than 20*s.* a week could pay, to receive in sickness a sum being 2*s.* or 3*s.* less weekly than he earned in health, and not being a member of any other benefit society ; the sum so paid for such benefit to include an annuity after the age of 60.

In this and the adjoining parishes four or five benefit societies have failed during the last few years, thus depriving a number of members of benefit at an age when most needed and after many years payment.

Horrabridge School (mixed).

240. *Mr. Wakem*, master.—

Numbers on the books—boys and girls - 124
Average attendance during the past year - 90

The school is under Government, and we get some children from Sampford Spiney. The children do not work much in the field, they go fern gathering on the moor for three weeks in the autumn for their parents, and earn no money. More than one-third of the children work at the factory ; some of the children in the school are farmers' and artizans' children, and very few of them farm labourers' children, and there is no child above 14 years of age in attendance. This parish would not be affected by any law preventing the work before 10 years of age. The best educated lads of 16 and 18 years of age leave the parish for other work than agriculture. The farmers' sons pay 5*s.*, 3*s.*, and 2*s.* a quarter, according to the number that come, but the farmers do not trouble themselves much about education.

Huckworthy Bridge.

School not under Government.

241. *Mary Newman*, mistress.—

Girls and boys - - - 58.
Girls, 35. Boys, 23.

They are mostly children of farmers, and a few of the boys only go to field work. The girls remain at school till about 14 years of age, but the boys go to a free school at Walkhampton to finish off their education. The farmers' children pay 2½*d.* a week, and the labouring class 1½*d.* Most of the parents in this part can read and write, and some few are anxious to improve their children. This district is very thinly populated, and the distance to the school is from one to two miles.

242. *Mr. Davis*, agent to Mr. Newton, of Bridestow.—My neighbourhood is more a tillage district

than that of Tavistock. Children are not much employed, and women only occasionally, in stone-picking or wooding. The education in my neighbourhood is at a very low ebb.

Tavistock Boys' School.

243. *Mr. Soam*, master.—There are a very few children of agricultural labourers in this school. The average age for leaving school was 10 years. I believe the average rate of wages for farm work to be nearer 10*s.* than 12*s.* a week, as stated at the meeting held here. There are a great many children in the town who never get any education at all.

Girls' School.

There are 20 on the books, children of the agricultural labourers, who attend pretty regularly. The payment is 1*d.* a week. Five come a mile and three-quarters, some mile. They generally remain at school till 14 years of age. There is a night school for them, but those who attend the day school do not go to it.

Gulworthy School.

Tavistock parish.

244. *Mr. I. H. Gand*, master.—This school is in the centre of a mining district, mixed, and 130 on the books, with an average attendance between Christmas and Lady-day, 105; between Lady-day and Midsummer, 122 (this is a high-class school).

The children are about 20 per cent. agricultural, a large number miners, and a very few farmers' sons. The attendance begins to decrease at about 11 years old; mostly they go to the mining work, but a few as farm labourers. They are employed in the mines as young as 9 years, above ground, for dressing ore. Farm boys would begin to drive horses at 10 years of age, and they get 4*d.* a day, or 1*s.* a week, and their meat, they also go away for turnip-hoeing and weeding, and are kept at home to do their parents' gardens. I do not think that if the limit for work were placed at 10 years there would be any hardship on the parents; the gain on the children's work is imaginary, the wear and tear of clothes is much more than the earnings. I think that half a day attendance would answer well in agricultural districts, and I should prefer the morning part for the schooling. Alternate days would be difficult to arrange, without taking the children's work out of the hands of the parents or employer. When the children have passed 10 years of age, I think 200 half-times' attendance in the year might be well required; and attendance at night schools up to 16 years of age might be compulsory. The oldest boys in my day schools are from 14 to 16 years of age. The boys are dismissed from school at 3 p.m. The night school was a failure until art and science classes were introduced; the lads are very fond of drawing, &c. The average attendance for reading, writing, and arithmetic was 15, for the art classes I had 40 to begin with. The class is open from September to the end of May every night, except Saturday, for two hours. Some come five miles, even at the tender age of 9 and 10; there are several lads of 18 or thereabouts, and one of 25. As an instance of the advantages of this school, a lad of 14 came quite uneducated to the night school, he is now well up in drawing, &c., is able to teach his master, a stonemason, the proper setting of stones, &c., is now a paymaster, and high up in his work. The school draws from a population of quite 2,000, still there are a great many children in the district who never get any schooling at all; their parents are careless about it, but very few are too poor to pay the 1*d.* a week. I think the application of the principles of the Industrial School Act would be difficult to carry out, the informer would be in a very invidious position, and it would be necessary to have a paid man.

Lewis Woodley, age 14, works underground in mines, attends school either half-day or in the evenings; gets half-time schooling five days in the week.

HIRTON, near TAVISTOCK.

Population, 800.

245. *R. Parker.*—The cultivation is chiefly pastoral. Boys are employed from about 10 years old, and generally as indoor servants, through the year. Girls generally go to service. Women are employed in the fields to a very small extent. On my farm the young persons have to go a quarter of a mile, on the average, to their work; in the parish I should say half a mile. They work from 7 to 5.30. An hour is allowed for dinner. I would place the limit of age at which boys should be permitted to work on the land at 10 or 12 years, according to health and strength. I think the place of the young is in the house, and not in the field.

There are two schools for the poor, the school in connexion with the Church of England, and the chapel-of-ease school, in another part of the parish. The children in both are taught by females. A great many of the older boys go to the town of Barnstaple, to the Wesleyan day school. The cottages in this parish are in general in pretty good condition. They are sufficient for the labourers, and are conveniently situated on the whole. They are not overcrowded. The water is good. I believe all have gardens, and *some* allotments also.

LAMERTON.

Population, 1,500.

246. *Rev. H. Philpotts.*—The parish is 13 miles long, and the greater part of it is grass land, and some part of it is very thinly populated.

The women and children do not work in the fields, the former are employed in the mines, and the boys in breaking stones for all at the mines.

The farms vary from 200 to 250 acres in extent, and the farmers will not employ more than two or three labourers. A labouring man's wages are 11*s.* a week.

There are many good schools in the neighbourhood, and the children attend pretty regularly. The payment to our schools is 1½*d.* a week for each child over 6 years of age. The pence realize from 30*l.* to 40*l.* a year.

Many parents complain that they cannot afford to pay it, and some would not send their children in consequence at all.

After 10 years of age the children can probably get six months' schooling in the year. Night schools do not answer; we could only get nine to attend. The marriage register is still frequently signed with a mark. The cottages are very indifferent, and there is a great want of good houses at reasonable rent, and there are either gardens or allotments attached to each; the allotments are the eighth of an acre each, rented at 8*s.* a year. We have a savings bank in operation.

Lamerton School.

247. *William Peddle*, master.—The oldest boy in the school is 16 years of age; he is in the fifth standard; he only lately entered the school, and is the son of an agricultural labourer. On an average the boys leave school from 9 to 10 years of age, mostly for the mines. I am in favour of compulsory education with a penalty on the parents, who are often very indifferent about the attendance of their children, though they do not complain much of their inability to pay the school pence.

248. *Davey*, 15 years old.—I have been at work 2½ years all the year round, leading horses at 6*d.* a day; I lived at home. My father is a farm labourer; earns 12*s.* a week; has a house and garden rent free. I come to school four miles every day.

249. *Wm. Swailes*, a sower.—I earn from 9*s.* to 12*s.* a week by piecework. My cottage has one room downstairs, two bedrooms, garden, and pigstye, rented at 4*l.* a year.

Devonshire.

Mr. Portman.

h.

250. *Williams*, carpenter.—I own 10 tenements averaging under 4*l.* a year, payment is quarterly. The cottages are not crowded ; there is only one family in each, and sometimes a lodger is taken in. The cottages do not pay me very well, as the repairs absorb a good deal of the rent, and I have a mortgage on them.

251. Cottages belonging to Lord Fortescue.—Two rooms and storeroom on the ground floor, three bedrooms first floor ; with a garden ; rent 4*l.* 10*s.*

252. Greenfield cottage (Brookes'). — One large kitchen and one small kitchen, coal-hole, ground floor ; two bedrooms on first floor, attic above built for a lodger ; garden 40 yards ; 6*l.* a year rent. The lodger pays 1*s.* 6*d.* a week for his room and attendance. The garden is worth about 10*s.* a year rent, and I have to pay rates 12*s.* There is a closet and pigstye, but no outhouse for firing or straw, and a tank to catch the rain water. My husband gets 2*s.* a day working on the roads.

MILTON ABBOTT.

Population, 1,062 - Acreage, 6,300.

253. *Rev. Sir St. Vincent Hammick, Bart.*—The cultivation is chiefly pasture with arable. There are no private gangs. I may say there are no children, young persons, or women employed in agricultural labour, except boys living in farmhouses. Their work is the usual work of a farm. They are not ill-treated, and their health is not injuriously affected by their work. I find that farmers will not employ boys until they are of an age to be really useful.

The school charge for labourers' children is 1*s.* a quarter ; if there are many children in one family of age to go to school, the clergyman gives them help, which, with his ordinary subscription, makes a very heavy charge. In a populous neighbourhood payment on results, with the children's pence and a few subscriptions, may support a school ; but in an agricultural district, with a sparse population, a very heavy deficit must be met by the clergyman.

Many of the cottages in this parish are deficient in accommodation—damp, dark, unhealthy holes. There is not a sufficient number with two or three bedrooms. The village is well supplied with water, but it is not brought into the cottages. Many cottages have a garden or a small allotment piece. The cottages belonging to the Duke of Bedford are fair ; those owned by other smaller landlords very bad. From the cottages in some adjoining parishes (close parishes) being allowed to fall some poor large destitute families have come in, and occupy cottages which are too bad to be inhabited by the old established families of the parish. Almost all the children attend school. There are two evening schools in the parish. Each is open 20 weeks in the year, during the winter season. They are open for two hours two nights a week. In one school there are three children under 12, in the other none. There are on the register of one school 33 above 12, and in average attendance 26 ; in the other there are 18 on the register, and 14 in average attendance. The scholars are taught reading, writing, arithmetic, drawing, with a little elementary instruction in geography and grammar. The chief difficulty in the way of maintaining an efficient evening school is the Government requiring the school to be under a certificated teacher, and not allowing scholars under 21 to be presented for examination. In my larger school I have engaged a certificated teacher, and, therefore, can hold out to the scholars the stimulus of an examination, with prizes given by myself to those who appear to me to pass well. I am always present, and although the certificated teacher is most attentive, I believe the school could be conducted by myself with help as well. In the smaller school there is a want of that stimulus as in the former ; the average attendance is not so good ; there is not the same spirit shown in their work although the teaching is just as good.

The wages fixed are 11*s.* a week ; a man can earn by piecework, hedge-making and turnip-hoeing, from 14*s.* to 15*s.* a week. There are two girls' schools belonging to the parish. I carry on a night school at Chillerton with from 25 to 30 pupils, of ages varying from 14 to 30. Most boys go to school, but not regularly ; the irregularity of attendance is the great difficulty I have to contend with. The farmers do not help their servant lads in their education. There is a want of some premium to be held out to well educated boys in agricultural districts ; in mines or factories there are places of trust and prospects of promotion which act as a spur.

There is a savings bank in Milton Abbott under my management ; depositors of a penny and upwards, but no person allowed to have more than 5*l.* in all ; the money is then transferred to the Post Office Savings Bank, but the depositor may continue to pay to the penny bank if he chooses, or a shilling at a time to the Post Office Savings Bank. Interest on every 10*s.* deposited before the 1st of July and 1st of January in each year, and remaining in the bank for six month after each of these dates is paid at the rate of $2\frac{1}{2}$ per cent.

There is a club-room in the village well frequented, open day and night, when newspapers are supplied and coffee at a penny a cup ; I found that this keeps the people away from the public-house. We have allotments in sufficient quantity, but I do not think they should be too large.

254. *J. Horswell.*—The cultivation is mixed. Boys of 11 and 12 years of age are employed all the year round. No girls are employed, and women to a very small extent. The children and young persons have to go about half a mile to their work. They are employed eight hours a day, except at harvest time. I would not let boys under 10 be employed on the land. Restrictions on the employment of females are not necessary in this district, as but few are employed, and these only in harvest. There are two schools for boys and two for girls here, all of which have very efficient teachers. Great interest is taken in the education of children in this neighbourhood. There are also evening schools for boys and young men in the winter months, which are of great value. These are supplemented by four Sunday schools, which also are well attended. We are generally well supplied with cottages, and they are very conveniently situated. I have no man that has to walk more than half a mile, except in particular cases. A large portion of this parish is the property of his Grace the Duke of Bedford, who pays great attention to the condition of the cottages. All the cottages are furnished with gardens or allotments of land.

Milton Green School.

255. *Mr. Christy*, master.—Boys, only 75 on the books, including 10 boarders. Average attendance for the year, highest, 50 ; lowest, 45. The highest weekly attendance, 56 in October ; the lowest, 34 in January ; the worst time of attendance is after the harvest. Boys of 7 and 8 years of age leave school for work for hire, but not for the whole day. They usually get their food only, and go where their fathers are employed. If the limit for work were placed at 10 years, and the loss of earnings were struck up to 15 years, it would not be at all serious to the parents.

The want is, not a larger supply of schools, but some mode of getting the children to the schools that now exist either by direct compulsion and by a penalty on the parents. The Government grant might be devoted to a system of rewards for attendance instead of towards the maintenance of the school ; and for the purpose of making some reimbursement to the parents in the case of compulsion.

Boys can pass the sixth standard at 11 years of age if they attend regularly. Many come back to school at 15 or 16 years of age, and pick up what they have lost. Night schools would answer, if only as supplementary to day schools, on a more advanced scale of teaching. Some boys come from distances

at a diameter of six miles. A shortening of the hours for schooling in the afternoon, by giving only half an hour for dinner, would give time for poor boys to do odd jobs afterwards. This school does for many small parishes for boys. A calculation of the supply of schools should be made on the acreage of the districts and the amount of schools supplied on a given radius. Boys go to farm service as young as 10 years of age in the case of a large family, and are hired by the year. They begin with meat and lodging, then meat and clothes, and then the advance of 6*d.* a week besides. I would not allow children to be hired without a certificate of attendance at school for so many days in a preceding year. Lads of 18 live in the farm house at 9*l.* a year. A small farmer holding less than 200 acres has two men and a boy regularly employed, and generally a skilled farm labourer in the house by the year. The number of men employed varies according to the amount of pasture or tillage. The weekly wages of a labouring man average 11*s.*; jobbing wages by the day, 2*s.*

256. Extract from a letter to the Honble. E. B. Portman from the Rev. G. W. Proctor:—

Bradstone Rectory, Tavistock,
DEAR SIR, 20th March 1869.

I HAVE learnt it is easier to make suggestions than to suggest what would be a real improvement, and more free from evils than what one deplores or from some cause dislikes.

Our aim should be a better public opinion both in the employers of labour and in the employed. I suspect nothing would prevail or produce with rapidity the desired effect among the latter but compulsory education of the young, which means education provided by the State out of a rate assessed on all kinds of property and not only on land, or, which would be with the same result, rates assessed on houses only, and on no other property. I have grown out of my former fears of an elementary school education under the direction and at the cost of the State. Under it a little more labour might be laid upon the members of the church, lay and clerical, but that would call forth exertion, and the results to morality and to religion would probably be more satisfactory than at present. We cannot hope for more from the farmers as a body than they do now, perhaps it would be unreasonable to look for more. The employment of hands by them depends on the capital they can command more than on anything else. Not a few carry on their business with borrowed capital, and very many only keep afloat by unceasing care and watchfulness in the management of their capital. Some are, notwithstanding the risk they incur, but little better off than the labourers they hire.

Faithfully yours,
(Signed) G. W. PROCTOR.

Women and children are not much employed in the fields. The state of education is very low, few can read the New Testament with ease. The cottages are very indifferent; many, however, are being now pulled down.

KELLY.

Population, 217 - Acreage, 1,721A. 2R. 1P.

257. *A. Kelly, Esq.*—The cultivation is mixed. Boys are generally hired as farm servants by the year, entering on service for the most part about 8 or 9. Girls are employed only as farm servants; they are employed from 8 or 10 years old. Their employments are generally in the farm houses, and on the farm premises. A few women are employed at certain times of the year. They do not have to go more than a mile to their work. The hours for women are from 8 to 5; for boys, from 7 to 6 in summer, and from 7 to dark in winter. Boys are rarely employed but as farm servants. I do not think boys should go out to work before 12 years of age. In this damp climate exposure in all weathers must be prejudicial to health in the case of mere children, independent of the limited means of education which such a practice involves. I would not place any restriction upon the employment of women in agriculture, except perhaps in the case of married women having children under the age, say, of 2 years. I am now going beyond my own parish, in which women are so little employed; but accidents to very young children in consequence of the absence of the mother are, I understand, not uncommon in other counties, and there is the same risk everywhere.

There is a parish school here, conducted by a mistress, which is taken full advantage of by the people of this parish, as well as by the neighbouring parishes of Bradston and Dunterton.

The majority of the cottages here may be considered as in good condition, and the remainder are in a fair state. They are conveniently situated, not overcrowded, and well supplied with water, but there is no mechanical provision for ventilation, except in three lately rebuilt. All the cottages have either gardens or allotments, and in some instances both gardens and allotments. In this parish there is a field for the pigs of the cottagers.

KELLY SCHOOL.

258. *Susannah Wright*, mistress.—

On the books - - - -	50
Average attendance from Michaelmas to Christmas - - -	37
Average attendance from Christmas to Lady-day - - - -	35

Boys leave school at 11 or 12 years of age, and do not go to work very young. Girls do not work at all in the fields, and leave school at 14, some for service, some to stay at home. The school payments are for labourers' children, 1*s.* and 1*s.* 6*d.* a quarter, journeymen tradesmen's children, from 1*s.* 6*d.* to 2*s.* 6*d.* per quarter, and farmers' and tradesmen's, 2*s.* 6*d.* to 4*s.* If three of one family come, the third pays half price, and for a fourth he comes free. There is no difficulty in getting in the payments. Some come three miles to school.

HOLSWORTHY.

Population, 1,724 - Acreage, 8,826.

259. *Rev. G. W. Thornton.*—There are no private gangs. There are scarcely any women employed in field work. There are no children regularly employed; the farming class usually employ their own children at odd times as their services seem to be required. There are a few boys between the ages of 11 and 14 or 16 at work. The women pick stones, and boys attend to the cattle at certain seasons. The hours of work are from 6 a.m. to 6 p.m. when regularly employed, with two hours allowed for meals. There is no injury to health, nor are any restrictions necessary in this neighbourhood. One cottage per 100 acres is sufficient. The majority of our cottages are in the town. They are generally built of cob, with thatched roofs, and consist of one kitchen about 10 feet square and 7 or 8 feet high, and pantry (sometimes); and above two small bedrooms, or one divided by a curtain or wooden partition; floors of lime ash, rough paving stones, or slate; drainage none; water supply is fair, and there are gardens to most of the cottages. The owner is usually the landowner, but cottages have in many cases been built on ground rented for 60 years, or during three lives. Rent varies from 2*l.* to 6*l.* a year.

There are very few young persons who cannot read, write, and do elementary accounts. There is no night school.

Devonshire.

Mr. Portman.

h.

260. Extract from Letter from Rev. G. W. Thornton to Hon. E. B. Portman.

Holsworthy,
June 15, 1869.

DEAR MR. PORTMAN,

* * * * As to schools, if we could have attendance enforced up to 10 years of age it would be well. Few can afford to keep their children at school after 11 years of age, and after that time it would be a hardship to compel them, unless by a happier arrangement of things higher wages could be given to the labouring classes. Our chief want here is a resident proprietary. * * * * For the labouring classes—indeed for many of the farmers—dwellings, food, and education are at present much defective, the consequences are too apparent, ignorance, disease, and immorality. I do not see how this state of things is to be remedied except by a much larger circulation of money among us. At present our farmers have too little to spend on the land either in draining, manure, or labour. For the latter 10*s.* a week is the maximum wage, and it is as much as the work done is worth ; for the most part men do not get sufficient food of a good quality to enable them to do such a day's work as is done in other parts, and they can only afford a small sum for weekly rent ; and consequently our cottages, except a few in the town, are very poor and much deficient in arrangements for cleanliness and ventilation.

Yours, &c.
G. W. THORNTON.

261. *Mr. J. Parsons*, Holsworthy, guardian.—The district is a poor one, farms are small, and there is a great deal of bad land. Wages for men are 1*s.* 8*d.* a day, 10*s.* a week. Children are not so much employed in agriculture since the system of ploughing has been changed.

The children in the union are better educated than many farmer's sons. The will for education is not wanting among the farmers, but they have no capital, and are obliged to keep their lads at home to work on the farm.

Children of parents receiving out-door relief are expected to earn something by 9 years of age.

The cottages in the district are very bad.

262. *Mr. Higgs.*—Wages for men are 9*s.* and 10*s.* a week. Women are very little employed and girls not at all in the fields ; the latter go to service at 12 years of age. No children are employed under 10 years. There is gloving work here sent from Torrington.

There are two schools, one National and one Wesleyan day ; there is no workhouse school, but the children attend the National school. There is no means of education for farmers' children. The want of a middle class school is much felt in this district.

The land in the neighbourhood is very poor ; the number of acres held by a farmer cannot be taken as a criterion of the holder's wealth. The farmers employ their own children a great deal.

In some cases the labouring class save money. They usually have a garden with their cottage and keep a pig ; occasionally they hire a plot of ground for a cow, or run one in the lanes ; they have potato ground from the farmer free if they find the manure. The grist corn system in this union is dying out. Out-door relief is withdrawn from children of 10 years of age if they are strong, but there is no strict rule on the point.

A compulsory system of education would not, in my opinion, be opposed by the farmers if they understood that they would themselves gain some advantage for their children.

263. *Dr. Ash*, surgeon.—Children go to work very young, but their health is not thereby affected so much as their morals.

The dwellings of the labouring class are very bad ; too many have only one bedroom, earth floors, and no privies.

PYWORTHY.

264. *School.*—Mixed ; not under Government.

M. Bowden, mistress.—On books 64, average attendance 40 to 20. The fullest time is from Michaelmas to Lady-day ; the farmers' children attend at that time but are kept at home in spring and summer. The payment is 2*d.* and 2½*d.* a week. The oldest boy in the school is 11 years of age. Boys do not go to field work much before 10 years of age. Girls are not at all employed. Women do the weeding and other work on the farms.

265. *Mr. Sanders*, farmer.—I have in my house a boy of 10 years old from the union ; in the winter he trims roots for the cattle. My sons go to school at Holsworthy, they worked on the farm at 8 years of age.

Women take stone-picking by the load, and their children go out to work with them ; they also weed corn. I have three cottages attached to my farm.

My foreman has 10*s.* a week, cottage and garden, potato ground, and firing.

An ordinary labourer has 10*s.* a week, a jobman 2*s.* a day. A woman earns 8*d.* a day ; boys 4*d.* a day and meat. A boy in the house gets for the first year meat and clothes ; when 21 years of age he would get 13*l.* a year, board, and lodging. The labourers here are very bad and slothful ; two Cornish men are equal to four here.

Hours of work for men are from 7.30 a.m. to 5.30 p.m. with 1½ hour out ; for women from 8 a.m. to 5.30 p.m.

The farmers complain that the children of the labourers get a better education than their own ; they are often obliged by poverty to keep their children at home to work on the farms. I think that the labourers' children should be taught reading, writing, and arithmetic, but should not have such an education as would put them above the farmers.

CLAWTON.

Population, 549 - Acreage, 3,537.

266. *W. W. Melhuish, Esq.*—The cultivation is—

1,517	acres	arable.
705	„	meadow and pasture.
30	„	orchard.
105	„	woodland.
1,130	„	furze and common and rush land.

Some of the furze land has been converted into arable. There are probably 10 children employed in this parish in agriculture and 10 married women who are employed occasionally. On my farm two married women are occasionally employed. Their work consists of weeding, picking stones, winnowing, planting potatoes, hoeing turnips, hay and corn harvest. They live very near the farms on which they work, probably under a quarter of a mile from them. Their hours are from 8 a.m. to 6 p.m. with an hour for dinner. Their health is not in the least affected by their work, on the contrary those who are occupied in agricultural pursuits throughout the county appear the most healthy and thriving. The females that go out to *daily* labour are certainly not ill-treated. Having acted as a magistrate for upwards of 18 years I do not recollect more than one case of ill-treatment, but although there is such an absence of ill-treatment I rather incline to think *little* boys in farm service (not those who go out to *daily* labour) may be subject to long fatigue though they are not ill-treated ; but this very much depends on the master, whether he is kind-hearted or otherwise. There are certainly no special employments in this neighbourhood injuriously affecting females or the young. I am of opinion that no women in this locality who are employed in agricultural pursuits are corrupted in their morals ; as regards the nature of the employment, if any class of women is more subject than another to immoral conduct I should say

dressmakers, glovers, and young women of inactive habits. I do not think any restriction upon the employment of females is necessary in this parish or the neighbourhood for many miles (say 20 miles) round. One seldom sees young females at labour in the fields, except it be picking stones in the spring season. I would not therefore put any restriction upon the age at which females should be employed. I consider there are no boys or girls who have to go to an unreasonable distance for labour; in fact they go to labour in very few instances, and the nature of the work is so unobjectionable that I consider children are in most instances better out at work at an early age than not when they return to their parents at meals and at night; but I do not recommend boys or girls until 10 or 11 years old going into service in farm houses; and as a general rule I consider that at that age they are better in domestic service than at home with their parents. I do not recommend any alteration in the hours of work as regards this neighbourhood. The means of obtaining school attendance provided by the Factory Act are not applicable to the country. I consider that, from the middle of November to the middle of March, boys and girls under 10 or 11 years old would be better at school, otherwise at such work as it is intended they should earn their living by; of course I allude to labourers' and very small farmers' children (by small farmers I mean those renting under 20*l.*). I consider the school attendance is not much affected generally by the distance the children have to go, except in severe weather. It is more affected, I suspect, by the pecuniary resources of the parents. No efforts are being made for the industrial training of girls.

I consider the cottages generally *very* bad, mostly containing one living room and one bedroom, with an earth floor in the living room; this, I consider, tends to the increase of rheumatism. I believe *mud* (commonly called "cob") walls very dry and more healthy than stone. I consider light and ventilation are not sufficiently regarded in the bedrooms of cottages covered with slate. There should always be two bedrooms at least. There appear to be cottages enough, and they are, generally speaking, conveniently situated. They are, in some instances, overcrowded with members of the family, seldom with lodgers. The construction is bad; the ventilation and drainage are bad. The county generally is well supplied with water. There is usually a small garden. They are generally rented of a landowner; sometimes, and not unfrequently, rented under a tradesman or other person. The rent is about 1*s.* a week, including the small garden. The Union Chargeability Act is causing no increase of cottage accommodation; one or two landlords are making improvements. The commons in this neighbourhood, though numerous, are in the hands of so many owners that the Act 27 & 28 Vict. c. 114. is hardly applicable to cottages in this district. If the owners of cottages would appropriate more garden and orchard ground to the cottages, I think it would tend to improve the comforts of the labourer, and he might thus be able to pay a little more rent; but the comforts of the cottage itself seem to involve a certain amount of outlay in the first instance on the part of the owner, and unfortunately in numerous instances the owners of cottages are as poor as the tenants.

The children of this parish are not all in the habit of attending one school. Some attend a dame school in the parish, and others attend similar schools in two or three other parishes; some the National school at Holsworthy, three miles distant. Probably more than half attend some school. There is no evening school in the parish. I believe evening schools, where they do exist, are very undesirable. Children, after the fatigue of the day, are not in a fit state to learn, and the habit of children and young persons being absent from their parents' homes, and from that of their masters' and mistresses when in service, leads to dissolute and immoral habits, in rural districts especially.

The wages of an ordinary labourer are 9*s.* a week. I am receiver for the Devon and Exeter Savings Bank. The deposits of agricultural labourers and of a few small farmers from the parishes of Clawton, Ashwater, and others near Holsworthy average over 300*l.* a year. Farm servants deposit perhaps more than the labourers.

267. *Nathaniel Heard*, occupier of 500 acres.—Boys are employed all the year round from 10 years old and upwards. Girls are not employed in the fields. Women are hired for light work such as weeding corn and picking stones. The average distance to work is about half a mile. The hours of work are from 8 a.m. to 6 p.m., but in winter they are mostly employed on job-work. Boys should not be allowed to work before 10 years of age. There is a dame's school and Sunday schools. The condition of the cottages is bad, most of them have only one bedroom; they are on the whole conveniently situated with respect to the farms, and they have good gardens attatched to them.

I began life as a labouring man; I cannot write well, but would give 50*l.* to be able to write a good letter.

TETCOTT.

Population, 289 - - Acreage, 2,181.

268. *Rev. Temple West.*—The cultivation is mixed. There are no private gangs. The school attendance here is very materially affected by the distance the children have to go to school, but not to any great extent by the pecuniary resources of the parents. No efforts are made for the industrial training of girls.

There is not a sufficient number of cottages here with two or three bedrooms and a sitting-room. The cottages generally are badly constructed, particularly in reference to drainage. The water supply is tolerably good. All have gardens. They are under the ownership of landowners, or in some cases the tenant of the estate. The Union Chargeability Act is causing no increase of cottage accommodation.

School Statistics.

In Summer and Winter.

——	On the Register.	In average Attendance.
Boys:		
Under 10 - -	18	15
Between 10 and 13 -	12	11
Total - -	30	26
Girls:		
Under 10 - -	15	15
Between 10 and 13 -	11	11
Total - -	26	26

There are none who are neither at school nor at work. Speaking generally, the whole labouring class has insufficient education.

There is no evening school in this parish. The principal difficulty in the way of maintaining an evening school is the irregular attendance.

An agricultural labourer's wages are about 10*s.* a week; they are fairly well off, many of them keeping a cow. The children go to work very young. Farmers' children who work on the farms are able to be spared to attend school in the winter quarter.

The hirings of lads for farm service are by the year commencing at Lady-day.

ASHWATER.

Population, 803 - Acreage, 8,587.

269. *Mr. Oliver*, farmer.—There are three schools in the parish,—

1. Mr. Vesey's for boys and girls, the children of labourers and farmers.

Devonshire.

Mr. Portman.

h.

2. Mr. Cory's day school for children of labourers and farmers.

3. An infant school; also a Church and Bible Christian Sunday school.

The education here is improving, and the parents are becoming more anxious about it. I am opposed to placing any restriction by law on the age at which children go to work; they ought to work as soon as they can do anything, and I think we should not interfere with the parents' control over their own children. I should not like to see a compulsory system of education.

Women are much employed here in the fields; they do not work every day in the week, and keep their houses tidy; they are employed in hoeing turnips and weeding corn, for which they get 8*d.* a day; in in digging potatoes they earn 1*s.* a day, and they take stone-picking by the job at 6*d.* a load.

Children who live in the farm houses get at 8 or 9 years old meat and 6*d.* a week; a boy of 13 years gets 3*l.* a year, board, and lodging; a girl of 12 years, 1*s.* a week, board, and lodging.

The best men get 10*s.* a week, an ordinary man 9*s.*; the men who are regularly employed through the year have privileges besides. The rent of a cottage and garden varies from 1*s.* a week to 3*l.* a year. Of the old cottages a larger proportion have one bedroom than two.

270. *Rev. J. M. Field.*—The majority of the population of this parish are dissenters. There is no church school except on Sundays. It is attended by old boys, and I think there is a desire among the people to educate their children.

It is a very large and scattered parish; the farmers as a rule have but little capital and are very poor; the cottages are for the most part bad. Miss Preston has improved those belonging to her, and I have put three bedrooms in some belonging to Mrs. Melhuish, senior, for whom I act, but the third bedroom is usually devoted to storing potatoes, &c.

Woodpark Cottage,

Property of Miss Preston.

271. *Mrs. Tom.*—This is an old cob cottage which has been raised with fresh cob and a slate roof put to it. Down—a kitchen and one room; up-stairs, two bedrooms. Rent, with 20 yards of garden, 3*l.* 10*s.* a year. We have no privileges; my husband gets 10*s.* a week and "sometimes a bit of piecework; us couldn't live "if it was not for that."

I have three small children; I go to work sometimes in the fields stone-picking and turnip-hoeing at 8*d.* a day. I went to farm service when I was 18 years old, but never worked in the fields before I was married. It is not the custom for girls to work in the fields here.

HEANTON,

May 5.

Lord Clinton.
Rev. J. C. Kempe.
Rev. L. Woollcombe.

272. Women are very rarely employed in field work, nor are boys under 10 years of age so employed.

There is a great deal of glove-making both in silk and cotton at per dozen, the price varying according to quality and work; this occupies the women. There is an absence of training of women for domestic life, hence arise discomfort and untidiness in the labourers' homes and the consequent evils.

A compulsory system of education, if attended by a rate, would be very unpopular.

Men's wages (paid by Lord Clinton), 10*s.* a week; there is a garden with the cottage and an allotment of a quarter to half an acre.

Farmers' men get 9*s.* a week; a few give 8*s.* and grist corn and cider.

Women earn 6*d.* to 8*d.* a day from the farmers. Cottages not attached to the farms are rented at 1*s.* a week to 3*l.* a year.

Rev. J. C. Kempe stated that as receiver for the Devon and Exeter savings bank he received in his parish from 200*l.* to 300*l.* a year, chiefly from young men in farm service and from labourers. Clubs are numerous.

Merton Village.

273. Cottages:—

1. Three bedrooms; two rooms down; cob and thatched roof. Rent, 4*l.* a year with garden.

2. Two rooms down; three bedrooms; garden. 5*l.* a year.

3. Two rooms and backhouse down; two bedrooms. Rent, 1*s.* a week.

4. Old and have been altered; two rooms and backhouse down; two bedrooms up; with garden and orchard, 3*l.* 10*s.* a year.

There is an abundant supply of allotments let at 2*l.* an acre.

Merton School.

274. *Mr. Robbins*, master.—Children are absent from the school in spring and autumn for potatoing with their parents. The fullest time is from January to Lady-day. The average attendance last year was 65. Some children come a long distance, the parish being about three miles in length and the school at one end of it.

If boys attended regularly up to 10 years of age I could get them through the fourth standard; they could attend 100 times in the year when earning wages, but not 150 times. Lads of 15, 16, and even 20 years of age come back to school at times.

MERTON.

Population, 821 - Acreage, 3,738.

275. *Rev. J. C. Kempe.*—The cultivation is mixed. There are three males between 10 and 13, and one between 13 and 18, employed here in agriculture. Most live within a very short distance from the farms on which they work; one or two live a little over a mile from their work. They work from 7 a.m. to 6 p.m., and leave home; those that live near, at 6.45 a.m., returning at 6.15 p.m.; and those that live at a distance at 6.35 a.m., returning at 6.25 p.m. Half an hour is allowed for breakfast, and one hour for dinner. They are not injuriously affected by their work. Females are very rarely indeed employed in field labour here, with the exception of a few weeks in the season of harvest. If children under 10 years of age are employed, I think that half time would be desirable.

The method of obtaining school attendance, by "attendance for a certain number of hours during "the preceding six months," is by far the preferable one. About four per cent. of the children are absent through distance, and about 10 per cent. in consequence of the pecuniary resources of the parents. If the parents could afford to send dinner with the children, the distance would affect the attendance but little, unless the weather were very inclement. Girls are taght sewing and knitting only, besides the usual elementary education.

We have here two cottages to 100 acres. This is sufficient for the accommodation of the persons employed on the land. With but very few exceptions, they are conveniently situated. Most of the cottages in this parish are very suitable for the accommodation of the labourers. Lodgers are forbidden without permission from the landlord in writing. The cottages vary in size, but are sufficiently large for use and health. The ventilation is very good in all new buildings, and very good *generally* in old buildings. Here and there are exceptions. Drainage is carefully attended to. The water supply is good. There are gardens (about 20 yards) to each cottage, and an oven

(a great requirement). There is a pigstye to each cottage; the privies are not sufficient in number, but when erected they are not generally used. The cottages are owned by landowners; in very few instances they are rented for their labourers by the tenants. Rent (including garden) from 3*l.* to 5*l.* The Union Chargeability Act does not certainly cause any increase of cottage accommodation.

Between 10 and 13 -	19	13
Total - -	62	43
Girls:		
Under 10 - -	23	16
Between 10 and 13 -	10	6
Total - -	33	22

There are about six boys and four girls between the ages of 8 and 10 who are neither at school nor at work. About five per cent. of the males and 10 per cent. of the females are growing up with insufficient education. There are very few of either sex who do not learn to read. The females are less educated than the males in this neighbourhood, as gloving is carried on to a great extent among all the labouring class; hence as soon as a girl can use her needle, she is either withdrawn from school or irregularly sent; and the only education she then receives is given at the Sunnay school.

There is an evening school in the parish. It is open 14 weeks in the year, from October to February. The hours are one and three-quarters for four nights a week.

There are:—

—	On the Register.	In average Attendance.
Under 12 - - -	2	1·3
Above 12 - - -	12	7·26

The subjects of instruction are reading, writing, and arithmetic. If the young persons would avail themselves of the advantages of the evening school, I think it would adequately supply the deficiencies of the day school. The principal difficulties in its way are the apathy of the young persons themselves; the distance of the school from the majority of those in service; the disinclination of the masters to allow their servants to attend; and the frequent inclemency of the weather during winter evenings.

PETROCKSTOW.

Population, 616 - Acreage, 4,000.

276. *Rev. L. Woollcombe.*—The cultivation is mixed. There are about 10 or 15 children, young persons, and women employed in agricultural labour in this parish. They live generally near the farms on which they work. Some have to go a mile or a mile and a half to their work. Their usual hours are from 7 a.m. to 6 p.m.; women go to work at 8 a.m. An hour is allowed for dinner. Their work does not injuriously affect their health, and they are not subject to ill-treatment. The employment of females in agriculture is injurious both to morals and to proper training for domestic service. Women are occasionally needed in field work, and many elderly women would be without employment if not so engaged. Boys should certainly not be employed earlier than 10 years old. The mode of obtaining school attendance by a certain number of hours during the preceding six months is preferable, I think, to those provided by the Factory Act. In wet and rough weather the children who live at a distance are generally absent from school. Parents with large families can afford to send but one or two of their children to school, at least want of means is their excuse often for not sending. When the payments are low, it is often neglect.

No efforts are being made for the industrial training of girls.

Many of the cottages here have only one bedroom, which is most injurious to morality and health. Often where there are two bedrooms, lodgers are taken in to occupy one. There are two cottages to 100 acres. This is sufficient. In most instances the cottages are conveniently situated. They are overcrowded. Some cottages are being repaired, and increased accommodation given.

There are 25 males and 25 females growing up with insufficient education. They are very ignorant. An evening school is held here 12 weeks in the year, from January to March. It is open five nights a week, $1\frac{3}{4}$ hours each night. There are six scholars above 12 on the register ; about four attend. The instruction is reading, writing, and arithmetic. Negligence on the part of the young people in attending is the principal obstacle in its way.

MONK OKEHAMPTON.

Population, 272 - Acreage, 1,488.

277. *Rev. H. M. Northcote.*—The cultivation is mixed. In this parish there are employed in agricultural labour one male between 10 and 13, three males between 13 and 18, and four married females over 18. Their occupation in spring is leading horses and planting potatoes ; in summer, harvesting ; in autumn, drawing turnips and potatoes ; and in winter, feeding cattle, threshing, &c. They live on or near the farms on which they work. Their hours are from 7 to 6. One hour is allowed at noon for dinner. The work does not injuriously affect the women. I think they are the healthiest in the parish, and are among the best. I think that young unmarried women had better be kept away from the field labour altogether. I would not allow boys under 12 to be employed in field labour. I would make the restriction as to the hours of work dependent on age, not limited as to time beyond the limits already prescribed by the customs of the country. The school attendance is very little affected by the distance the children have to go to school, and to a slight extent by the pecuniary resources of the parents, but " where there is a will, " there's a way." There are no efforts made for the industrial training of girls after their leaving school. Our cottages are too small ; not properly supplied with privy accommodation, but the landlords are poor, and I think the evil arising from the present state is not very great. There are about 32 cottages in all. They are conveniently situated. Very few have two or three bedrooms. They are overcrowded with members of the family. The cottages are small and thatched, consisting of one sitting-room and one bedchamber (sometimes a second small one), a little backhouse for washing, &c. They are indifferently ventilated and drained. There are various owners. Rents are from 2*l.* 10*s.* to 3*l.* 10*s.* per annum. There is no progress being made towards increasing the cottage accommodation. The Union Chargeability Act causes none.

Between 10 and 13	1	1
Girls :		
Under 10	16	14
Between 10 and 13	4	4

There are not a great many who are neither at school nor at work. An evening school has been tried and failed. As a general remark, I should say that our district has suffered much from the abolition of the old system of apprenticeship, the evils of which might have been remedied without destroying the good. The young people are foolish and lawless, set at liberty before they have any notion of guiding themselves, and the improvement in education has in no way counterbalanced this evil. They get the knowledge that " puffeth up," and no more.

HATHERLEIGH.

278. *Rev. J. Phelps.*—The cultivation is mixed. So far as the schools indicate there are 15 males between 8 and 10, five between 10 and 13, and five between 13 and 18, employed in agriculture. Females do not appear to be employed. The males employed live near the farms at which they work ; their hours are, I presume, from 6 to 6, with meal hours. I do not think the harvest season is profitable for young women. I think that boys should not be employed under 10 or 12 years of age.

The school attendance here is not much affected by the distance the children have to come to school. There is a general disposition on the part of the parents to give some education, though perhaps at a sacrifice. No efforts are made here for the industrial training of the girls. I could wish the cottage accommodation improved. The cottages here are conveniently situated, but are rather crowded. The rents are from one or two shillings weekly. Not much progress is being made towards increasing the cottage accommodation.

There is an evening school in the parish open for six months in the year; it is open three nights a week for two two hours each night. There are on the register 44 scholars above 18, and there attend on the average about 20. The scholars are instructed in reading, writing, and arithmetic. The school does not adequately supply the deficiencies of the day school. There is a difficulty in obtaining voluntary teachers.

Boys go to work at 10 years of age, sometimes younger. Men's wages are 8*s.* and 9*s.* a week; the labourers are slothful, slow workers, and very untidy in their cottages. There are many farmers very little above the station of labourers.

There are benefit societies of many years' standing and in a flourishing condition.

PASSAFORD.

Population, 1,645 - Acreage, 7,041.

279. *J. H. Veale, Esq.*—Children begin to work about 10 years of age. Women are very little employed in the fields, and girls not at all. It is not necessary to put any restriction on the age for children's work; farmers will not employ them as servants till their services are valuable in field labour or the care of horses, or, in the case of girls, for house work. The amount of labour done is very small, the people are slothful. Farms are small, the average are rented at from 50*l.* to 100*l.* a year, and some of the land is very bad. Men's wages are 1*s.* 8*d.* a day, house, and cider; women, 8*d.* to 10*d.* a day and cider.

There are good National schools with certificated teachers, partially taken advantage of; the great fault is want of regular attendance, parents are too careless in enforcing attendance. A neighbour who employs six boys on his farm arranged that they should work and attend school on alternate days; *they did not go to school.* I think the people would be much opposed to compulsory education.

The cottages generally are not good, they have too few rooms; they are sufficient in number for the supply of labour, and are conveniently situated; they all have gardens or allotments.

NORTH LEW SCHOOL.

280. *Mr. Mills.*—Master; mixed. On register, 83. Average attendance, in winter, 71; in summer, 69. The oldest boys are 12 or 13 years of age. Many go to work at 9 or 10 years, are absent in the summer, and attend school in the winter months. The school has been open for two years; the schoolhouse was built by Miss Woollcombe, and the school is mainly supported by her; there is a lending library for the use of the children who attend the school. Children of all denominations come to day school, at the Sunday school there are 10 in the morning and 20 in the afternoon.

The parish is a large one; population about 1,000; purely agricultural. The parents cannot read or write, and do not value education for their children. There is a night school in winter attended by a few farm lads. Some children come to day school three miles, from Beeworthy and Bratton Clovelly.

The farmers send their children to this school; many of them are very rough and ignorant, and not being able to employ labour they keep their children at home to work on the farm. The school payments for farmers are 8*s.* and 4*s.* a quarter, according to size of farms; for labourers' children, 1*d.* and 2*d.* a week.

There is another school in the parish kept by the former parish schoolmaster; there are 70 children in the parish who never attend any school.

If children between the ages of 10 and 13 were compelled to attend school, 100 attendances in the year is as much as should be required. The farmhouses are at a distance from the village and scattered, it would be difficult to get farm lads regularly to night school.

Men's wages are 8*s.* and 9*s.* a week, part in kind; I have seen bread made from bad grist corn, quite black.

281. *Palmer*, 12 years old, son of a farmer, in the first class.—My father keeps six lads in his house; some are paid by the year, some by the week; they work from 8 a.m. to 6 p.m. on the farm; have to look to the horses before 8 a.m., and again after supper about 8 p.m. I have sometimes seen them read a book, but not write. My father's farm is at Beeworthy.

282. *Thomas Wood*, 10 years old, son of a farmer at Ashbury.—My father keeps one labourer, he also employs one woman for stone-picking and dropping and picking potatoes. Women are paid 6*d.* a day for stone-picking and 1*s.* a day potatoing. Men's wages are 1*s.* 6*d.* to 1*s.* 8*d.* a day. I have worked on the farm, rolling.

DOLTON.

Population, 976 - Acreage, 3,553.

283. *George Arnold*, land agent.—The cultivation is of a mixed character, principally arable. Boys are seldom employed under 12 years of age, and then only in very light work in the summer months. A few young women are occasionally employed in weeding corn in the spring. The women are principally glovers. The few that are employed on the farms have rarely to go above a mile to their work. Their hours are from 8 to 12.30, and from 2 to 6. I think no restriction is necessary upon the age at which boys should be permitted to be employed in agriculture, or upon the employment of females.

The children of this parish have every facility for obtaining a sound education at the National school, conducted by a certificated master. In too many instances the parents, from indifference, do not avail themselves of this advantage.

The cottages are of a varied character. Some are in good order, others are gradually improving. They are well situated with respect to their proximity to the farms. A few are overcrowded, and many require additional bedrooms. They are well supplied with water, and can be ventilated if the occupiers think proper. As a rule they have good gardens; allotments are the exception.

INWARDLEIGH.

Population, 634 - Acreage, 6,281.

284. *J. Vallance*, farmer.—The cultivation is mixed. Boys are employed in this parish at 12 years of age as servants; they are not employed *else.* No girls, and scarcely any women are employed. I would not place any restriction upon the age at which boys should work on the land, or upon the employment of females. The children here are sent to school by charity.

The cottages in this parish are very good, and have good gardens.

School.

285. *Miss Percy*, mistress.—On register, 52; average attendance, 44. The best attendance is in winter. We have no Government aid. The school is sup-

Devonshire.

Mr. Portman.

h.

ported by bequests. Poor children are educated free, those of farmers pay 2*s.* 6*d.* a quarter. The attendance of children is irregular ; in some cases the elder ones are kept at home to look after the little ones when the mother is working in the fields ; in others, boys are at work themselves, and girls with their mothers stone-picking as young as 8 years of age in the case of a large family. Women are employed a great deal in the fields ; they earn 8*d.* to 1*s.* a day. A man gets 10*s.* a week, and a boy 4*d.* a day.

286. MEETING OF THE DEVON AND CORNWALL CHAMBER OF AGRICULTURE.

Plymouth, 27th March 1869.

EARL OF MORLEY in the Chair.

The following resolutions were carried :—

(1.) That no legislative restriction on the age at which women and children are employed in agriculture is necessary in Devon and Cornwall.

(2.) That the education of the labouring classes appears to be at present inadequate, and that it is desirable that the Government should give further facilities for the establishment and maintenance of schools, especially in small rural parishes and in districts where the population is scattered and sparse, and that it is desirable that such schools should be entirely unsectarian.

(3.) That the cottage accommodation in this district is inadequate both in quantity and quality, and that it is desirable that the improvement of dwellings should go hand in hand with education, and that so far as possible cottage accommodation should be provided on the farms.

It appeared to be the general opinion of the meeting, that the Government should not interfere with the employment of children after 10 years of age, but that before that age their education should be cared for.

On the second resolution,—

Mr. B. Snell said there were many instances in the moor districts of whole families being uneducated on account of the distance from their homes to any school. He would like to see neglected children committed to some establishment for education up to a certain age.

Mr. S. Rosewear advocated the formation of local committees to establish good schools, and then apply for Government aid.

Mr. Eld. Brown, chairman of ragged school, said that the parents being themselves most ignorant, take no interest in the education of their children. He expressed himself in favour of compulsion, as in order to obtain the desired improvement of the labouring classes it was necessary to educate a *whole* generation. The funds might be supplied partly by Government, partly locally, including a quota to be paid by the parents of the children so educated.

Mr. Sobey was against a compulsory system, but desired the formation of lay central boards in rural districts for the management of schools, the local centre to be aided by Government for the benefit of outlying parishes.

Mr. Horswell expressed himself in favour of local supervision and management of schools.

On the question of cottages as contained in the third resolution,—

Mr. Pratt thought it desirable that cottages should be placed on the farms and not grouped in villages.

Mr. Soltau said that the present state of the cottages was disgraceful ; that their bad condition caused an increase in the rates ; and that the overcrowding was a fruitful source of immorality. He suggested that these dwellings should be placed under inspection, the inspector to give a certificate of the number of persons that each cottage was capable of containing with due regard to decency and health.

Mr. W. Woollcombe supported the idea of inspection, and thought it very desirable that the Lands Improvement Act should be amended, and more practical and simple modes of obtaining money for rebuilding and repairing cottages should be furnished by Government.

The wages of the district were stated by—

	Upper Man.	Ordinary labourer.
MR. PRATT -	13*s.* a week. Cottage and garden rent free, and 20 yards of potato ground.	12*s.* a week.
MR. SOWTON -	12*s.* a week. Cottage and garden rent free. Potato ground. Piecework. Run of two pigs. Poultry.	12*s.* and cider, and lose no time.
MR. DEWDNEY - - - -		Three able-bodied men average 30*l.* a year. No cottage.
MR. CORK - - - -		2*s.* a day and quart of cider.
MR. ROSEVEAR -	12*s.* a week and piecework.	2*s.* a day.
MR. HORSWELL	Thought 13*s.* a week would be a fair weekly average through the year.	—

287. Letter from Wm. J. Woollcombe, Esq., Solicitor to Hon. E. Portman.

SIR, Plymouth, April 5, 1869.

IN compliance with your request I have now the pleasure to submit the following remarks on the Act 29 Vict. c. 28., to which you directed my attention in connection with the subject of cottages for the labouring classes.

I have not had the advantage of a perusal of the rules, which under clause 4. of s. 4., the Commissioners have (as I presume) laid lown for the working of the Act (and upon which in my opinion much of its efficiency must depend), nor am I aware of the practical results which have been obtained from its adoption ; but it appears to me that the principle of this Act might be advantageously applied in rural districts.

What is wanted is, I think, to afford to landowners the greatest possible facilities for the erection or improvement of labourers' dwellings without large expense, and without any further interference than is actually needful to secure the due expenditure of the money lent for this purpose.

In order to secure this it seems to me essential that the loan should be on such easy terms as would enable the landowner to let his cottages when built at low rents ; and further that the Act should extend to trustees and persons having limited interests, *e.g.*, tenants for life, persons to whom sec. 4. of the present Act does not appear to me to apply.

The subject is full of difficulties, which become all the plainer the nearer they are approached, for whilst on the one hand I am sensible that landowners would be very sensitive if any attempt at *pressure* in the matter of providing increased or improved cottage accommodation were attempted by the Legislature, yet, on the other hand, I greatly fear whether any improvement on a large scale will take place in rural districts, no matter how simply facilities are provided, unless some sort of control is exercised, not only as to the *quantity* and *quality* of the accommodation provided, but also as to the number of occupants ; as to this it is possible that the appointment of a public inspector might be ventured on, but I suspect we are hardly ripe for that yet. I venture, however, to think that an Act of Parliament extending to rural districts and to the persons I have alluded to might, if worked inexpensively and under rules clogged as little as possible with mere formal regulations, be even now adopted and worked beneficially.

I am, &c.

WM. J. WOOLLCOMBE.

CORNWALL.

LISKEARD UNION.

Liskeard District.—No. 1.

288. *R. Famblin*, relieving officer.—Children are first employed at about 9 years of age. Their work consists of driving horses, drawing turnips, cutting weeds, picking stones, &c. Women are employed in the fields. The cottages in some parts of my district are crowded.

The schools at Menheniot and Liskeard Borough are under Government inspection. There is an evening school at Menheniot.

The average rate of wages for agricultural labour is, for men, about 2*s.* a day; for women, 9*d.*, and for children, 6*d.* a day.

Looe District.—No. 2.

289. *Geo. Milton*, relieving officer.—Children are not employed under 10 years of age. They do different kinds of work; but are not so much in request as formerly, the use of oxen in farm work being nearly discontinued. Women are employed in the fields, but not to the same extent as they were 20 years ago.

Some cottages are crowded with members of large families, and many houses have but one sleeping apartment. I was lately in a labourer's cottage in the parish of St. Martin where the family consisted of nine persons, with only one room.

The schools at Lanreath, Lanteglos, Morval, and St. Veep are under Government inspection. Lanreath and St. Veep have night schools.

Men whose whole time is engaged get 10*s.* a week and a cottage rent free; other labourers, who lose time from wet weather, &c., get 2*s.* a day. Women earn 8*d.* a day. Boys earn from 6*d.* to 8*d.* a day when hired by the day, but this is very seldom the case, they are more generally hired by the year, and reside with the employer.

Cornwall.

Mr. Portman.

Callington District.—No. 3.

290. *Relieving officer.*—It is very seldom that any children are employed in farm-work under the age of 10 years. They are then chiefly employed in tending cattle, occasionally driving horses in the plough or harrow, drawing turnips, going errands, &c. Girls would not be employed till they were much older, except occasionally for picking stones and such like work with their parents. Women are employed in the fields. The cottages in my district are not crowded. The schools under Government inspection are St. Dominick, St. Ive, Callington, and South Hill. At Callington, Linkinhorn, and St. Ive there are night schools in the winter.

The average rate of wages is 2*s.* a day for men; 10*d.* a day for women. Children seldom go out at day work; when employed by farmers they are generally taken to live in the house at wages varying from 20*s.* to 30*s.* a year, and their board provided by the employer.

MORVAL.

291. *Mr. Roberts*, steward.—Men's wages are 12*s.* a week, without privileges. In harvest they get meat and cider extra. All the labourers' cottages are let at 1*s.* a week, with a garden, linney, and pigstye, and mostly have two bedrooms. One boy of 18 years of age gets 9*s.* a week on the farm. Another 15 years old gets 7*s.*, and looks after the cattle from half past 6 in the morning and fodders up at 8 p.m.

292. *Mr. Grigg*, Barton-of-Portlooe (farmer).—Boys of 8 or 9 years of age go to farm service for their meat, and sometimes lodging; this is generally in the case of large families. When the boy arrives at 12 or 14 he gets meat or 40*s.* a year. These boys go to Sunday school, but not to the night school. Their occupation is driving cattle and pulling turnips. An ordinary labourers' wages are 12*s.* a week and cider. A man who looks after the cattle gets a house rent free extra. A head man has other privileges, such as a pig, milk from the farm, &c. In harvest time they get their meat extra. A woman gets 8*d.* a day, and 1*s.* in harvest; and they work from 8 a.m. to 6 p.m. at stone-picking and weeding. Cottages when attached to the farms are reckened at 1*s.* a week, with a garden, and 20 yards of potatoes at 1*s.* a yard. Hardly any of them have two bedrooms, the one bedroom being divided by a screen. I have built some cottages for 50*l.* a piece. Girls are very seldom employed; and I think that soon there will be very few women to work at all in the fields. Turnips are hoed by the piece; and there is other piecework for men. The earnings for the year of an ordinary labourer would be 32*l.* in money, and meat for the harvest month, say equal to 3*s.* a day. Some few lads put money in the savings bank. I know this because several of them are looking out for small farms of 20 or 30 acres, of which there are some in this part. There is a large allotment field at Looe, which is a fishing town.

DARLEY.

Population, 2,551. Acreage, 7,899.

293. The cultivation is mixed, arable and pasture.

Mr. Dingle, vice-chairman of the Liskeard Board of Guardians.—A man's wages are from 12*s.* to 14*s.* a week, and at harvest he will earn 1*l.* a week. Women get 8*d.* a day, and at harvest 1*s.* 8*d.* a day. Men's hours are from 7 in the morning till 6 in the evening, and a woman's from 8 a.m. till 5 p.m. Boys do not get any schooling after they once go to permanent service.

This, Linkinhorn, is a very large parish, and has several Sunday schools and private schools; the principal school has an endowment of 30*l.*, it used to have a grant which is now discontinued. There is a considerable mining population. Some parents are very indifferent about the education of their children, and the system of compulsion would be good for this. There is a great division of opinion among the farmers on the subject of compulsory education; they are afraid of a rate.

There are some farmers, holding from 20 to 30 acres, whose children, as a rule, are very badly educated, and are taken to work very young indeed, and do harder work than the agricultural labourers. The rent of cottages, with a garden, varies from 50*s.* to 5*l.* 5*s.*; for the most part they have two rooms up and two rooms down, sometimes with an outhouse. The drainage is not good, and there is not a sufficient supply of privies. The dwellings are worse in the district towards Petherwin and Launceston.

Cornwall.
Mr. Portman.
h.

Boys are employed at all seasons of the year, from 10 years old and upwards. Sometimes in the summer girls are employed to some little extent, from 14 years of age and upwards, in picking stones, harvesting, and turnip-hoeing. Women are very rarely employed, perhaps during five or six weeks in the course of the summer. They go to work to distances of a quarter of a mile to, perhaps, in some cases, two mile. I do not think it desirable to place any restriction upon the age at which boys should be permitted to work on the land in this neighbourhood, as boys never work until after 10 years of age. I would not place any restriction upon the employment of females in agriculture.

There are schools here in which children are taught reading, writing, and arithmetic at fees commencing at 1*d.* a week. Most of the children are sent to these schools. Early labour does not prevent the attendance of the boys before 10 years of age, or of the girls scarcely at all.

There are cottages enough for the supply of labour in this parish. Some are very good, but in many cases they are too small, and have not sleeping rooms enough for the separation of the sexes. I have not observed much direct evil results to morality in consequence. Water is plentiful in this neighbourhood, and generally within easy reach of the cottages. The only means of ventilation is by opening the windows. They have generally good gardens. The allotment system does not prevail here.

LOSTWITHIEL.

294. Mixed School not under Government. *Miss Joanna Williams*, mistress (uncertificated).

There are 175 on the books in winter, and 190 in summer. The average attendance in winter is from 110 to 120; in summer, 135 to 140. I have only one teacher to help me. The attendance is very irregular. The parents are very indifferent about their children's education, and keep them at home for errands or for work. The payment to the school is one penny a week. We have no Government grant, and no inspection, diocesan or otherwise. The greatest distance to the school that any child comes is a mile. There are children of all classes, miners', bargemens', artizans', and agricultural labourers', of ages varying from 2 to 12 years, and some few girls as old as 13 and 14. The education has been much neglected. In this town a night school was tried and given up. The Sunday school is very thinly attended. The dissenting Sunday schools are full. Prizes are given for regular attendance.

I think 10 years old would be too young a limit to fix for the purposes of education. The farmers are decidedly against any system of compulsion. We have six girls on half-time system, who go to service in the morning and to school in the afternoon; they get on pretty well if they come regularly.

The number of children who attended 200 times during the past year is 104, viz. :—

First class - - -	31
Second ,, - - -	19
Third ,, - - -	23
Fourth ,, - - -	12
Infants - - - -	19
Total - -	104

295. *Mr. Vivian.*—Job men are employed barking oak, they get 20*s.* a week for a month. The harvest also is done by the job. Bodmin men go down to Fowey for harvest, which is a month earlier than that near Bodmin. The average earnings of these men is not higher than those of the regular agricultural labourer, as they lose so much through bad weather. The people here are very improvident, and are not fond of staying at home if they can get work elsewhere.

296. *Mr. Kidd*, master of Lostwithiel Grammar School.—Farmers are very negligent about the regularity of their children's attendance at school. Compulsory school attendance is necessary to secure regularity. I would suggest that Government aid should be given to night schools for 10 years to come, so as to make up the gap in the education of the present generation. Farmers are afraid of education as likely to raise the wages, or to necessitate a rate. They are also afraid of the labourer getting above them. Farms are small in this neighbourhood.

In the last 20 years farming as a trade has improved 30 per cent.

Commission of Enquiry at Lostwithiel.

297. *Sir C. Sawle* stated, in reply to the Assistant Commissioner, that the age at which children were first employed in agricultural pursuits depended very much upon their physical capacity. The parish of St. Austell, with which he was intimately connected, could scarcely be regarded as an agricultural district, inasmuch as the people generally were employed in clay-works and mines. No child under ten years of age was sent out to work; but in the event of a boy of that age being in robust health, Guardians usually expressed an opinion that it was almost time for something to be done; and when a boy arrived at the age of 12 he was always expected to be following some kind of occupation.

The *Rev. J. V. Vivian* remarked that in the Bodmin Union it was quite an exceptional thing for a boy to be set about farm labour at 10 years of age, the rule generally observed being to send him out at 11. There were, however, instances in which a child had been sent to work so early as 10 years.

Mr. Rundle said he was not aware that any definite rule was observed in the parish in which he lived, St. Veep. When a matter of that description was brought under the notice of the Liskeard Board of Guardians they did not act upon a fixed principle, but used their own discretion. The age at which boys were generally sent to work was, he should think, between 11 and 12. Children were not even accustomed to driving cows before that time.

The *Rev. J. Hawksley* observed that, so far as his knowledge extended, the age at which boys commenced farm service depended very much upon the position of the parents.

Sir C. Sawle wished to explain that the boys to whom he had referred were not in the habit of going to their homes at the completion of their day's work and return on the following morning; they were kept permanently at the farmhouse, and did other things besides driving cows.

Mr. Portman.—If a boy were sent out at 10 years of age, what renumeration would he then receive?

Sir C. Sawle.—I do not know of a case in which a boy has been employed so young.

Rev. J. V. Vivian.—They are usually found their meat and clothes for a considerable time after the commencement of their services; but, I should add, it is almost invariably the custom with the Board of Guardians to supply a boy with clothes if he be sent out from the workhouse.

Mr. Rundle said that boys were very rarely employed as day labourers; they were usually hired from year to year, and kept altogether at the farm house. The system of agriculture was so different at the present time to what it was a few years ago that a little boy was now comparatively useless on a farm.

Mr. Portman.—When the parents are engaged in job work do the children usually work with them?

Rev. G. Hext.—Very rarely. It is not at all the rule.

Mr. Rundle.—My experience has taught me that if a farmer wanted to remove the stones from two or three fields in his possession he would get all the women, boys, and girls he possibly could to go about the work, going himself, or putting a hand or two of his own, with them.

Mr. Portman.—Do the farmers pay those children so much per day?

Mr. Rundle.—The amount which is paid them ranges from 3*d.* to 6*d.* per day; while the average wages of an able-bodied agricultural labourer is 12*s.* per week.

Mr. Portman.—Are there any perquisites in addition to that sum?

Mr. Rundle.—When a man is what is called a permanent labourer he receives a few perquisites; but when he has to take his chance for employment he does not, of course, get any.

Mr. Foster.—What is the general hiring—by the month or by the year?

Mr. Rundle.—The hiring is generally by the year; but the labourer is paid weekly wages. When the man is allowed to occupy a cottage on the farm he calculates upon retaining the place for a year.

Mr. Portman.—Is there any possibility of the boys who are employed on the farm attending school?

Mr. Rundle.—It would be rather inconvenient.

Mr. Portman.—I suppose you mean inconvenient to the farmer?

Rev. G. Hext.—I might state, in order to show that it is possible for something of that kind to be done, that during the past winter I have had a night school, which has been attended by 10 farm lads. In that case their work during the day is no hindrance to their attending school at night.

Rev. J. Vivian.— I can bear Mr. Rundle out that in many districts such a thing would be most inconvenient, not only to the lad, but to the farmer as well. In the parish in which I reside it would be utterly impracticable, for the parish consists of ten thousand acres, and the houses are so scattered that it would be impossible for boys to attend a night school.

Rev. G. Hext was convinced that a great deal of the success of any educational scheme which was not compulsory depended upon the parents of the children. In some instances he had found parents utterly indifferent as to the education of their children, but he thought at the same time that things had improved to what they were a few years ago, as the older generation were beginning to discover that education was beneficial to their interests, and were now anxious that their children should be instructed, if only in the rudiments of learning.

On the question of fixing by law a limit of age for the work of children and the probability of such a restriction being injurious to the parent or employer,

The *Rev. Mr. Hext*, was strongly of opinion that it would be injurious to both. He did not believe that the limit was at all abused at the present time.

Mr. Taylor also believed that it would press very hard upon small leaseholders.

Sir Charles Sawle said he was satisfied that, as a rule, no children were sent to work under 10 years of age. Eleven was about the age.

The *Commissioner.*—Then if that is so, in what way would it press hardly either upon the parent or the employer?

The *Rev. Mr. Vivian* explained that it would only be injurious in individual cases, and not generally. In some cases children might be employed for a few moments after school hours to drive a cow belonging to their parents, and that would be held to be illegal, and that was where the hardship would be.

Mr. Foster said thare were a great many young people who were so employed, and he found unfortunately that a large number of them did not go to school at all.

A desultory conversation followed, and the expression of opinion that was elicited was that boys under 10 years of age should not be employed in agricultural labour, but that at the same time there might be individual cases in which legislation upon the matter might cause hardship to the poor. With respect to girls it was stated that they were seldom or ever engaged at farm work, although perhaps for a week or so during the year they might be employed in stone-picking and potato-dropping. It was further stated that in several parishes a large mass of children never went to school at all, although there were many schools, both day and night, at which they had an opportunity of going. Sir Charles Sawle expressed his belief that children from 12 to 13 years of age were anxious to be educated, but that there was negligence on the part of their parents.

In answer to a question from the Commissioner,

Mr. Blewett said he had frequently visited the cottages of the poor, and he was of opinion that there never ought to be a cottage constructed without at least three bedrooms, one for the parents, another for the boys, and a third for the children. There should be one room in front, and another behind. He had seen much misery and wretchedness amongst the poor, but he was satisfied that many of them might improve their condition if they would only exert themselves a little more. They might, if they liked, put their children to school. The cottages in the Lostwithiel district were in a very bad state indeed; many of them had only one bedroom, and were without any conveniences whatever; they were, in fact, a disgrace to the times in which we lived. He had seen three or four beds in one room. It was very seldom he had seen a cottage with three bedrooms in it.

Further information was given to the commissioner that the agricultural labourers were not in the habit of contributing to any benefit club; that their rent varied from 2*l.* 10*s.* to 4*l.* a year, and that their hours of work were from 7 in the morning to 5 or 6 in the evening.

The Assistant Commissioner then said he gathered from what they had said that they were not in favour of any legislative interference at present, but that they thought with the existing facilities in their district for education that labour and schooling might be combined during the earlier portion of the labourer's life —(hear, hear).

GULVAL.

Population, 1,742 Acreage, 4357.

298. *Rev. W. Wingfield.*—The cultivation is mixed. There is extensive market gardening. There are no private gangs in this parish. About 400 children, young persons, and women are employed in this parish in agricultural labour. They are employed of all ages from 7 or 8 upwards. Their work in spring is potato-planting; in summer, potato-drawing, fruit-picking, and weeding; in autumn, weeding and harvesting; in winter they are but little employed. Probably, one-third come from adjoining parishes. They work from 8 a.m. to 6 p.m. They are allowed 1½ hour in summer, and one hour in winter for meals. I think the girls are injured by the demand upon their physical powers in many cases. Females are not subject to ill-treatment; but I think they and the young generally are injuriously affected by brocoli-cutting in wet weather. A girl working in the fields is subject to the worst influence on her morals, and becomes unfit for and dislikes domestic duties and service. I should limit the employment of females to those of a certain age, because it would probably not be practicable to abolish it altogether in this district. I should recommend a school qualification, after the form of the Print-works Act. I would not permit boys below 9 to be employed in farm labour. I think that children and young persons should not be employed more than six or eight hours a day, according to the nature of the work, and the season of the year.

The two modes of obtaining school attendance contained in the Factory Act would prevent progress, and injure school discipline. The mode provided by the Print-works Act would certainly be best. The school attendance here is not materially affected by the distance the children have to come to school; children often come two miles on the average as regularly as those close by. It is also very little affected by the pecuniary resources of the parents; payment of the penny or twopence per week is not

Cornwall.

Mr. Portman.

h.

the reason why children do not attend. The girls here are trained in needlework, knitting, and housework.

Cottage accommodation is very insufficient here and bad. To this cause I unhesitatingly attribute much of the immorality of the labouring classes; it hinders education, and is certainly the cause of disease and discomfort. So many miners live in this parish that I cannot say how many cottages per 100 acres would be sufficient for the accommodation of the persons employed on the land. Some of the cottages are conveniently situated; more are not. There is not sufficient bedroom accommodation. They are often crowded both with members of the family and with lodgers. There is great variation in the construction of them. Some, recently built, are good; but much more frequently they are bad in plan, in repair, in requisite conveniences, and outhouses. There is no artificial water supply, but many rivulets and springs. Rents range from 4*l.* to 6*l.*; for 4*l.* very little would be got. Very slight progress is being made towards increasing the cottage accommodation. The evils that the Union Chargeability Act was designed to remedy did not exist here. I do not see how good cottage accommodation can be provided on self-supporting terms.

An evening school is well attended; but little is effected where the pupils have not had early instruction. There are very good mixed and infant schools, both under certificated teachers, besides other private and dames' schools. The parish schools have some 160 on the books, but we cannot get an average of more than two-thirds. Work in the fields is *in part* the cause of this, but a still larger number of children are kept away from school wholly or partially by the utter indifference of the parents to education.

Gulval School, Mixed.

299. *Mr. Martin*, master.—The children have been out lately putting down potatoes. Some boys of 8 years old have been out, and some girls. Small holders of land work their children very young, *e.g.*,—

William Row (7 years old) has been out putting down potatoes for two years for his father who holds four fields, two in grass for his cow, and two in gardens. The boy looks after the cow, and when he cannot his sister does, who is 9 years of age. He is very irregular in his attendance at school.

If any law was made for enforcing school attendance, I should like the penalty to be put on the employer as well as on the parents in case of neglect. I think that attendance at school should be encouraged, as well as absence from work compelled.

300. *T. Oliver* (7 years old).—I have been out putting down potatoes; got fourpence a day; worked from 6 a.m. to 6 p.m., half-an-hour being allowed for dinner.

301. *Ellen Pierce* (11 years old), very irregular in attendance).—I have been out pulling radishes at 7*d.* a day, hours of work from 8 a.m. to 6 p.m. I go home to dinner from 12 to 1 o'clock. Men, women, boys, and girls all worked together potatoing; we were seven girls, five boys, three women, and one man to fill in the drills; the women get 10*d.* a day. The older girls go away early from the morning school to cook or carry dinner for their mothers in the gardens. My aunt works in the gardens, gets 5*s.* or 6*s.* a week. 10*d.* a day is the wage for day work, and 1*s.* a day for tut work. In my cottage we have one kitchen, one bedroom, and a dairy, where mother, aunt, grandmother, and myself live together.

302. *John Hoskins* (10 years old).—My father is an agricultural labourer; gets 13*s.* a week, and pays for his cottage.

303. *James Williams* (12 years old).—I went out for the first time this year in the gardens; got 6*d.* a day, and worked from 7 a.m. to 6 p.m. in the month of March. I live a mile and a half from the school, and go to chapel school on Sunday.

304. *Mr. Thomas*, Gulval (a holder of market gardens).—The garden work is mostly taken by the piece, fruit picking by the gallon. A man's wages are 2*s.* a day at the lowest; a steady man gets from 13*s.* to 15*s.* a week. Women get 10*d.* to 1*s.* a day. Girls begin at 9 or 10 years of age, and get 6*d.* a day. The hours of work are from 8 to 6, and 1½ hour out for dinner. Boys begin as young as the girls. Women can earn by piecework a day and a half's wages in a day. I think it would be very just to keep boys from working till they were 10 years of age, such a limit would not inflict any injury on the employer, but might possibly do so to the labourers' families. In the potato season a man's wages are 1*l.* a week, mostly all money, few give drink. The best land is let at 10*l.* an acre. My holdings vary from 4*l.* to 10*l.* The cottages are very bad, the average rent is 4*l.* a year. The labourers do not save much, they lose a good many days' work, and the women have to work very hard.

In the case of a "take" a few labourers agree together, and they all consider themselves a party to the contract. Men do not employ women. Men and women will take separate "takes;" the two rarely mix together, the heavy work is done by the men, and the light by the women.

305. *Cottages*, Gulval:

No. 1. One room down, one up; small garden. Seven people living in it. Rent 4*l.* a year. The children go out potatoing at 5 or 6 years of age in the summer.

No. 2. One room up, one down, at 1*s.* a week. Widow and children on the parish.

306. *Mr. Corin*, Tolver.—I hold market gardens. The land is held on my life. Children begin to work at 9 years of age, and at a year younger potatoing. Women work on to 70 years of age. They do as good a day's work as a man, and are much cheaper to be employed; still they do work that ought to be done by men. I think little girls should not be allowed to go to work; it is a shameful thing to see them working so young; and they should be left at school till 14 or 15 years old. The wages are 12*s.* or 14*s.* a week for a man in summer, 15*s.* sometimes. Labourers cannot save anything; the benefit clubs are mostly going down. To make children learn anything they should be kept at school till 14; between 10 and 12 years of age they lose all they have previously learned.

307. *Simms.*—Cottage of cob in bad repair; two rooms down, two bedrooms, and garden of 20 or 30 patches; rent 6*l.* 10*s.* a year. I have worked at farming gardens. Farm wages are 12*s.* a week, losing wet days, and a little "tut" work. Boys and girls begin to work at 8 or 9 years of age; and the little ones earn 6*d.* a day; young women 10*d.*, and at summer 1*s.* 6*d.* to 2*s.* a day, from 6 a.m. to 8 p.m., with an hour allowed for breakfast and an hour and a half for dinner, and then work till dark, that is in the potato harvest. The Cornish range in the cottage cost 8*l.* 20 years ago, and burns one hundred and a half of coal in the week.

ST. ERTH.

Population, 2,557. - Average, 4,092.

308. *Rev. A. Mills.*—The cultivation is mixed. There are no private gangs employed. The work of the children, young persons, and women employed in agriculture is, in spring, picking stones and other field work; in summer, weeding and hoeing; in autumn, harvest work; and in winter, barn work. They live near the farms on which they work. Their hours are from 8 a.m. to 12, and from 2 p.m. to 6 p.m.; from 12 to 2 being allowed for meals. Their work does not injuriously affect their health, but does them good. They are not subject to ill-treatment. The employment of females in agriculture is against their proper training for domestic duties.

I would not place any restriction upon the employment of females. I think that children under 13 should go to school altogether. There is not in this parish a sufficient number of cottages for the accommodation of the persons employed upon the land. The proportion is $2\frac{1}{2}$ to 100 acres; it should be 3 to 100 acres. They are conveniently situated, and have sufficient bedroom accommodation. They are not overcrowded. The ventilation and drainage are bad. There is an average water-supply, and all have gardens and privies. They are owned by landowners, and the rents are 50*s.* to 80*s.* a year.

309. Meeting at the Old Library, Penzance, March 8, 1869.

PRESENT:

T. S. Bolitho, Esq.
Captain Arthur.
Rev. P. Hedgeland.
Hallet Batten, Esq.
G. Wilson, Esq.
Rev. R. Malone (St. Paul's vicarage).
Rev. J. P. Vibert.
T. Cornish, Esq.
Mr. R. Chergwin.
Mr. Laity, Perran, } Farmers.
Mr. Laity, St. Hilary, }
Day Le Grice, Esq.
W. Borlase, Esq.
Rev. W. Wingfield.
The Mayor of Penzance.
Rev. A. W. Mills.
Mr. Hosking, &c. &c. &c.

Children are employed in the gardens for potatoing, and for stone-picking in the fields; they are not much employed in agriculture under 9 years of age, or, except occasionally, under 10. Boys come to drive horses at 6*d.* a day, but are not taken to live in the farm-houses under 14 years of age. Young boys work for 9 hours a day, but no evening work. Children under 10 years of age are not paid by the farmers, but go to help their parents in stone-picking or other piecework; the amount of earnings by them is of no real importance to the parents. A limit of 10 years for work would be no hardship to the parents or the employer. An agricultural labourer's wages average throughout the year, including perquisites are 12*s.* a week. Piecework is given to the better men, whereby they can earn a higher average. The average wage in the market gardens for a man is 15*s.* a week.

It was agreed that a combination of labour and education, with a view to secure continuous education for the labourers' children, is necessary. Mr. T. Bolitho suggested that a certificate of school attendance for some hours during the preceding week should be demanded every Monday morning, and if not produced the child should not be employed by anyone; attendance at night school or Sunday school to count. Mr. Chergwin thinks that boys who had to attend school for five or six hours in the week would be all the better for it, and none the worse for the purposes of the farmers. Night schools were thought to be the best mode of securing continuous education after a certain age. The difficulty of maintaining it is the scattered nature of the population and the distance from the school in agricultural districts. It was stated that in the Penzance Union a penny a week is deducted from the weekly relief by the officer (overseer) to pay for the children's schooling when the parents neglect to do so; and that this custom has prevailed for some time. There is no rule as to the cessation of relief when children attain a given age. Cottages are reckoned at 1*s.* a week in wages by the farmer, and are rarely let under 3*l.* a year. Generally those with two rooms and a spence (wash place) are let at 1*s.* a week. Mr. Laity, of Perran, does not think that there is a cottage in his parish with less than four rooms, two up and two down. Those with two rooms are often crowded. There is usually a garden with each farm cottage. The labourers do not now keep so many pigs as they did five or six years ago. The cottages are for the most part on leases for lives. The land is also often on lives as well as the cottages. The dwellings in this neighbourhood are not alone and scattered; the people like to congregate in villages. It was thought that an improvement in the dwellings of the poor must go hand-in-hand with any system of education, otherwise education will not have the desired object. It was said that the best men go to mining and fishing, not only on account of the higher rate of wages, but because there is a prospect of promotion and a rise in position.

Undivided holdings were said to be one cause of bad cottages. An undivided holding is a joint holding by two or more persons, the annual value of the estate being divided according to the shares. Each holder can sell his share, but no one partner can take a portion of the land absolutely.

ST. BURYAN.

Population, 1,428 - Acreage, 6,964.

310. *Rev. T. B. Coulson.*—This is a purely agricultural district. The attendance of the children at the school is irregular, principally on account of the distance to the school and the bad weather, and at almost every season there is some work to keep the young children away at times from school. The wages of an agricultural labourer are 12*s.* a week, or 2*s.* 6*d.* a day. Some of the farmers are only just above the class of labourers. They employ their own children in potatoing, dropping, and weeding turnips, &c. The parents of these children will not make any sacrifice of the earnings. There is a dairyman class here who sometimes become farmers. The west of Penzance has more cows than any part of the county. Women and girls are employed in the field. Very few women come to be married who are not in the family way.

Some cottages are attached to the farms; the unattached labourers live in the church town, where the dwellings are often very crowded. The cottage rent, with garden, varies from 2*l.* to 4*l.* a year. The men often rent a piece of potato ground from the farmer. There are clubs, but there is a great want of thrift among the people, they will not make use of the savings bank. We had a night school last year which did very well, and I got a grant for it. I think that compulsory attendance at school would necessitate giving up school fees. The children will not come in bad clothes. I think that if restriction were placed on the work of children before a certain age there might be some hardship on the heads of the families, and I doubt whether such a restriction would be followed by a rise in men's wages.

Return.—There are no private gangs in this parish. It would be difficult to ascertain how many children, young persons, and women, are employed in agricultural labour. Their work in spring is to help in putting in potatoes, weeding, and hoeing; in summer, harvesting and a little work in connexion with the steam threshing machine; in autumn, threshing and pulling mangolds and turnips; and in winter, dropping early potatoes. They live from a few yards to two miles from the farms on which they work. They work about eight hours a day. From the time of leaving home to the time of returning their hours are, for those who live near, nine, and for those who live at a distance, 10. One hour is allowed for meals in winter, and two in summer. They are not injuriously affected by their work. The common impression among women here is that domestic service resembles farm service. They prefer what they consider the liberty which they enjoy in working in the fields. I would not place any restriction upon the employment of females in agriculture. Very young boys are not employed here in the fields. As far as I am able to judge

Cornwall.

Mr. Portman.

h.

I think that a certain number of hours attendance at school per week should be insisted on. The school attendance here is not much affected by the distance the children have to go to school. Some parents, caring but little about their children's education, plead want of clothes as a hindrance. With few exceptions, I believe, where there is a will there is a way. No efforts are being made for the industrial training of girls.

Some few of our people are occupied at times on the fisheries, and sometimes at quarry work.

The cottages are very fairly situated with respect to the farms on which the work has to be done. In some few cases the cottages are overcrowded. Cottage property in St. Buryan will not pay three per cent. If a reasonable rent were offered there would be no difficulty about cottage accommodation.

There is but one elementary, and that a National school, within the limits of the parish. Just over the border, in the parish of St. Levan, is a Wesleyan school. Possibly from 15 to 20 children attend from this parish.

SENNEN.

Population, 600.

311. *Rev. G. Woollcombe.*—No children are employed here in agricultural labour. About 10 young persons and 12 women are so employed ; the males between the ages of 13 and 18 ; of the females, four are between 13 and 18, three over 18 and married, five over 18 and unmarried. Girls are but little employed, principally by their fathers who are small farmers or dairymen. Women are employed in stone-picking, potato-dropping, and weeding. Their hours are not over long, nor are the distances they live from their work great. Their hours in summer are from 7 to 6, and in winter from 8 to dark. They are allowed a short time at 11.30, one hour for dinner, and a short time in the afternoon. Their health is good. Neither females nor the young are subject to ill-treatment. This parish has a fishing population as well as an agricultural one. Out of the population of 600, quite 200 are supported by fishing. Among the fishing population, on account of the distance from school and the irregularity of employment, the education of young persons is indifferent. I have tried a night school for them with tolerable success.

The children are, for the most part, at some school. Compulsory education is hardly necessary, but if determined on, the plan of "school attendance for a "certain number of hours during the preceding six "months" only is possible. In this parish the distance of the National school keeps some children from it, but they go to a private one nearer, but more expensive. The school attendance is affected by the pecuniary resources of the parents only in the case of large families ; but even then one or more children, after the first, are admitted to the National school at a cheaper rate than one would be. No efforts are being made in this parish for the industrial training of girls.

The cottages here mostly consist of four rooms, two downstairs and two upstairs, or sometimes only one downstairs. The drainage is very indifferent. Water is obtained from wells, which are often common to many cottages. Gardens are small, if any ; but potato ground is attached to many, to some a part of wages, to others at a low rent, say 1*s.* a strip. The cottages sometimes have an outhouse. They, for the most part, go with the farms on which they are situated. The rent is 1*s.* a week. Progress is being made towards increasing the accommodation, but principally in the fishing part of the population.

The ordinary wages for a labourer are 12*s.* a week, in some cases 7*s.* a week, with dinner. Cottage and potato ground extra. The cottage and potato ground given in lieu of harvest wage. Children do not work much under 10 years of age, except with their parents in the potato season. The district is well supplied with schools. There is one at St. Leven and Sennen, with an uncertificated master. One at St. Buryan, mixed, certificated master. Two at St. Paul's, one certificated. One at Sancreed, certificated. One at St. Peter's, Newland, uncertificated. One at Madron,

endowed. One at St. Just, certificated; besides which there are sundry dissenting and private schools. I do not think that the people neglect education, except parents in the "Cove," which is a fishing village. We had a very good night school last year, but the attendance has rather fallen off. There are some farms of 200 acres. Every large farm has a dairy, and there is a class of dairymen.

TRELOWARREN.

PRESENT :

Sir Richard Vyvyan.
Mr. Shaw, agent.
Mr. Appleton, doctor.
The Rev. — Bloxam.

312. The farmers have the control and repair of the cottages attached to their farms. It was thought to be a better system than keeping all the control in the hands of the landlord. Leases on lives are very common in this district. The average rent of a cottage, with a garden, is 3*l.* a year; they usually have two rooms down and two up. Sir Richard Vyvyan charges 2*s.* 6*d.* a month, with a month's notice. The average size of farms is under 100 acres. Wages of an ordinary labourer 12*s.* a week, including perquisites. Farm lads of 16 years of age get 12*l.* a year, with board and lodging. At 17 or 18 years of age 16*l.* a year. Boys' wages begin at 4*d.* or 6*d.* a day. The district is well supplied with schools, which are used by the farmers' sons.

Boys' School.

313. *H. Skewes*, master.—Not under Government. Seventy-seven on the books. [On the 19th of April only 27 in attendance, it was said to be a busy time at barley tilling.]

The bigger boys are away a good deal, either working for the farmers, their masters, or for their fathers. Some go out to work at 9 years of age. The fullest time for the school is in the months of May and June. The winter attendance is much affected by distance and weather. The population is thin and scattered. I do not think that half time or alternate days at school and work would answer in agricultural districts. Boys between 9 and 11 years of age are not employed regularly throughout the year, and they might perfectly well attend school 150 times during the year without any injury to the parents by the loss of earnings. The oldest boy now in the school is 12 years. The school draws from a distance of three miles, from the parishes of Mawgan, St. Martin, the Edge of St. Keverne, and from Wendron. There is no payment by the children.

314. *Sir R. Vyvyan.—Return.*—The cultivation is mixed. Strong healthy boys begin to work from 10 to 12 years old, and are employed occasionally throughout the whole year, and when not employed are allowed to return to school at any time. In many cases the boys work and go to school on alternate days or weeks. Girls are not employed in agriculture here. A few women are employed in the spring and summer, and there is employment for more women than are now disposed to go into the fields to work. Their cottages are either on the farms or very near where they are employed. Eight hours is the longest time they work, except a few days at hay and corn harvest, when it may be more. It is not necessary to place any restriction upon the age at which boys should be permitted to work on the land, but the time should be decided by the parents and the employer. No restriction is required in this parish upon the employment of females in agriculture.

There are two good free schools in this parish, which are well attended by the labourers' children, one for boys and the other for girls. They are quite distinct from each other, and are maintained at the expense of Sir R. R. Vyvyan, Bart.

There is a sufficient number of good cottages for the labourers, with accommodation favourable to health and morality. There is an ample supply of good water. All the cottages about us have gardens attached to them sufficient to supply the families of the labourers with vegetables and small fruit. They are allowed ground in the fields to grow potatoes enough for the use of their families, and to feed their pig.

The rent of the cottage and garden is usually 3*l.*; Sir R. Vyvyan's 2*s.* 6*d.* a month, and a month's notice.

The wages of farm servants are, of those of 16 years, 12*l.* and upwards, board and lodging; of 17 or 18 years, 16*l.* Ordinary labourers get 12*s.* a week, including perquisites.

GRADE.

Population, 339.

315. *Rev. F. C. Jackson.*—The cultivation is chiefly arable. No females are employed here except in farm household work. There are five males between 10 and 13, and 10 between 13 and 18, employed in agricultural labour. They are employed in driving plough horses and harrowing, and doing other light works. In winter they feed stock. They live on the farms chiefly. They work so long as it is light. One hour is given for dinner. They are not injuriously affected by their work. I have always considered that the lax way in which farmers entrust the driving of cows to bull to boys is as prolific a parent of ill as well can be devised. Too often, in the absence of any man on the farm, some servant girl turns out the bull. This may seem a trivial matter, not the sort of thing to mention, but the question as to the effect of the employment of females in agriculture on morals, if it deserves an answer, must be answered fairly. Should boys be employed under the age of 12 years, they should be allowed or the master should be forced to let them attend afternoon school; thus in very poor families the children would not of necessity grow up, generation after generation, in utter ignorance.

The cottage accommodation is decreasing annually, the population (chiefly on account of the Serpentine Factory) increasing. The cottages are crowded; men sleep together in the same bed, and children, half grown up (in some cases quite so) sleep in the same room. There is no facility given for building. People want to build. Landowners will not grant land. This, however, is not a fault to be imputed to me; the ill effects of such a state of things is apparent everywhere, and those who are responsible will have, I suppose, to answer for it.

The approximate number of children of the agricultural labouring class neither at school nor at work is,—

In Summer and Winter.

Boys :	
Between 8 and 10	12
Between 10 and 13	7
Total	19
Girls :	
Between 8 and 10	2
Between 10 and 13	2
Total	4

There is no evening school in this parish. Those who do not go to school have insufficient education. The difficulty in the way of an evening school is want of funds. There was one in this parish last year, started by the schoolmaster, but the attendance was small and the pay insufficient. The education of the children has cost me, independent of my own subscription, 30*l.*

Cornwall.

Mr. Portman.

h.

GRADE AND RUAN-MINOR SCHOOL.

316. *Miss Nicholls*, certificated mistress (school mixed).

In winter quarter number on the register, 88.

Average attendance from 60 to 68.

In the summer of 1867 on the register, 78.

Average attendance, including the Lizard children, 66.

There is now a school at the Lizard. The parents are indifferent about the children's schooling, and grumble about the pay. The children are often kept at home very long, and sent to school late, and in a rough state. The payment for the first class is 5*s.* 3*d.* a quarter; for the second class, 4*s.* The little ones pay one penny a week. The principal occupations of the girls and women are net making and stocking knitting. There is a daughter of a small farmer, 5 years of age, who has been in school since Christmas, but never learned to write before she came.

317. *John Carter* (10 years of age).—I was out at work last and this year for a farmer driving horses and putting in potatoes. Got a penny a day and three meals. Milk for breakfast; meat and no drink for dinner; bread and milk for supper.

318. *Mr. Nicholls* (father of schoolmistress, and under-steward for one of the properties; an old man).—Boys go out to work at 9 years of age and younger. Women and girls hardly go at all. A boy of 9 years of age would get 1*s.* a week and his meat, or 2*d.* a day by the day. An ordinary labourer gets 2*s.* a day, and during the harvest month 3*s.* and 3*s.* 6*d.* a day and meat and drink. Boys are hired by the year into the farmhouses, and begin from 3*l.* to 3*l.* 10*s.* a year, with board and lodging. A woman gets 8*d.* a day for weeding, and 1*s.* a day and meat in harvest. There are not more than five or six women in the two parishes who go out to work. The restriction on the employment of children under 10 years of age would do good. I would vote strong for education. Boys don't get any after they go out to service. The pilchard fishing from the end of July to the end of November brings in a good deal of money, and the potted pilchards are a great help for the food for winter; they are either sold at 1*s.* 6*d.* per 120, or sometimes given away to the very poor. The cottages are not very bad. They have mostly two bedrooms. The rent, with garden of 5 to 15 yards, is 3*l.* to 4*l.* a year. The labourer can also get potato ground from the farmers at per yard, if they want it. The farms are small and the rent high. There may be one or two farms up to 100 acres in the parish, but they are more often from 50 downwards. The small farmers are worse off than the labourers.

I do not think the labouring class would object to compulsory school attendance.

MAWNAN.

319. *Rev. W. Rogers*, *A. Rogers, Esq.*, and *Mr. Pender*.—The wages of an ordinary labourer, 12*s.* a week; of a hind, 13*s.* and a cottage. The carter also has a cottage free, as he works on Sundays, and he has firewood for the cutting. Potato ground is let at 2*l.* an acre if hired. Women are very little employed, except in spring at stone-picking, and in autumn in turnip-cutting and potatoing; they earn 8*d.* a day. The boys are not employed under 10 years of age, but they rarely remain at school after that age. The cottage rent without garden ranges from 2*l.* 10*s.* to 3*l.* 10*s.* a year. The allotment system here is very rare. The gardens with the cottages are very small. We have had a night school kept by the schoolmaster, and farmer's children attend the parish school up to 11 or 12 years of age, and afterwards sometimes go to a town school. The labourers are inclined to take pains with their education. The savings bank is much used, but only in rare cases does an agricultural labourer save enough to take a farm. There are a few cases of dairies being let at 9*l.* a cow. One-eighth of an acre per cow given for tillage for roots for that sum. Some of these men become small farmers. Most of the cottages are leased on lives.

Any legislative enactments as to the age for work would not affect this district.

320. *Mary Ann Cock*.—I have one child. I began to work in the fields at 12 years of age, and I have worked in them pretty regularly ever since. I work now at stone-picking, weeding corn, potatoing, and taking up turnips and mangold. I have had bad health. I was very ill when I was 14 years of age, and the doctor said I had injured my health by working so young in the fields. I have been often very wet in weeding corn. At first I got 6*d.* a day, now I get 9*d.* a day. I live at my father's, and the earnings pay for my clothes. Girls do not go out as much now to regular field work. Those in farm services are used occasionally for outdoor work. I think it a bad thing to send a girl to the fields. I would never do it myself. My cottage with two rooms down, two bedrooms, and a small bit of garden, rents at 3*l.* 10*s.* a year.

MAWNAN SCHOOL.

321. *Mr. Wilkes*, master.—The oldest boy in the school is 12 years. The average age of the first class is 10½ years. Some of the boys work for their parents, but none for pay. We had a night school four nights a week in winter; I have had 14 in, in one night, mostly farm lads who have been at day school, but the average is four or five. There is generally an interregnum of two or three years between the time of leaving the day school and coming to the night school. Those who attend at night school soon pick up what they have lost and take an interest in their work. It is difficult to get any attendance at school after the boys once go to farm service, as they are employed all the year round, and are tending the cattle morning and evening.

MR. PETER'S COTTAGES.

322. No. 1.—*F. Downing*, agricultural labourer.—Earns 11*s.* a week. No firewood or grist corn; gets potato ground free by putting the manure in the land himself. One room down, one up, and garden. No privy. Rent, 3*l.* 3*s.* and "outs" equal to 6*s.* a year. Most of the cottages in the parish have two bedrooms, but there are a very few privies in the village.

No. 2.—One room down, one up. Garden. Rent, 3*l.*, and 6*s.* rates.

No. 3.—Two rooms and a backhouse down. Two bedrooms, with garden. 4*l.* a year, and rates. No privy. In bad repair. Inhabited by a man, a boy of 15, a girl of 14, a young man and a woman, and a lodger; each room being about 11 feet by 9.

CONSTANTINE.

323. The population is chiefly employed in the granite works. The cottages are held on leases for lives, and some are very deficient in accommodation, having only one bedroom.

ST. KEVERNE.

(A large parish with a scattered population.)

324. *Rev. E. Griffith* and *Mr. Pearce*.—Very few children of 10 years of age are employed in the fields; they may be used occasionally for driving carts, &c. Women are not much employed, except for stone-picking, weeding corn, and potatoing occasionally. The wages of an ordinary labourer, are 12*s.* a week. The farm lads, 14 years old, living in the house, get 5*l.* or 6*l.* a year, board, and lodging, and rises as they get older. A boy of 14 would earn in the fields from 6*d.* to 8*d.* a day. Women get 8*d.* a day. Head carters get cottages rent free, besides their wages. The cottages are not sufficient in number. In some parts of the parish the average rent is 3*l.* a a year. There is a great deficiency of gardens and

no allotments. A few labourers get potato ground, for which they usually pay 1*s.* a last, equal to 18 square yards. There is a great want of privies in the village. There is a school in the church town, and some dames schools, but not sufficient for the population. The attendance at school after 10 years of age is very irregular, and the parents are very indifferent about the education of their children. The children might perfectly attend school in winter months, but it would be difficult to carry out any system of half time or alternate days, and the feeling would be against compulsory education. Most of the property is leasehold.

About 35 males between the ages of 10 and 13, and 25 between 13 and 18, are employed in agricultural labour in this parish. They live principally on the farms. They work 10 hours a day, and are allowed three hours for meals. Very few females of any age are employed in field-work. They are not injuriously affected by their work.

SCHOOL STATISTICS.

In Summer.

	On the Register of the Parish School.	In average Attendance.

Between 10 and 13 -	46	40
Total - -	72	60
Girls:		
Under 10 - -	14	10
Between 10 and 13 -	17	12
Total - -	31	22

325. *T. Joyce*, schoolmaster.—The children in the school are those of farmers and labourers. There are some labourers' boys at 11 and 12 years old, and one girl of 14. Boys between 10 and 13 years of age come to school in the winter, and work in the spring and autumn. Some children come three and four miles to school. You could not carry out the half-time system in the agricultural district.

326. — *Jordan*, 10 years of age.—I have been out driving horses for farmers for 2*d.* a day and three meals. Pie for dinner, bread and milk at the other meals. This year I got 4*d.* a day and the same meals. I go to work at 7 a.m. and leave off at 6 p.m.

327. *Thos. Wren*, 12 years old.—I was out last year driving horses and harrowing. I got 2*d.* a day and meat. I was out three or four weeks in the year; came to school in the winter, and am now in the first class.

328. *John Tripcony*, 17 years old.—At 11 years of age I went out to farm service, and got 3*l.* a year, board, and lodging; at 14 years of age I got 4*l.* a year; at 16, 8*l.*, board, and lodging. I came back to school last Christmas, but I have not saved any money.

329. LETTER from GEORGE APPLETON, Surgeon, to HON. E. PORTMAN.

SIR, St. Keverne, May 17, 1869.

I REGRET that I have been unable before to give you the particulars desired (*here follows a list of names*).

All the above have risen from agricultural labourers by their industry and frugality without any legacies or other assistance. Many might be named now holding farms whose fathers were originally agricultural labourers, but by industry became renters of land and left their stock, &c. to the present holders. their sons.

BUDOCK

(part of St. Gluvias parish).

Population, 3,000 - Acreage, 3,900.

330. *Mrs. Spargo.*—Boys go out to work at 9 years of age for driving horses, cutting turnips; sometimes even younger. They get 4*d.* or 6*d.* a day. My husband works at the granite works. I have nine children. I think it would be a good thing to keep them rather longer at school. No child ought to go to work before 12 years of age, though I think in some cases it might be a hardship on the parents to forbid children to work under 10. Agricultural labourers' wages are 12*s.* a week. The cottage rents have lately risen to 4*l.* and 5*l.* Our cottage has one room down, and two bedrooms, with a small garden; rent, 3*l.* a year. Women work in the fields at 8*d.* and 10*d.* a day. Some girls of 12 years old will earn 6*d.* a day. There is not so much work for women as there used to be.

331. BUDOCK SCHOOL (Mixed).

Mr. Roberts, master.

On register 1868, May to July -	148
Average attendance - -	109
Number to January on the register -	140
Average attendance - -	88

The low average in the winter is caused by the distance that the children have to come. There are 36 children over 10 years of age on the books. Agricultural labourers' children are away in spring putting in potatoes, driving horses, and tilling; and in the autumn in getting up potatoes, &c. Some of the children come a distance of three miles, and the attendance is fairly regular. If a restriction is to be placed on the employment of children I should like the limit to be put at 11 years. I had a night school for two winters, and the number dwindled away until it became useless to attempt to keep it on.

332. *C. Thomas*, 9 years old, son of a labourer.—I have been out putting in potatoes for my father for a few days at 3*s.* a week, and worked from 8 to 6, with an hour allowed for dinner.

333. *W. Houghton*, 10 years old.—I have been charlick pulling at 4*d.* a day and dinner at the farmhouse. Trimming turnips at 6*d.* a day and meat. I went to charlick-pulling with my brother. Boys and girls do not work together.

334. *Miss Bone*, schoolmistress.—I have been for 11 or 12 years in the school, and always lived in Budock. Girls very seldom work in the fields, and women not so much as formerly; they now get 10*d.* a day stone-picking and weeding. Boys are not so much employed by the farmers, since the system of ploughing has been changed. The labouring class care more for educating their children now. Many of the grown-up people cannot read or write, but all the children can. We had a night school, but it was discontinued. The cottages of women who work in the fields are, in my opinion, less tidy and well kept than those who have been in domestic service.

Cornwall.
Mr. Portman.
h.

335. *Thomas*, farm labourer: cottage, one room down and one up; rent, with a garden, 4*l*. a year. Man and wife and five children. The jobbing man gets 2*s*. 6*d*. a day and no privileges, and loses wet days; a regular man on a farm gets 12*s*. a week.

336. *Tallack*, agricultural labourer, with a grown-up family.—They began to work on their own land at 7 or 8 years of age. I should have liked to have kept them at school; they forget what they have learned very soon when they have left it; there is no occupation to make them keep up their education. "They are all the better for it, and are qualified for better occupations than without it." I think it would be difficult to carry out a law for fixing the limit of age, and it would be hard on some families. The cottage has one room down, and two up stairs, with garden, 4*l*. a year rent.

337. *Bowden*, stonemason; lives in a cottage in a row belonging to an agricultural labourer in Mr. Bulmore's employment; rent, 4*l*. 10*s*., and 10*s*. "outs;" one room and a back house down, two bed-rooms up, and a garden.

338. *Mr. Bulmore*, farmer.—A lad of 16 would get 10*l*. to 12*l*. a year, board and lodging in the farmhouse, and mending done out. I would not take a boy into the house under 12 years of age. I am opposed to any compulsory system of education, and far prefer voluntary aid. The average wages of an agricultural labourer, 12*s*. a week, beer and crousts, or 2*d*. a day, meat and beer through the carrying time. The holdings are small. A man on the farm who looks after the cattle has a house rent free, a bit of potato ground, and fuel, which make his earnings up to 14*s*. or 15*s*. a week. Owing to the changes in the method of farming operations, such as driving with reins, in ploughing and harrowing, boys are less employed than formerly, and women less in consequence of the introduction of machinery in mowing and reaping. Boys are not capable of doing the weeding fairly, it is done generally by women, if they can be got, if not, by men. Very few labouring parents take much care about their children's schooling unless they are looked up.

339. *R. W. Fox, Esq.*—The cultivation is mixed. There are no private gangs here. Very few young persons, children, and women are employed in this parish. They live generally near the farms on which they work, not often at a distance exceeding a mile from them. They work from 8 to noon, and from 1 to 5. They are not injuriously affected by their work. I do not think any restriction is needed in this parish upon the employment of females in agriculture, or upon the age at which boys should be permitted to be so employed. I see no reason for placing any restriction upon the distance to which children should go to work. The school attendance of the children is not commonly interrupted, except at hay and corn harvest time. The school attendance is not much affected by the distance the children have to go to school; several children come from neighbouring parishes, a preference being given to a National mixed school, in this parish, to schools nearer the homes of the children. In some cases probably the parents do not send their children to school through poverty. A few girls have been sent to a good training school at Falmouth, to be prepared for service, with satisfactory results. Better cottage accommodation is very desirable, especially in the case of large families. A sitting room and *one* bedroom only is more general than *two* bedrooms and a sitting-room. The construction of the cottages generally is good. There are stone and slated roofs. The rooms are too small, and the drainage is often very defective. Water is often inconveniently distant. Rents are 4*l*. to 5*l*. a year, and upwards.

340. *J. G. Falck*, farmer.—Of the 3,900 acres in this parish 236 may be deducted for highways and waste land, much of Budock being bounded by the sea, and the measurement being taken at low water. The cultivation is mixed. Boys are employed from about 12 years of age; but since the system of guiding the horses by reins has been adopted, there is little employment for boys. Girls are very seldom employed in agriculture. They usually go to service to Falmouth and Penryn. Women are employed very little. They seldom live above a mile from their work. Their hours are from 8 to 12, and from 1 to 5. I would not place any restriction upon the age at which boys should be permitted to work upon the land, but I think it would be desirable to have recourse to the apprenticing system (as in the Act of Elizabeth) in the case of such children as have parents who are unable to support them; but I think the period of the apprenticeship should be shorter, say from 12 to 19; at this age they would be quite capable of earning their own livelihood. I would not place any restriction upon the employment of females.

There is a large school in the centre of the parish, which is well attended not only by the children living in the parish, but also by some that live in the adjoining parishes. The cottages are generally pretty good, and are more than sufficient for the agricultural labourers; many of them are occupied by mechanics and others employed in the adjoining towns. In most cases, where the cottages are single, they have gardens; but where they are grouped, they have not.

PROBUS.

Population, 1,449 - Acreage, 8,113.

341. *W. Trethewy, Esq.*, and *H. Tresawna, Esq.*—The cultivation is chiefly arable. Boys are employed from 7 years of age. They would be employed in picking stones for about a fortnight in the month of May, and they would be annually employed about the same work until they arrive at the age of 10 years, when they would be altogether employed on the farm. A few girls may be employed for about a fortnight in the month of May in picking stones on the arable land; age from 7 to 13. On an average not 30 women are employed in this parish in agricultural operations. The distances they have to go to work vary from half a mile to two miles. Boys work from 7 to 5; girls from 8.30 to 5. Boys ought not to be altogether employed in field-work until they are 10 years old. The females in this parish, as a rule, do not care about farm work.

The means of education provided in this parish are, in the first place, an infant school, at which about 40 children are in average attendance; secondly, a mixed school, at which there would be an average attendance of 40 girls and 40 boys. We think that nearly all the children in the parish attend school.

The cottages are generally in a fair state, and are sufficient for the supply of labour required. They are situated for the most part in a village, and distant from the farms from half a mile to two miles, and are not overcrowded. They are also well supplied with water, and the ventilation is good. They generally have gardens attached, but for the convenience of those who have no gardens there is an ample supply of allotment land. Wages in this district are 12*s*. a week.

ST. COLUMB MINOR.

Population, 2,025 - Acreage, 5,562a. 3r. 3p.

342. *R. Cardell*, farmer.—The cultivation is mixed. No boys are employed under 10 years of age, except in the month of April for stone-picking; and girls are employed at the same time for the same purpose. Women are employed during the summer months for stone-picking, weeding, haymaking, and harvesting. They have to go about a mile to their work. They work from 8 to 5, but are allowed an hour for dinner. No restriction is required in this district upon the age at which boys should be allowed to work upon the land, or upon the employment of females in agriculture.

We have three schools in this parish (and a new one is being erected), very well attended; the labour does not at all interfere with the attendance.

There are quite sufficient cottages here, but they are not in good condition. They are not on the farms. They are not overcrowded. They have a good supply of water, but are not well ventilated. In general they have very good gardens. There are allotments of land for potatoes in addition.

I farm nearly 400 acres. I employ women and children of all ages, from 6 and 7 years upwards, in large numbers for stone-picking; they are paid 6*d.* a day each all round; they work on an average four days a week, not in bad weather, and are employed perhaps for three weeks in the spring on different farms. This work has to be done quickly, and all hands are useful, but at other times of the year children are very rarely employed. The stone-picking is sometimes done by the piece, at which a woman will earn 1*s.* to 1*s.* 6*d.* a day.

Wages for men are 12*s.* a week, not all in money; grist corn and potato ground are given in lieu of money. I should prefer paying them in full money.

If any restriction by law is placed on the employment of children under a given age I think a discretionary power should be vested in the magistrates to allow children under that age to work where an emergency arises.

343. *Rev. H. F. Chudleigh*, vicar.—There are about 130 children, young persons, and women employed on the farms for four or five weeks in the year, whose ages are,—

Males.—Under 8, 5; between 8 and 10, 15; between 10 and 13, 20; between 13 and 18, 4. Total, 44.

Females.—Under 8, 5; between 8 and 10, 8; between 10 and 13, 50; between 13 and 18, 22; over 18, married, 6; unmarried, 4. Total, 95.

They are employed for stone-picking, weeding corn, and hoeing turnips. The hours of work are from 8 or 8.30 a.m. to 5.30 p.m., with an hour allowed for dinner. There is no injury to their health arising from such work; in fact rather the contrary. I have no reason to think that the morals of women are much affected by field-work.

I would not place any restriction on the employment of women and boys. The latter are not employed till they are of service.

Attendance at school is affected by the poverty of the parents, but they could send their children to school if they were more provident.

Cottage accommodation is generally good. They have mostly four rooms of 10 to 12 feet square. They are owned by landowners, tradesmen, and others. The rent varies from 2*l.* 10*s.* to 3*l.* a year.

One cottage per 100 acres is enough for the labourer and his family, the lads residing in the farm-houses as servants.

The schools in the parish are,—

NEWQUAY.

		No. of Children.
1. Mr. Reed } 2. Miss Hubben }	United Methodist	20 24
3. Mrs. Marshall - -		30
4. Wesleyan School -		25

A National school is being built here, capable of holding 150 children.

In other parts of the parish, exclusive of Newquay, there are,—

	No. of Children.
1. Wesleyan - - -	60
2. United Methodist - -	50
3. Bible Christians - -	50
4. Church Day School in Church Village - - -	40
5. Elementary Writing and Ciphering School in Church Village - - -	50
6. Trencuick Village - -	30
7. Quentral Downs - -	12 to 15

The parish being a scattered one there are schools in all parts. There are also Sunday schools.

I have a night school in winter open for two hours on four nights a week, where writing and ciphering are taught.

CARNANTON.

344. *Humphrey Williams, Esq.*

Girls' School in the Park.—70 on the books, many of whom come four miles to school. Their writing from dictation was good and quick, and the spelling very correct. Most of these girls go out to service. There is an infant school at Mawgan, where 14 attend, and a boys' school at Mawgan; number in attendance, 40.

Mr. Williams thinks that there *is* a desire among the labouring class to avail themselves of a good school, and if means of education are given them they will take advantage of them.

345. MEETING at St. Columb-Major, April 29, 1869.

The chair was occupied by Mr. R. H. S. Vyvyan, and amongst those present were—Messrs. G. B. Collins, St. Columb; the Rev. Mr. Williams, curate of St. Columb; Moorman, St. Columb; W. Menhennick, jun., Trelil; W. Hocking, Pengelley; T. Key, jun., Boddellick; W. Rowse, Trebridannon; John Rowse, Trebridannon; T. Hicks, Tregamere; W. Williams, Hill-head; M. D. Broad, Rosurrants; J. Henwood, Trewince; R. Cardell, Trebelzue; J. Searle, Legonna; W. Johns, Trethingey; J. Rowe, Trenissick; J. Hellyer, Trevuzza; M. Richards, Trewinion; E. S. Carus-Wilson; G. Tom, Trethewey; J. Ruudle, Trethewiel; J. Hicks, Trevilgas; T. Hawkins, Tredinnick; R. Cobeldick, Gluvian; J. Steeper, Denzil; R. Williams, St. Merryn; W. T. Hellyar, St. Merryn; T. Rowe, Cargoll; W. Rickeard, Trenance; John Williams, Porthmissen; J. H. Key, Treravil; J. Tredwen, Cross House; W. Brewer, Churchtown; J. L. Hicks, Rostiggon; J. Clemo, Padstow; J. Hawkey, St. Issey; J. P. Davies, St. Columb; W. Langdon, St. Enoder; W. Gatley, St. Columb; T. Andrew, St. Columb; W. Bennetts, St. Stephens; J. Robins, Withiel; F. Paynter, St. Issey; Rashleigh, St. Columb; Cornish, St. Columb, &c.

Mr. Moorman, surgeon, said he was of opinion that the employment of children in agricultural pursuits did not injuriously interfere with their health, but he thought there was great reason why young children should not be employed on farms where machinery was used, because of the danger to which they were exposed. He was further of opinion that children should not be put to work under the age of 10 years.

Mr. G. B. Collins remarked that as a rule in the St. Columb district the labourers did not save anything out of their wages, although there were instances in which it was done. With regard to the dwelling-houses, his belief was that generally they did not contain more than two bedrooms, but he was strongly of opinion that no cottages should have less than three. There were cases in which there was only one bedroom in a cottage, and in cases of that kind it must be apparent that the effect upon the different members of the family of both sexes must be most demoralizing. He had no doubt in his own mind that a great deal of the illegitimacy which prevailed arose from that state of things. Mr. Portman had alluded to the fact that he had seen a large number of women and children at work picking stones, but it so happened that that gentleman had visited the neighbourhood just at the very time when the women and children were employed. It only lasted for two or three weeks, and they were not so engaged during any other part of the year. He did not think that in the St. Columb district there was any necessity for legislative interference. There was a want of schools throughout the district.

Cornwall.
Mr. Portman.
h.

Mr. Carus-Wilson agreed with Mr. Collins that schools were wanted in the district, for it was a sad truth that there was scarcely an efficient school in the whole place, and he hoped it would soon be remedied. There was very little employment of women and children out of doors excepting just at this time of the year. As to the cottage accommodation he did not think there was any very great complaint to be made respecting that.

Mr. Cornish asserted that the majority of the cottages in the parish contained only two rooms, one upstairs and the other down, and the boys and girls of the family all laid down in one room. It was a shocking state of things, and something ought to be done in the matter.

Mr. John Rowse considered that if Mr. Cornish had extended his visits to the cottages of the labourers throughout the district, instead of confining himself to St. Columb only, he would have formed a different opinion as to their condition. He agreed with the other gentlemen who had spoken, that the means of education in the district were difficult, but at the same time he did not think that any legislative interference was necessary. Very few boys were employed under the age of 12 years, and as for women and girls it was with great difficulty that they could be got at all. Their ordinary wages were 8*d.* a day. The hours of the labourers were from half-past 7 or 8 in the morning until 5 in the evening.

Mr. W. Rowse was of opinion that every cottage should have three bedrooms, but he would have an Act of Parliament preventing the people from taking in lodgers.

The *Rev. Mr. Williams* considered that education in St. Columb was very defective. There were no schools there at all, with the exception of that which was called the National school, and the dissenters objected to send their children there, and he believed they never would succeed in getting good schools until unity existed among the inhabitants. He bore out the statement of Mr. Cornish respecting the dwelling houses of the poor. The floors were as damp as the roads outside; they were in a most abominable condition, and were a disgrace to those to whom they belonged.

Mr. Rowe was of opinion that any system of education introduced by Government should be non-sectarian.

Mr. J. Hawkins, of St. Ervan, stated that in Rumford, part of the parish of St. Ervan, there were 15 cottages with only one room down and one bedroom; and that the school established under Government regulations is now closed. He thought there was great need of a better system of aid for education.

The following resolution was carried:—"That it "is not desirable that children under 10 years of "age should be constantly employed in agricultural "pursuits."

The question of requiring a certificate of a certain amount of school attendance, or of certain attainments to be produced by any child previous to employment was discussed, and it was the opinion of the meeting that such a scheme would not be acceptable.

Mr. J. H. Vyvyan stated that he had built a block of five cottages of stone, with slate roof, for 200*l.*

ST. COLUMB MAJOR UNION.

Population, 16,552 - Acreage, 71,126.

346. *G. Collins*, union clerk.—In the spring children of either sex and of all ages are engaged in picking stones for a week or two; but, with this exception, boys are but little employed before 11 years of age, and girls rarely or never. Women are employed a little in the spring stone-picking with the children, and weeding in the hay and harvest fields. They are employed occasionally in summer, upon the root crops in autumn, and in the barns in winter. They have to go about a mile to their work. They work from 8 a.m. to 5 p.m. It is quite unnecessary to place any restriction upon the age at which boys should be permitted to work in the fields, or upon the employment of females.

The means of education are very limited throughout the union, and I consider not so much used or appreciated as they might be.

Cottage accommodation is very indifferent as a rule. Few have more than two bedrooms, many only one. This must necessarily have a demoralizing effect. There is no rule as to gardens, and many are without any. The allotment system does not prevail in the district, but labourers generally take land for their potato crops every year. There is a Cottage Garden Society in the district, at which the cottagers compete for prizes; and they produce wonderfully fine vegetables.

347. *Mr. Broad*, farmer.—Girls are very seldom employed for farm work. Women are employed for stone-picking, weeding corn, &c. at 8*d.* a day. I employ two all the year round root cleaning, and working in the barn in the winter. Children also are employed for stone-picking a day or two on a farm at 6*d.* a day.

Wages for men are 11*s.* and 12*s.* a week, without corn.* A man living in a cottage on the farm, and employed all the year, gets 10*s.* a week with corn (harvest included), cottage rent free, 30 yards of garden, potato ground free, sometimes a cow to milk; he keeps a pig, and the manure goes to the garden.

This district is very badly off for schools, and even where they do exist there is great indifference on the part of the parents as to the education of their children. I do not think that if children under 10 years were forbidden to work the loss of earnings would cause any hardship to the parents.

Some cottages are built of cob and thatched. There is a great want of privies for the dwellings of the poor.

ST. COLUMB MAJOR.

Population, 2,875 - Acreage, 12,000.

348. *T. Allanson*, farmer.—The cultivation is mixed. Boys are employed occasionally at 10 years of age, but more generally at 11 and 12. Very few girls work on farms, except for about a few days, in the spring of the year, picking stones. They are then joined by their mothers and children, sisters. Young females do occasionally weed corn in the spring, and occasionally assist in the harvest fields, both at hay and corn harvest. Women are employed four or five days stone-picking in the spring; a day or two in the week in the barn threshing corn, from September to April; a week or two at turnip-hoeing in July; two or three weeks in the harvest; and a few days in the fall and winter in turnip drawing and cleaning. They seldom live more than a mile from their work; oftener they live on the farm, or in the village connected with the farm. Their hours are from 8 to 5. No harm accrues to any children here by over-work at an early age, but if any restriction were made, it should be that no boys should be allowed to work on the land under 10 years of age, except for a few days for stone-picking, or for driving plough horses. They often do service by driving the horses in threshing machines. I would not place any restriction upon the employment of females. No immorality or bad health arises here from the employment of females in agriculture.

Education is badly provided for. Early labour seldom prevents any from going to school. The cottages are sufficient in number, and conveniently situated. They are not generally overcrowded. Occasional instances of immorality seem to have resulted from overcrowding. There are gardens generally attached to the cottages. There are also allotments of land for potatoes.

* A Cornish bushel is equal to three imperial.

St. Columb Major.

Population, 3,000 - Acreage, 12,046.

349. *John Rowse*, farmer.—The central portion of this parish is chiefly rich grazing land, surrounded by some useful arable and pasture lands. The outskirts contain large tracts of, what was till recently, waste land, but a considerable number of acres is now in course of cultivation. Boys are employed from 11 to 12 years of age. They are employed in the winter in cattle yards, and, during the summer, weeding and picking stones on land recently cultivated. Girls are occasionally employed during the summer, about the same age as boys, picking stones and weeding. Women are mostly employed with the girls about similar work; they are also, to some extent, employed during hay and corn harvest. They seldom have to go more than a mile to their work. They work from 8 to 5, with an hour for dinner. I do not think it desirable to place any restriction upon the employment of females, or upon the age at which boys should be employed in agriculture.

The means of education here are very defective. There is what is called the National school, but this is a disgrace to the parish, and is badly attended. The parish is extensive, and about one half of the inhabitants live in the central part of the town, and the other portion in villages scattered about. There is the Established Church and no less than 11 dissenting places of worship in the parish, with a Sunday school attached to each, and most of the children are taught to read the Scriptures.

Some of the old cottages are very poor, but they are quite sufficient in number, and mostly conveniently situated. In a few cases they are much overcrowded, and some instances of gross immorality have resulted. There is an excellent supply of water throughout the neighbourhood. Nearly all the cottages in the country parts of the parish have large gardens, and those labourers who are in regular employment have potato ground in addition on the farms.

In the southern part of the parish a great many labourers are employed on the china clay works in this and the adjoining parishes; many boys and girls, from the age of 11 and upwards, are also employed.

350. *Rev. J. Williams*, curate.—The parish of St. Columb is seven miles long. There is one bad school in the church town, a small school at Quoit, and a dame's school at Talskitty. Education is at a very low ebb, and progress is stopped by the question of religious instruction.

St. Columb School.

351. *C. Coade*, master.—There is no endowment, and no Government grant in aid.

On register, 88. Average attendance for year, 50–60. There are very few boys or girls above 10 years of age in attendance. Many of both sexes are now out stone-picking. I have no record of the age of the children. Children of all denominations are admitted. There is a Sunday school. I once tried a night school, but it did not answer; the boys came in the first winter, some as old as 16 and 17 years, and after that the attendance gradually decreased. The payment was 3*d.* a week. One and a half mile is the longest distance that any child comes to the day school.

ST. MINVER.

Population, 1,100 - Acreage, 8,000.

Cultivation chiefly arable, with occasional meadows and cliff runs.

352. *Thomas Liddell, Esq.*—I employ one or two boys all the year round. They are seldom less than 10 years old. Boys are generally employed in the parish at a proportion of 1 to 100 acres. Girls are also employed in about the same proportion and at about the same age. In the winter the girls assist in the barn, and in the spring and summer they are employed in weeding, hoeing, haymaking, and harvesting. Women are more largely employed than girls, say two to 150 acres. The hours of work are from 8 a.m. to 5 p.m. The distance to work averages under a mile.

Wages for a man are 10*s.* a week, and wheat at 6*s.* 8*d.* a bushel, wood for the cutting, and 20 yards of potato ground; for women, 7*d.* and 8*d.* a day; boys and girls, 6*d.* a day. Lads living in the farmhouses from 12 to 13 years of age begin with 2*l.* 10*s.* a year, and board and lodging, and the pay is raised perhaps 1*l.* a year as they get older.

I am not in favour of legislative interference with, or of any legal restriction on, the employment of children.

There is a very good school in the centre of the parish, with upwards of 100 names on the books; but there is no great desire for education among the parents of the labouring class. In some farmhouses the lads are taught a little in the evening; but they are generally too tired after their work to read much.

The condition of the cottages is not all that could be desired. They mostly have two bedrooms, but few have privies. There are sufficient for the supply of labour, and they are tolerably well situated for the work of the farms. No evil results from overcrowding have come under my knowledge. Rent, with garden, 40*s.* to 3*l.* 10*s.* a year. Nearly every cottage has a garden, and in addition the labourers obtain ground cultivated in the fields for the growth of their potatoes.

There are some farms of 300 and 400 acres; also some of 50 acres and under.

One man who lived with me for seven years saved money, and now farms from 50 to 60 acres. Another who lived with me for three years and then went to the mines now has a farm of 100 acres.

Tredrissick School.

353. *John W. Anning*, master.—A mixed school. No. on register, 112. Average attendance about 78. They are mostly agricultural children. The longest distance to school is $2\frac{1}{2}$ miles. The oldest boy in the school is 14 years of age. They generally go to farm service at 12 years. The thinnest attendance is in the spring, when the boys go out to the fields for potato-dropping.

The night school was so badly attended that it was discontinued.

A compulsory system of education would not be liked in this district.

354. *Joseph Mably*, 10 years old.—I have been out potato-dropping and stone-picking for two years. I began by earning 3*d.* a day; I now get 6*d.* I have been stone-picking with two women and four other boys.

ST. KEW.

Population, 1,182.

355. *Rev. J. Every.*—This parish is a very large one, with a very small population round the church, but containing many scattered hamlets. The good and industrious people send their children to schools; but the idle parents will never do any good for their children, even if they were paid to send them to school.

St. Kew School.

356. *Jacob Stone*, certificated master.—On register, 90. Average attendance, 50. I have been at work here 10 months. When I came there were 15 children on the books. The oldest boy here is 15 years of age. I have had some of 18 and 19 years. I tried a night school, but it did not answer. Girls of 6 and 7 years old go out stone-picking, and earn from 4*d.* to 6*d.* a day.

Cornwall.
Mr. Portman.
h.

The parents seem disposed to send their children to school, except when they can earn anything in the fields.

N. Bray, 13 years old.—I have been in farm-service. I got 3*l.* a year.

WADEBRIDGE.

357. *R. Pollard*, large farmer.—In the Bodmin Union relief for children ceases at 10 years of age if the health of the child permits it to work. There are no gangs in this district. Small children earn 4*d.* to 6*d.* a day stone-picking. I do not think such employment is bad either for their health or their morals.

The wages of a man in regular work are 10*s.* a week, and a cottage rent free, fuel, and potato ground. Wheat at 20*s.* and barley at 10*s.* the Cornish bushel. The men and their wives ask to have the corn. The regular men are better off than the jobbers at higher wages. Women and children are employed to a great extent for stone-picking, pulling charlock, &c.

There is a class of small farmers who are in many instances worse off than the labourers, and cannot spare children's work for the sake of education. It is very desirable that the Government should give grants in aid of education to small rural parishes, whether the teacher be certificated or not. I am opposed to compulsion or quasi-compulsion. The voluntary system is working well. I believe the desire for education to be increasing among the labouring class, and all that is wanted is some furthur assistance in the poorer districts.

Any legislation as to the employment of labour in agricultural districts should be elastic.

PADSTOW.

Population, 2,489 - Acreage, 3,239a. 1r. 29p.

358. *J. Hocking*, land agent.—The cultivation is mixed. Woman and girls are not employed. I think boys should not be permitted to be employed in farm work under 11 years of age. There is a National school here, which the parents avail themselves of.

The cottages here are good, sufficient in number, conveniently situated, not overcrowded, and well supplied with water. Some have gardens, some allotments.

359. Extract from letter from C. Prideaux Brune, Esq., to Hon. E. Portman :—

Prideaux Place, Padstow,
April 22, 1869.

Sir,

There are really in this parish no women or children employed permanently in agriculture; a very few women are employed occasionally in picking stones and weeding. The fact is, that the great majority of boys are apprenticed to shipbuilders and other tradesmen, and the residue are sent to sea. If we require a farm labourer we have to introduce him into the parish, and we find that he in his turn disposes of his family in the manner before mentioned.

Your obedient Servant,
C. G. Prideaux Brune.

MICHAELSTOW.

Population, 216.

360. *Rev. J. Kingdon.*—Children are employed in groups in stone-picking on the farms at 8*d.* a day each. They are also employed very young at the Delabole slate quarries in St. Teath parish, and their education is very much neglected.

Boys go to farm service at 10 or 12 years of age and live in the farm houses.

There is a great scarcity of labour in this parish. Wages for a regular man are 12*s.* a week, for a job man 15*s.*

The attendance at the school is larger in winter than in summer, but the children are taken away too young owing to the indifference of the parents about their education. There is a night school in winter attended by farm lads.

Women do not go to field work, probably on account of the high wages earned by the men.

In the neighbouring parish of St. Bernard there are large granite works.

Cottages are substantial and good; they mostly have two bedrooms; there is a garden attached to all, privies are wanting; the material, slate and granite, is at hand. Rent 1*s.* a week to 3*l.* a year. I think an Act for regulating the employment of children is much to be desired, and for securing education compulsion is necessary.

The hours of work are 7 a.m. to 5 p.m. in summer, and from 8 a.m. to 5 p.m. in winter.

LANTEGLOS.

Camelford.

361. *Rev. J. J. Wilkinson.*—The cultivation is mixed. There are no private gangs. The persons employed in agricultural labour live at an average distance of a mile from this work. The men work from 7 to 5; the women from 8 to 5. They are allowed one hour for dinner. No efforts are made here for the industrial training of girls.

The cottages here are conveniently situated in little hamlets, and scattered. They are overcrowded. There is not sufficient bedroom accommodation. Most have small gardens. Rent is on the average 1*s.* a week. They are not held on lives as a rule; many belong to small tradesmen.

School Statistics.

In Summer.

	On the Register.	In average Attendance.
Boys :		
Under 10 - -	6	4
Between 10 and 13 -	4	4
Total - -	10	8
Girls :		
Under 10 - -	3	3
Between 10 and 13 -	3	2
Total - -	6	5

In Winter.

Boys :		
Under 10 - -	7	5
Between 10 and 13 -	5	4
Total - -	12	9
Girls :		
Under 10 - -	5	3
Between 10 and 13 -	8	4
Total - -	13	7

There has been an evening school in this parish but it is discontinued. Attendance falls off after a short time when it ceases to be a novelty.

Women and children are very little employed in agriculture in this district; some few go out stone-picking and weeding corn in the spring. Wages for an agricultural labouring man are 1*s.* 8*d.* to 2*s.* a day, for women 8*d.* a day, for children 4*d.* to 6*d.* a day.

There are some small holdings under the Duchy, where the moors are being reclaimed.

A restriction on the employment of children under 10 years of age would not much affect this district. The farmers are opposed to much education for the labourers, and I think there would be a difficulty in carrying out any system requiring the production of a certificate of school attendance previous to hiring.

KILKHAMPTON.

362. *Rev. A. C. Thynne*, diocesan inspector of schools.—The district is partly in Devon and partly in Cornwall; it contains 29 parishes in which there are 11 schools under inspection, six being in Cornwall; nine parishes decline inspection.

Cottages.

363. Row of eight, property of the Rev. Lord John Thynne, built of stone with slate roof, brick floor. Down, two rooms and backhouse; up, two good bedrooms, ceiled and with one fireplace; woodhouse, pigsty, and privy, small garden. Rent 3*l.* a year, and outs 6*s.* a year.

The two end houses of the row have two rooms on ground floor, the kitchen being rather larger than in the other cottages.

Two cottages property of a carpenter. Down, one room and backhouse; up, two bedrooms, no fireplace; with a garden, no privy. Rent 3*l.* 10*s.* a year.

Row of four (Lord J. Thynne), lately built, stone and slate, very good. Down, two kitchens and pantry; up, three bedrooms, with one fireplace; privy, pigsty, and woodhouse. Rent with garden 3*l.* a year.

364. *Mr. Trickey*, Stowe Farm.—Boys are not employed in the fields before 10 years of age; any restriction on such employment before that age would not affect this district.

An agricultural labourer's wages are 10*s.* a week if paid all in money, or 9*s.* with cottage and garden, or sometimes 8*s.* a week and corn at a fixed price. I prefer paying all in money.

I have some cottages attached to my farm and let with it; two new ones have each three bedrooms though rather small.

The hiring day for yearly servants is Old Christmas day; the lads or their parents go round to the farm houses seeking employment.

Women earn 4*s.* a week in fieldwork. I do not think women's labour would be so very much missed as far as the cost of farming operations is concerned, if it ceased altogether; there are a few small jobs such as weeding corn and stone-picking which they can do as well as men. Girls are very rarely employed. Hours of work are from 7.30 a.m. to 6 p.m.

Cornwall.

Mr. Portman.

h.

365. *Mrs. Walter* and *Mr. Galsworthy*, farmers.—Boys lodge in the farmhouses, as there are not enough cottages; they are hired by the year and generally change places every year. Women are not so much employed in the fields as they used to be, you can't get them to go out. Sometimes children as young as 7 years of age are employed, but as a rule few are taken under 10 or 11 years.

Wages for yearly lads 4*l.* 10*s.* to 8*l.* and 9*l.* a year according to age; for an ordinary man 9*s.* and a bag of corn a week, for a carter 10*s.* a week and cottage free; wood for the cutting drawn for them, broth and milk at dinner. Wages are paid once a month unless the men wish for it weekly. With a good master we think the privileges are a great advantage to the labourer.

The best educated young men go away to the police and other employments than that of the farms; "those who have got any brains get away."

Lads in farm service do not take any pains to keep up their education, they have no heart for learning. Mrs. Walter said she had often offered them pen and ink and writing materials, but they won't use them. There would be great difficulty in carrying out any system of compulsory attendance at night schools on account of the distance from the farms to the village and the necessity of having the lads to do up the horses and cattle from 8 to 9 in the evening. Any restriction on the employment of children under 10 years of age would not affect this district.

366. *J. F. Delmar, Esq.*, Stratton.—The cultivation of this district is four-fifths arable and coarse pasture.

There are no private or public gangs. Boys are generally taken on the farms about 10 years of age and are employed to clean cattle-sheds and to take the cows to and from the field.

Women and girls are employed in the fields in spring and summer in planting potatoes, picking stones, cutting weed in the corn.

Hours of work are from 8 a.m. to 5 p.m. with one or one and half hours for meals and rest. The distance to a dame's or National school is under two miles.

The cottages in the district are very indifferent; in one instance a landlord has been improving, but the others do but little for them; it is a poor district. The present mode of borrowing money under Lands Improvement Act is very cumbrous and expensive, the expenses being much and unnecessarily increased by surveyors' visits and during the progress of the work.

Legislation as to the employment of children under 10 years of age would not affect this district. Any system of compulsory education would be distasteful to the people.

APPENDIX.

Education of Agricultural Labourers.

Important Meeting, January 1869.

The *Callington* Club and Institute have just held meeting at which the education of agricultural labourers was discussed in connexion with the Government inquiry into the employment of women and children in agriculture. There were present the Earl of Morley, Colonel Coryton, Major Strode, Messrs. W. H. Pole Carew, D. W. Horndon, R. Foster, jun., H. Jackson, J. Kempthorne, the Rev. Sir St. Vincent Hammick Buck, J. B. Kitson, Dr. Fletcher, C. Rodd, R. Martin, F. V. Thornton. C. M. E. Collins, E. F. Glanville, J .Coryton, Hullah, Vigor, Bush, Fenwick, Messrs. J. Peter, jun., E. Nicholls, W. Snell, J. W. Dingle, Clemence, Trehane, and many others.

The *Rev. F. V. Thornton*, having been voted to the chair, in opening the meeting said that the Callington Club and Institute had selected this subject for discussion at their annual meeting because of its pressing importance, and had invited others to the conference because the chambers of agriculture had selected other subjects for discussion. That they were right in doing so was made evident by the large numbers present, and the regret expressed by those who were unable to attend. He read the letters from the Earl of St. Germans, Lord Eliot, Lord Northbrook,

Cornwall.

Mr. Portman.

h.

Sir J. S. Trelawney, M.P., Messrs. T. J. Agar Robartes, R. Kelly, and others, expressing hearty concurrence in the objects of the conference. He said that the history of the movement was soon told: the success of the Factory Acts led to the repression of agricultural gangs as soon as attention was called to the scandals connected with them. This led to inquiry into private gangs, and generally into the evils connected with agricultural labour. Whether legislative interference was necessary or desirable was one part of the question before them; the other part being whether more could not be done to remedy those evils by the voluntary agencies already at work. In this matter the individual experience of each would, if told to all, help on the common work. He had been connected with evening schools for thirty years, and had found them meet the evil in many cases. In his parish in Hampshire the farmers had been persuaded to employ no boys under 10 nor girls under 15 years of age. The boys at 10 had acquired such a foundation in a school unusually good that they made great progress in the evening schools, and he had always found boys able to work in the winter in evening schools as the hours of labour are then shorter than in the summer. After a few years the farm boys were to a great extent boys born in the parish, for the farmers preferred the educated boys, and the boys preferred remaining near their school. But there were four large farms close to the school, so that the circumstances were unusually favourable. In the same parish there was a farm only three-quarters of a mile off with a good road, and until the farmer began to employ the boys who had been in the village day school he never succeeded in persuading one boy to come to the evening school from that farm; while those employed in a more distant farm could have had no instruction had not the lady of the house, the farmer's sister, been able and willing to teach them. In more scattered places the difficulties in the way of efficient evening schools were very great, and a part of the business of the day was to suggest ways of overcoming those difficulties.

The *Earl of Morley* remarked on the importance of these preliminary meetings to prepare the public for the visit of the Commissioner, and to facilitate his operations. The Commission had been issued in consequence of the scandals of public gangs, and the scope of its inquiry had been extended in consequence of other evils which were more widely spread. The inquiry must of necessity be general, as if there be any legislation on the subject it should be uniform throughout the kingdom. The general results arrived at by the inquiry as far as it had gone were that children are not often employed permanently on farms until 10 years of of age, but that they are very frequently employed irregularly from 7, or even earlier; the very early age at which some worked impaired their health in after life, while the frequent absences from school hindered them from making progress. The school age ends at 10, sometimes at 9. In Yorkshire 74 per cent. of the school children are under 10. In Nottinghamshire, Yorkshire, and Lincolnshire 63½ per cent. are under 9, only four per cent. over 13 years of age; and in the opinion of the great authority, Mr. Fraser, the age had been steadily diminishing. It is true that in Devon and Cornwall very few children comparatively are employed at so early an age. (Applause.) The number of children in these counties examined in the higher standards (from four to six) is above the average. It is 31 per cent., while in the rest of England it is only 24 per cent. But, on the other hand, these counties suffer from another evil, and that is irregular attendance. In Devon and Cornwall only 67 per cent. of the children in school are daily attendants. Now, the result of this early labour must be bad for the health of children, and it is impossible but that their irregular attendance and early withdrawal from school should prevent their getting any real education. No one need be afraid of over education. He was not an advocate for over education; all that he pleaded for was a fair amount of reading, writing, and power to use the elementary rules of arithmetic. (Applause.) Even this is not yet attained, and the causes are in some cases the need of labour; in others, and much more frequently, the apathy of parents, who being uneducated themselves do not care for education for their children. But there are also two other causes which require attention. The one is the poverty of parents; in those counties of the north where the wages of the agricultural labourer are the highest these evils are much less than where the poverty of the parents compels them to desire that their children should earn wages as soon as possible; and the other is the distance at which many families live from the nearest school. There can be no doubt that the present state of things is not what we should desire; and the question is whether any legal remedy would be an unjustifiable interference with the liberty of the subject. Now the Factory Acts establish the principle of State interference in some cases; a great outcry was made against them at first, but they have worked well. The remedies therein applied are, however, not applicable to agricultural labour. The half-time system appears to be impossible, from the scattered position of the population, as well as from the difficulty of inspection and irregular character of out-door work. When one labourer is wanted all are wanted. (Applause.) The Workshops Regulation Act is equally inapplicable; but it is possible that something like the Printworks Act might be of use. That Act requires 150 hours' attendance at school in the year. It would on the whole be desirable to have some legislation on the subject, such as would restrict the employment of boys under 10, would ensure regular attendance before that age, and would enable a child to give some time to school for two years more; and it is possible that some such scheme could be framed which would not interfere unduly with the requirements of the employers of labour or with the necessities or rights of parents. (Applause.) At the same time it is clear that there are great difficulties in the way of framing and also of enforcing such a law. Any statement of difficulties will be valuable, and one thing is quite clear, that the inquiry is important, and that the Commissioner ought to be assisted in that inquiry. He therefore moved "That "every help be given to Her Majesty's Commis- "sioners in their inquiry into the employment of "women and children in agriculture with a view to "ascertaining whether any of the provisions of the "Factory Acts should be extended to such persons." (Applause.)

Mr. W. H. Pole Carew seconded the motion. He was himself very jealous of legislation, especially where it touched not only the rights employers, but the rights of parents. Some of the worst evils did not exist in that neighbourhood, and the poverty of the parents made it unjust to deprive them of the additional earnings of their children. (Applause.) He would rather look to the influence of public opinion to correct the evils which did exist. He disliked any approach to the French system of perpetual interference on the part of the State. It was possible that the evils spoken of might be much worse elsewhere than here. If so, those greater evils might be stopped by law. It was possible for the legislation to be applied there only where it was needed. But this did not affect the desirableness of inquiry, and he was sure that the Commissioner would find everyone ready to give him all the information in his power. (Applause.)

Mr. H. Jackson, fellow and lecturer of Trinity College, Cambridge, said that he had one difficulty in speaking on the subject, which was that he knew little from personal experience of the condition of the agricultural labourer. But it might be worth while to hear what those thought on the matter who like himself were engaged in education as a profession. He not only read of it, but saw the superiority of the labourer in the north and in the towns over the ordinary agricultural labourer, and this superiority was owing to education. (Applause.) He believed himself that some scheme of compulsory education

was necessary. [Here a voice in the crowd asked, "Who is to pay?"] What is the good of asking for ever who is to pay? (Laughter.) We are to pay, you are to pay. We are paying for something every day. Why not for this as well as for other things? some of them occasioned by not paying for this. (Applause.) He had not seen much of English agricultural life, but he had been staying in Bohemia, where they had compulsory education. No circumstances could be more unfavourable. The two divisions of the people were of different races, not speaking the same language, and they were very poor, far poorer than any in England, and yet they were enabled through the arrangements made for them to obtain a fair amount of instruction. One thing he could answer for, that those who had made education their profession would do all in their power to help any measure for its extension. He regretted that in the University local examinations the agricultural class were scarcely represented. He trusted that this would no longer be the case.

Mr. W. Snell believed that State interference was not needed to assist the spread of education. (Applause.) He found that his servants now could read and write sufficiently; if they were better educated they would want to go off as local preachers or teetotal lecturers. (Laughter.) For his part he was not there to oppose education, but he must say that the best servants he ever had could neither read nor write; they were the best educated too, for they understood the whole of their work and could do it. Farmers might be philanthropists, but they must be men of business, and they wanted men who could do their work. (Applause.)

Dr. Fletcher said that he rose to protest against the assertion of the last speaker, that a man was not a better labourer for being an educated man. He had much to say on the general question, but would now confine himself to the point before the meeting. A large amount of education was needed in this neighbourhood, and he trusted that the inquiry now making would end in the removal of some of the difficulties in the way of that extension. He thought that 11 years of age was a good age for boys to begin work on a farm. It was the age fixed in the Unions in this part of the country.

Mr. E. Nicholls said that he had no doubt that every facility would be given to the Commissioner in his inquiry, nor should there be any objection to legislation on the part of those resident in this county. The noble lord had said that legislation must be uniform throughout the country. Two other speakers had deprecated legislative interference as not needed in this part of England. It appears to him that both could have their way. A general law which repressed evils which existed elsewhere but not here could not affect the people of Cornwall, and they certainly ought not to oppose legislation which would not affect them, and would benefit others. He believed that these evils would not be removed without some scheme of compulsory education; but he was surprised that men should object to this on the score of rates. The great mass of our criminals could neither read nor write, and if education were extended the diminution of rates for gaols and other dealings with criminals would more than cover any probable educational rate. The farmers might lose their cleverest lads, but they would have a higher class of labourer than they had now. He was brought up in a farm, and used to teach the farm labourers, and one of them had now risen to a high position in the Post Office. He ridiculed the notion that compulsory education was un-English, and said that it would only affect the bad and neglectful parents, and this would be no hardship. (Applause.)

The *Chairman*, in putting the motion, said that he could not agree to the impression of some, that there were no evils in this neighbourhood to correct. He knew many of 15 and 16 years of age who could not read or write on account of the early age at which they had been sent to work.

The motion was then put, and carried unanimously.

Mr. R. Foster, jun., said that the gentleman who had been startled by the interruption of "Who's to "pay?" had evidently not spoken often in Cornwall on the subject. He had often had to meet that question, and it had been an ugly one; but he was no coward, and if there were an awkward question he liked to look it in the face, to get it into a corner, and make it give an answer. Now since he had been in that room he had received an answer to this question, and it was a very satisfactory one. He would tell them what it was. The Chairman had said that in an outlying farm in his parish in Hampshire the farmer's sister had held an evening class for the boys on that farm. There was nothing to pay. (Great applause.) Several societies would help to supply books; and if they all, all in that room, with all their wives and all their daughters, would give themselves to the work, it would be done, and done well. If they said they would not give their labour and their time, then he was afraid they must give money. But they must not quarrel with this, as a way had been pointed out to them of doing the work without paying anything. (Laughter.) He knew how much could be done by evening schools. They had a large one at Lostwithiel; it had been going on for seven years, and they had 93 men and boys in it. Some of their earliest scholars were now their best teachers, and some had risen through the instruction received there; one lad had, through his good writing, become a lawyer's clerk, and was doing very well. He agreed with the Chairman, that boys were not often too much tired for work. The change of occupation relieved them. Every now and then he saw a yawn, and begged the boy to go home and go to bed. They never went though, and were generally all the brighter next time. He had great pleasure in moving the second resolution, "That efforts be made to ex-"tend the benefits of evening schools and classes to "all young persons, especially to those engaged in "agriculture." (He sat down amidst continued applause.)

The *Rev. Sir St. Vincent Hammick, Bart.*, seconded the resolution. His experience differed from that of the last speaker, for he lived in a country district. His parish was widely scattered, but there were two centres which were available for the purpose. In each of these he had an evening school for two evenings in the week, and the progress made by the scholars was to him marvellous. When one considered the time, it was so short. Twenty-five evenings at an hour and a half gave but the same time for learning as one week and a half of a day school. What could be learned in eight days? And yet those who attended the evening schools regularly did learn, and he must say that he had found the attendance regular. In one of his evening schools his average attendance was 32, out of 36 on the books; and he was sure that a little tact was all which was needed to carry on such a work successfully. (Applause.)

The motion was then put to the meeting and carried unanimously.

HAMPSHIRE CHAMBER OF AGRICULTURE.—EDUCATION FOR THE AGRICULTURAL CLASSES.

(*From the* Hampshire Chronicle *of Saturday, April* 17, 1869.)

Mr. Parsons.—The subject to which I have the honour to invite your attention is one of great importance to the interests of agriculture, though but incidentally connected with politics. It is "Educa- "tion as needed by and suited to the Agricultural "Labouring Classes." Now, it must be granted, that, with whatever of justice or injustice, the parties most interested in the prosperity of agriculture have been regarded (with the exception of the clergy) as constitutionally opposed to the promotion of education amongst their servants. In fact, that agriculture and education are bodies of heterogeneous principles, that like an acid and an alkali, or fire and water, they never can be made to amalgamate or coalesce. I am persuaded the speaker is not the only one present to whom the remark has frequently been made,—"Oh, "you farmers are always opposed to education." Now, Sir, it would be useless to assert that this charge is altogether groundless—that there is no foundation in fact for an opinion so widely extended and so firmly maintained. But the important inquiry to which I would invite earnest attention on the present occasion is—whether there may not have been something in the mode in which so-called education has been hitherto conducted which has led to this result. If there be in the agricultural mind such a prejudice against popular education, may not, at least, some part of that prejudice be ascribed to the inefficiency of the various systems hitherto adopted to raise the character and increase the efficiency of farm labourers? It is believed that such is the case, and that it is not an impossible, though, doubtless, a most difficult task to introduce such a system of training for the rural poor as shall tend to the improvement of their condition and the satisfaction of their employers. But in order to this, some great and radical change in the systems of instruction hitherto practised must be adopted. Before we enter more fully into the discussion of this subject, it may be well to review the position in which we stand at the present moment. An outcry has been raised that as respects the general intelligence and particularly the scholastic requirements of our operative ranks, we, in enlightened England, are far in arrear of Scotland, of the United States, of many counties on the continent of Europe, and even of Ireland itself. And the irresistible fiat of public opinion, as expressed in the leading journals of the day, and as recognised by our legislature, has gone forth that some more comprehensive and even stringent system of instruction for the people at large is required and must be supplied. Under this impression, the late Government very laudably set inquiries on foot, which will doubtless be carried on by the present one, as to the mode of achieving an education of the rural poor, which, while it shall raise their intellectual and moral character, shall not interfere with their social condition, nor prove inimical to the interests of their employers. For this purpose, the Hon. Mr. Portman recently visited this and adjacent counties, and an opportunity was afforded to our cultivators to express their opinions and to make suggestions for the consideration of the Executive Powers. This opportunity was but partially embraced by those interested in agriculture in this neighbourhood, and therefore it has been thought that the first meeting of the Chamber of Agriculture in Andover could not be more profitably occupied than in a discussion on this important subject. In introducing it to your notice it may be necessary first to define the word "education," as, unless we agree in our definition of the term, we shall be but fighting in the dark in our further consideration of the question. The word education is derived from two Latin ones, *e duco*, signifying to lead out of, and by this derivation I understand that its object is to lead the young (who, according to Scripture, are born like wild asses' colts) out of the state of ignorance and incapacity inherent to them by nature into a state of fitness for the discharge of all those duties in life allotted to them by an All-wise Providence. Now, if this definition be accepted, it will follow of course that the cry of being over educated, as applied to our operatives, labourers, or domestic servants, must fall to the ground, since it is obviously impossible that any can be too well qualified for the performance of the duties of life. It is not that they are over educated, but imperfectly educated, as we hope presently to show. It will be seen, too, that education means something more than instruction, for we believe that the confounding of these two words, and using them as synonymous terms, has led to much of the error and failure which has attended hitherto our systems of popular education, and which has given rise to the assumed prejudice against it in the agricultural mind to which we have already referred. It will follow, also, that whilst some parts of education may be carried on advantageously in the school, there are other and at least equally important parts in the training of boys for the various departments of cultivation, which can only be accomplished outside the walls of an academy. In order to gain a clear and definite idea of what is included in such an education as we should desire to see carried out amongst our rural population, it may be necessary to imitate the chemist, who makes us to know the real nature of bodies by making an analysis of their component parts. Education so analysed, we believe, will be found to consist of five separate branches, to each of which we must give a brief passing notice. These I regard to be 1, physical; 2, mental; 3, moral; 4, professional; and 5, spiritual. In the systems of education hitherto adopted, the second of these, or mental instruction, has been cultivated, if not to the exclusion of the others, yet with a prominence which has cast them into the shade; and thus education has been presented to the agricultural mind as a distorted thing. It has resembled the caricatures in *Punch*, which are almost all head, and have but the feeblest apologies for body or limbs, hands or feet. Now we all know that in the animal frame perfect health and vigour as well as beauty can only coexist with a symmetrical construction of the whole body. Is it to be wondered at, then, that systems of education so partial and defective should have failed to accomplish their intended purpose, or to enlist the sympathies and secure the co-operation of the agriculturists of this country? Moreover such a system as stimulates the brain only, and requires no exercise of the hands and feet, not only leaves the practical duties of life untaught, but it positively weakens the system, and disqualifies for success in after life. If we breed for flesh, form, silky coat, early maturity, and fattening properties, we must reckon upon some deterioration in milking qualities. It is equally true that a system of education which seeks the development of the mental powers only will not only neglect, but positively obstruct, the attainment of those physical and professional capacities which are essential to the efficiency of an out-door labourer. This truth may be elicited more fully by a brief survey of the five several branches of education just indicated, and in the harmonious combination of which its real success and highest value can alone be found.

I. *As to Physical Education.*—The training of the muscles, the limbs, and general constitution of the youthful peasant for the laborious duties and constant exposure to weather which are to be the lot of his future life. I presume no one in this assembly is so refined and sentimental as to deny that this is a matter of great importance. How many are the failures, disappointments, and early deaths which in

the higher walks of life have resulted from the neglect of this branch of education! The young aspirant for legal honours, whose knowledge of law and powers of eloquence qualify him for a high post indeed as a barrister, and even for the woolsack, yet as the result of too hard study and close confinement, has to drag his debilitated frame abroad, and spend his precious time in continental towns to repair the mischiefs wrought in his system. And very frequently a student comes forth from his college richly endowed with those literary stores and spiritual qualifications which would render him of eminent service as a minister of religion whose friends, having rejoiced in the success attending his first efforts, have too soon had to mourn his enfeebled health and premature death. Supposing that the Cambridge boatmen should spend their time till the day of the great race in close and ardent study, while the Oxford men should daily strengthen their nerves and muscles as well as increase their skill by practice on their noble river, it would require no prophet to foresee on whose side the victory must lie. And yet there have been found some advocates for school teaching so ardent, but withal so misguided, that they would have our country boys confined to the hot and close atmosphere of a schoolroom until the age of thirteen and upwards, and then sent out into the fields to perform the task of farm labourers. With what amount of success must be apparent to everyone. As well might you take the petted and pampered racer from his heated stable, strip him of his clothing, and expose him to all the toils, privations, and hardships of the costermonger's cart. If a compulsory form of education, then, be forced upon us, it will become the paramount duty of all who favour the agricultural interest to see to it that it be not extended beyond the age of ten years, and that even before that age every encouragement be given to out-door exposure and exercise. For this purpose I would have every schoolhouse to stand in an ample playground, and every playground to be furnished with appliances for gymnastic exercises and athletic sports. Much good might also be done by inculcating in the minds of parents the duty of seeking, by personal cleanliness, free ventilation, moderation in food and drink, and active exercise, to promote the future vigour and competency, and consequently the real welfare of their children.

II. *Mental Education.*—It can never be imagined that our Divine Maker, in distinguishing man from all the lower orders of creation by the endowment of an intelligent mind, capable of great achievements, but requiring exercise and instruction for its full development, ever intended that this intelligent mind should remain dormant and inactive. Solomon says, "That the soul be without knowledge it is not good." Indeed, we may say that man, if his mental powers be altogether stagnated through inaction, is in a worse position than the brutes, as their instinct affords them all the knowledge essential to their existence, while to place man in a similar situation some measure of teaching is requisite. It is true that this requisite degree of knowledge may be acquired without any book learning. Instances have occurred of individuals being very proficient in their callings, and highly exemplary in their moral character, without any measure of what is generally called education—that is to say, without school instruction. The best carter that ever I had, and the best domestic servant, were father and daughter, and neither could read nor write. On the other hand, the worst shepherd lad was one who had made the greatest proficiency at school, and had obtained prizes and honours there. Probably many present could relate a similar experience, and perhaps there may be some who would argue hence that we should have better servants without any education at all. Now, I do not believe that to be a sound inference at all. I do not believe that it was the inability of the carter and his daughter to read and write which made them such excellent servants ; on the contrary, I consider that with the same moral qualities and professional skill they would have been still more intelligently efficient had their minds been properly trained. Nor do I think that it was the book learning of the shepherd which made him so worthless, but the neglect of other branches of education essential to his success as a shepherd. That a reasonable amount of mental cultivation does not unfit for the duties of an agricultural labourer is proved from the character of such labourers in those counties to which I have referred as having outrun our own in the spread of education. In the United States the farming help is not heard to cry out as many of our men do, "Oh, I don't "know how to do that," when set about any work just without their usual routine, but to be expert in every part of farming labour, and moreover in some districts to spend many of the hours of their long chilly winter in performing the crafts of the blacksmith, carpenter, and harness maker. In Holland, Belgium, Switzerland, and Austria, the concurrent testimony of many competent witnesses attests that the classes employed in field labour are not only more intelligent, but also more active and industrious than with us. And those who have visited Scotland will probably have observed that, notwithstanding the evils of the bothy system, and that their fare is principally oatmeal porridge, potatos, and milk, still the stalwart highlanders will get through an amount of work which we might in vain expect from our southern labourers. By all means, then, let mental cultivation have its due share of attention. And this may certainly be accomplished, by the aid of night schools, Sunday schools, and free libraries, without the necessity of confining our boys to study so long as to unfit them for the duties of after life. In the mode of conducting this mental instruction some improvements might possibly be effected. I would have no boys taught at the public expense such things as are useful for mental training only, and afford no information which shall be valuable in after life ; such, for instance, as algebra, Euclid, or foreign or dead languages ; and above all, neither boys nor girls accomplishments which must be regarded as luxuries only, as fancy work, music, or drawing. Might not the mind be equally well trained in acquiring some knowledge of common things, and, in the case of more advanced pupils in the night schools, in the rudiments of mechanics, physiology, and botany, which might be turned to account in their future career ? After all, I believe that the failure of education as at present conducted to meet the requirements of the class before us arises not so much from the mode of conducting the mental training as from its exclusiveness. At Abbott's Ann we have the advantage of a clergyman of whom it may truly be said that for his intrinsic worth, faithful discharge of the duties of his sacred calling, and earnest devotion to the cause of education, he merits, as he enjoys, the highest respect and esteem of his friends and parishioners, and of a far wider circle throughout the country. The school there has been for many years most efficiently sustained by competent masters under the direct supervision of the rector. But if we were to judge of the merits of the system pursued there by its effects in improving the character of our agricultural labourers, it must be admitted to have proved a failure. This is not a mere matter of opinion, but is based upon incontrovertible facts. By far the larger proportion of the pupils trained there seek the engagements of their future life otherwise than in the pursuits of farm labour. Some become pupil teachers or enter gentlemen's service, or enlist into the army, and many obtain employment in the adjacent foundry. The consequence is that very few of the native youth hire themselves to the farmers as yearly servants, and the supply of these necessary helps has to be sought from the adjacent parishes. Now it is but reasonable to suppose that in those parishes where the young men and their families are so well known, the best hands are secured at home, and the less competent and worthy find their way to Abbott's Ann, so that

Hampshire.

Mr. Portman.

h.

our supply of really good servants is injured rather than benefited by this influence of our excellent school. I know well that I shall be told that this arises from the fact that good education, such as at our school, is the exception, and that when all other parishes are equally favoured this discrepancy will cease, and the proportion of supply and demand find its appropriate level. But we may at least retort that the tendency of the system is to disincline for farm labour, and that, though necessity may compel to accept such employ, yet the effect of such an education must be always to lead the pupils to seek situations in life in other spheres, which are at least supposed to confer greater ease, comfort, and respectability. Now let it not for a moment be supposed that I mean to infer that the school at Abbott's Ann is more to blame than other schools in this respect. I have heard it as the saying of some great man that if you want to know how to make a good cup of coffee you must visit every hotel, café, and refreshment-room in London, and then go home and make one just as they do not. Now I would say much the same as to schools for fitting lads for agricultural service. We have National, British, workhouse, and other schools, but in none of them may be found a system which promises success in this direction.

III. *Moral Education.*—Let me endeavour to illustrate my meaning here. It will be within the recollection of many present that upwards of 30 years ago, in a time of agricultural depression, when work was scarce and wages consequently low, a spirit of insubordination sprung up amongst the labourers of this and neighbouring counties. Mobs formed, and with riotous clamour went from farm to farm where a threshing machine was to be found, demanding its surrender into their hands to be summarily demolished. Not only have machines for threshing been multiplied and improved since that time, so as almost to supersede hand labour in that department, but machinery to lighten human toil has been introduced into other departments also. But at present we are in no danger of a visit from Swing, for the men have learned to look upon a new machine as a friend, relieving them of the hardest portions of their work, and introducing a new class of skilled labour which is more highly remunerated. Experience has in this case taught our peasantry a moral lesson, of which, in our present quiet security, we are reaping the benefit at this day. And surely the mind might be trained while such moral maxims are imparted. I have read that in the palmy days of slavery no religious teaching was allowed to be imparted to the negroes in the Southern States of America, but the duty of abject submission to their masters, and contentment with the station in which God had placed them. Now, I am not about to advocate such a narrow code of morals as this, but surely more prominence might be given in our teaching to the obvious fact that all immorality is not only a crime against society, but redounds to the injury of him committing it. This principle might be applied with profit to strikes, trades-unions, and all other unlawful combinations, the tendency to which is but too apparent at present. Much benefit might also result from a more careful supervision of the children when out of school, preventing much immoral influence being exerted the one upon the other.

IV. *Professional Education.*—It must be evident to all that casting up sums can never fit a boy to guide a plough, nor translating Horace for the higher branches of presiding over an intricate machine. We must learn to dig by digging and to plough by ploughing. And in no other department of labour is early introduction so essential as in labours on the farm. A person leaving school at 15 or 17 may be well initiated into the routine of a shop, the mysteries of a craft, or the duties of a profession; but it is not so with him whose duty is to be the care of horses, cattle, or sheep. Skill in these matters is well known to all farmers to partake more of the character of an instinct than a science. If the poet be born and not made, equally true is it that the skilful carter, or herdman, or shepherd, must have a natural fondness for the animal which he tends. Dutifulness may lead to the performance of the work required, but only devotion can furnish that interest and pride in the animals committed to his care which will ensure excellence, and this can never be attained except by a very early acquaintance with such duties. The failure of our workhouse schools to furnish servants useful in husbandry may be accounted for in this way. They are kept in the school too long to acquire tact and skill in farm labours. On the formation of the Frome Union, I, as one of the first batch of guardians, was invited to meet Mr. Weale, and consult as to the best mode of conducting the industrial training of the boys and girls. It was suggested that the trades of shoemaker, tailor, and carpenter, might be taught in the house; but a difficulty was felt in this was, that if we taught them to be skilful artizans an injustice would be inflicted on the children of the independent poor, while, on the other hand, if they were not made competent for self-support, it was but time and labour thrown away. I suggested that the workhouse should be assimilated to the cottage so far, that the boys should go out to work for any person who would employ them, and in any kind of work which they might prefer, their wages being received by the guardians, and one-third part reserved for a fund for an outfit, the boys meanwhile to receive instruction in the winter evenings and at other opportunities. This suggestion Mr. Weale did me the honour to lay before the central board, and sometime afterwards I was informed that the board considered this plan the best ever devised for making the boys self-supporting without doing injustice to others; but the danger was, that we should not keep the boys long enough to give them an education, and, moreover, it would be incompatible with the routine of the house. So red-tapism and routine prevailed here, as in multitudes of cases, over plans of practical benefit. I thought, in my simplicity, that the sooner the boys became self-supporting and independent of the rates the better. Now, Sir, I submit that in the rejection of this plan, and the non-adoption of some similar one, a monstrous injustice has been done to the agricultural interest. I knew a schoolmaster who used to send the boarders every Saturday afternoon to a neighbouring coppice to cut a bundle of sticks to be used on their own backs during the following week. Just so, the proprietors and occupiers of land have been called on to pay the largest proportion for the maintenance of pauper boys, and for their teaching by a system which excludes all the necessary professional training, and therefore unfits them for farm labours in after-life. The farmers themselves will be responsible for the success of efforts to promote this early professional training amongst our country juveniles. I know that it is not a pleasant thing to see a pack of boys breaking the hedges in their search for birds' nests, or interrupting the labourers in their work; but if we would have our lads to possess that deep interest in animals and rural affairs which is essential to their efficiency as farm servants, we must not be too severe with the youngster who is riding home from the field on a spare horse, nor drive others away too rudely from their gambols with the young lambs. Especially it will be incumbent on us to see that all boys are provided for, at remunerative wages, at the very earliest period at which they may be emancipated from enforced attendance at school.

V. *Spiritual Education.*—I have placed this last, not because I think it of least value, for indeed I regard it as of supreme importance, and believe a spiritual influence to be essential to the success of every means which may be employed for raising the character and promoting the real welfare of our labouring classes. But then I regard religion as the relation which subsists between a man and his Maker, and therefore as an influence to be felt rather than a science to be taught. As in our country districts there are few to be found who deny the divine

authority of our Holy Scriptures, I presume no objection ought to be felt to the reading of a portion thereof as a part of the school exercises of each day; but I would not have the Bible used as a class book, nor more especially would I have the committing portions of it to memory used as a punishment, and I would object to the teaching of creeds and catechisms of every kind as being calculated to excite disgust rather than respect, and to hinder rather than promote the cause of true spiritual culture. This branch of education, then, must be left mainly to the efforts and prayers of parents, of ministers of religion, and of every section of the Christian Church, to enlarge the sphere and promote the efficiency of their Sunday schools. For myself, I am opposed to compulsion both in education and religion; but if the attendance at the day schools be made imperative, I do not see that enforced attendance at some school on the Sunday would be an injustice. And now allow me to say a few words on the way in which this improved system of education should be made available to promote the interests of youthful farm labourers; and this I suggest should be by means of certificates, but differing in character from those which relate to school proficiency only. It is no slander on the tenant farmer to say that if a lad of the age of from 14 to 17 coming to him to be hired as a shepherd or carter should present a splendidly embellished certificate of prizes and honours gained at school, the result would probably be that the farmer would say, "Oh, you know too much for me," and close the door against him. But supposing this testimonial to include regular attendance at school, good moral character, and especially if it should comprise professional competency for the situation which he sought, I presume the case would be altered, and his certificate would tell for rather than against him. The certificate might be given first at the age of ten, and must at that time be confined, of course, to the character which the lad had borne at school; but it should be so framed as to extend over a period of four or five years, in which the holder might, if he had entitled himself to it, have an entry made each year by the teacher of the Sunday or night school which he had attended, and by the master whom he had served of his fidelity and proficiency whilst in his employ. With such a document in his hand I cannot but think that the youth would be regarded with favour and his services sought as an acquisition. I thank you Mr. President and gentlemen, for the patience with which you have listened to my rambling remarks. They lay no claim to merit in themselves, but may serve as decoy birds, to bring more valuable fowl into our net, and to elicit more important suggestions from those who shall take part in the discussion which is now invited, and from our able Chairman in his concluding remarks. I can only assure you that in bringing this subject before you, the speaker has been influenced by no other motive than the desire to promote the improvement of the labouring classes, the welfare of agriculture, and, through that, the peace and prosperity of our beloved country. It now only remains that I beg the adoption of this resolution:—"That in any measure of education which may be adopted for the benefit of the poor in rural districts, whilst mental instruction is not neglected, it is essential that prominence be given to such moral and practical training as shall fit them for the duties of after life' [loud cheers].

Mr. Norman.

i.

EVIDENCE accompanying Mr. NORMAN'S REPORT.

*** [I have arranged this evidence accompanying my report as follows, viz.: Section A. contains miscellaneous evidence. B. contains evidence relating to education mainly; a good deal which relates to education will, however, be found in other portions of the evidence, but so mixed up with evidence relating to other matters, that I have been unable to separate that relating to education from the rest. C. contains medical evidence. D. contains the evidence of labouring men, their wives, and children. E. contains the answers given to the questions contained in the printed circulars which I distributed. The evidence contained in each of these divisions is again subdivided into the portions relating to each particular county; and these subdivisions are printed in the alphabetical order of the counties from which they come, viz., Herefordshire, Surrey, Warwickshire, Wiltshire, and Worcestershire. The evidence relating to each county is printed according to the alphabetical order of the places from which it has been obtained. At the end of each section, except D., will be found a list of those gentlemen from whom I have obtained evidence which I have thought it unnecessary to print, because their opinions are substantially similar to the opinions expressed by other witnesses whose evidence has been printed.—F. H. N.]

INDEX TO EVIDENCE.

APPENDIX A.—MISCELLANEOUS EVIDENCE.

HEREFORDSHIRE.

Bosbury.
1. Rev. J. E. Cheese, Mr. A. J. Burrows, and Mr. R. Hickman.
2. Mr. J. Pitt.

Bridstow.
3. A. Armitage, Esq.

Brobury.
4. The Rev. S. Clark and Mr. J. Vaughan.

Bromyard.
5. Rev. N. Stephenson.

Clodock.
6. Rev. C. L. Eagles.

Dorstone.
7. Rev. D. Powell.

Eardisland.
8. Rev. J. Barker.
9. Mr. G. Yeld.

Felton.
10. Rev. H. T. Hill.

Fownhope.
11. Rev. T. West, Mr. J. Apperley, and Mr. C. T. Lechmere.

Hentland.
12. The Rev. W. Poole.

Hereford.
13. Mr. Edwin Day.

Kington.
14. Meeting.

Pipe-cum-Lyde.
15. Mr. J. Bosley.

Sellack.
16. Mr. T. Duckham.

Withington.
17. Mr. W. Taylor.

Whitney.
18*a*. Rev. H. Dew.

APP. A.—*cont.*

SURREY.

Abinger.
18*b*. Rev. J. W. Powell.

Addington.
18*c*. Mr. M. Walker.

Addlestone.
19. Rev. W. Pidcock.

Albury.
20. Rev. G. R. Portal.

Bramley.
21. Rev. H. B. Power.
22. Mr. W. Drewitt.

Byfleet.
23. Rev. N. L. Spicer.

Camberwell.
24. Mr. W. Barnes.

Carshalton.
25. Edward Galtland.
26. Mr. C. Simm.

Capel.
27. E. Kerrick, Esq.

Chobham.
28. Mr. F. Daborn.

Clandon.
29. Mr. R. Drewitt.

Cranleigh.
30. Mr. T. Street.

Dorking.
31. Rev. J. S. Bright.

Farnham.
32. Mr. J. Nash.
33. Mr. C. Carmichael.

Frensham.
34. J. Simmons, Esq.

Guildford.
35. Mr. T. Drewitt.

Appendix E.—Containing the Answers given to the Questions contained in the Printed Circulars of Questions.

1. As to the employment of private gangs.
2. The numbers and ages of the women and children employed.
3 to 16. As to the effect of the field work upon the health of the women and children engaged in it.
17 to 60. As to the effect of the employment of females in agriculture on morals, and on their proper training for domestic duties.
61 and 62. Restrictions suggested as to the age at which boys should be permitted to be employed.
63 to 77. Recommendations as to the distances and hours of work.
78 to 127. Recommendations as to education.
128. Information with respect to the cottage accommodation.
129 to 180. Descriptions of cottages.
181 to 190. Remarks on the subject of cottage accommodation in regard to its effects on morality and education; and suggestions as to how good cottage accommodation can be provided on self-supporting terms.
191 to 198. Opinions expressed on various subjects.
199. School returns—Day schools.
200. „ Night schools.

EVIDENCE.

HEREFORDSHIRE.

APPENDIX A.—MISCELLANEOUS EVIDENCE.

Herefordshire.

Mr. Norman.

A.
i.

Bosbury.

1. *Rev. J. E. Cheese*, Vicar of Bosbury.

Mr. A. J. Burrows, occupier of 150 acres and guardian.

Mr. R. Hickman, occupier of over 400 acres and guardian.

At present there is rather an excess of labour in this parish, but at certain times we are very slack. People come to work here from a distance during the harvest and hop-picking.

Mr. Hickman finds great difficulty in inducing women to come to work for him; he has four cottages, but the men who occupy these cottages earn a sufficient sum of money to enable them to live without their wives going to work. Mr. Burrows employs two women regularly, but finds that on an average they have not worked more than two and a half days per week each, including the hop-picking season.

The parish of Bosbury belongs to a number of different proprietors; there are about 11 yeomen who farm their own land. It contains 4,516 acres, of which 1,572 are meadow.

There is not much wood; there is not much wood in any of the parishes about here except Ledbury. Some of the women are employed in making gloves, which they get from Ledbury and Worcester. Every farmer grows a few acres of hops, but very few grow as much as 20 acres (*i.e.* hop acres). A statute acre usually contains more than a hop acre. No harm arises either morally or physically from the employment of females. Mr. Hickman and Mr. Burrows think that boys are of little or no use until they are 11 or 12 years of age; and that labourers who have had some education have more pride in themselves and are more useful than uneducated men. After boys once come to work there is continuous employment for them all the year round. When farmers let cottages they usually make an agreement with the women to come out to work whenever they have work for them to do.

There is not enough work here to give employment for children in bark stripping, but where there is more wood children are employed in collecting the bark after it has been stripped. Hardly any potatoes are grown for sale out of this parish. Cider is universally given now, but the men who do job-work drink far more than than those who are regularly employed. There is no market for cider now, and the new trees which are being planted are usually for table fruit. The cider which the men consume is usually worth about 1*s.* per week.

There is an endowed school for boys here with an income of about 107*l.* per annum chiefly in cottage property; there is also a girls' school supported by voluntary contributions, both under government inspection. There is no part of the parish which is inaccessible to the church or school. The boys pay 1*d.*; as a general rule the people are alive to the importance of education, but we think that some means should be adopted to compel negligent parents to educate their children, *e.g.*, if on the application of the overseer or guardian power were to be given to the magistrate to compel children under 12 to attend school and to charge the parents with the cost.

The great defect in this parish is the practice of keeping the girls at home as gloveresses and dressmakers; they generally object to go to service and become greatly demoralized. It was formerly the practice for farmers to lodge their carters, &c., but that practice has now been discontinued.

2. *Mr. J. Pitt*, landowner, Bosbury.—I farm 300 acres of my own land, of which about 160 are grass and 20 hops. The soil round Bosbury is all very stiff clay. I employ three women regularly, and more occasionally. The employment for the three women is pulling and cleaning turnips in winter, hoeing wheat in the spring (but only the more able women can do that), then beating clots, and assisting their husbands to stick up hop poles. The hop tyeing occupies women during May and June until hay time; and after haymaking they are occupied at harvest, hop and fruit picking, and occasionally in winter with the threshing machine. They don't work in frost and snow. All the hop work, the turnip cleaning, and fruit picking is piecework. Extra women are required for hop-tyeing, picking and stripping poles; one woman can tye four acres. I put three poles to the stock, and pay 6*s.* an acre for tyeing with one quart of cider per day; cleaning turnips costs 6*s.* or 7*s.* an acre; for hop-picking I pay on an average 1½*d.* a bushel. Children of 8 or 9 years old can earn 6*d.* a day at picking, and if they were kept from work the women would have to stay at home to look after them. The picking is let out in "cribs," and the pickers come from all parts. I make it part of my agreement with my cottagers that they should come out to pick hops. Those who come from a distance I lodge in buildings, where they sleep on straw. I provide blankets if they dont't bring them for themselves. There are low partitions in the buildings where they sleep to separate the families. We employ boys to drive plough from 10 years old and upwards, and (very exceptionally) for bird and pig tending. We should be put to no inconvenience if none were employed under 10 except in hop and fruit picking. They sometimes come out to help their parents at turnip cleaning under that age, but are not of much use. Boys wages begin at 3*s.* per week; the lowest wages for men now (April) are 9*s.*; carters and stockmen have 11*s.* with a house and garden worth 4*l.* or 5*l.* a year rent free; potato ground is usually provided by farmers for their men, sometimes rent free. When I make a charge I charge 6*d.* per score (a row of 20 yards long). I do all the cultivation except the planting for them. During the hop-picking season the baggers have 6*d.* per bag and can fill six or eight bags per day, and the driers receive 30*s.* a week and their maintenance; that lasts a month or six weeks. I always employ my men wet or dry; they usually have piecework all through the summer. The hop cultivation is done by the acre (of 1,000 stocks) at 23*s.* or 24*s.* per acre; that includes "throwing down" (*i.e.* uncovering the stock in the spring), "spreading the poles" (*i.e.* moving the poles from the bundles to the place where they are to be pitched), "pitching" the poles, "kerfing," "rowing" (raising the earth into a hill round the stock), "stripping and piling the poles." The women assist in spreading the poles. I usually allow three or four quarts of cider a day, but only two in cold weather. I have tried to give up the practice of giving cider, but the men wont work without it. I own about 30 cottages, and let them for from 3*l.* to 8*l.*, usually at about 4*l.* All have gardens of about quarter acre in extent. When farmers let cottages to their men it is usually agreed that the women shall come

out to pick hops, but not to other kinds or work; it is taken for granted that the children shall come out as well, but if they are at work for somebody else I don't expect them to throw up their employment.

BRIDSTOW.

3. *Arthur Armitage, Esq.*, Dadnor, landowner and occupier of 400 acres, and manager of the property belonging to Guy's Hospital, amounting to about 10,000 acres.— The hospital property lies in two blocks, north and south of Hereford, besides a considerable quantity in and around the parish of Vowchurch. Herefordshire contains generally about two-thirds arable to one-third grass, except in the valleys, where there is a larger proportion of grass. Women are very little employed, less than formerly; so many implements are used that they are not wanted as much as they used to be. Farmers do not require young boys, certainly not under 10 years of age; but the parents want the earnings. I have never allowed cider. I pay my ordinary men 12*s.* a week, and let them as much potato ground as they like to have (which I cultivate and manure for them) at 6*d.* a score yards. I sell them as much cider as they like to have at 4*d.* a gallon. I think that farmers maintain the practice of allowing cider for the purpose of getting a market for their inferior drink. I have had no difficulty in carrying on my system. I have done it since 1843 when I began farming. When three or four men come to do a job for me, I allow them to have access to a barrel of cider, of which they keep the key; and when I settle with them, I make a deduction from what I have to pay them for the cider they have drunk. I think that my men drink too much cider, not so much of what I sell to them, as of what they buy elsewhere. I think they buy less of me than they would receive if they were allowed what is usual. I don't think that farmers require boys to work for them under 10 years of age. At present not half the adult population can read; but I don't think that the want of eduction is owing to the demand of the farmers.

Guy's Hospital let a certain number of cottages with their farms; but they have 75 which are let independently. I object to all cottages being let to the farmers, because it gives them too much control over the labourers; a man's labour is his capital, and he should be able to dispose of it as he pleases. The cottages which I let to labourers independently of the farmers are let by the year with a stamped agreement, under a quarterly notice to quit. I think that the labourers about here are rather inferior as workmen; there are but few who can lay a hedge and do the more skilled kinds of work.

Coal costs 14*s.* a ton; it is obtained from the Forest of Dean, and wood costs 8*s.* 6*d.* a "cord" [2 cords= 1 waggon load]. The people usually burn coal.

The rent of the "light land" in this county is about 35*s.*, and of the heavy about 25*s.* per acre, and labour here costs about 30*s.* an acre.

BROBURY.

4. The *Rev. S. Clark*, rector of Brobury and vicar of Bredwardine.

Mr. J. Vaughan, occupier.

The farms here range from 500 acres downwards. About half is grass; there are no hops.

The supply of labour is scarcely sufficient, but there is a large population in Staunton on-Wye, which supplies the surrounding neighbourhood. Women's work consists in picking stones, dressing meadows, hay and corn harvest, picking apples, and pulling turnips. Of these employments picking stones and pulling turnips are piecework and the remainder day work. They scarcely ever bring their children out to help them. Mr. Vaughan thinks that children are simply useless to farmers under 10 years of age even for scaring; and that farmers would not be put to much inconvenience if they employed none under 12.

Jarvis' Charity provides a free education for the children belonging to the parishes of Bredwardine, Letton, Staunton-on-Wye, Brobury, and Monnington, and the children from the last three parishes are clothed as well as educated; the receipt of clothing is made dependent upon their regularity at school. Very few have to come above a mile to school.

There has been a night school for several years at Bredwardine; those who come can sometimes read and write, but it sometimes happens that young men who have been to the school up to the age of 12 cannot sign the marriage register. Mr. Clark thinks that the education would be better kept up if the cottages were more comfortable, so as to encourage the boys to remain in the house and read in the evenings.

The cottages are extremely bad, but although the occupier occasionally complains, they do not appear to be really discontented.

We think that the most suitable plan for providing education would be to prohibit labour under 10, and also between 10 and 13 unless a certain amount of proficiency had been attained.

Cottage rent in Bredwardine and Staunton is 4*l.* to 7*l.* a year; in Brobury 2*l.* to 3*l.* This is on account of Jarvis' Charity. Some cottages are much overcrowded.

BROMYARD.

5. The following paper was communicated by The *Rev. Nash Stephenson*, vicar of Bromyard, and Educational Secretary of the Social Science Association.

I.—MALES.

Labourers constantly engaged by a farmer are mostly paid 9*s.* a week through the year, from which must be deducted wet or broken days; but in harvest time they are mostly engaged by take-work; for mowing, 2*s.* 6*d.* to 3*s.*, and for reaping 8*s.* to 10*s.* an acre is paid; at a bark-peeling job they earn 2*s.* 6*d.* a day; hoeing from 2*s.* 3*d.* to 2*s.* 6*d.*, bean and wheat hoeing ranges from 3*s.* 6*d.* to 4*s.* an acre; wagoners are paid 10*s.* a week or a little more, wet or dry, but usually are hired by the year and are indoor servants, and obtain from 7*l.* to 12*l.* a year. The hours of the labourer are from 6 a.m. to 6 p.m.; they have two quarts of cider a day from Michaelmas to Lady Day, and three quarts from Lady Day to Michaelmas, except in mowing and reaping seasons, when they have six quarts.

Labourers who are accustomed to cider, usually drink cider and buy it at 3*d.* a quart, but others, not farm labourers, prefer beer, which is 5*d.* a quart.

I had charge of a populous parish near Solihull in Warwickshire for nearly 30 years, and was Secretary to the Archidiaconal Board of Education. The labourers there are certainly in a better position than they are here. Wages are higher, houses are better, though rent about the same, and coals are 14*s.* instead of 28*s.* a ton. The state of education is much in advance of what it is here, and there is not nearly as much drunkenness there.

II.—FEMALES.

Hops.

Hop-tying.—In the beginning of June tying hops to the poles commences. By take-work the pay is 3*s.* 6*d.* an acre if the tyers find rushes, and 3*s.* if the master finds them; if by day the pay is 1*s.*, and the hours of labour are from 7 a.m. to 6 p.m. There are two poles to each stock. The hop plants are tied with rushes as they grow, and require tying three times in the year, and whoever commences the work also finishes it. At the first tying a quarter of an acre can only be done in a day, at second tying an acre, at third tying two acres; but much depends on there having been much or little wind to loosen them. Should a fourth tying be needed extra pay is given. Children are not employed, as they cannot tell the difference between the "gut wires" which are hollow and do not bear fruit, and are not cared for, and the wires on which alone the hops grow. The tying finishes about the middle of July.

Herefordshire.

Mr. Norman.

A.
i.

Hop-picking.

The season of hop-picking begins about the latter end of August, and lasts about three weeks or a month, varying according to the number of pickers looking for employment, and the fruitfulness of the season.

The farmers pay for hop-picking by day or bushel. If by day, the payment is 1*s.*, but few engagements are by time. If by bushel, should the hops run small or be few in quantity, the farmer pays 1*s.* per four bushels, or, should the hops be large or season plentiful the farmers pay 1*s.* per eight bushels. An adult experienced hand will earn 2*s.* a day, a girl from 12 to 14 will earn 1*s.* a day. The master provides cribs, tallies, and tickets, and gives new milk. Large numbers come from the black country for the hop-picking season, and are lodged in the barns; the employers find blankets, sheets, and straw ; children, boys and girls, married and single, all sleep in the same barn, close to each other, without screen or partition. Of course there are some laudable exceptions to this rule.

Field work.

For dressing ground, pulling swedes, picking stones, weeds, &c. the pay is 8*d.* a day ; for bark peeling, which is in May, the pay is 1*s.* a day ; they are employed in peeling in addition to stacking the bark. In hay-making seasons the farmer gives 8*d.* a day to his regular workers, but to others he gives 9*d.* or 10*d.* Wet or broken days are paid for proportionately.

Children under 10 years of age are seldom employed except in apple and hop-picking.

Female work is not excessive or unhealthy, neither does it tend to demoralizing results.

Mops or Hiring Fairs.

There are in Bromyard during the year three mops or hiring fairs, Lady Day, 1st May, and Michaelmas ; male and female indoor farm servants are hired at these fairs, and the engagement is binding for the current year. The servants receive 1*s.* as "earnest money" on the mop-day. As a rule, the master writes for a character to the last place ; if not satisfactory, he writes to the servant to that effect, and the engagement is at an end, the servant retaining the 1*s.*; on the other hand, should the servants decline, the 1*s.* is returned. Fighting and immorality prevail to a great extent, but, owing to the increased vigilance of the police, the evil is not as great as it used to be.

I do not think that the mops can be put down by law. In Warwickshire the mops are fast dying out as hiring fairs. The better class of farmers and farm servants are ashamed of them and will not attend them.

Rent, Rates, &c.

The rent for an ordinarily sized cottage is 1*s.* 6*d.* a week. In the country there is usually a good-sized garden. The rates (of which there are four in the year) for a cottage of 4*l.* 4*s.* rental vary from 1*s.* to 3*s.* 6*d.*; the cottagers and not the landlord usually pay the rates.

The above information respecting wages and work was given me in answer to my inquiries by a married woman in Bromyard, aged 29, who had worked all her lifetime in Bromyard in fieldwork, and was confirmed, and slightly altered by another married woman, who had worked at fieldwork for 10 years, and by some labourers and employers of labour, and was ratified by the clergy at a ruri-decanal meeting.

Education.

In agricultural districts there are many chilren now growing up without knowing the three r's. The reason why children are not sent to school is not the want of the school pence or of clothing, but mainly the indifference of the parents. There are probably few or no children who have never been to school, but the attendance of the mass is so desultory that the education given is of little value in after life; either the children do not come to school at a sufficiently early age, or, if they do, they do not attend regularly enough to attain satisfactory results. The children themselves are not engaged in any agricultural labour which need materially interfere with their education. The school accommodation in the neighbourhood is generally sufficient, but, owing to the scattered position of the cottages, some of the children have to travel long distances. I am in favor of "compulsory education," but do not think that there is any mode by which, in rural parishes, where the population is small, "compulsory education," either direct or indirect, can be carried out. If any plan is feasible it would be by the application of the principle of the Print-works rather than the Factory Acts. The supply of certificated teachers being limited, and the funds of rural schools being necessarily small, it is impossible for rural parishes to employ such teachers, and so to obtain Government aid. To remedy this it would be desirable that in small parishes Government aid should be given for results without requiring certificated teachers, but the grant should not be given unless the average attendance amounted to 20, and unless not less than 40 or 45 per cent. of the children in average attendance pass. The object of the former provision is to prevent the time of the inspector being wasted on insignificant schools ; and of the latter, to induce the teacher to secure an adequate result with respect to the children committed to his care.

Clodock.

6. The *Rev. C. L. Eagles*, vicar of Craswall Chapel. —Been here 20 years. The parish of Clodock contains 17,833 acres, a great deal of which is mountain. It comprises the townships of Craswall, Llanveyno, Longtown, and Newton. It is only one parish for ecclesiastical purposes, but each of the townships forms a separate parish for secular purposes. The rateable value is 10,000*l.*, and population (1861) 1794, and inhabited houses 372. There is one church and four chapels of ease in the parish. There is one school in Longtown, another in Craswall, and another in Newton. There is a very small portion of the population in Llanveyno which is so situated as to be out of reach of a school. There is a master and mistress at Longtown, a master at Craswall, and I think a mistress at Newton. More than half of the parish is grass ; there are no hops ; oats, barley, and wheat are the staple crops. I farm about 100 acres. Women are employed to a considerable extent, but do no hard work; but they are more employed in Michaelchurch, where there are some Scotch farmers. Women won't come to work before 8 or 9 in the morning, and usually leave about 5 p.m. I employ about four women when I have work for them to do. They always have 1*s.* a week and drink. I employ six men regularly ; my best man has 12*s.* and the other 10*s.* and 11*s.* a week and drink, and for two months during summer they have 3*s.* a week extra ; if they don't have that they expect victuals. There is a sufficient supply of labour here. I don't employ any boys ; but all farmers employ one or two, whom they board in their houses, of 12 or 13 years of age ; such a boy would probably have 25*s.* or 30*s.* a year. No boys are employed younger than that ; some are employed for scaring, but sometimes go to plant potatoes with their parents. The holdings here are small; they probably average less than 100 acres. There are a great many small proprietors who farm their own land, which is usually mortgaged ; but they are quite unable to contend with the larger tenant farmers.

We have a sufficiency of cottages, but they are very bad ; the ordinary rent is 3*l.* to 5*l.*

There is nothing at all to take the children from school before they are 12.

The women often give the farmers two or three days' work for no wages in consideration of receiving

permission "to lease;" and occasionally they only "*lease to halves*," *i.e.*, are obliged to give up to the farmers half the wheat they collect. Either one or the other of these practices always prevails among farmers.

I know the district in this neighbourhood well, and I don't think any practices prevail about here substantially different from those I have described, except that our wages may be rather higher here.

Dorstone.

7. The *Rev. D. Powell.*—I am a trustee of the schools at Dorstone, Clifford, and Peterchurch. The first has an endowment of 50*l.* per annum, and the two last of 80*l.* They are under Government inspection; we don't profess to admit children into them under the age of 7; some under that age are however admitted to be taken care of while their mothers are out at work. There are besides the endowed schools two infant schools at Clifford and one at Peterchurch, but there is none here. All the children in our school pay 1*d.* per week. I think there is hardly a parent in the parish who cannot read; and the children who came to receive instruction at the age of 7 can usually read monosyllables. Almost all the farmers let potato ground to their labourers at 2½*d.* a "purk" or "perch" = 7 yards. The farmers prepare the land and the labourers plant, weed, and get up the crop In the case of stone, potato, and apple picking the work is usually done by the piece, and the children assist their parents, but are not "employed" by the farmers; and bird-scaring is the only occupation in which young children are employed. I think that the first continuous work for children commences at about the age of 11; a boy of that age if in the farmer's house would get 50*s.* a year, but if out of the house 3*s.* a week. I only know of two families in the parish who don't attend school at all; but my experience tells me that the education depends very much on the popularity of the master. Our master is not permitted to inflict corporal punishment. I do that myself, and every case in which it is done is reported to the trustees at the end of the quarter. I think that the best way of providing education for the labouring class would be by having school open from 4 to 7 from the 1st April to the 31st October for boys at work. Attendance should be compulsory then and in daytime during the remainder of the year.

Wages are 9*s.* or 10*s.* a week here, besides drink. A good deal of extra money is given in the way of occasional meals, hauling coals, &c., and in harvest time the men are all fed.

Eardisland.

8. The *Rev. J. Barker*, vicar of Eardisland.—I have been here two years, and before that I lived at Berkswell, in Warwickshire. I think that no boys go to agricultural work here before they are 12 or 13. In Warwickshire they never stayed at school after the age of 9 or 10. I think there is a surplus supply of labour here, and that the hop cultivation induces more to remain in the parish than otherwise would. There is an endowed free school here; I think that the education is rather more advanced here than in Warwickshire; but the people don't really value it. There are 78 on the books of this school, and 42 in average attendance. My last confirmation class contained 23 boys varying from 14½ to 17 years of age; of them 16 could read well, six moderately, and one not all; 15 could write well, seven moderately, and one not at all. There are no inhabitants of this parish who have not access to some school. The apathy of the parents is the only cause of the defective education here. I don't think there is any necessity for a new law to improve the education in this parish; and if it were necessary I don't see how it could be carried out. I object to females working in the fields, because I think that their children and cottages are neglected, but I don't think that the work does them any harm. The children of field workers are certainly less regular in their attendance at school than the children of other parents. I have carried on a night school here until this month [May], and in Warwickshire I carried one on all the year round. I think night schools are very valuable for the purpose of keeping lads out of mischief, but they cannot be generally relied on as a means of giving instruction. I strongly object to the practice of paying wages in cider. I have recommended the farmers to sell some of their cider; but the labourers have a strong objection to its going off the farm.

9. *Mr. G. Yeld*, Twyford, Eardisland, landowner.—I farm my own land; 174 acres. More than half is grass. I don't grow hops, but most of my neighbours do. I never employ more than one boy aged 11 or 12. I don't think they would be of any use under that age. But where hops are grown little boys are useful for hop-picking, but in no other operation connected with the hop cultivation. I never employ women for hard work; but I do employ them in haymaking, and weeding the corn, and turnip and mangold pulling, which is piecework done for about 7*s.* an acre. They weed with a spud and not with a hoe. They never bring little children to help them, except in hop-picking; the older children come occasionally to assist them in turnip pulling, but I think not under 11 years of age. Their ordinary hours of work are from 8 to 6 p.m. on my farm, but perhaps other employers keep them longer. Wages here are 10*s.* for day labourers, and an extra 1*s.* a day during harvest, generally for a month; and in haymaking if we keep them past time, we either give them money or victuals. They always have cider; that is the great curse of this country, but it is impossible for any single employer to get the men to give it up. The cider is worth about 2*s.* a week. I sometimes give an additional 2*s.* a week instead of cider during winter. The labourers also have potato ground, which is usually paid for at 6*d.* a score. Women have 8*d.* a day, never less, and more if we keep them late. I never give them cider except in hay time. There is a sufficiency of labour here. My men come from either Eardisland or Pembridge. The cottages are not very good, but those in Eardisland are being greatly improved. Usual rent is 3*l.* to 4*l.* All have gardens. I find I can get just as many women to work for me as I could formerly, but I hear my neighbours say that they cannot.

There are very good schools both at Pembridge and Eardisland. There is nothing whatever in the agricultural labour the children perform to prevent their attending school.

Felton.

10. Letter from the Rev. H. T. Hill, rector of Felton, vicar of Preston-Wynne, and rural dean of Frome, dated Felton Rectory, May 26, 1869.

I have carefully read the printed papers you enclosed to me. I think that from me a short continuous statement would be quite as serviceable to you, if serviceable at all, as a categorical answer to the printed questions. For my own two adjoining parishes of Felton and Preston-Wynne are very small, insignificant in point of population, &c., and I should therefore think it out of place to furnish you with particulars respecting them, such particulars would not be any criterion. I can only give you, as you desire it, my own impressions (after some years' experience in these and much larger parishes) on the general questions and matters of inquiry.

1. As to agricultural labourers my own impression is that here or hereabouts there is no excess of labour required by employers, nor any necessary unhealthiness in the occupations of our women and children employed in agriculture unless in cases where they are at their work in wet weather on these clay soils for some hours together, and I certainly think that pulling

Herefordshire.

Mr. Norman.

A. i.

turnips in wet and cold weather ought not to be required of women and children.

I have had no experience of gangs, public or private.

I do not think that children are usually overworked in our country parishes, nor do they have to go long distances to their work. I am not aware of any ill-treatment. I do not think you can expect the labourer to forego altogether the pecuniary advantage to be gained from the work which his wife and his children may do.

I think that possibly some legislation there might be with good effect to regulate the age below which boys and girls should not be employed in farm labour, say not below 10 years of age. I also think that some encouragement might be held out to parents to abstain from sending their children to work till a more advanced age, say till 11½ years of age, and this entirely for the purpose of their education. I do not think that the hours of work of boys or girls need be regulated, nor do I think regulations needed hereabouts as regards hours of work or unhealthiness of employments generally.

I would also express an opinion that it may be questioned whether the gain to the labourer from the out-door work of the wife is so considerable as he usually thinks it to be. I think he might come to a difference of opinion if he could be induced to consider, that such out-door work necessitates the neglect of many home duties, greater wear and tear in the matter of clothing, a more generous kind of living in order to perfect health, or else weariness and exhaustion, and considerable interference with his own comfort in his own home. I think that in this country the employment of females of a certain age in field work could hardly be restricted.

II. As to education. I think something might be done, or ought to be done, with the smallest possible degree of compulsion (but with it if unavoidable). I am of opinion that the education of children in our rural parishes should be carried on. I cannot think it right or advisable that children should continue to lose, as many are doing, the only education (in its best sense and truest) which they can ever receive, owing to the blindness and selfishness of their parents or employers. I cannot think it right that children, as is often the case, should be sent to work at 9 and 9½ and 10 (sometimes, I fear, earlier than 9), instead of being sent to school. They may not be sent regularly to work, but neither are they sent regularly to schools, and that very irregularity defeats all our efforts to educate them.

I consider that even alternate whole days at school, if it were regular, would be preferable to the present state of things, if we could be sure of children, say, on Mondays, Wednesdays, and Fridays; I mean that it would be preferable for many, there are of course some who attend with tolerable regularity each day in the week. I do not think that a night school is a substitute at all for a day school. In very small parishes they are difficult to work, because so few can come to them, and because the clergyman has often no one to help him and so cannot have such a school sufficiently often in the week. But even with us they are of use; encouragement in the erection of schoolrooms in small parishes is needed, or for united small parishes. It is far easier to get schools erected and maintained in large parishes. I have had to build one myself on land of my own for my two small parishes, finding it impossible to obtain funds for it from other sources. We have now an attendance of 35 children, as many as the room will hold when the novelty has worn off the attendance may fall off possibly. We want some way (though as mild a way as can be hit on) for enforcing a more regular attendance at our schools when they are erected. The very irregular attendance by some families is a great obstacle and difficulty, it renders a good school almost impossible, it prevents there being a good first class in the school, it greatly discourages the teacher, it just prevents children who are irregular from acquiring that information and those good principles and habits of discipline which would be of such permanent benefit to them. I think that employers generally do put too much pressure on their workpeople to induce them at certain times to send their children into the fields rather than into the schools (I do not now allude to hay making, corn harvesting, and hop-picking). I also think that 2*d.* per week for each child is in some cases felt by the parents a good deal, and yet I do not see how our rural schools are to be supported if a smaller sum is charged. I think Government might well offer some assistance to rural schools, and ought to do so, satisfied with our usual diocesan inspection.

III. As to cottage accommodation. It has been very inferior in this neighbourhood, but improvement is slowly taking place. I think bad and insufficient cottage accommodation a great evil and very demoralizing. I do not think we have a sufficient supply of cottages, nor with sufficient bedroom accommodation. Even inquiry on the part of Government must do good in this matter.

Fownhope.

11. The *Rev. T. West*, vicar.
Mr. James Apperley, occupier.
Mr. C. T. Lechmere.

This parish is situated just on the borders of the hop district; no peculiar crops are grown here. The farms are small, from 100 to 200 acres; there is not much grass, but there is a large quantity of wood. There are a good many squatters, but very few farmers occupying their own land. No children are employed under 10 to 12 years of age except occasionally for bird-keeping. Mr. Apperley thinks that the little boys under that age do just as well for scaring as older boys. The general occupation for boys after they go to regular work at the age of 10 to 12 is with the horses. Very few boys are now boarded in the farm houses. The women are employed in the ordinary light work of the farms, but they are much less disposed to go out to farm work than they used to be; they are not of much use except for such work as apple and hop picking; their ordinary wages are 8*d.* and in harvest 10*d.* besides cider. Hours of work from 8 to 6 except when at piecework. Girls never go out before they are 16 or 17 years of age. There is an over supply of labour here; there are a good many men who live by job work, and work only a part of the year.

The supply of cottages is sufficient in number, and (with a few exceptions) they are tolerably good, and are provided with gardens, rent 4*l.* to 5*l.* It is the usual practice for farmers to let potato ground; the larger farmers only let it to the labourers they employ, but the smaller farmers let it to any who will take it at 6*d.* a score.

A new school has been built here, now under a master, who is about to receive his certificate; it is a mixed school, and was opened last October. There are now about 100 on the books, and about 70 in ordinary attendance. When Mr. West came here, which was four years ago, there was only a small dame's school attended by from 30 to 40 children; when the new school was opened there was an immediate attendance of over 50, which has gradually increased. The parents expressed themselves very anxious to Mr. West for the opening of the new school, and he believes that the increased attendance is entirely due to the value attached by their parents to education.

Mr. West thinks that since the opening of the new school there are very few children who do not attend, and that the agricultural employment does not interfere with the education. The average age of the first class is 11 years 9 months. No change of the law is necessary to improve the education here.

Wages here are 10*s.* in summer, and sometimes drop to 9*s.* in winter.

The cider allowed by Mr. Apperley is two quarts a day in winter, three in summer, and four or five in

hay time and harvest; it costs him less than 4*d.* a gallon, probably about 3*d.*

HENTLAND.

12. The *Rev. W. Poole*, Secretary to the Hereford Diocesan Board of Education.—The whole of the county of Hereford is in the diocese of Hereford. There are only two parishes, containing over 500 people, in the county which are without schools. There are no accurate returns from which it is possible to estimate the number of places containing a population less than 500 which are without school accommodation. The population of the county is very much scattered, and thus in some districts it is scarcely possible to find a sufficient population to maintain a school. In the east of London 185,751 persons are found in a square mile, but in Herefordshire the average is 147 (including the towns).

There is not much agricultural employment for children under 12 years; but these young children are more constantly kept away when their parents are occupiers of small quantities of land (under 10 acres), of which there are two in my parish. The chief causes which interfere with the education of children may be gathered from the following census of my parish:—

Total children under 6 -	95
From 12 to 6 - -	108
	203
From 12 to 6 at school -	55
Not at school - -	53
	108

Causes of absence.

Want of money, clothes, or food -	9
Out at work - - - -	8
No school near - - -	2
Kept at home to mind house or nurse -	13
Indifference of parents - -	17
Accidental cause - - -	4
	53

I don't find that the agricultural labour causes much irregularity. I don't permit irregularity, and discharge those who are irregular.

I think that the employment of females in the fields is decidedly healthy, but I object to it because it certainly leads to both the cottages and children being untidy; and also to the elder children being kept from school to mind the younger ones.

The farms here vary from 150 to 300 acres. It is the usual practice to let cottages with the farms; but I disapprove of that practice, because it gives the employer too great a control over his labourers, and because a man who is liable to be turned out on a short notice will take less interest in his cottage and garden than if he had a more certain tenure. I have a property in this county in the neighbourhood of Stretton Grandison, on which there are above 60 cottages, and I retain all except four in my own hands. I have no difficulty with the farmers on this account, I usually let the cottages to the men whom the farmers recommend.

At present most of the friendly societies are little better than drinking clubs; there are, however, two or three good ones, one of which, the Hereford Friendly Society, has a branch here. There are now two public house clubs here. The law which now requires clubs to be registered should also require that a certificate should be obtained to show that the tables are founded on reliable calculation. I would also make it compulsory for all young men over 15 years of age to belong to a club, and would make it incompetent for them to give evidence or receive parish relief unless they did.

There exists a very strong feeling against "compulsory education." It is reckoned an interference with private life; it is thought likely to augment pauperism; it is considered to be unworkable; it is hard upon farmers who want hands; it is hard upon parents who want money. Any law simply exacting that all children shall be educated would be likely to meet a very general opposition and that neglect or indifference which is even harder to contend against than actual opposition itself.

On the other hand, it cannot be denied that the lads who grow up without education are (if we take them in the mass, and do not judge by this or that exceptional case) the least trustworthy of the labouring class. They are slow and unintelligent in their work; they fall back upon the public house for their amusement; they are the enticers of younger men to drunkenness and extravagance; they become paupers and the fathers of paupers, and hand on to another generation some of the worst evils of our own.

Is it hopeless then to make an effort that we may lay the strong hand of the law upon these vagrants of civilisation, and bring them within the healthful circulation of the national system?

Compulsory eduction by itself appears to me quite impossible in the present state of men's opinion regarding it. None of the plans as yet proposed would have vitality enough to conquer the passive resistance of all classes. Its few supporters would be battering an earthwork of unmeasured thickness. But as one of a group of measures intended to improve the condition of labourers and at the same time to lighten the pressure of local taxation, it is possible that such a bill might not be unacceptable. Men feel that school teaching is but one among the many elements of success in life, and when it is insisted on as in itself of supreme importance they point to this or that individual instance of its failure within the range of their knowledge, and all argument is counterbalanced by this fatal fact. If a wise and broad plan, however, were traced out for meeting the principal evils which beset the country on the side of its poor inhabitants; if the interests of the ratepayers were evidently to be served and the necessities of the employers of labour were acknowledged, it is probable that regulations for an universal instruction of the young might be accepted and worked out. The principal points which would have to be considered and provided for in such a scheme would be as follows:—

1. Securing decent and sufficient dwellings for the poor.
   - (*a.*) Lending money not only to landlords as at present, but to poor freeholders for the improvement and building of houses, and even under regulations not difficult to draw up to tenant farmers.
   - (*b.*) Forbidding more than a proper number to live in any house (as in the case of registered lodging-houses).
   - (*c.*) Declaring by proper process houses unfit for habitation, and so compelling owners to repair or keep them vacant.

2. Providing against sickness and old age.
   - (*a.*) Altering the present pauperising system of friendly societies, forbidding them to meet at public houses, amalgamating smaller clubs, closing the unsafe, and guaranteeing the rest.
   - (*b.*) Bringing government annuities within the reach of labouring classes and making the regulations more popular.
   - (*c.*) Making it compulsory on all the young men under 15 to belong to such societies (or to show that they have a deposit at the savings bank instead).

3. Providing recreation and instruction for elder lads, men, &c.
   - (*a.*) Encouraging the establishment of playgrounds, reading rooms, &c. by facilities for appropriating ground, management, &c., and when such play places are established, forbidding any game or sport to be held at the public house.

Herefordshire.

Mr. Norman.

A.
i.

(*b.*) Limiting and regulating public houses (a great boon to employers of labour).

4. Then requiring that all children should be educated to a certain standard.

Regulations which by themselves might be thought hard, in conjunction with these other measures would assume a very different appearance.

The plan of requiring once for all a certificate of having obtained a certain amount of school learning seems to labour under this evil, that in infant schools this standard may be hastened to such a degree as to allow of very young children going out to labour, and knowledge so early acquired is easily and entirely forgotten. I have known children qualified for any standard that could be reasonably required come back after a few years of work totally unable to read or write.

The half-time system has been successfully carried out in special instances, but in every case I believe where this has occurred among our agricultural population it has been owing to the active intervention of some influential individual who has given his time and often his money to work it out, otherwise it seems unlikely that this plan would succeed.

In towns under a numerous police the children idling in the streets or unemployed at home might be swept by the officers into free ragged schools without injuring or interfering with schools of a better class.

In the country it might be required both of the parents and the master employing a child under 12 years of age that they should produce a licence, the parents for his being hired out, and the master for employing him. This licence should depend upon his reaching a certain standard of acquirements, and might or might not be paid for as might seem best. It should never be granted for more than one year, and if during the year of labour the child had greatly lost the power of reading and writing it would be in the power of the authority to refuse a renewal on the ground that either at home or at service his proper improvement had been neglected. A committee selected out of the Board of Guardians of the poor (with a certain proportion of ex-officio guardians) might be the authority by which such licences should be granted. In this way it would be open to any one interested in the welfare of a child to demand the licence and to oppose the issue of it were such a step deemed desirable.

This, in conjunction with the other measures alluded to above, might ensure the non-employment of children under 12 years of age; but for its possibility it depends upon forming part of a system which shall endeavour to ease the working of the wheels where, between the employers of labour, the ratepayers, and the paupers, they have unhappily become a little disordered. The decay of an independent feeling among the poor, ready application for relief, especially for medical relief, by those not absolutely in want, and an accompanying carelessness as to the education of their children, make this question, in this part of the country at least, of very urgent importance, and though at first sight at least we may seem to complicate the matter by the introduction of these allied questions, yet this will really be found a case in which Bacon's axiom becomes strictly true,—"It is easier to change many things than one."

Hereford.

13. *Mr. Edwin Day*, Secretary to the Herefordshire Friendly Society, established in 1836. Open to all residents in the county, but the great bulk of the members live within five or six miles of Hereford. There is a branch at Leominster, and eight or nine agents in different country parishes. There are over 1,100 members [April 1869]. The insurance is for sums payable in sickness and at death, as well as for annuities payable after 65, but very few persons purchase annuities. The great majority of the members are agricultural labourers. Those who live in the towns are caught up by the Odd Fellows and Foresters. The balance in hand at the end of last year amounted to 9,287*l.* 6*s.* 4¾*d.*

Kington.

Meeting at Kington.

14. The Rev. J. F. Crouch, vicar of Pembridge.
Mr. Gardiner, occupier, Lyonshall.
C. W. Greenly, Titley Court.
Rev. J. Whateley, Kington.
Mr. Wellson, occupier, Kington.

Women are very much employed in agriculture in this county; the usual hours of work for them are from 8 to 5, except in harvest time. There is less work for them in winter than in summer. They are not injured either physically or morally by the work they do, but some of the gentlemen present think that the houses of the field worker are less tidy than those of other women.

Boys are not employed in regular farm work under 12 years of age; they do no work which is injurious to them. Young girls are not employed in farm labour except in apple picking.

The condition of the education among the young now growing up is fairly satisfactory, although it is in many instances defective. At Pembridge there was no failure last year when the school was inspected either in reading, writing, or cyphering; the great difficulty is to maintain the education after work commences. The school accommodation in the neighbourhood is generally sufficient. We cannot see that any change in the law is practicable for the purpose of improving the education, although improvement might in many cases be desirable.

The cottages are not as good as could be wished; they are usually sufficient in number and well situated; they are usually scattered, but there are considerable villages at Pembridge and Lyonshall; the accommodation they contain is generally insufficient; there are not sufficient bedrooms, not enough privies, and the cottages are out of repair; they all have gardens. There are no allotments, but the labourers hire potato ground of their employer at 6*d.* a score. The rent varies of cottages from 4*l.* to 4*l.* 10*s.* We cannot suggest any change in the law for the purpose of improving the accommodation, the powers of the present law are sufficient if carried out. Men's wages are 10*s.* and drink, and generally potato ground free; 1*l.* or 25*s.* extra in harvest. Women have 8*d.* a day and drink in harvest, and boys about 6*d.* a day at first.

Pipe-cum-Lyde.

15. *Mr. J. Bosley*, Lower Lyde Farm, Pipe and Lyde.—Most of this parish belongs to Guy's Hospital. About half is grass and half arable; there are about 44 acres of hops. I farm 344 acres here and have another farm at Huntington about the same size as this; the land is all rather stiff. We have a sufficient supply of labour within easy access. Cottages are usually let with the farm. I have six with my farm; that is not sufficient to supply me with all the labour I require. I have great difficulty in getting women to come out to work. I make a stipulation with those who do occupy my cottages that they shall come when I want them, but they always make some excuse. The work which they dislike most is apple picking because it is cold work; they do that by the day. They rather like turnip cleaning, because they can go out for two or three hours a day for that work. Boys are wanted for a good deal of work in the hop gardens, because the horses must be led between the poles when at that work. I had rather not have boys younger than 12 except for bird-minding.

There is a school in this parish under a mistress; it is quite in the centre of the parish and accessible to all. I certainly think that all should be taught to read, write, and cypher, but I am not prepared to make any recommendation as to how that could be

carried out, and I fear that a compulsory law would meet with opposition. The cottages in this neighbourhood do not contain sufficient accommodation, but they are not crowded and are well situated with reference to the work to be done.

I employ 12 regular men besides my bailiff; I board none in my house. My shepherd's wages and allowances are,—

	s.	*d.*
11*s.* per week=per annum -	572	0
3*d.* per head allowed for lambs (say 200) - - -	50	0
Shearing 360 sheep at 1*s.* 6*d.* per score = - - - -	27	0
Shearing 180 lambs at 6*d.* per score = - - -	4	6
Money given in lieu of pig= -	30	0
102 lbs. of bacon given at (say) 6*d.*=	51	0
Extra money in harvest= -	30	0
„ „ haymaking= -	20	0
Thatching (say)= - -	15	0
Cider (2*s.* per week)= - -	104	0
Potato ground (25 score at 6*d.*) =	12	6
Total - - - - -	916	0

= 17*s.* 8*d.* per week.

He has five children, three of whom work for me, and those three and his wife earn on an average 4*s.* 6*d.* per week. No farmer about here keeps a regular shepherd except myself.

My carter has 11*s.* per week and his earnings average about 13*s.* per week besides his cider. My best day labourer has 10*s.* per week summer and winter, and his earnings average 13*s.* 6*d.* per week besides his cider. Of the remainder of my day labourers three of the best earn on an average 12*s.* 6*d.*, and three of the worst earn 11*s.*, besides their cider and potato ground. I give all my men who have no piecework 30*s.* extra for harvest and 20*s.* extra for hay making. I use mowing and reaping machines, and therefore do not require extra men except sometimes for hoeing. I employ five boys; those who are big enough to drive plough earn 3*s.* and little boys who scare 1*s.* 6*d.* per week. I do not want to employ boys under 11 or 12 years of age regularly. Possibly I may pay rather higher than some of my neighbours. I make no distinction between old and young men, some of the others do.

[I visited the cottages on the farm; they were decidedly very bad; most of them were made of wattle and dab, and thatched; the living room tolerably spacious but very low and unceiled; one or two bedrooms upstairs in the roof, and sometimes one opening out of the sitting room on the ground floor. Good gardens; rent usually 4*l.*]

Sellack.

16. *Mr. Thomas Duckham*, Baysham Court, occupier of about 270 acres (about 120 grass).—The soil in the neighbourhood of Ross is light and well suited for growing turnips and barley, but no hops are grown there. The farms vary a good deal in size, but it is exceptional for them to exceed 300 acres. The old red sandstone formation is not suitable for hops; the four course system of cropping usually prevails on it, and the six course on the clay land of the county. I employ women to a small extent; their usual employments are stocking turnips (*i.e.* pulling out the roots when the sheep have eaten the upper part of the bulb), cleaning turnips, weeding the corn crops, cleaning the pastures, haymaking; in harvest they tie up, but I think I never saw a woman reaping here, reaping machines are now coming into very general use; after harvest they are employed in potato and fruit picking. No potatoes are grown for exporting. In winter one woman is generally employed with the threshing machine to cut the bands; steam threshing machines are generally used. I generally employ three women when there is work to be done, but never have any extra women. They are supposed to breakfast before they come, and commence work at 8 o'clock, dinner at 1 to 2, and leave off at 6. Their pay is 9*d.* a day without cider, except in busy times; they are the wives of my labourers. I employ boys from the age of 10 or 11. I only employ one at present; he is employed to assist the cowman, shepherd, or carter, but boys are not much required to drive horses on the light land. In my neighbourhood two horses with reins are usually employed for ploughing; boys are required to drive on the stiff land where more than two horses are used to plough. It is very rare that a boy is employed at weeding, &c. with women. Beans are sometimes but rarely dibbled, but no other crops. Boys and sometimes girls are employed to frighten birds, but not much. My opinion is that boys should not be taken to work until they are 10 years of age; that should be the minimum. Boys as well as girls are employed in fruit picking; that is sometimes day and sometimes piece work. After fruit picking is over boys under 12 or 13 are not usually wanted until the following March. Boys usually get about 2*s.* 6*d.* a week when they first come to work. I don't think that women or children do any work which is physically injurious to them. I think that as a general rule the agricultural children attend schools well; the value of education is becoming so well known among agricultural labourers that they make efforts to obtain it.

As a general rule cottages are let with the farms; the usual rent of cottages is about 5*l.* a year, but farmers let them at 1*s.* or 1*s.* 6*d.* a week.

Labourers' wages are usually 10*s.* a week. Cider is always allowed; two quarts per day during the six winter, and three quarts per day during the six summer months; my waggoner gets 11*s.* and house and large garden rent free. All my cottages have five rooms each. Cowmen and shepherds have the same wages as waggoners.

Some of the old-fashioned farmers board two or three indoor servants, but the practice is fast wearing out.

There are statute fairs in all the small market towns, but they are not used as much as formerly.

During the harvest we give 1*l.* in addition to the ordinary wages, *i.e.*, 5*s.* per week; they are allowed some victuals besides.

Withington.

17. *Mr. W. Taylor*, occupier of about 1,000 acres, of which about half is grass, and more than 50 acres of hops, partly in Ocle Pitchard, Preston Wynne, and Marden.—I employ about 30 men, and occasionally boys under 13, but none regularly. I have three now under that age minding cows, and I may employ them for that and other light occupations for about two months in the year; that is in addition to the work they do with their parents, such as fruit and hop picking. The soil here is a stiff loamy clay, but we always plough with a pair of horses, and don't require boys to drive. The women I employ vary in number according to the work to be done; all whom I employ (except those who come during the hop-picking) live in the village, and during that season a number come to work for me from the black country. The hours of work for women are from 8 to 6; they stop at about 9·30 to "*bait*," and again at 1 for dinner. As a general rule the supply of labour in this parish is sufficient for the demand, but I usually employ four or five men for hoeing in the spring and summer who come from Stourbridge.

Women's wages when at day work are 8*d.* or 9*d.* a day, and 1*s.* in hay time, and 1*s.* 6*d.* per day for tyeing in harvest. They always have cider, one quart a day, except in harvest, when they have as much as they like.

Fruit picking is done by the bushel or load, at 1*s.* per cartload or 20 bushels.

My shepherd gets 12*s.* and three quarts of cider per day; house rent free; 10 stones (12 lbs. each) of bacon, in lieu of keeping a pig; 28*s.* extra for

Herefordshire.

Mr. Norman.

A. i.

harvest, and 6*s.* for haymaking, and 21*s.* extra for lambing season; potato ground worth about 10*s.*, and wood worth 15*s.* My shepherd also attends to my horse when I am out, and has his supper on those evenings; the waggoner does not get quite as much as that. The ordinary men get 10*s.* a week (it has been 11*s.* until this last winter). They do the hop work by contract; that includes the throwing down, cutting, spreading, and pitching the poles, hilling up and stripping the poles after the hops are picked; that is done for 24*s.* or 25*s.* per acre. Each man can take about 3½ acres; that occupies them about 45 days. These men cannot be spared to hoe. In harvest time they have 2*s.* 10*d.* a day for every working day in August, without reference to whether the harvest is going on or not. In hop-picking the pole pullers who are my own labourers get an extra 1*s.* per week; there are two dryers, and they get an extra 22*s.* a week and their maintenance. The baggers earn about 4*s.* a day (at 6*d.* a bag) and maintenance. The measurers who are my own men get an extra 10*s.* or 15*s.* All the men to whom I don't allow bacon have a run on my meadows for a pig, and potato ground free. I send about 20 miles to meet my hop-pickers; there is some bread and cheese and a barrel of cider sent in the waggon, and during the picking each picker has three pints of pea soup and three pints of cider a day; I consume 150 hogsheads of cider per year.

Women have also opportunities of earning extra money by making and mending sacks.

WHITNEY.

18 (*a.*) The *Rev. H. Dew.*—There is a mixed school here under an uncertificated mistress. There are about 40 in attendance. The fee is 2*d.* a week; it has lately been raised, and since it has been raised the attendance has been more regular.

The are only about seven women in this parish who go out to field work, and they don't bring out their children to help them.

The two principal employers of labour here don't give cider, except in harvest time.

I farm 70 acres, and I employ four men. I pay (1), 12*s.* a week and a cottage; (2), 11*s.* 6*d.* a week without a cottage; (3), 10*s.* a week without a cottage; and (4, and old man), 9*s.* without a cottage. I never allow drink; in harvest time I give the men their food, but no extra money. When I employ extra men by the day I usually give them 1*s.* 8*d.* a day besides their cider.

Evidence substantially similar to the above has also been received from the Rev. W. C. Fowle, Brinsop; Mr. T. Powell, Goodrich; Mr. Sessions, Hampton Court; Mr. J. Davis, Kingston; Mr. H. N. Edwards, Broadward, Leominster; J. Rankin, Esq., Much Dewchurch; the Rev. W. E. Edwards, Orleton; Mr. B. Brunsdon and Mr. J. Bennett, of Ross; and Capt. M. K. Power, Mr. T. S. Bradstock, and Mr. T. Theyer, Walford.

SURREY.

Surrey.

ABINGER.

18 (*b.*) The *Rev. J. W. Powell*, rector of Abinger.—The parish of Abinger is nine miles long and half a mile broad. A portion of the parish is now separated into the ecclesiastical district of Oakwood, which embraces also a portion of Wotton. Females are hardly ever employed in the fields in this district; they are a little employed at haymaking, but they do no hard work. There is a great deal of woodland; that gives occupation to men and boys in hoop shaving in winter; as a general rule all men understand the work in the woods; the wood cutting is not done by piecework. There is no employment for women and children in the woods. There is no continued employment for children at all until they go out with the horses. There is a school at Abinger, and also a school at Oakwood; that at Abinger is very central for the Abinger district; the most distant part of the district may be two miles from the school. There is also a private school kept by a woman, who is paid 3*d.* a week by those who learn to write, and 2*d.* by those who learn to read only. There are from 20 to 30 scholars at that school, and the rent of the schoolroom is paid by a friend. There are eight different churches to which the inhabitants of my parish can have access as easily as they can to mine. The rent of cottages is about 4*l.* a year. The principal landowner, who owns most of the cottages, gives 1*l.*'s worth of groceries, and bread, meat, &c. to the value of from 2*l.* to 3*l.* to every tenant of his cottages each year, and all the old people are well cared for. I think the children leave school at about 11, as young as they do elsewhere. They leave at particular times of the year, for a few weeks at a time, after the age of 8. There was a night school here last year, which was attended by about 24 scholars regularly, most of them about 18 or 19; some came 2½ miles to attend it. No women or children are employed in barking trees. I think it is desirable that children should remain at school longer than they do in order to provide for their moral training; but the instruction, *i.e.*, book learning, which I support on principle, can never be obtained without compulsion. I am not opposed to compulsion in principle, but think it impracticable.

ADDINGTON.

18 (*c.*) *Mr. Marmaduke Walker*, occupier.—I farm 1,200 acres (200 acres are grass and 150 are wood), the rest arable. I employ boys at the age of 12 or 14, all the year round, to go with horses and other light jobs, under that age I employ them occasionally. They are then useful to scare birds, and (from June to September) to single turnips and make bands in harvest, also in tending sheep, cattle, &c. Girls usually go out with their mothers; their mothers take the jobs and bring the children with them, and if the mother takes work by the day she usually brings her children to look after them. I think I employ 16 women all the year round, and perhaps 20 all through the summer, 40 in harvest. In summer they hoe turnips and weed; in harvest they follow the mowing machine and lay the corn in sheaves; the children make bands. In winter they work with the threshing machine; 12 or 14 are required to supply the feeder and take the straw away and tie it up, they pull turnips. I keep 2,000 sheep and 120 bullocks. My labourers live near; I have 12 cottages on my farm, with 4 rooms each. Women have 6*s.* in summer and 9*s.* in harvest; men 12*s.* in winter, and 20*s.* 8*d.* for five weeks in harvest; children 6*d.* to 8*d.* a day; cottages always let rent free and fuel is carted free. The hours of work are from 8 to 12 and from 2 to 6. Big boys who have 10*s.* a week to look after the horses have to be there at 6 a.m.; our horses no out from 7 to 12 and 2 to 6. There is no unhealthiness among women or children. There is a free school at Addington, where children go in winter. The women I employ are almost all Irish, I think no English go out, they are all above it. Many Irish families have settled here for some years, and saved money and have then gone to America; I think one family saved in 7 or 8 years 70*l.*; many have saved 50*l.* There is an infant school at Chelsham. Children all go to school except when at work. I have built 12 four-roomed cottages. I generally let 2 rooms to a man and wife and if there is a large family I let the whole cottage to them; they depend on tanks for water; I had to cart water this year [1868]. All the cottages have gardens. Labour cost me 1*l.* an acre a year. Nobody about here employs women and children to the same extent as I do.

ADDLESTONE.

19. The *Rev. W. Pidcock.*—I have been in this district, which was a portion of the parish of Chertsey, about 23 years. Chertsey was formerly one individual parish. It now contains, besides this parish, the ecclesiastical districts of Ottershaw, Botley's, Lyne, and Longcross. There is a school in each of these districts; the population has increased very considerably. Women are not much employed in field labour, not so much as to create an evil. The work they are principally employed in is picking potatoes and bunching carrots. Two farmers in this district have lately taken to growing garden produce, peas and carrots; many women and children are employed in picking peas, but very few of those who are so employed belong to this district, they usually come from a distance. We have had a night school; we have had about 35 to 40 in ordinary attendance. It is open for two nights a week from October to February. I have always had to lament a lack of help at my night schools; I find that if you can give the scholars plenty to do, they will always attend regularly. There is one hamlet in my parish (Woodham) which contains 18 cottages, that is $2\frac{1}{2}$ miles from my school, but only $1\frac{1}{2}$ from Horsell and Byfleet; only two children from those cottages come to my school, but some go to Byfleet and Horsell. I don't think we are ripe for compulsory education at present, and I also think that education is now sufficiently appreciated. I advocate the early employment of boys in field labour in order that they may learn their business. The cottages about here are much crowded. The usual rent is 3*s.* 6*d.* or 4*s.* for cottages with four rooms; in the outlying hamlets it is 2*s.* 6*d.* or 3*s.* Very few men have far to go to work. The cottages have good gardens but there are no allotments. I don't think the farmers press the parents unduly in order to induce them to send their children to work. I think a dame's school might be maintained in most outlying hamlets. I stated one which cost at first 21*l.* a year; the woman who kept it had 6*s.* a week at first; I found that the children attended well and made progress. I have had no experience of itinerant masters. The ordinary excuse for keeping the children away from school is the want of clothing. Some of the parents are willing to pay extra in order to obtain a better education for their children; they sometimes send them to Chertsey, where they pay 6*d.* a week. I raised my price from 1*d.* to 2*d.* and none of the children left in consequence.

ALBURY.

20. The *Rev. G. R. Portal.*—I think that the education of the children is insufficient. I attribute the defect to the fact that they don't attend school sufficiently regularly before they to work. Many don't send their children to school at all. They keep them at home and send them to work whenever they can get a job; to some extent the large gardens are an inducement to the parents to keep their children at home. The main cause of the want of education is the indifference of the parents. They can always find something for their children to do, if they do not want to send them to school. There are not enough schools here. The parishes are very large, mine is 6 miles long; there is a school in every parish, but that is not enough. In my parish there are 4 or 5 hamlets, and there should be a dame's school in each, but the expense is too great to enable me to establish them; the payment should be made for results without requiring certificated teachers, or there should be one scale for certificated and another for uncertificated teachers; the payment in all the schools about here is 1*d.* until they write in copy books, and 2*d.* afterwards. I think a child could attend school advantageously at the age of 5, and if they attended regularly up to the age of 8 they would be so well grounded in the 3 R's that a night school would do the rest. I think that the labour should be prohibited up to the age of 9 or 10. The night school is the only mode which is practicable after the children begin to work. It is difficult to get children who know nothing to come to night schools; those who can read are glad to come and read amusing books. I am a guardian in the Guildford Union. The Public Health Act, 1866, is unknown and not enforced. The guardians are indifferent about nuisances.

BRAMLEY.

21. The *Rev. H. B. Power.*—I find that in my school the children who come from a distance attend better than those who live near. It is rather the indifference of the parents than the pressure used by the farmers that keeps the children from school. As soon as the parents find that their children can read and write they take them away from school, and the effect of having a good master and mistress is to cause the children to leave school younger than they otherwise would do, because their parents find that they make greater progress. Boys attend school up to the age of 10 or 11; a few leave occasionally before that age for scaring and dibbling and a few similar occupations, but they do not absent themselves to a serious extent.

There were no schools here when I came. I don't think many young persons are growing up in this district without being able to read and write; if they cannot it is their own fault. I think this district is well supplied with schools, and that they are well placed with reference to the cottages. I have attempted night schools, but they have not succeeded.

Letter from Mr. W. Drewitt, Lea Farm, Bramley.

22. I think the present mode of education as good as could be desired for children under 10 years, for which period the whole of their time should be given to it, after which they should be learning their trade, so to speak, which should be continued without interruption.

And I think the system of half-time, or so many months a year, though not injuring the farmer greatly, would be of very little service towards a boy's education.

A great deal might be done to improve the education and morals not only of the boys but also of men by a good system of night schools properly carried out, the time of which should never exceed an hour and a half, which carried on in a comfortable room would save many a man from the public house, and eventually the jail and ruin.

The best educated men are the best workmen, because they respect themselves enough to keep from the degrading influence of the beershop and public house. And the best means of improving the labourer's education is that which keeps in his mind all his school learning, and at the same time enables him practically to learn things daily required in his avocations, for which means no plan can do so much as night schools.

For instance, boys may be taught almost anything in the school, but put them on the farm, and in a year or two they have forgotten almost all they learnt.

In recommending night schools I speak from experience, and feel confident that if properly conducted they would be a great boon to the working classes.

BYFLEET.

23. The *Rev. N. L. Spicer.*—I think that the work done by women in the fields is very injurious to them physically; hoeing and carrot washing is too severe work for them. The standing so long in cold weather is injurious to them. I know of several women in my parish who, I think, have been injured by it. I am certain, too, that it has led to an immense amount of drinking among them. They fall into men's habits

Surrey.

Mr. Norman.

A.
j

from mixing with men, and go off to the public house directly their work is done. The field work absolutely unfits them for domestic duties; they don't perform their domestic duties. The infants are hired out at about 6*d.* a day, or are sent to the infant school when their mothers go out to work. I have an infant school. I am quite opposed to it in principle, but I am obliged to fall in with the practices of the neighbourhood. The children leave the infant school at 5. As a general rule the cottages of the women who go to work are less tidy than the cottages of those who do not. In my school there are only four children above 12 years of age. I think that labourers' sons stay at school until the age of 11; they are irregular in their attendance during the last six months. Every boy and girl who leaves school can read and write when he or she leaves, and only a small minority don't come at all. Men's wages are 13*s.*; beer is allowed in addition during hay time and harvest; women have 1*s.* 6*d.* a day in hay time, and find their own beer; children have 2*s.* or 3*s.* a week at first. Some of the cottages in the parish are at a great distance from the school, but the distance makes no difference in the regularity of the attendance of the children. I think that the small farmers don't appreciate education at all, because they have no means of educating their own children. Cottages are usually let by the quarter, but the rent is paid weekly. Cottages belonging to the smaller landlords are all let by the week. There are very few close parishes in this county. A few women may get washing to do, otherwise the whole family is dependent on the father for support. A little work is done in the cottage gardens on Sundays, and a good many cows are kept for the London market; these have to be milked; and boys scare on Sundays.

The education of the poor is clearly defective. I attribute the defect to the unwillingness to forego the children's earnings.

Camberwell.

24. *Mr. W. Barnes*, nursery gardener.—I have lived here as a nursery gardener during the last 17 years. I employ a couple of boys, aged about 14; they begin at 5*s.* or 6*s.* a week, and are gradually raised. I don't employ women; no women are employed in nursery gardens, and boys are not employed to a greater extent than I employ them. I am well acquainted with the cultivation of market gardens near London; I have occasionally had the valuing of them. All the severe work of the cultivation is done by men; the women's work is to collect the vegetables (which have been previously dug up by the men), to clean them, and to carry them to the carts to be packed for market; but no young girls or boys are to be found at work in the market gardens. The usual hours of work for women are from 6 a.m. to 5 p.m., but at busy times they often have to begin at 4 a.m. and go on until 9 or 10 at night, and to work on Sundays as well. The whole profits of a market gardener depend upon his being able to bring his vegetables as early as possible to market so as to secure the best price. All the work must be expeditiously done, and children cannot work expeditiously, and therefore they are not employed.

Most of the women who work are Irish; I should say 9 out of 10. Their usual wages are 6*s.* to 9*s.* a week, but when they work overtime they get about 2*d.* an hour for every hour they work overtime. Around Fulham and Hammersmith thousands of Irish men and women are employed in the market gardens, and in hard weather during winter they are thrown upon the rates. The busiest months are from April until September; after that the work becomes slack, but there is always something to be done during the winter. None of the women work at piecework. The women are old, strong, and healthy, although much of the work they do exposes them to cold and wet. There is no work done by boys or girls in the gardens (nursery or market) which causes them to leave school before the age of 14. I never employ a boy in my gardens who cannot read and write; if he could not do that he would be useless to me.

Carshalton.

25. *Edward Galtland*, foreman to Mr. Arnott, Woodcote.—Mr. Arnott farms about 550 acres; no grass; he grows a little lavender. This year he has grown 80 acres of potatoes, and about eight or 10 acres of green peas.

We employ women for weeding corn and potatoes, knocking dung, setting potatoes, and couching. In winter they sometimes work with the thrashing machine; about seven or eight work with the machine; they hand the corn into the machine, and collect the scattered corn from underneath. About seven or eight women are usually occupied in planting potatoes for about three weeks. We cut our corn by machinery, and the wives and children help the men to tie up; that job is done by the piece. After harvest the women rake, and after that digging potatoes occupies them for three weeks or one month. There is no constant employment for women during winter; they are occasionally employed for a day or two. We employ from seven to 20 women during summer. There are about seven who live on the farm, and the rest come from a distance; we set them on as we can get them. We plough up our potatoes. Our potato picking and weeding is done by the day. We have never had any women injured by machinery; some women are not strong enough for the work, but we cannot get enough men; we employ about four boys. We do not often employ a boy under the age of 12; if we do it is only for a week or two scaring birds. We plough by steam, and don't want ploughboys. We do not do much work by the piece. Men's wages are 15*s.* a week; women's, 6*s.*; and boys, 5*s.*, that is the lowest for boys as a general rule, although we had one boy to mind pigs after harvest at 3*s.* a week. Women work from 8 to 6 all the year round; they have one hour, 12 to 1, for dinner. Carters have 13*s.* or 14*s.* a week and a house which is worth 3*s.* 6*d.*; each man has charge of one pair of horses. We have 11 cottages on the farm; that number is sufficient to supply us with labourers during the winter, but not during the summer. The children who are big enough go to Carshalton to school (distance two miles); they stay there until they are 14 or 15. Perhaps a few more boys are employed where they plough with three or four horses, which some people about here do.

26. *Mr. C. Simm*, Carshalton.—My brother and myself grow about 60 acres of medical herbs here. We cultivate altogether about 160 acres. Probably about 300 acres of medical herbs are grown in this district altogether, and about nine-tenths of that extent consist of mint and lavender. Women are employed a little in the spring for pulling up the young plants in the nurseries before they are transplanted into the fields; that work lasts one month or five weeks; they are paid 1*s.* 3*d.* or 1*s.* 6*d.* a day with one pint of beer. They are sometimes employed with their husbands in cutting the crops; but there is no other labour in connexion with this cultivation in which they are employed. Very few children are employed; they sometimes work with their parents, but there is no special employment in connexion with the herbs which occupies boys.

Capel.

27. *Edward Kerrich, Esq.*—I have been chairman of the Dorking Board of Guardians for 30 years; I am well acquainted with the cultivation of the land and with the mode in which labour is employed in this district. I formerly farmed 150 acres of land. There are no gangs in this neighbourhood. When engaged in bean or pea dibbling a man will bring three or four children to work with him; but there is no other work in which children are employed to work under the control of a man who hires them and superintends the

work. The children who are so employed are generally small. Women go harvesting with their husbands, they help to tie up and some of them fag a little; they make hay. I have never known a woman take a job at harvest by herself. I have seen a woman occasionally pull turnips in winter, but that is very rare. Women are so little employed that I cannot say whether the employment is physically or morally injurious to them. I cannot imagine that what they do can injure them. It is very rare to see a girl under 16 or 17 at work. I have occasionally seen a girl or two tenting birds. Very few boys under the age of 13 or 14 are employed; they used to begin to work younger than that, but now they remain at school. They go with the team, scare birds, tend cows, and in winter go to copse cutting. Copse cutting is piece-work, and is paid by the load or the 100 of each article. That work lasts from September to March or April; hoop shaving and peeling bark lasts a month or six weeks longer. The woodmen are then employed in mowing the hay and at harvest. The boys brush up and cut the small stuff. Most of the men in this district can cut wood, but some are far more dexterous than others. Men's wages are 13*s*. Carters and shepherds are 15*s*. or 16*s*. Some farmers give their carters 1*l*. or so in harvest, but that is not a general rule. Carter boys get from 5*s*. to 8*s*. a week; they come at 5 a.m. and leave at 6.30 or 7. I think the poor are better off in this district than in any other in the country. This is a purely agricultural district, but many men go from here to the metropolitan district. Cottages are very insufficient. You may make the internal accommodation as comfortable as you like, they will always take in lodgers. The accommodation is better now than it was formerly; the owners are of all kinds. The rent for cottages with two or three bedrooms and gardens is about 5*l*. a year. The guardians never overlook a case of overcrowding; we find it difficult to come at, it is difficult to know who is living in the cottage. I approve of the Act of 1866, but I think it is defective in making nobody but the person who originates the nuisance responsible for it. I think that any person on whose land a nuisance is found should be liable for it, and should have power to proceed against the person actually causing the nuisance. I think that the education of the poor is quite sufficient. No cottages in this district are more than two miles from a school. A man who worked for me with a boy at copse cutting for 10 weeks earned on an average 23*s*. a week.

Chobham.

28. *Mr. F. Daborn*, farmer.—Boys are not of any use to farmers until the age of 10, and are not of much general use until the age of 12. I pay my carter 15*s*. (he also has 6*d*. every time he goes away from home, and that amounts to about 1*s*. 6*d*. a week). My carter, two under cowmen, and shepherd have to be here three and a half hours each Sunday. No women are employed, and boys very little until after the age of 11 or 12; they earn 4*s*. or 5*s*. a week at that age; that is more than they are worth, but we give it to them in order to retain them on the place. The boys used formerly to lodge in the farmers' houses, and they then came in at 7.30 or 8, now they spend their evenings at the public houses. An Act should be passed to compel the children to attend school during a certain number of years, and to abolish half the beer houses. Day wages are about 13*s*.

Clandon.

29. *Mr. Richard Drewitt*, agent to Lord Onslow.—I have lived here 19 years. I formerly farmed from 400 to 700 acres of land at Pinford. Women are only occasionally employed; on a farm of 400 or 500 acres, perhaps four or five women will be employed, commonly about 9 months a year. They are employed in raking and spudding couch grass, weeding corn, haymaking, and harvesting. After harvest they are employed in picking tuffets off the sown wheat. They usually work from 8 to 5. I don't think that the wife's work is of much assistance to the family except during harvest. I am well acquainted with the country for 10 miles round this place, and what I say now applies to all that district. The farms are usually from 200 to 500 acres in extent. I don't think that more than one-fourth of the women go out to work at all, except in haytime and during harvest. Girls very seldom work in the fields, and it is not at all desirable that they should. Boys usually remain at school until they are 12; their chief employment is to drive plough; they are useful for that purpose at the age of 12; those employed in bird-scaring and sheep and cow tending are usually 12. They earn about 3*s*. a week at that age. Most boys can read and write; I can name one family who cannot, but that is because they will not go to school. Lord Onslow subscribes 10*l*. a year to the schools in each of the parishes in which he has property. It is a great mistake to suppose that all labourers earn the same; in order to be a good agricultural labourer a boy must begin to work when young, but I think 12 is young enough to begin, except during harvest. Gleaning causes more immorality than any other kind of work. The children go out 50 or 60 together to get so many handfulls, and they go and steal the corn in order to complete their handfulls. Lord Onslow lets about 1½ cottages per 100 acres with the farms. He charges his tenants 3*l*. per cottage, and I endeavour to bind the tenant to let them to the labourer for the same sum as they pay themselves, but I cannot get that carried out. Lord Onslow charges 50*s*. a year for the cottages he lets to the labourers. The farmers frequently let their cottages to others than their own labourers. All the cottages have gardens of from 30 to 60 poles. There are some allotments in Clandon. Every labourer who has only 20 poles of garden has an allotment of quarter acre for which he pays 5*s*. a year. The usual rent of the land is about 25*s*. an acre. The allotments are let subject to the condition of the occupiers keeping sober and going to church; they may not grow wheat on more than a quarter. The farmers do not object to the allotments. Almost all the labourers keep pigs. The cottages are conveniently situated with respect to the work to be done, but there are not enough of them. I built two cottages for 100 guineas each, with two bedrooms and a small sleeping room for children up stairs, and sitting room, kitchen, and scullery down stairs; that sum included the water supply, which can be easily obtained here, and fences. On Sundays the shepherd is wanted during half the day, sometimes more; the horse keeper and stockman three hours each. I think a good labourer will earn 50*l*. a year here; but here he can earn 30*s*. a week for 6 weeks by stripping bark. I have three under me now who earn that amount; most men will earn about 40*l*. I think it is desirable that boys should go to school during a portion of their time after they begin to work, but they can only devote the evening and Sundays to it.

Cranleigh.

30. *Mr. Thomas Street*, Mannings Hill Farm.—I was born here, and have lived here all my life. I farm 190 acres of my own land, and hire about 70 acres besides. I have only about 20 acres of wood and about 30 of grass. I can employ women when I can get them, but they don't like work. 10 years ago I used to pick 80 loads of stones by women's labour a year, and they used to bid for the work This year I have only picked about 20 loads. Women used to trim roots in winter, but they won't do that now; all they do now is to weed corn, pick couch, make hay, and help in harvest. Many won't come out to harvest at all; they do nothing in the fields here after harvest. There are no hops here. They are usually paid for weeding and couching 10*d*. a day, and 1*s*. during haytime and harvest. Women never work by the piece, except during harvest, when they work with their husbands. The ordinary hours of work are from 7 to 5 for men all the year

Surrey.

Mr. Norman.

A. i.

round, and from 8 to 5 for women. Those who work for me are usually labourers' wives. I have never had more than three women working for me at one time this year. I employ five boys under 18 all the year round. I don't think they are of any use under the age of 13; I may sometimes take one of 10 out of charity. I feed my turnips on the land. In winter I want perhaps two boys to help the shepherd. In summer we have our stock on the commons, and want boys to tend them; they also help a little in the service of the house; they begin to drive team at about the age of 13. We don't want them for bird frightening much; we never have them to scare after sowing, but sometimes a little before the corn is ripe. Boys are not employed to single turnips, a man does that. Boys' wages begin at 6*d.* a day, and stop at 1*s.*; 21 years ago I gave 2*s.* 6*d.* for a boy to drive plough; now I give 4*s.* or 4*s.* 6*d.* The hours of work with the horses are from 7 to 4; they return home for one hour for dinner; they have their breakfast before they go out. The ordinary hours of labour are from 7 to 5. The boys are almost always employed either in looking after stock or with the team. Sometimes I apply to the parents for boys, and sometimes the parents apply to me. The boys are healthy. I pay my men 12*s.* a week, the shepherd and carter have 15*s.* I think that the boys who have been to school conduct themselves better and are therefore more useful to me than those who have not. I think that those who stay away from school, stay away because they live too far from the school, *i.e.*, about 2 miles, and besides, the parents are not always anxious about it. We cannot get maid servants as easily as we could. I could not spare the boys who work for me at all during the day time. I think education is very desirable, but a boy ought to be educated before he goes to work at all. The boys are easier to manage after they have been to school, and are not discontented. This parish is 6 miles long, and some parts of it are more than 2 miles from the school; my labourers all live within 1 mile of my farm. Cottages let for about 80*s.* a year. I have three carter boys in the house; I board them. They have 9*l.*, 6*l.*, and 4*l.* a year, besides their board and lodging. I hire them for the half year. They are obliged to stay in-doors during the evening. Formerly all farmers used to board boys in their houses, but few do it at present. I find more difficulty in getting boys to come than formerly. I send them to school in winter. The cottages have gardens of from 20 to 40 poles. There are no allotments. Women and children do not do much work in the gardens. The cottages are not crowded. I think that all the farmers about here manage their land in the way I do.

Dorking.

31. The *Rev. J. S. Bright.*—I am a noncomformist. I know the neighbourhood of Dorking well. There are plenty of schools, in fact there is a competition among the different managers to procure the attendance of the children at their respective schools. This is not a purely agricultural neighbourhood; but knowing what I do of the condition of the poorer classes generally, I incline to think that they can be educated by compulsion only. I am inclined to think that nonconformists would object to compulsion, not from fear of objectionable doctrines being taught, but because they object to anything which infringes their independence. In the large parishes compulsion would be impossible, because you cannot contend with space. Children could not come great distances to school. The cottage accommodation is everywhere inadequate.

Farnham.

32. *Mr. John Nash*, auctioneer, land surveyor, and hop planter, Farnham.—I have lived here all my life. I farm about 20 acres of hops and 10 acres of other land. In the parish of Farnham there are 1,500 acres of hops, and about 10,600 acres altogether. I have about 120 hop growers. The hop district extends about 12 or 14 miles south-west and about 3 miles north-east. In that district there are about 3,500 acres of hops. I am well acquainted with the general employment of labour in agriculture in this district. Farms are small, there may be 10 or 12 over 200 acres; the remainder go down to as low as 8or 10 acres. Women are employed in hop tying, (*i.e.*, tying the hops to the poles); they commence about the beginning of May; one woman will tie 4 acres at 10*s.* an acre. They bring their children to help them; a woman working alone would tie 4 acres in about 3 or 4 weeks. They usually work from about 8 a.m. to 4 or 5 p.m.; don't work in wet weather; we always find plenty of women to do these jobs, they consider it healthy. Very often all the labour necessary for the cultivation of hops is contracted for at 4*l.* per acre. That includes everything except "extra-becking" (*i.e.*, extra labour which may be necessary to remove the weeds) and ladder lying when the hops are blown off the poles. That work will employ the man who undertakes it constantly from January to August, and one man will do 5 acres, and in addition will have a few days to spare. He does it all himself. If a man has a son to help him he will take more land, but the women never do hard work, altho' they sometimes help their husbands in laying out the poles, which is included in the contract work done for 4*l.* The labour costs about 4*l.* 10*s.* per acre except the picking. Young boys and girls under 12 are useless for the cultivation of hops, and are scarcely ever employed at all under that age. The picking employs about 7 or 8 persons per acre upon an average for about three weeks. The work is done by the piece, we pay usually about 2½*d.* a bushel. Each family take their own money; no gang system; never heard of a contractor undertaking to get hops picked by the acre at a certain price. Young children are useful for picking hops, the whole labouring population turn out to pick hops immediately after harvest. A good picker will earn 2*s.* 6*d.* or 3*s.* a day; I have known a large family earn about 3*l.* or 3*l.* 10*s.* a week. Very few Farnham men pick the hops; they are employed in other ways at that time. There are tramps who come to assist in hop picking, but nearly all of the labour is supplied by the inhabitants of this locality. Women do no hard work in agriculture. Children very little employed. They do not go to drive ploughs until the age of 13 or 14. There is hardly anything for them to do before that age. They go to school; there are plenty of schools. There is an ample supply of cottages; average rent is about 2*s.* 6*d.* a week; all have gardens of 20 to 40 poles. There are a few allotment fields, but it is rather the exception to have allotments. The new cottages are good, the old inferior. Wages are 12*s.* or 13*s.* a week; women at haymaking have 1*s.* a day and beer allowed. The cottages are owned partly by the landowners, but a majority by other persons; many labourers have cottages which have been built on the waste. The cottages owned by the proprietors are about the same in quality and let at the same price as those owned by others. I have built several cottages with 3 bedrooms; they cost me 120*l.* each and let for 3*s.* a week with gardens. The commons are most of them enclosed now so that the cottagers cannot cut fuel as formerly, nor have they been compensated for the loss.

33. *Mr. Colin Carmichael*, bailiff to Mrs. Paine, Dippenhall farm.—I have been here 5 years and have the management of 1,000 acres of land, 200 of which are hop ground. I employ 23 women now, and about that number all the year round. That was not the practice here before I came, but I find women at 1*s.* a day cheaper than other labourers. In hay time we employ 60 women. I am obliged to keep very friendly with the women because in May I want 60 for tying hops. The general employment of women is as follows:—In spring they spread manure and hoe, in summer and autumn they are employed at haymaking, harvest, and hop picking, and in winter they pull and clean turnips and strip hop poles. My neighbours don't employ as many women as I do. I

don't employ any girls under 12; sometimes the mothers bring them to help them when they do piece-work. I have about 30 boys under 18; they do the same sort of work as the women, but don't tye the hops. The boys are not well educated, some we have who have never been to school. I won't employ them younger than 12, but their fathers take them out to work with them under that age when they do work by the piece. The cause of their defective education is because their parents will not keep them at school long enough or regularly enough. My men's wages last week averaged 1*l.* a head. The boys would be far more useful to me if they were better educated. I think there should be a law requiring a certain amount of education from those engaged in labour. I would not allow any boy to be employed in the fields under the age of 10, and between the ages of 10 and 12 they should go to school in the winter quarter. If that were done they could devote the whole of their time after the age of 12 to their profession. I think that boys might go to school for 2 or 3 hours in the morning before they go to work. I don't think that would at all interfere with the arrangements of agricultural labour. Education renders them far more intelligent in every way, and particularly more competent to use machinery. It is all nonsense to say that education makes them discontented; I have no difficulty with the best educated of my men. In hop-picking we use 600 bins, and they usually employ 2,000 pickers. We engage pickers by the bin, and those who take the bins bring assistants, and the actual number employed depends upon the number of assistants they bring. It costs me 1*s.* 7*d.* per bin to get the pickers, and for refreshments on the journey here. I send waggons for 10 or 20 miles all round to bring the people in, and I send them back after the hops are picked; we have sub-agents in all the parishes round. I send out men who go round the country to collect pickers, I pay them 4*d.* for every bin for which they provide pickers; and they pay something, I believe 1*d.* a head, out of their money for the pickers the sub-agents can provide them with.

Frensham.

34. *James Simmons, Esq.*, Cherrimans, Shottermill.—I have lived here all my life. I farm 100 acres now, formerly 400. I don't think women work in sufficient numbers for it to have a bad moral effect upon them. It is the exception to see a girl in the fields. I think children could be spared up to 11 or 12 from field labour without increasing the expense of cultivation; but a boy should begin to work early in order to learn his business and to enure him to agricultural work. I have employed boys who have been in the workhouse up to the age of 13, and they were of little use. Most boys can read and write when they leave school; they do not take much trouble to keep up what they know. I don't think any good could be done by passing an Act of Parliament for the purpose of introducing compulsory education. The labourers are too independent. Most of the commons around here have been enclosed. Before the enclosures the squatters on the commons and cottagers depended upon the commons for their fuel; since the enclosures they have not been allowed to cut the turf, except by special permission; but their condition has nevertheless improved, because there is more regular employment than formerly. They can usually keep geese, but bees pay best. The parish of Frenchham is nine miles long. There are four schools in different parts of it. My cottages are let for 1*s.* 9*d.* per week; that is rather cheap. A five-roomed cottage here costs about 120*l.* for the building alone. I do not approve of the Labouring Classes Dwelling House Act. It is too complex, and the plans on which the work is done are not always the best for investment.

Guildford.

35. *Mr. Thomas Drewitt*, Picard's Farms.—I farm 550 acres; about 100 are poor sheep walk. I have occupied it for 50 years. I employ a few women, but not so much now as formerly. Women are seldom employed in pulling up turnips for storing, but they sometimes thin them in winter. Very few girls work. We have about six or seven boys, beginning at the age of 11 or 12, at work all the year round. We have one boy with each team, and we want one or two extra boys to lead the horses when the teams are divided and placed in separate carts or other farm implements. These boys are also wanted in the winter to help the shepherd, to thin turnips, and to prepare food for the sheep and cattle. Not many employed younger than 11 or 12. Some farmers employ them for scaring birds, but I always employ a man with a gun for that purpose. I rarely employ boys younger than 11 or 12. I give my youngest boys 2*s.* 6*d.* per week; their wages are increased to 7*s.* or 8*s.* I give women 1*s.* a day and beer during haytime, and 10*d.* a day at other times. Boys usually apply for work when they want it. Men are wanted on Sundays to feed horses, sheep, and beasts, but for no other purposes. The boys get more saucy when mixed with other boys at school than when at work. Day wages for men are 12*s.* a week. I think a good man who works by the piece would earn 2*s.* 6*d.* a day in winter and 3*s.* in summer, and would find piecework to do almost all the year. A great deal of hoeing, all mowing, reaping, winnowing, and hedging are done by the piece; piecework is usually taken separately, but occasionally two or three men will undertake a piece of work together. Meal hours are half an hour for breakfast at 8; dinner at 12, one hour; and if they work late, half hour at 4. In winter they breakfast before coming to work and do not stop at 4. All my men live within one mile; usually four or five cottages are let with a farm of the size of mine. My own farm cottages let at 1*s.* a week, that is the usual rent for cottages let by the farmer to his labourers; other cottages are about 2*s.* a week. They generally have gardens of from 20 to 40 poles. They dont grow corn in the gardens. Some labourers have allotments, not more than a quarter of an acre. There they grow vegetables, and sell some of the produce. They keep pigs where allowed to do so, but the sanitary inspectors have shut up the pigsties in many instances. I think it answers to a labourer to keep a pig where they have allotments. They feed the pig chiefly with potatoes. I don't allow my cottagers who live on the farm to keep pigs, because I would not expose them to the temptation, but I give them four loads of dung a year, and sell them 30 stone (8 lbs.) of pig meat at 25 per cent. under the market price. My shepherd and carter have 15*s.* a week. I think that all the boys have been taught to read and write and do a little arithmetic. I don't think that the labourers value education very much, because I often find that they keep their children at home when they might send them to school. A certain number of cottages are always wanted on the farm, and I think about one cottage per 100 acres sufficient on farms over 400 acres, but the proportion must be larger on smaller farms. I think my labour costs nearly 2*l.* per acre, including harvest. No statute fair about here. I am not aware of any in the county. My farm is principally on the Hog's Back, but the mode of cultivation is the same both north and south of the Hog's Back until the wealden clay about Dunsfold is reached. A family often earns 10*s.* a day by reaping.

Godstone.

36. *Mr. W. Chater*, relieving officer and nuisance inspector to the Godstone Board of Guardians.—The cottage accommodation in my district is by no means sufficient. The defective drainage forms the principal ground of complaint. I meet with no difficulty in carrying out the present law; when I have found a cottage overcrowded, I have occasionally complained to the inmates, and always with success. Near Farley I found three cottages, in which 27 persons lived, supplied with only one privy. Power should

Surrey.

Mr. Norman.

A. i.

be given to the magistrates to supply the necessary accommodation where the landlord failed to do so.

LIMPSFIELD.

37. *Mr. Henry Cox*, landowner.—Cultivation is chiefly arable, one-third grass, 70 or 80 acres hops. I have farmed 300 acres of my own land (one half grass), for 40 years.

Young boys about 8 to 12 are employed at crow, cow, and sheep keeping, and weeding; sheep and cattle are turned out on the commons; sheep require a keeper. Children are employed by their parents to weed. At 12 they they are fit to go to plough. I think it a great hardship for a boy to be put to drive plough under 12 with a stranger, that does occasionally happen. I used to have two or three boys always running about. I do not employ extra boys at particular times of the year. There are upwards of 800 acres of common in Limpsfield.

Girls are hardly ever employed.

Women are very little employed, except in weeding, hay making, and hopping; families get their children to service as soon as possible. Women and children never have more than a mile to go to work; they work from 6 to 6 in summer and during daylight in winter. Carter's boys have to come at 5, and the only case of hardship which I know is where boys put to plough under 12 years of age with strangers; there may be a few cases where that happens in Limpsfield. They work from 7 p.m., but after 2 o'clock the work is very easy. Carter's boys breakfast before they come. I cannot say whether any restriction is desirable, but I don't think any farmer would be worse off than they are now if they employed no boys under 12; I think a boy should be permitted to work with his parents under that age.

There are plenty of schools here; I don't approve of the education given, I don't think the children are taught to think, they only give answers by rote. It is impossible that more can be done for education than is done about here.

Men's wages are 13*s.*; a great deal of work done by piece. All threshing is done by machinery; the machines are attended by 17 or 18 hands, about 2 of whom are women. I don't remember any accident happening to women. There is plenty of hop-picking here for the inhabitants, in fact the residents are not quite able to do work.

My labour always amounted to rather more than 1*l.* per acre, that did not include hop picking and drying, but did include the hop cultivation.

I think two cottages per 100 acres sufficient here.

[I am indebted to Mr. H. Cox, for the following particulars as to the expense of cultivating hops and the average rate of day wages each year. Mr. Cox was a hop grower himself for many years, and the following particulars are the result of his own experience.—F. H. N.]

Estimate of the Expense of cultivating an acre of Hops at Trevereux, Limpsfield, for the year.

	£	*s.*	*d.*
Rent of land	1	5	0
Tithe and taxes	1	6	0
Stripping poles	0	7	0
Average expense of poles (12 or 14 feet)* per year	7	10	0
Digging	0	18	0
Cutting	0	6	0
Polling	0	14	0
Average manure	4	0	0
Keeping clean	1	5	0
Tieing and hilling	0	14	0
Fences	0	5	0
Interest of capital	1	10	0
	20	0	0

[* The 14 feet poles cost more than the 12 feet, but last longer.—F. H. N.]

* Expenses of picking, drying, and of the duty on a crop of hops by the hundredweight.

	£	*s.*	*d.*
Picking on an average	0	9	0
Pole pullers and helpers	0	2	6
Small repairs to kiln	0	1	6
Driers' wages	0	2	0
Fuel and sulphur	0	3	0
Pockets and bagging	0	3	6
Carriage to London	0	1	6
Commission on selling	0	2	6
Duty (now taken off)	0	19	0
Hop, sulphur, &c.	0	1	0
	2	5	6

The average growth of hops at Trevereux from 1817 to 1843 (being 1,649 cwt. 1 qr. 16 lbs. grown on 274 acres) was 6 cwt. 0 qr. 2 lbs. per acre.

On an average it cost 1*s.* to get about 8 bushels picked, but the number picked at Trevereux for 1*s.* has varied from 2 to 9 bushels; 58 to 80 bushels of green hops are required to make up a hundredweight. During the picking a pole puller is required for every 4 or 5 bins.

Average day wages at Trevereux.

PUTTENHAM.

38. *Mr. J. L. Hewitt.*—I farm 1,200 acres with my brother, nearly all arable and some hops. I want boys all the year round; I employ about 20 from the age of 11 or 12, they are employed with carters and shepherds. I plough with two, three, or four horses, according to the soil and crop we intend to grow; also employ five or six boys bird minding for a month or two, and for a few weeks in summer in weeding, they are seldom under 10. In weeding we send out five or six together with a man; that lasts only two or three weeks in May and June; weeding is required here because charlock grows more on chalk than elsewhere. Small boys earn 2*s.* to 3*s.* a week; we usually send to the parents when we want boys. The men who superintend the boys at work threaten a good deal, but find it difficult to carry it out, the mothers let them know about it. Boys more useful than women for weeding; don't tread so much; these weeds grow where seeds are sown, and if you use a horse-hoe you pull pull up the seeds. Girls are seldom employed; it would be a good job if none went out. We employ about two-fifths of the wives of the labourers, only in

* In some years when hops are abundant the picking may cost less; if the crop is bad the picking will cost more; the price of fuel also varies a little. It never is done, picking, curing, &c., until sale is made under 2*l.* 2*s.*

summer; they weed; I have one who works with a threshing machine, but know of no other; they don't hoe, but weed with the hand or fork. They live about half a mile from their work. Boys work from 7 to 5, carters 6 to 6, but they go home for breakfast; one hour is allowed for meals; women's hours are from 8 to 5.

I think it is desirable that labour of boys should be prohibited up to 10, except during harvest and hop-picking, when they can earn about 1*s.* a day. I could not spare them at all after they once came to work for me, but I employ very few under 12.

Labour costs 35*s.* to 40*s.* an acre; day labourers' wages are 12*s.* a week, but only about one-fifth of the work is done by the day. Seven men in my employment earn on an average 42*l.* a year; wages are paid fortnightly. These seven men are not particularly good workmen, rather under average. We have often talked it over at Guildford, and we think that the average wages per week in this part of Surrey are 16*s.* Carters have 15*s.* and harvest money 3*l.* I also find beer worth about 25*s.* per annum, and fetch firing for them. There has been a rise in the cost of agricultural labour, amounting to at least 25 per cent., in 10 years.

Reigate.

39. *Mr. Robert Clutton*, Hartswood, land agent.—I farm 600 acres. I am well acquainted with every part of Surrey, and with the labour necessary to carry on the cultivation here. So far as the health of women and children no Act of Parliament is necessary. The school attendance is irregular while it lasts, and does not last long enough. The increase of wages to the labourer has not led him to send his children more regularly to school or for a longer period than formerly. I think it very desirable that the children should have a better education. Here we don't employ children before 12, but they are employed on the greensand and beds above that to single turnips for about a month to six weeks in the year under the age of 12; they are also employed for rook and sheep tending; but I don't employ them for that purpose, I think it cheaper to employ men. I don' think they are employed under 10, they are not wanted, and should not be employed. There would be no harm in prohibiting labour under 10, it would be useless here, because it is never done. I think boys are of no use between the ages of 10 and 12, except for about three months in the year. I always advise the men to keep their children longer at school, but they won't do it; at present those who are educated are apt to be discontented, but when education becomes general I expect that will not be the case. I am acquainted witn the Labouring Classes Dwelling House Act; I don't think it answers; it adds largely to the expense, and often the plans which are insisted on are not the best. I know that no five-roomed cottage can be built for 150*l.*; I always build with an upper floor; poor people all prefer cottages so built, they are drier. I think landlords ought to let cottages with the farm, making stipulations as to lodgers; the labourer should be under the farmer, and not the farmer under the labourer; the agent should see that the labourer is not screwed as to rent by the farmer, and the cottage not overcrowded. In this district almost all the farms are let on yearly holdings, therefore the landlord virtually has the control over them; where the farms are let on lease some other arrangement may be necessary. My labour here costs 35*s.* or 40*s.* an acre, and I have two cottages for each 100 acres; that is amply sufficient. The most necessary alteration in the law which can be made with regard to cottages is that the nuisance inspector should not be a local man; if he is he is apt to be influenced by local interests.

Letter from R. Clutton, Esq., dated Hartswood, Reigate, 5th September 1868.

40. I find on enquiry that there are more children employed in this neighbourhood under 12 years of age than I was aware of. It is very desirable that up to 12 certainly the boys and girls too should attend school, and if one year later they could attend school alternate days (half-time days being found impracticable in agriculture) it would more than anything tend to fix in them that which they have been previously taught. I am confirmed in the opinion that the increase in the wages of both men and boys has, instead of inducing a longer attendance at school, produced exactly the contrary effect.

Ripley.

41. *Major Onslow*, owner.—The cultivation chiefly arable. I farm 90 acres. Boys are employed from 8 to 10 or 11 occasionally at bird-minding, cow and pig keeping; after that they are employed regularly. Boys do much injury to wheat. Last year I had a boy to mind birds for me, and he did more harm than the birds would have done. It is said here that if you employ boys you must employ a man to look after them. They are employed now about as extensively as formerly; wages, 2*s.* and upwards.

Girls are hardly ever employed; women very rarely, except in hay and harvest. A few farmers grow carrots, and women are wanted to wash them from November to spring. The merchants who buy the carrots employ all that labour. I think women get rheumatics from carrot washing. As to the morality, I find that there is more bastardy among women in service than among those engaged in field work.

I think any restrictions as to age boys might be permitted to work would cause a great deal of discontent on the part of farmers and parents; the parents say it would be hard to be deprived of their earnings, and farmers say it would be hard not to have the work done. Nor do I think any restriction is desirable. If there were much female labour I should object to it, but there is so little that no restriction is necessary.

There are two schools, one at Ripley and one at Send. Children pay 2*d.* a week; no cottages are out of reach of the schools. I don't think labourers take sufficient advantage of the schools, *e.g.*, I have a man who works for me, and I can't get him to send his son to school; he says that his wife works, and the boy must stay at home to take care of his young brother.

The cottages are now becoming sufficient in number, many having been built by Lord Lovelace, they are conveniently situated; much crowded in the villages. Old cottages have only two rooms, but the new have two or three bedrooms and one or two others; rent, 2*s.* to 2*s.* 6*d.*

Water supply good; drainage good: cottages in villages have no gardens, but they have allotments of about one-quarter acre each near the cottages; other cottages have gardens.

Seale.

42. The *Rev. W. L. Beynon.*—I have been here 12 years. Girls are never taken away permanently from school to go to work. Boys begin to leave school at about 8 and girls at about 10. Boys often ask leave to be absent from school before they finally leave, and are absent about one month or six weeks besides the regular holidays, which last during August and September, for gleaning and hop-picking. It is against the rules of the school to give the girls leave to be absent, but they ask leave to be absent to take care of the younger children when the mother is away, chiefly in the hop-tyeing time, and we usually give them leave. They then go to the fields ostensibly with the dinner, but when there they stay and assist in the work. There is a certain amount of pressure put upon the parents by the farmers; the parents send the children to work because they don't like to offend the farmers. The parents tell me that the farmers say the work must be done, and that they cannot stay in the cottage unless it is. The enclosure of the commons is no great loss to the poor; some of

Surrey.
Mr. Norman.
A.
i.

them used to keep a cow, which they cannot do now, and they used to cut fuel on the commons; but now they can buy coal, which does not on the whole cost them much more than obtaining turf from the commons. There are no cottages in this parish more than $1\frac{1}{2}$ or $1\frac{1}{4}$ miles from the village. There are many parents who from indolence or indifference never send their children to school, even those who attend regularly are quite insufficiently educated, they can hardly read, and writing is quite unknown among them. When they come to a confirmation class they can hardly get through the service. The parents never tell me that they are obliged to keep their children at home for the sake of their earnings. I know well that that is not the true reason. Persons who live at a distance from the village always fall off in morality. Most of the cottages are scattered about at a distance from the village. The nominal wages here at 12*s.* a week, but so much task work is done that many earn 16*s.* or 17*s.* When husband and wife and one or two boys go to work they earn from 1*l.* to 30*s.* a week. There is no real poverty here. The farmers do not turn off the men in winter, but employ them to trench the commons.

THORPE.

43. The *Rev. G. Drury.*—I don't think that the women who go to work are less respectable than any other women in the parish as a general rule. The work does not appear to interfere with the management of the cottages, except in one or two instances. The older girls stay at home to look after the children. I think that is a good education for them. 25 attended my night school last year; that number comprised nearly all in the parish between the ages of 13 and 18; and out of that number nine, who are in the choir, are sufficiently educated; of the remainder four could not read, seven could read a little, perhaps second standard; the other five could read about fourth standard. Perhaps one-third could not write well. I think that if a boy attended school regularly up to the age of 11 he would have have learnt enough to be able to keep up what he knew. The attendance of the older children at school is very irregular. The porportion in regular attendance is very large, but that is made up by the infants who attend regularly, and as much in winter as in summer, because they live near. I reckoned that the expense of our night school during one winter for four months, four nights a week, was 15*s.* per boy; that included teaching, lighting, firing, and books. We have 70 cottages here for 1,400 acres, but some are inhabited by gardeners, &c., there being four or five large houses in the parish. There are a few allotments; only about one acre altogether. I lived at Peper Harrow $6\frac{1}{2}$ years; I don't think they are better off here than there, though the people have more opportunities; there is more drinking here. Wages were raised a little while ago here; but the people are not better off for that; they only drink more beer. The education is more advanced here than at Peper Harrow. We have a reading-room here; it is open from 7 to 9 p.m. during the winter months. The subscription is 1*s.*; that is not quite enough to pay the expense; they may smoke if they like. There are nine subscribers; they may not take the books out The room is always lighted and has a fire. There are books and newspapers, drafts, chess, and dominoes. Nobody is admitted without my consent.

WANBOROUGH.

44. The *Rev. G. Chilton.*—I have been here 7 years. I think that the children of the labourers now growing up in this parish are sufficiently educated at the time they leave school. The charities in the parish are made to depend entirely upon the attendance of the children at school, and consequently all attend regularly. I don't think there is much difference between the state of things in my parish and the surrounding parishes. Perhaps I am rather more advantageously situated than others, because I am well supported by the landowners. The boys attend school regularly up to the age of 10 at least; they sometimes go away for three weeks or a month in the spring for bean-dropping, &c., but that does not interfere with their school work. I think that the instruction would be best carried on by the half-day system, where the farm work is sufficiently near the school; and I think that there is a sufficient supply af boys about here to enable that to be done. I think that the girls acquire a distaste for service by going to school; they prefer living at home and leading an idle life. Boys who go away for a few weeks to do short jobs always come back to school when their work is done. There is only one farmer in this parish who employs boys as young as 10. There are a few hops in this parish, but they are picked by the parishioners without any assistance from elsewhere. The extra earnings of father, mother, and four children in harvest amount to 5*l.* or 6*l.* The income and expenditure of a family of a father, mother, and four children is as follows:—

Income (weekly).	*s.*	*d.*
Father's wages - - - -	13	0
Extra money in harvest, earned by father 4*l.* = per week, say -	1	6
Do. earned by wife and children, 2*l.*, = say	0	9
Total weekly income - -	15	3

Expenditure (weekly).	*s.*	*d.*
Five gallons flour, at 1*s.* 6*d.* - - -	7	6
Three lbs. pork, at 8*d.* - - -	2	0
Two ozs. tea and two lbs. sugar - -	1	1
One lb. butter - - - -	1	2
One lb. candles, 6*d*; soda and soap, 6*d.* -	1	0
Firing - - - - -	1	6
Salt and yeast - - - -	0	4
Schooling - - - - -	0	3
Clubs (Clothing and Benefit) - -	1	$8\frac{1}{2}$
Clothing (besides club) 2*l.* a year, say -	0	9
Rent - - - - -	2	0
Total weekly expenditure -	19	$3\frac{1}{2}$

	s.	*d.*
	19	$3\frac{1}{2}$
	15	3
Excess of expenditure over income - -	*s.* 4	$0\frac{1}{2}$

Some cottages are always let with the farms about here; I have never observed any harm to arise from that plan. It is the usual practice here for the farmers to make a dedution from the wages when the weather is wet, and then if a man has not an allotment on which he can work his time is thrown away. Women are much employed in carrot washing and turnip trimming in winter. I think that so few boys go to work before the age of 10 that a restriction up to that age would have no effect; if children were to attend from the age of four *regularly* the difficulty would be considerably lessened. Boys who go out to work at 10 have usually reached the third standard, but after they leave they lose their education, unless they can read with sufficient facility to amuse themselves. There is a lending library here. All the cottages have gardens or allotments.

WINDLESHAM.

45 (*a*). The *Rev. F. C. Fitton*, Bagshot.—There are many boys of all ages in this parish who cannot read. When I opened a night school many applied to be admitted who ought not to have left school for one or two years; a large proportion don't send their children to school at all. In December 1867 there were 32 names on the register of my night school, all between the ages of 14 and 19; out of these 12 could not read and 20 could not write. There is a night school in Bagshot, which is a district of Windlesham; the National school is in Windlesham, two miles from here. There is an infant school at Bagshot.

45 (*b*). *Mr. John Waterer.*—I keep the nursery grounds at Bagshot; they are about 120 acres in extent. We employ four or five women in summer, but not regularly; their principal work is weeding and cleaning the ground. They earn about 1*s.* a day and work from about 8 or 9 until 5. We don't employ young girls. We employ four or five boys aged from 9 to 12; they are employed constantly; they wait on the men. We employ 40 men all the year round, and at times as many as 60 or 70. We employ the boys because they come and ask for work; their labour is not of great importance to us; we pay them 4*s.* to 8*s.* a week. The other nursery gardeners about here employ labour in the same way as we do.

WOLDINGHAM.

46. *Mr. W. Harrison.*—I farm 560 acres. I hire six cottages with my farm; I also lodge four or five men in my house; they board with the labourers in their cottages. It is never the practice for farmers to board servants in this district. I have no doubt that the labourers would be far more useful as farm servants if their minds were more enlightened, but they are so ignorant themselves that they will not insist on their children attending school. I never employ boys regularly all the year round until they are about 12, and only for occasional jobs for about three months in the year before that age. I think it very desirable that the Government should do something in this matter; I think there ought to be some form of compulsory education. The greater part of those now growing up cannot read or write. I don't think that legislative interference is necessary except in the matter of education. When I came here there was no school within two miles; I opened one myself. I provide everything and charge 1*d.* a week, but cannot get the children to attend regularly. I used to live in the north of Lincolnshire; the labourers here are not nearly so able as labourers as the men there; they are also behind them in the matter of education. We have no man here who can read well enough to be parish clerk. I pay my horsemen 16*s.* or 17*s.* a week and 1*l.* at harvest; day wages are 13*s.*, but the men usually earn 15*s.* to 18*s.* a week by means of piecework, exclusive of harvest. I paid my harvest men yesterday; they had earned from 8*l.* to 9*l.* each in three weeks. I allow my cottagers one ton of coals at Christmas, and let them sow one sack of potatoes on my land which I till for them; these allowances are included in my estimate of what they earn. In Lincolnshire wages are about the same as they are here, but they vary with the price of flour. The men are better off there than here.

Evidence substantially similar to the above has also been received from Mr. W. Drewitt, of Bramley; the Rev. G. Finch and Mr. J. Sadler, Chiddingfold; J. Bradshaw, Esq., Cranleigh; Mr. J. Smallpiece and Mr. G. Bennett, Compton; Mr. R. Lewin, Cuddington; A. K. Barclay, Esq., Mr. A. Mitchell, Mr. J. White, and Mr. W. Stephens, Dorking; Mr. Edward Hooker, East Horsley; Rev. G. E. C. Walker, Farley; Mr. C. Roumieu, Farnham; Mr. I. Ellis and Mr. W. F. Snelgrove, Godstone; Mr. A. Ellis and Mr. J. Ellis, Guildford; Mr. C. Ellis, Hambledon; the Rev. Albert Mangles, Horsell; Mr. E. Atkins and Rev. S. Charlsworth, Limpsfield; the Rev. J. Thomas and Mr. G. Chapman, Lingfield; Mr. A. Lambert, Ockham; Mr. R. Young and Mr. Edward Kelsey, Oxted; the Rev. J. Randolph, Sanderstead; Mr. E. Elkins, Stoke; Mr. J. Taylor, Thorpe; Mr. D. Walker, West Horsley; Mr. G. Frimbley and Mr. Perrin, Windlesham; Mr. G. Burt and Mr. Brumbridge, Worplesdon; and Mr. Edward Hilder, of Woking.

WARWICKSHIRE.

ALVESTON.

47. *Sir R. N. Hamilton, Bt., K.C.B.*

Mr. W. Gibbs, occupier of 280 acres in Alveston and 100 in Snitterfield.

The parish of Alveston belongs to a number of proprietors. The cultivation is principally arable. There are meadows near the river Avon; the side of the parish next the river is light, the remainder rather heavier land. The four-course system prevails on the light and six-course on the heavier land. The farms are about 80 to 300 acres. There is not a sufficient supply of labour in the parish. Many men come from Stratford to work (distance two miles). Girls are not employed under 15 or 16; they do the same work as women. Boys are not wanted regularly until they are old enough to drive plough. Mr. Gibbs thinks they might do that at the age of 10; they are never wanted under that age except for bird-tending. Sometimes small boys are employed in that way, sometimes old men. Ploughboys begin at 6*d.* a day. Only a small number of women go out to work, principally in summer; they are usually the wives of the labourers who live on the land; they take a job, such as cleaning turnips, by the piece, and do it during autumn and winter, when they have time to spare from their home duties; they get 8*d.* a day when they work by the day. Men's wages now are 11*s.* on this side of the river and 12*s.* on the other; waggoners and shepherds, 14*s.* and 15*s.* All the regular workmen have jobs at piecework whenever there are jobs for them. There are a few casual workers who live in the towns, and who get a few jobs in the summer.

Mr. Gibbs has six regular labourers, besides two waggoners, one shepherd, and three boys on his farm of 280 acres here. All the boys are over 12; two of his labourers are lodged and boarded in his house. An under waggoner has from 5*l.* to 8*l.* and his board, which costs at least 1*s.* a day. The farmers usually give two meat meals a day, but the servants often stipulate for meat three times a day.

There is a National school at Alveston, but we think that the Government should be more liberal in their grants to country parishes. Sir R. Hamilton had the superintendence of the distribution of some diocesan prizes in the neighbourhood, and he found that a larger per-centage of the children educated by uncertificated than of those educated by certificated masters got the prizes. There is a group of about 19 cottages at a distant part of this parish, about two miles from the school and one mile from Stratford. A dame's school has been established there for the early education of the children. The better class of agricultural labourers are very anxious to get their children educated, but there is a considerable number of the worst class of labourers who live in the market towns who don't care about it. There can be no question that the educated men are far more useful than the uneducated as labourers; they take a greater interest in their work, they are more trustworthy, and are not at all disposed to throw up their work. There is no fear of their getting too much education. All that is wanted is a more liberal grant in the country districts. It should also be rendered compulsory to institute central schools for the education of pauper children. When a child has been brought up in the union they always come back there as their home.

The supply of cottages in this neighbourhood is insufficient; they belong to a variety of proprietors; some have gardens; there are also about 80 allotment gardens. The farm cottages are let at 1*s.* 6*d.* a week; many built by speculators are let for 6*l.* a year. There are not enough cottages built on the farms. When a man can get a good cottage and garden he will always be respectable and stick to his work. In many of the parishes about game is highly preserved, and cottages have been pulled down to a considerable extent during the last 30 years, partly to save the

Warwickshire.

Mr. Norman.

A.

4.

rates and partly to keep off poachers. No alteration has taken place since the Union Chargeability Bill was passed. There is a large statute fair at Stratford. There is very little hiring done, but a great many people come for the sake of the amusement. Statute fairs are decidedly objectionable; good servants will not go to them. The nuisance is not sufficient to make it necessary to the Government to put a stop to them by law.

BABINGTON.

48. *Mr. H. J. Carter.*—I usually employ two women from March to November; their work consists in weeding, spudding thistles, haymaking, and harvest work, cleaning the stubbles, and picking acorns; this year four women who worked for me picked 178 bushels and 5 gallons of acorns between the 26th September and the 26th October. I paid them 1*s.* a gallon; one woman picked 49 bushels 4 gallons in 16 days; she picked 5 bushels 4 gallons in one day, and 5 bushels another day; she sometimes had a boy to help her. Another woman picked 45 bushels in 17 days with two children to help; another 44 bushels in 16 days with one boy to help; another 35 bushels in 16 days alone; she is above 60 years of age. No women come out to work who are under 40 years of age, except in haymaking and during harvest. The girls do the same work as the women as soon as they come out to work.

BARFORD.

49. *Edward Greaves, Esq., M.P.*, landowner.
Mr. Thomas, schoolmaster and assistant overseer.
Mr. Reading, bailiff to Mr. Greaves.

This parish contains 1,577 acres, about two-thirds arable. The soil varies; it is very good, some stiff and some light; it belongs to a number of proprietors, Mr. Greaves, Lord Warwick, Rev. C. Mills, and Miss Ryland being the principal. There are 202 houses in the parish. The supply of labourers is more than sufficient for the requirements of this parish. Some men go from here to Tachbrook and Sherbourn to work, and some come from Wasperton to work here. The size of the farms varies from about 150 to 300 acres.

A very small number of women work in the fields; at present about seven or eight may be so employed; more are employed in summer; many like to go out then; they don't often reap in harvest now; they used to do so; they now make bands for their husbands. Young girls are not employed. As a general rule no boys are employed under 11 years of age; a few under that age may be employed at particular times of the year.

There is no continuous work for boys until they are big enough to go with horses; they are of no great use for that until they are about 12. Mr. Thomas thinks that the children of labourers don't remain at school after the age of 10; from 8 until 10 they would be absent for three or four months in the year for intermittent work. There are a few who never come to school at all, but almost all the remainder can read, write, and cipher by the time they grow up.

Men's wages are 12*s.* to 13*s.* Formerly all the farmers about required extra labour for harvest, but now they require less because some use machinery, and the ordinary staff is in many cases sufficient. Not nearly as many Irish are employed as formerly. Where a machine is used the employer provides the machine and horses, and pays the whole of the men 5*s.* 6*d.* or 6*s.* per acre; we only allow them to work from 5 a.m. to 7 p.m.

Boys get 3*d.* or 4*d.* a day for scaring, about 6*d.* per day when they first come out with the plough. The plough is out from 7 a.m. to 4 or 5 p.m., with one hour in the middle of the day. The ploughboys come at about 6.30 a.m., and leave at 6 p.m.

The cottages belong to a number of persons; rent is 3*l.* to 4*l.*; sometimes a small garden; most have cottage allotments; some of the small proprietors charge from 4*l.* to 6*l.*; they are let by the week or quarter. Mr. Thomas thinks a weekly letting the best, because he finds that the rents are difficult to collect where let for longer periods than one week. It is not the custom to let cottages with the farms. There is a club called the "Barford Friendly Society" here, to which about 60 of the labourers belong; the rules of this have been certified.

BICKENHILL.

50. *Mr. John Smith*, Lyndon.—I have lived here 16 years, and I farm my own land. The parish of Bickenhill is separated into two parts. The main part, where the church and schools are, is called Church Bickenhill, and the part where I live called Lyndon End. Lyndon End is about three and a half miles long and half a mile broad. There is no school here, but there is a school at Sheldon, distant about three-quarters of a mile, to which the children might go from here, but they are not admitted in that school, and have therefore no good school accommodation; as a fact none of them do go to school except occasionally in summer, when they go to Bickenhill school, distant three miles; there is however a dame's school at Sheldon, to which some of the infants go, it being a private school. Lately a considerable population has sprung up in a place called Haycocks Green, but before these people came the population of this part of the parish amounted to about 400. This is a purely agricultural district. The ground is cropped in the ordinary four-course system, and very good wheat is grown here. Boys are employed for driving ploughs from the age of 9 or 10 years; but boys are very scarce, they get apprenticed at Birmingham; when old enough to drive a plough a boy gets 3*s.* or 3*s.* 6*d.* a week; they are employed also a little in stone-picking or bird-tenting. You cannot get a woman for love or money; there are a considerable number of well-to-do residents who employ women for charing, &c.; women when they work in the fields get 1*s.* 6*d.* a day. There is no great necessity for employing women here because at the busy time of the year a number of Irishmen come round and do all the necessary work for 2*s.* a day.

The regular labourers get 13*s.* a week and beer. Many of the young men are enticed away to the factories at Birmingham; but the old men cannot take to factory work as easily as the young. There are a few market gardeners who supply Birmingham market; they are usually small farmers; they work themselves and employ Irish when they require assistance.

Mr. Digby is the principal landowner; about three-fifths are grass; the cottages belong to a number of proprietors. Since I have been here Mr. Digby has purchased four or five properties, and has pulled down five cottages which stood on those properties. The ordinary rent for a cottage is 4*l.* to 6*l.*, and most of them have gardens.

There is no necessity for the extension of the Factory Acts on sanitary grounds, but I am decidedly of opinion that education should be made compulsory, and I would support a rate, if necessary, in order to carry out that plan. I was a manufacturer at Birmingham before I came here, and found that the uneducated men gave me far more trouble than the educated; the same observation applies to agricultural labourers. You cannot carry on the half-time system in agriculture, but I think that the plan of requiring a certificate of proficiency would be not only practicable but decidedly desirable.

BISHOP'S TACHBROOK.

Meeting held Tuesday, December 8th, 1868.

PRESENT:

51. *Rev. E. T. Codd*, vicar.
Rev. J. R. Porter, curate.
Mr. T. Rainbow, churchwarden, and occupier of 290 acres (part in Barford and part in Warwick).
Mr. John Barnett, occupier of 218 acres (part in Warwick).
Mr. Edward Hawkins, schoolmaster, and assistant overseer, and collector of rates.
Mr. Ashford, occupier of nearly 200 acres.

This parish belongs almost entirely to Lord Warwick; the soil varies, some heavy some light land; the acreage 3,467 acres. The cultivation is chiefly arable. The farms vary from 120 to 386 acres in size. The parish is partly agricultural, but a great many men who live here go to work in Leamington and Warwick, or work as artizans; the supply of labour would be insufficient if there were not a number of Irishmen in Warwick who come out to assist us. Our cottages would be sufficient in number if it were not that a number of them were inhabited by old people, or men who don't do regular work. Lord Warwick rarely turns labourers out. The cottage accommodation is very fair; the cottages are old but comfortable. The cottages are nearly all in the village; some of the men have to go one and half miles to the distant parts of the parish to work. The water supply and drainage is good. Cottage rent is 2*l.* to 3*l.*; it was not formerly the practice to let cottages with the farms, but lately Lord Warwick has been in the habit of letting a few to the farmers; that is thought a good plan; it was adopted because the supply of labour is short. There are gardens and also allotment grounds; some labourers who have gardens have allotments besides; there are altogether 10½ acres of allotment ground; the labourers have one-eighth of an acre each; they sell a portion of what they grow at Leamington; they are not allowed to grow corn, it is undesirable for them to go to market because it takes the mothers and daughters of families away from home. There is very little drunkenness here; the men are employed in the evenings on their own ground. There are not many men who keep themselves unemployed in order to do odd jobs on the allotments.

Females are only employed in hay and corn harvest and in stone picking; no restriction is desirable with respect to their labour. They earn 9*d.* to 1*s.* a day.

Boys are occasionally employed in bird-keeping, and osier stripping, which lasts three weeks or a month.

Mr. Rainbow has not had his beans dibbled for some time because he cannot get boys to drop them, although he prefers dibbling to drilling; he thinks that if there were 12 more ploughboys in the village they could all get employment; he is sometimes compelled to send two men instead of a man and a boy with his horses.

Mr. Hawkins thinks that the age at which the boys first go out for casual work is before they are 9, and that they leave school finally from 10 to 11. There has been a good school here since the end of the last century; nothing is taught besides reading, writing, and arithmetic; geography is taught occasionally. We are in favour of education of the character given at this school, and think that all should have it.

Mr. Codd thinks that when he has a confirmation class the children who belong to this parish are sharper than those which come from other parishes where the schools are not so good.

Mr. Hawkins thinks that the instruction they receive at day schools before they go to work is not sufficiently impressed upon their minds to prevent them forgetting it after they have been absent from school for some time.

The parents are very anxious to get their children out to work.

Mr. Porter thinks that none should be necessary; that all the education necessary should be given before work begins, although a night school may be useful at present.

It is the general practice to hire farm servants at statutes; it is now customary to require characters, that was not so formerly. Here they change at Michaelmas. The servants hired at statutes are waggoners, shepherds, cowmen, in fact all farm as well as many domestic servants.

We think that statutes are a decided encouragement to vice, drunkenness, and immorality. Servants go there with their year's earnings and spend it all; farmers are without servants for nearly a week. Statutes also lead them to change their places.

If they were abolished the thing might work round; but Mr. Barnett thinks there would be great difficulty in obtaining farm servants.

A ploughboy gets 2*l.* 10*s.* with board and lodging; a shepherd or waggoner would get 10*l.* to 12*l.* besides board and lodging. It costs on an average about 1*s.* a day to feed a man or boy. They have meat three times a day. Wages now are 12*s.* per week, and beer all the year round worth 1*s.* a week; piecework may raise their wages about 2*s.* per week.

Farmers don't want boys to work for them under 10 years of age, except occasionally for a few weeks.

Chilvers Coton.

52. *Mr. T. P. Evans*, Griff, agent to Lord Aylesford, Mr. Newdegate, M.P., and Mr. Bromley Davenport, M.P.—I am acquainted with all the northern part of Warwickshire. The soil is a good deal mixed, some light and some heavy land, nearly half grass; almost all the farmers have a cheese dairy as well as arable land. The farms usually average about 150 or 200 acres, some are as large as 300 or 400 acres. The light land is farmed on the four-course and the heavier on the six-course system. Women are occasionally employed, *i.e.*, a few in the summer, but it is not a general practice among farmers to employ them. I think that the number employed is diminishing. A good many used to be employed at Lord Aylesford's estate, but very few are so engaged at present. I don't think it a good that women should work in the fields; they can make a better use of their time at home. Their labour is not necessary for farmers. There is an ample supply of men's labour here.

Almost all the farmers employ boys, one or two each; they begin tending birds, &c. at about 8; they begin regularly at about the age of 12. The bulk of the land in North Warwickshire is usually ploughed with two horses now, so that fewer ploughboys are wanted than formerly; but they should begin to handle horses early in order to become accustomed to them. The school accommodation is ample in this neighbourhood, and within easy access of the cottages.

It is not the practice to let cottages with the farm, very few indeed are so let. Our cottages cost about 250*l.* a pair for the brickwork alone; the new ones are usually placed as near the farmer's work as possible. We change the occupiers of the cottages if we find that the farmers have any well-founded objection to them.

Cubbington.

53. *Mr. Richard Bass.*—I have been guardian for this parish above 30 years; I have been occupied as a land surveyor during the greater part of my life; I was school teacher for 17 years, and have also farmed a little. This is an open parish; there is no resident squire here. The parish is owned by above 40 small proprietors, almost every form belongs to the occupier. The population numbered 944 in 1861; 883 in 1851; and 677 in 1841. A great many people go from here to work in Leamington; the remainder work as agricultural labourers. The neighbouring parishes of Ashow, Weston, Hunningham, Lillington, and Offchurch are in a few hands, and draw a great portion of their labour from this parish. In 1861 there were 232 inhabited and six uninhabited houses in the parish; the inhabitants of about 130 of these houses have been in the habit of out of this parish for work and still do so. The Union Chargeability Bill has not yet had any effect in diminishing our population. Women work scarcely at all in the fields except in hay time. Some take in washing and many go to Leamington to wash. They leave here at 7 a.m., and earn 1*s.* 2*d.* a day and their food. The children go out to work very little in the fields except in driving plough; many work in the brick

Warwickshire.

Mr. Norman.

A.
i.

fields; I don't think they are much employed under 12 or 13 years of age. I was formerly schoolmaster here. I gave up the school in 1842; while I had the management of it boys used to attend the week day school and Sunday school up to the age of 15 if they were out of employment. Boys get 2*s.* 6*d.* a week when they first go out to work. The cottages are owned chiefly by small tradesmen. The rent is 3*l.* to 5*l.* per annum; many have gardens, but there is also an ample supply of allotments. All the cottages except five or six are in the village. Our rates have decreased half since the introduction of the Union Chargeability Bill. Some few cottages are let by the week, but it is more usual to let them by the quarter. The water supply and drainage is good, and the population healthy. I don't think that there is sufficient employment of women and children in the fields about here to make parliamentary interference necessary. There are statute fairs at Kenilworth, Berkswell, Warwick, Southam, and other places. I think they should be done away with, but far fewer are hired there now than formerly. All the cottages in the parish are within reach of the school.

Charlcote.

54. *Mr. William Dilworth*, agent to Spencer Lucy, Esq., occupier of 120 acres.—I have resided here nearly all my life. Almost the whole of the parishes of Charlcote and Hampton Lucy belong to Mr. Lucy. The farms average about 250 acres, principally arable. The greater part of the land is rich loam on a gravel subsoil, well suited for turnips. All the land bordering the river is good. There is scarcely sufficient labour here. We draw a few men from Wellesbourne and Wasperton (distant one mile each). Almost all the cottages at Charlcote are new; those at Hampton Lucy are not so new, but all well cared for and in good repair. We take care that they are not crowded. None of the inhabitants have far to go to work. The outlying farms have a cottage or two each, but that is rather exceptional. At Charlcote there is a school under a mistress and a grammar school, as well as an infant school at Hampton Lucy.

The grammar school at Hampton Lucy is free for the parishes of Charlcote, Hampton Lucy, Wasperton, and Alverston. Children who have attended school here for a time, go to the grammar school for a year or two before going to work. There are no cottages in the parish out of reach of the school. These two parishes are purely agricultural. The cottages let for about 45*s.*, with garden and allotment about a quarter of an acre. They are let by the year, subject to a three months notice to quit; the rent is paid annually. The cottagers prefer to pay their rent annually to any other letting. There are a few women who go out to field work, chiefly in spring and summer, and occasionally in winter when the weather is fine, to clean roots or stock turnips.

Young girls scarcely ever go out. Boys are employed from about the age of 10 years; I think they are of scarcely any use to farmers under that age, but the age at which they begin must depend upon their size and strength. We usually plough with three horses and boys drive. Their hours of work are from 6 or 6.30 to 5 in winter and 6 in summer. Wages about 6*d.* to 8*d.* a day. They are not employed much for "tenting" in this county because it it is so much enclosed, nor for weeding. There is an evening school here. I think that the children in this neighbourhood are sufficiently well educated for their position, and that no new law is desirable. No portion of a boy's time except the evening could be devoted to school after he begins to work.

Men's wages here are 12*s.*, usually paid wet or dry. About here three or four men and one boy are necessary for the cultivation of every 100 acres. There is very little wood here.

Most of the cottages have two bedrooms, very few three. We don't encourage the grown up sons and daughters to stay about the village. It is the usual practice for the farmer to board one or two of their younger farm servants in their houses; that is a most desirable practice. They are kept under proper subjection until they are old enough to marry, and they make much better labourers than those who live in the village. They usually save some money while they live with the farmer, and it is no greater expense to the farmer than paying board wages.

There is no publichouse here; a few buy casks of beer, which they keep in their houses. There is very little drunkenness. Most of the men belong to the Becher Club, some belong to the Hampton Lucy Friendly Society.

Claverdon.

55. *Rev. E. A. Kempson*, vicar of Claverdon, with the Chapelry of Norton Lindsey.—Langley is a hamlet of this parish. The principal proprietor is Captain Musgrave, who is lord of the manor, and Mr. Galton. The cultivation is chiefly arable. The cottages of the parish are very much scattered; they are not, as a general rule, let with the farms. The rent varies from 3*l.* to 4*l.* a year. There are a great many copyhold cottages, the tenants of which pay a quit rent of about half a crown a year.

The acreage of Claverdon with Langley is 3,572 acres, and of Norton 604 acres. The cottages are in a very bad condition, but the copyhold cottages worse than others; they belong to and are inhabited by farm labourers. They will never part with them unless very hard pushed. When they sell them they usually get about 40*l.* to 60*l.* for them. The copyhold cottages have larger gardens than the others, and are therefore more popular. The mode of cultivation throughout the parish is very uniform; the farming is improving very much. The farms contain from 200 to 300 acres. I think the supply of labour is sufficient, except when there is a press of work. The women go out to work to a considerable extent; they are mostly married women, and not young girls. There is a National school here, and dames' schools at Langley and Norton Lindsey. All the children in the parish would have access to one or other of the schools; most of them come to school, but very irregularly; education always suffers if any work is to be done.

As a general rule the better the cottage the better the man; but I don't think that I can fairly say that the copyholders are either more or less respectable than the other men; but the men who live in the cottages attached to the farms are certainly more respectable and steady than others. I am sure that some form of compulsion is necessary in order to improve the education. The general work for boys is driving plough. They do not leave school much in order to work on their parents' gardens. We have allotments here. The labourers have one-eighth of an acre as a rule. The system answers well. The health of the people is good; but a more efficient mode of inspecting the cottages is necessary. I have continually noticed cases of fever and illness arise where the drainage is bad; nobody likes to give information about the nuisances; the inspector is not very accessible. The best club in this county is the Becher; I want my parishioners to belong to that, but it is not so popular as others, because the payments are as a rule 2*d.* a week more, and also because the management is not in local hands. It is managed without recourse being had to public-houses; I receive the subscriptions. We have a local medical club which acts well; the poor pay from 1*s.* 6*d.* to 2*s.* 6*d.* a week according to the size of the family, and have medical aid free in case of illness. They always object to being attended by the parish doctor, because they think that attention can only be secured where they have to pay.

I find great inconvenience from the statutes; they are so arranged as to follow in succession at the neighbouring towns during the course of about three weeks.

The young labourers leave their employment for about a week and go to two or three fairs. It leads to a great deal of dissipation. They could be done away with very easily if some substitute could be found for them by way of amusement. I am Diocesan Inspector of Schools for the Deanery of Warwick. There are 17 parishes in the deanery; in four of them there is no school at all (Wolverton, Preston Bagot, Haseley, and Beaudesert), but all these places are within two miles of some school, and, with the exception of Wolverton, not so far as that. The average age of the first class in the schools I inspect is $10\frac{1}{2}$; in the schools not under Government inspection the first class is usually as well taught as in Government schools, but the lower classes are not.

Eatington.

56. *Mr. W. Lowe*, agent to Mr. Shirley, and occupier of 300 acres in Eatington, and 250 in Loxley.

The *Rev. G. H. Biggs*, vicar of Eatington.—I came here in 1866. The chief proprietor at Eatington is E. P. Shirley, Esq. The population in the parish is fully large enough to supply the necessary labour for the parish; in busy times all have work, but at slack times, as at present (December), there are a few men out of work; at present there are 18 young men out of work [the population being 713]. As a general rule this parish does not supply labour to the surrounding parishes except in a few instances. There is no manufacture here of any sort. I think the average size of the farms is 200 acres. There are two or three small holdings of glebe lands; one man has 22 acres, another 55, and another 150. There are about 100 cottages and small houses here. Mr. Shirley has about 30 cottages, the remainder belong to several proprietors; they are sufficient in number for the population. Mr. Shirley's cottages are most of them let for 3*l.*, some of the others for 4*l.* or 5*l.*; most of them have small gardens, but there are also from 20 to 30 acres of allotments, let in pieces of a quarter of an acre each; they pay 10*s.* or 11*s.* for each allotment. There are about 15 to 20 squatters on the waste; they pay an acknowledgment to the lord of the manor; the gardens connected with the cottages are very small. Many of the squatters are farm labourers; they are usually in very poor condition; and don't seem to be better off than men who have to pay rent. Before Mr. Biggs came here nearly 50 acres of the glebe were let out in small pieces varying from 1 to 16 acres; some were taken by small tradesmen. In the parish of Loxley the glebe was let in a similar manner, but Mr. Lowe has observed that these small occupiers have always been miserably poor; they have usually had to pay a rather higher rent than the ordinary farm rent; in this parish they paid at the rate of 3*l.* an acre, landlord paying rates and taxes. The ordinary rent about here would be about 30*s.* There is a mixed school here under a certificated master; all the cottages, except two, are within one mile of the school.

The parish of Loxley belongs chiefly to Mr. Jones; he resides in the parish. There is an ample supply of labour in winter, but not enough in summer. The cottages are about the same in character as those in Eatington, but no squatters. The school is under a mistress. The six course system of cropping usually prevails in this neighbourhood; very few turnips are grown, and so women are not employed in winter, except with the threshing machine; they are employed more regularly in spring and summer. The women who work in the fields are quite as respectable, usually more energetic, and take as good care of their families as other women. A great many more go to field work at Loxley than here; there was a blind woman living there who used to take charge of six or eight children while the mothers were out at work. Many of the women like to go out, because they say it is more healthy than staying at home. Their wages are 8*d.* a day and 1*s.* at haytime, Boys go to regular plough work from 11 to 14; they have a little occasional work before the regular work begins. Mr. Lowe thinks that boys might be spared for half their time from December to March; he also thinks that educated men are far more useful than uneducated even in the simplest farm work. It is thought that on the whole the education in this neighbourhood is not sufficiently defective to render a new law necessary. Men's wages, 11*s.*

Exhall.

Meeting at Exhall.

57. *Mr. Startin*, landowner, Exhall.
Mr. Arthur Startin, occupier, Exhall.
Mr. Swinnerton, landowner, Caldecote, Nuneaton.
Mr. John Neale, landowner, Exhall.
Mr. E. Wilson, landowner, Over Whitacre.
Mr. S. Wilson, landowner, Exhall.
Mr. W. Burton, landowner and occupier, Allesley.

At Exhall the supply of labour is sufficient for the cultivation of the soil, except at particular times. Not more than one-third of the inhabitants are employed in agriculture, the remaining two-thirds are weavers and miners. There is a school at Exhall, which is badly situated with reference to the population, but otherwise the school accommodation is sufficient. The parish belongs to a number of small proprietors. When wanted the weavers will always assist in agriculture, but do not make very efficient labourers.

Over Whitacre is in a few hands, and as well as Exhall is chiefly cultivated by the proprietors. The supply of labour as well as the school accommodation is sufficient. The school is a mixed school under a mistress. Caldecote is in a few hands; there is a school there under a mistress; the supply of labour is not sufficient for the cultivation of the land.

Allesley contains over 4,000 acres; it is two miles from Coventry; there is an endowed school there for boys, a girls' school maintained by subscription, a dames' infant school, and another school for small boys and girls. The supply of labour is sufficient. In this district boys are employed continuously from about the age of 10 upwards; they do a few occasional jobs, such as bird-tenting, before that age. As a general rule boys could not be dispensed with by farmers after the age of 10 years, but occasionally where the land is light the boys might be dispensed with in the winter months for a year or two until the age of 15. Boys usually work from 7 to 5 in winter, and 6 to 6 in summer. Women are a little employed in the agricultural parishes, but hardly at all where bead-making and weaving can be obtained. Women earn 9*d.* or 10*d.* a day in winter, and 1*s.* in summer. They can now earn from 3*s.* to 4*s.* a week at weaving, but when trade was good they could earn more.

The gentlemen present all think that there can be no doubt that an educated labourer is more useful to a farmer than one who has not been educated; and all of them think that it is decidedly desirable the system of requiring a certificate of proficiency as a condition of employment should be imposed on all agricultural children. The employer should be fined as well as the parent, in the event of a boy being employed without a certificate on the information of any individual, and half the fine should go to the informer. If a boy failed to obtain the certificate of proficiency by the age of 13, he should then receive a certificate of stupidity from the parish schoolmaster, and might be employed on producing that. The best mode of carrying on the examinations would be by having periodical examinations in central places, conducted by certificated schoolmasters, to which the children of the surrounding neighbourhood could be sent.

Men's wages here are 11*s.* to 13*s.* in winter; in some cases beer worth 1*s.* a week is given in lieu of a

Warwickshire.
Mr. Norman.
A.
i.

portion of the wages. In summer they usually have 1*s.* a week more than in winter. At Caldecote and some other parishes it is customary to give 3*s.* a week beyond the current rate for two weeks in summer without any beer. About here where they do piecework they earn about 15*s.* to 25*s.* during the harvest work, but only two or three of the best men have harvest work; shepherds and carters get 2*s.* a week above the common men. Usually one man is kept in the house, who acts as groom and odd man. Cottage rent from 1*s.* to 2*s.* a week; they usually have gardens, and as a general rule are sufficient for the accommodation of the inhabitants and well distributed.

Harbury.

Meeting at Harbury, December 16th, 1868.

58. *Mr. Heath*, occupier of 300 acres, Harbury.
Mr. Horley, occupier of 700 to 800 acres, Ufton.
Mr. Dean, occupier of 500 acres in Ufton and Long Itchington.
Mr. Archer, manager of 700 acres in Bishop's Itchington.
Rev. M. H. Higgins, curate of Ufton.

These parishes are all in the Southam Union.

The parish of Harbury belongs to a number of proprietors, of which Miss Ryland is the principal. There is plenty of labour, some men go from here to work in the parishes of Chesterton, Itchington, and Ufton. The rates were very high here before the Union Chargeability Bill was passed, but have fallen considerably since. There is an infant school and another National school here, both under Government.

The cottages belong to a number of proprietors. Taking them all round the accommodation is very indifferent; overcrowding is to be met with in several cases. The village is well situated for the work to be done. The cottage rent varies from 50*s.* to 4*l.*; not many have gardens, but there are plenty of allotments; all have allotments who wish for them. The vicar lets 20 acres of land in allotments.

Ufton belongs to Balliol College, with the exception of about 90 acres. The supply of labour is hardly sufficient for the demand. The cottages are better than they are generally in this district; they let for about 2*l.* to 3*l.* a year with gardens and allotments. There is a school put under Government this year.

Long Itchington belongs chiefly to Lord Aylesford; Lord Leigh, Mr. Chamberlayne, and Dr. Jephson have also land there. It is a populous parish, and contains sufficient labour. There is a school there under Government.

Bishops Itchington belongs to several proprietors; the principal are Mr. Thelluson, Mr. Taylor, and Mr. Chamberlayne. There are plenty of labourers there. Many labourers go to work in Mr. Greaves' lime works, and in the neighbouring parishes. There was a great deal of extra-parochial land in this Union about Watergall and Hodnell on which there is scarcely any cottages; the land has now been divided into seven parishes and added to the Southam Union. There are two schools at Bishops Itchington; the church school and a dissenter school; the former is quite insufficient for the accommodation of the parish, but is now about to be rebuilt.

The soil about there is generally stiff clay; three or four horses are generally used for ploughing, sometimes five. On the extra-parochial land there is a good deal of grass; the other land is chiefly arable.

This is a purely agricultural district; no manufactures except cement; as many as 200 men have sometimes been employed in the cement works, but generally not more than 100. They take away all the best of the men at certain times.

Women are not generally employed here. Mr. Heath usually employs four in summer and some occasionally in winter.

Mr. Dean has not employed any for some years Those who work are usually the wives of the labourers. The stone-picking and turnip-cleaning is piecework and weeding is day work. Their wages are 8*d.* a day, and in hay time 1*s.* or 14*d.* a day.

The gentlemen present think that it is undesirable for women who have families to go to work, but that there is no harm in women who have no families going to work. Mr. Higgins thinks it does not answer for any women to go to work, because they are thus compelled to neglect their cottages, and they wear out their clothes.

No girls go out to regular work until the age of 13 or 14.

A few boys and girls go out bean-dropping and singling turnips, but that is not a common occupation for them.

Boys come out to regular work at about 10, some as young as 9. The boys are always anxious to obtain work as soon as possible, and their parents are anxious to get work for them.

The gentlemen present think that farmers would be put to inconvenience if boys did not go to work at the age of 10; and that the boys would not make good labourers if they went to work later than that.

Some of the gentlemen present think that the boys might be spared for two or three months in the winter, but the majority think that farmers would be put to inconvenience if they had to dispense with their services at all.

The gentlemen present think that all should be taught to read, write, and cipher; and without pledging themselves as approving of a change in the law, they think that if any system of compulsion is to be enforced the system of granting a certificate of proficiency as a condition of employment is the system best suited to the exigencies of agricultural labour.

Men's wages here are 12*s.* a week; waggoners and shepherds have 12*s.* with a house, or 13*s.* or 14*s.* without.

Boys' wages vary from 6*d.* to 8*d.* a day. A lad who is boarded gets 4*l.* or 5*l.* a year. A man of 24, 10*l.* or 12*l.* a year. The plan of boarding the lads in the farmhouses is going out of use; the boys don't like it, because they object to the restriction; and it is also troublesome to the masters. A few cottages are let with the farms, but that is not the general practice about here.

Statutes lead to a great deal of harm; we think that the practice of hiring at statutes is going out of use, but it would be very difficult to get servants to give them up.

Kenilworth.

59. *James Isaacs, Esq.*, chief constable of Warwickshire.—I have been chief constable of Warwickshire since 1841. There are statute fairs at Warwick, Southam, Wellesbourne, Henley, Alcester, Stratford, Kenilworth, Berkswell, Wolston, Brinklow, Rugby, Atherstone, Coventry, Nuneaton, Bulkington, Coleshill, Fillongley, and Polesworth. The fairs are held about Michaelmas; they range over about three weeks. The servants hired there are domestic servants, waggoners, shepherds, and cowmen. The farmer usually gives 1*s.* at the time of hiring to make the bargain binding. The fairs are called statutes if held before Michaelmas, and mops if held afterwards. Each fair lasts one day only; the fair at Southam lasts for three Mondays in succession, and at Warwick for the three intervening Saturdays; the last day of the fair is called the "draggle-tail." At other places the fairs only last one day. Very few come to be hired, a good many come for the amusement. They come in the morning of the fair; the hiring takes place about 1 p.m. There are usually shows in the evening, and often a dance at the public-houses, where they remain frequently until after midnight, the police often have to clear the houses. The town is usually clear by the following day. These fairs do no good, but there is not so much harm done now as was done some years ago because so few attend. They form a sort of harvest for thieves and

prostitutes; the farmers who come to hire servants usually leave early, but those who come to be hired bring many with them, and are frequently robbed. I have known the servants who come to be hired extend for 150 yards along the street at Kenilworth, now they do not extend for 15 or 20. Very few police cases arise out of these fairs. I have observed such an improvement in the conduct of these fairs of late, that we may hope that they will gradually die out without being put a stop to by law. I have not heard farmers complain of being put to inconvenience in consequence of the absence of their servants at the fair.

Women are employed more in the south than in other parts of the county; it may sometimes lead them to neglect their families, but the earnings are of great use to them. I think it very desirable that the attendance of children at the schools should be prolonged, but I don't think that their earnings can be dispensed with by their parents. There has been a great deal of bead work here, but the trade has been bad lately. I have known women earn 10*s.* or 11*s.* a week by making trimmings; and children can earn 7*d.* or 8*d.* a day by threading beads.

I find that not above 1 out of 10 of those men who belong to the agricultural class, and are applicants for employment in the police, have sufficient education to enable me to employ them.

60. The *Rev. W. F. Brickmore.*—There are plenty of schools in this parish. Two National schools (mixed), a Roman Catholic school, Boys' Free school, and British school (largely endowed). I don't think that the education given is sufficient except in the National schools. There are a good many boys now growing up who cannot read and write efficiently; that is due mainly to the early labour. When they once begin to go out to work there is a succession of employments for them which keep them occupied during the greater part of the year, so that they make but little progress afterwards. When the boys come to be confirmed I find that their education is very deficient.

Many of the cottages are extremely bad. We don't supply much labour to the surrounding parishes.

The statute fair is an abomination; it is a source of great immorality; the farmers don't desire to keep it up; it is only maintained for the purpose of amusing the people. I don't see that the evil of the fair is decreasing; its continuance depends in a great degree on the nomadic race of showmen who attend the fair, and profit by it.

61. *Mr. Thomas Harris,* Dale House.—I farm 400 acres; one-third is grass. My land is situated one-half in Stoneleigh and one-half in Kenilworth. I get my labour from Kenilworth and Stoneleigh. We are short of labour here. The parish of Kenilworth belongs chiefly to Lord Clarendon and Lord Leigh. I have three cottages let with the farm; but with the exception of the men who live in these cottages my men come 1½ miles to work.

The cottages in Kenilworth parish belong to a number of proprietors. The rent is 1*s.* 9*d.* to 3*s.* 6*d.* a week. Some have small gardens, some none.

I do not find that my men are attracted to go to work at the factories in Coventry or Birmingham. The extra men who come to do the work in hay and harvest come from Coventry, Ireland, Buckingham, and Berkshire.

All the men who live at Stoneleigh have been well educated and are well lodged. I think that they are stronger and in better health from having good houses and gardens than the Kenilworth men, but at the same time they are rather above their work. A few casual workers live in Kenilworth. There are no factories there except a tan yard.

My impression is that a labourer who has received a fair education in the three rules is much more useful to a farmer than an ignorant man. As far as this district is concerned I think that no compulsion is required; I think that all the boys now growing up have sufficient opportunities of learning.

The hours of work for ordinary men are from 6 to 6 in summer and from 7 to 5 in winter. The hours of my waggoner and shepherds are from 5 a.m. to 8 p.m. The boys come from 6·30 to 6 in summer and from 7 to 5 in winter. I think that three cottages per 100 acres would be sufficient to supply me with labour except when extra work is to be done.

The practice of boarding labourers is falling into disuse, and the practice of letting cottages with the farms is coming into use.

I think mops are a great source of evil and demoralization. Very few men are now hired there. Very few now go to mops to be engaged; they only go there for the amusement. If the hiring at mops were to be made illegal the mops would not be put an end to, because labourers would still attend them; they might meet the farmer there, and adjourn to another place and another day for the purpose of concluding the bargain.

I allow each of my men to plant a row of potatoes in my turnip field; that is not the usual custom.

I approve of the system of allowing beer to the labourers; they are better satisfied, work better, and it is cheaper for the farmer, because he must allow an additional 1*s.* per week if he does not give beer, and the beer does not cost him that.

Kinwarton.

62. The *Rev. Richard Seymour,* rector of Kinwarton with Great Alne.—These are two distinct parishes. Kinwarton is the chapelry of Great Alne. The principal proprietor of Kinwarton is Mr. Brown, who owns the greater part of the parish. Great Alne is more an open parish, the largest owners in it being W. Hemming, Esq., and Sir W. Throckmorton. This is a purely agricultural district. No peculiar crops are grown. The four or five course system of cropping prevails. The population of Kinwarton is about 70, and is not quite sufficient to supply the necessary labourers. Some labourers come from Alcester and Great Alne (distant one mile each) to work here, but one-half of Kinwarton is grass, so that not much labour is required. The supply of labour at Great Alne is sufficient for the requirements of the parish.

It is the usual practice for married women to go out to field work all the year round when the weather permits. Girls who have been out to service usually take to field work when they marry; their husbands expect them to contribute to the family earnings. The field work is popular among the women, and they prefer it to charring.

The majority of boys leave school from 9 to 10 years of age, and never come back to the day school. There is very little work which takes them away from school before they finally leave; they used to be absent a good deal for bean-dropping, but they don't dibble beans much now; a few are kept away for scaring.

There is a mixed school under a certificated mistress at Great Alne for the two parishes. All the cottages are within access of the school. The opportunities for education are quite sufficient in these parishes, but the labourers with large families don't take sufficient advantage of them. There are none who don't come at all, but the needs of the parish compel them to turn their children to account as soon as they possibly can. Farm boys are very scarce about here, and farmers tempt boys away from school by the wages they offer them. The boys get about 2*s.* a week when they first go out. I think that the boys when they leave my school could pass the second standard and some of them the third.

There is a statute at Alcester. I object to it strongly on the ground of morality. We made a great effort to abolish it some time ago by means of registry, but it did not answer; the publicans and shopkeepers opposed this change, and the farmers did not support it. Among the young the fair is popular. There is a Becher benefit club held here which embraces the whole union; there is a medical club attached to it. A member of the benefit club must belong to the

Warwickshire.

Mr. Norman.

A.
i.

medical club as well, but a man may belong to the medical club without belonging to the benefit.

A good many women about here are employed in gloving; that does not employ children but keeps some of the women from field work. They can make about 3*s.* a week by it. Formerly women were employed in straightening needles, but I know of none so employed at present in these parishes. The gloving is obtained from Worcester, the needlework from Alcester and Studley. I don't observe much difference in the social condition of those who take up that sort of work from that of those employed in field labour. There is nothing peculiar in these parishes when compared with the other neighbouring parishes.

I am diocesan inspector for the Alcester deanery and inspect the schools in 23 parishes in this neighbourhood. In the parish of Haseley there is no day school; the children have to come from that parish to Great Alne (one mile) to school. In all the remaining parishes there are schools, although in two of them it would be desirable to enlarge the accommodation.

Meriden.

Meriden Board of Guardians.

Present, 12, *J. Darlington, Esq.*, in the chair.

26th Jan. 1869.

63. Very few women are employed in agriculture in this neighbourhood; those who are so employed are chiefly the wives of labourers. Their hours of work are from 8 a.m. to 5 p.m., except during harvest. They are employed very little in winter; they are then engaged either in stone-picking or turnip cutting. Their principal work begins in March or April. They earn 10*d.* in winter, and 1*s.* a day in summer. The work does them no harm; and their cottages are not less tidy than those of other women. No young girls work in the fields. Boys begin to work at the age of from 8 to 12, and usually about 10; farmers don't want them under that age; they are generally employed continuously from the time they first begin to work. Sometimes extra boys are required for tenting birds. Their health is improved rather than injured by the work. Many boys don't go to school; that is owing either to the poverty or neglect of their parents; in some cases children have to go two miles or more to school; that is too far for small children. Some of the schoolmasters in the neighbourhood are inefficient. By some employers boys might be spared from work during the four winter months, and where there is a large population, as at Coleshill, they might be spared on alternate weeks.

Cottages are generally insufficient in number and condition; many men have to go long distances to work. In some parishes the cottages are good, but too few in number. The drawback is, that they are built by the large landowners at a positive loss. Gardens are very general. Farmers would usually guarantee the rent of new cottages if landlords would build them. A great expense has fallen on the rates in consequence of illness caused by bad cottage accommodation. The nuisance laws should be made more easy to set in motion; the nuisance inspectors should have the same powers as the officers under local boards of health. The land in this union is principally in the hands of large proprietors, and it would be very difficult for persons other than the landowner who might be desirous of building cottages to find sites for them.

64. *James Darlington, Esq.*, of Meriden Hall, a Justice of the Peace for the County of Warwick, Chairman of the Board of Guardians for the Meriden Union, &c.—The education of the people might be improved by placing it more directly under the care of one of the ministers, or by the appointment of a minister of education who could be held directly responsible for the expenditure of monies voted and for the extension of education to rural districts within defined limits.

The initiation of new schools in rural districts should not be left entirely to boards of guardians. The guardians are elected by the ratepayers, and it is not to be expected until education is more widely diffused and appreciated that ratepayers would elect persons in favour of an increase of local rates for school buildings and teachers in outlying hamlets.

The education of the industrious poor is defective both in rural and populous districts. I had many opportunities of testing it during the recent cattle plague. I found that few of the farm servants or labourers could read and write. Many could write only their name, and others could not do even that, although they had been sent to school for a time when quite young. This was owing to either (1) death or permanent illness of parents, and their being cast young and uncared for upon the world; or (2) to the poverty of parents owing to the want of work or weak state of health and a large family; or (3) to the indifference of parents living at a distance from school; or (4) to there being a large family and the parents unable to resist the temptation of securing the small earnings of their children.

There are rural districts in this union too far from a school. Expensive school buildings and highly paid teachers are not necessary, but both comfortable buildings and efficient teachers are indispensable to carry education into such districts. Itinerant schoolmasters would not be successful. The teacher should be at his post daily, and also conduct a night school for the older boys. All boys employed in agriculture and other things under 10 might prudently be prohibited from working for wages.

Those between 10 and 12 might work and learn on alternate weeks if they could read and write at 10 years old. Those between 12 and 15 might be required to attend a night school three times a week. Care should be taken to avoid unequal industrial restrictions, or some important industry might be seriously prejudiced. If 10 years be adopted as the starting time for work in agriculture, &c., the same restriction ought to apply to all other trades, so that the farmer or the miner would not be injured by the factories being open to them at an earlier age.

If fines be imposed by Act of Parliament for employing children contrary to the Act the master or employer should pay the penalties, and not the children or their parents, unless the latter had made a false representation of age.

In any district in which a new school and a teacher is wanted for the education of the people I would give three months' notice of the intention of the Government to establish a new school, fixing the notice on the church and chapel doors of the parishes affected, and if the parishioners or some of them did not before the expiration of the notice give an undertaking within a reasonable time to build a new school and provide an efficient teacher, the Council of Education should then call upon the Board of Guardians to erect buildings and appoint an efficient teacher, the cost to be defrayed by the parishes affected in such proportions as the board (or justices, in case of appeal) might determine.

If the parishioners or some of them gave the necessary undertaking, liberal grants should be made by the Council of Education to the parties undertaking in aid of the building and teacher's salary. In case of failure or default by the undertakers, the school building to revert to the Council with power to proceed, after one month's notice fixed on the church or chapel doors, as if no undertaking had been given.

All schools erected after such notice, or that lapsed by default of the undertakers, to be managed, subject to rules and to an effective conscience clause in reference to any special religious teaching. If the teacher were required to open and close the school daily with the Lord's Prayer the people would almost unanimously approve of it. As nearly the whole population of rural districts are members of the National Church the ordinary teaching of the National schools might be allowed.

In the case of relief being given by guardians of the poor to widows or others for children above the age of 7, such relief should be made dependant upon a weekly certificate of the schoolmaster of the attendance of the child at school during the previous week. Denison's Act is virtually inoperative in this union, and unless the relief *be earned by school attendance* (except in sickness) I fear it will remain so. Shoes and clothing for the children are rarely provided by the Board of Guardians, and without these the parents often by way of excuse say they cannot send them. Many other excuses are also made. Statute fairs for hiring servants are a source of much demoralization to ignorant and inferior servants of both sexes. Registries have been opened in many parishes to counteract the evil effects, but they have not generally succeeded. One was opened in this parish, and young persons put down their names, but the farmers and employers did not resort to it. If this evil is to be grappled with the most that can be safely attempted would be not to recognise the condition of master and servant where the hiring or any negotiation appertaining to it takes place at a statute or fair.

Servants of both sexes who have perhaps been hired at a statute or taken without characters live in farmers' houses. In many farmhouses at night the master, mistress, and their children sit in the kitchen, whilst the servants are often left without any suitable place in which to pass the evening. The comfort, accommodation, and surveillance are imperfect, consequently the young men stray out to the nearest public-house or village, or hang about neighbours' houses. This cannot be legislated upon, but a little more consideration might advantageously be given by masters and employers in housing their servants and properly separating the sleeping apartments of the men and women.

Owners of property also might do much by increasing the number of good three-roomed cottages, and by building them upon the farms where the labour is wanted. As a matter of investment cottages do not pay a fair interest. But many large farmers would gladly pay more than the mere rent for the convenience of having their labourers on the spot. When a man has walked two to three miles (as many do) to work, apart from the general convenience, his labour is not as effective, and therefore not worth as much to the farmer as if he lived nearer. Landowners might be still further assisted with Government loans for new cottages. It is desirable that boards of guardians should have power to shut up any cottage that is either in bad repair or that is unclean or undrained, or without proper water supply, or otherwise unhealthy, with appeal to the justices in case of resistance; also power to limit the number of persons in any house, and to enforce the removal of nuisances without appeal to the justices except in certain cases.

A higher state of education among the industrious poor would almost be useless without a proper regulation and improvement of the cottage houses.

The Nuisances Acts are too numerous and intricate. It is desirable to repeal the whole and substitute one simple Act with prompt and simple powers to the local authorities or justices. The inspection of nuisances in rural districts and villages is little more than a name. The duty is performed in this union by the two relieving officers, who have 18 parishes (some of them very extensive ones) under their care; they receive 10*l.* a year each for their work; they have not the leisure to make thorough periodical inspections; they seldom look to any houses but those to which they are taken in the discharge of their duty. An officer of the class of a police inspector, who should give his whole time to the duties, and report his daily visits to the local authority, would be far more efficient than the present imperfect system, without being much more costly to the union. The inspector should be empowered to serve notices on the spot, with an appeal to the next meeting of the local authority, or to the justices in petty sessions, if notice be given to the inspector or local authority of such appeal within three days.

Young children partially permanent in workhouses would be better brought up in separate district industrial schools, unless there is complete isolation from the adults and from those children who are received for short periods.

Many National or endowed schools will not admit workhouse children; such is the case at the National or endowed school at Meriden.

Milcote.

65. *Mr. J. C. Adkins*, occupier.—This is a hamlet of Weston, which is in Gloucestershire, but this hamlet is in Warwickshire. I have property in the parish of Loxley. I have lived here all my life, and have always been connected with agriculture. Women are considerably employed about here all the year, except during the winter; they are generally the wives of the agricultural labourers; the ordinary pay is 8*d.* to 1*s.* a day, and the usual hours of work are from 8 to 5, with 1½ hours interval. It is beneficial to their health, and I find that women who are most valuable as labourers are most valuable as wives and mothers; if they are good for nothing as wives and mothers they are good for nothing in the fields. I think the practice of women working in the fields is slightly decreasing, but not much. The services of women is most important to farmers; such work as weeding, haymaking, and stone picking would have to go undone if it were not for the women. In addition to the women I have just referred to who live at Milcote, we sometimes have recourse to Stratford (distant two miles) in busy time for women to assist us. Young girls sometimes come and do the same work as their mothers, but very rarely. Women do no piecework except in harvest.

We employ boys from 9 upwards in a variety of employments, chiefly with the horses, but also with shepherd and other jobs; they are occupied all the year round from the time they first come to us. Their hours of work are 6 to 5.30 in summer and during daylight in winter. I have never known any boys injured by the work they do, or any accidents caused by horses. I think that as a general rule the education they receive is sufficient; the boys whom I employ live at Stratford, where they have ample opportunities of education; the last three I have had have obtained places on the railway. I don't think that a man in service is at all more useful to me because he is a scholar. The labourers here are very stationary. The wages now are 11*s.* a week. One of my common day labourers earned last year 14*s.* 11*d.* on an average per week, exclusive of beer for four months, worth more than 1*s.* a week, and a five-room cottage and garden for 1*s.* a week. I don't think many men earn within 1*s.* a week of that.

I always hire two or three young men by the year, but do not board them; but there are very few hired agricultural labourers now boarded in the houses. I think that there is certainly no need of any extension of the Factory Acts to agricultural labour.

Oxhill.

66. *Mr. J. G. Ward*, landowner.—There is a church school here under a mistress; also a Wesleyan Sunday school, but no day school for non-churchmen. Not one-third of the population of the parish are churchmen; formerly the church school was supported by all parties, but of late many of the subscriptions have been withdrawn, and there are many parents who are unwilling to send their children to it on account of the doctrines taught. There is no educational provision for their children; some go to Tysoe, distant two miles. There can be no doubt that the education of the children should be improved. I don't think that there is much advantage in employing a boy under 10 years of age, but they are occasionally useful under that age. After they begin to work they could be spared in winter evenings after 5 o'clock, but not

Warwickshire.

Mr. Norman.

A.
i.

during the day time. I prefer a man who can read and write for a labourer, but most of our men here can do that.

RADFORD SEMELE.

67. *Edmund Lythall, Esq.*, occupier of 600 here, and 60 at Harbury.

Thomas Horley, Esq., occupier of 425 acres in this parish, and 140 in Napton and Harbury.

The principal landowners in Radford are F. E. Williams and W. G. G. Williams Esqs. About four-fifths of the parish is arable; the soil is various, some very stiff and some very light, more of the former than the latter. There is a sufficient supply of labour in the parish for the wants of this parish, but many men go to work at Leamington and at Offchurch (which is a close parish) so that there are often barely enough labourers here; we don't suffer from this because we keep the same number of men summer and winter. There are a good many young men out of work now; they won't go to regular work, but do casual jobs on railways or coal and iron works in Staffordshire; they come back here in winter when that work is over. There is a school here and a very good uncertificated master; almost all the children in the parish attend. There are now 94 on the books of the day and 110 of the Sunday school, there is also a night school attended by adults. The cottages are more than necessary for the labourers in this parish; many of them are very bad, not sufficient sleeping accommodation. Most of them belong to Mr. Williams, but some have been built up by speculators on small pieces of land which they have been able to purchase; the accommodation of these is also insufficient; rent from 2*l.* 10*s.* to 6*l.* All belonging to Mr. Williams have gardens, but some of the others have not, there are allotments besides. We think that allotments are a very great benefit to the labourers whenever they are used as a substitute for gardens, but they are very injurious to the labourers and farmers when they do not effect that object. They should be one-eighth of an acre in extent. It is useless to give a few men extra land in order to supply the labourer at extra times of the year, because these men have to do their own work at times when they are most wanted by the farmers. The bulk of the cottages are close to the school, only six are more than a mile from it.

At Harbury Miss Ryland is the principal proprietor, but there are a number of different owners. A few years ago almost every man farmed his own land there, but that system is now being given up. There is very little grass there (not more than one-sixth), the land is very stiff.

The usual size of farms is from 200 to 500 acres, average about 300. We cannot get boys as we used to get them; they go to work from this parish about 9 years old occasionally, and probably begin continuous labour about 10. They are first employed in bean dropping, and turnip singling, and bird scaring; women and girls are employed in bean dropping and turnip singling as well as boys. The best continuous work boys can do is driving plough; we don't think that any restriction upon their employment is desirable; there is no greater danger from boys of 10 being placed with horses than boys of 14, because if horses are unmanageable a small boy will run away, but a bigger boy will endeavour to restrain the horses.

Women are very little employed, we don't employ any regularly; they only do light work in the spring and summer. The winter work is quite occasional and optional. Many go to Leamington to wash, and they get 1*s.* 3*d.* a day and their food.

Men's wages are 12*s.* The piecework done in the neighbourhood is turnip hoeing at 7*s.* an acre (twice over); mowing, 3*s.* an acre and beer, worth 1*s.* per acre more; harvest work, reaping about 12*s.* with beer or 14*s.* without per acre; men are also employed in carting, &c., get 3*s.* a day for a month besides beer; carter's wages are 12*s.* or 13*s.* with a cottage, with 1*l.* extra for harvest. Last year 18 able-bodied men employed by Mr. Horley earned on an average 15*s.* 6*d.* to 16*s.* per week. Mr. Lythall thinks that his men earn about the same sum.

It was not the custom to let cottages with the farm, but it is becoming more the custom now. It is desirable that all cottages except those necessary for the stockmen should be placed in the village; but a few labourers should always live close to their work.

Mr. Lythall usually engages two or three servants at the statutes; they are domestic and not farm servants. He hired two servants this year, one an under carter, another an under shepherd, they are lodged at an outfarm; they are found in firing, lodging, washing, and they have 7*s.* a week to board themselves, and are supplied with garden ground for vegetables; they get from 7*l.* to 10*l.* at Michaelmas.

Mr. Horley objects strongly to statutes; Mr. Lythall has been always in the habit of using them, and thinks there would be a difficulty in obtaining servants without them. There is one objection to registry offices, it is for their interest to move servants as often as they can without injury to their character, because they receive a fee whenever a servant moves; they get 2*s.* 6*d.* from one party, and 1*s.* from the other.

The school here has been in existence for many years, the good education enables the boys to get places at Leamington. Many of the sharp boys go there after 15 years of age, we only get the stupid ones to work for us. We think that boys are more useful as farm labourers when they can read and write. Mr. Horley is often in the habit of giving his men *written* directions when he goes away himself.

ROWINGTON.

68. The *Rev. B. P. Brodie.*—I have been here 13 years. The parish belongs to a number of proprietors, some of them resident farmers. There are about 20 farmers in this parish. There is no resident squire. The small farmers employ very few men in winter. Some few of the labourers are lodged and boarded by the farmers. The cottages are very much scattered. The children are absent from school for about two months a year for bird and pig tending; we lose enormously in their school work in consequence of that absence. The farmers send to the parents and take the children away. I have known them to go away at the age of 6 or 7 for that job; but then they come back again. The women go to work here whenever they can get a chance. We have a surplus population. All are employed during the summer; but in winter many are out of employment. There is a charity here worth 200*l.* to 300*l.* per annum; that always attracts people. We now pay church rates out of it. Many of the cottages in the parish belong to this charity, some are good, but some are disgracefully bad; they are managed by a committee, consisting chiefly of farmers, so that the farmers can provide cottages for their labourers when they please. We used to charge no rent for these cottages, on condition of the tenants keeping them in repair, but they have failed to do that, and now we charge a quit rent of 1*l.* a year.

Boys leave school at the age of 10, girls remain up to 11 or 12. I am certainly in favour of compulsion, but I think that indirect compulsion would be preferable to direct. When I first came here the school was free, and the children were then very irregular; since then a new school has been built, and the children now pay 1*d.* a week, and are far more regular in attendance than they were. The difficulty I have to deal with is not so much the difficulty of the field work as the indifference of the parents. Any law which may be passed should deal with both these difficulties. The school has been in good working order for six or seven years. Very few boys have left this parish for work elsewhere, in consequence of the good education they have received. I won't receive the children belonging to neighbouring parishes without the sanction of the clergy of the parishes to which they belong. I think night schools are failures, except

in compact parishes. I have had one here, but this parish is too much scattered for the purpose; the night school is usually attended by agricultural servants, who are hired at mops, and belong to other parishes.

Mops are a great evil, the greatest that can be; they are a perfect heathendom; they do no good, except to the publichouse keepers. Everything is done to make them as attractive as possible; in Warwick an ox is roasted whole in the streets. They are held in October in all the principal towns; they are among the most immoral things we have. It is a holyday for farm servants, and the only one they have. The farmers are without labour for a fortnight at the time of the mops. We have established registers at Warwick and other places for farm servants; but the attempt to do away with mops has generally failed, because the farmers won't hire boys there. None of the schools in this neighbourhood have certificated masters except ours and that at Lapworth.

SOLIHULL.

69. The *Rev. P. M. Smythe.*—The Becher club insures an annuity at the age either of 65 or 70, a payment in case of sickness and of death. A club does not answer if too much extended; people lose individual interest in it. At first we permitted women as well as men to contribute to it; but that was given up because it is impossible to gauge their state of health; they don't go out to work, and they may be in indifferent health, although well enough not to appear ill while staying at home. A man will always go out to work if he can. The Odd Fellows club is managed by the members themselves; the members are sufficiently numerous in the Odd Fellows to enable them to do that, but not so in the Becher club. When a club is limited to one or two parishes, nobody can be found to manage the finances unless some gentlemen take it up.

The Becher club never go to a public house; there is a dinner every year, but nobody need pay or attend unless they like. I think it is the general practice for the poor about here to belong to a club.

We have also a medical club. The poor pay 1*d.* a piece for each family, or $\frac{1}{2}d.$ for each individual. In case of sickness they pay 1*s.* for a medical ticket, which entitles them to medical attendance for six months; the extra money necessary is made up from an honorary fund, which amounts to about half the regular subscriptions.

I never heard of the Act of 1866, which makes overcrowding a nuisance, being enforced in this neighbourhood.

SOUTHAM.

Meeting at Southam, 1st Feb. 1869.

Present:

70. The *Rev. T. Hillyard,* rector of Southam.
Mr. W. B. Russell, occupier, Priors Marston.
Mr. G. F. Wills, occupier, Priors Marston and Priors Hardwick.
H. T. Chamberlayne, Esq., landowner, Long Itchington.
Mr. W. Winterton, occupier, Long Itchington.
Mr. T. Martin, land agent, Southam.
Mr. W. Moxam, occupier, Granborough.
Mr. D. Rice, surgeon, Southam.
Mr. S. Cook, occupier, Napton.
Mr. James Whitehead, occupier, Southam.
Mr. T. E. Ruttledge, surgeon, Southam.

The parish of Priors Marston is principally grass. The land is in the hands of several proprietors, of whom Lord Spencer is the principal. There is a national school under a master and mistress, besides dissenters' schools. The inhabitants are mainly collected in the village, and are all within reach of the school. Priors Hardwick is much smaller than Priors Marston; Lord Leigh is the principal proprietor. The school accommodation there is sufficient. The supply of labour is scarcely sufficient for the cultivation of the land.

Granborough is chiefly grass; the population is about 400. There is a school under a mistress, not a very satisfactory one; but at Willoughby, distant two miles, there is a good school. The principal proprietors are Lord Overstone and Mr. Robinson. The supply of labour is more than sufficient in winter; some of the men have been walking seven or eight miles to work; but in summer it is insufficient; we get Irish to work.

Napton is chiefly grass. There are schools there for girls and boys; the master is certificated, the mistress not. The supply of labour is more than sufficient. The property is in the hands of many proprietors. Scarcely any girls are employed in this district. Boys begin to work at tending birds or leading an extra horse when crops are being carried, at 10; but they do not go to regular work, such as plough-driving, until the age of 12 or 13; they are also occasionally wanted for the shepherds' work and odd jobs from the age of 12 or 13; their ordinary hours of work are from 6 to 6 in summer and 7 to 5 in winter, if they can see. The work is not physically injurious; the boys are not liable to more accidents than men; they earn 2*s.* 6*d.* a week at first. Women are very little employed except in hay-making and harvest; women of all ages go out, but principally the older ones. There are very few turnips in the neighbourhood, and therefore women are not much employed in topping and tailing; they are not generally employed in hoeing or squitch-picking. The work is not physically injurious to them, but it has a hardening effect upon them, more particularly upon the younger ones; it certainly has a bad effect upon their families. The language heard when men and women are at work together in the fields is very bad. The houses of the field workers are cleaner than others, because the women who work in the fields are the most industrious, and the children do not as a general rule suffer, though sometimes they suffer from too many being entrusted to the charge of one woman. The women have from 8*d.* to 10*d.* a day generally, and 1*s.* in hay and harvest.

Boys are not wanted by farmers until the age of 12, except for about two months a year, and it would be much better for them to be at school. It is thought that if they attended regularly until they go to work they might receive sufficient education; but there is great indifference amongst the poor about education. There can be no doubt that educated labourers are decidedly more useful to farmers than uneducated. A majority of seven to four of the gentlemen present are in favour of interference by law for the purpose of improving the education of the children. It was suggested by some gentlemen that the object might be satisfactorily attained by giving additional support to night schools, and by utilizing wet days, &c. when boys cannot earn wages.

As a general rule the cottages are insufficient both in number and accommodation; in Napton there are now a man and his wife and six children in one room, besides numerous other cases of overcrowding. The ordinary plan of cottages consists—one sitting room, a lean to, and the upper room divided into two by a wooden screen. Mr. Ruttledge has often traced cases of illness to bad drainage and ventilation, or the accumulation of manure under the windows. Fever and rheumatism are the two most prevalent diseases here. It is thought desirable that it should be made compulsory to carry out the Nuisance Acts.

The rent is 4*l.* or 5*l.* in Southam, and about 3*l.* or 4*l.* in the country parishes. As a general rule the cottages have gardens, though often very small; there are numerous allotments. Mr. Hillyard lets 36 acres in allotments at 2*l.* 2*s.* an acre, but in most cases the rent is much higher. It is the usual practice to keep pigs, and nuisances are frequently thus caused. The gentlemen present approve of the allotment system when used as a substitution for a garden.

Men's wages here at 12*s.* usually (now in one parish only 11*s.* here given) in summer, not in winter; the regular men have 1*l.* a week in harvest.

Warwickshire.

Mr. Norman.

A. i.

STONELEIGH.

71. The *Hon. and Rev. J. W. Leigh.*—We established a co-operative store here in December 1867. We deal in groceries, bacon, cheese, bread, and beer. The sales amount now to over 40*l.* per week. The shares are 1*l.* shares; 3*s.* per share must be paid as allotment, the remainder by contributions of not less than 6*d.* per week till the whole amount of 1*l.* is paid up. The manager is paid by a per-centage on the sale. We think that that plan is preferable to that of a fixed salary, because it induces him to take an interest in the prosperity of the society. No credit should be allowed under any circumstances. One of the main objects of the society is to enable the members to keep out of debt. I think that a man with a large family would be able to pay his rent in this parish out of the dividend on the purchases he would make at a store. The beer sold is not allowed under any circumstances to be drunk on the premises. We buy our beer.

The profits are divided as follows:—10 per cent. for depreciation of fixed stock; 5 per cent. for interest on paid shares; dividends on the purchases of members and of non-members (if they reside within 3½ miles), but non-members receive only half the amount as a dividend that members receive. A small amount is always carried on to a reserved fund. The benefits derived from a co-operative store are (1), that a good article is supplied to the poor people at a moderate price; (2), that they are taught to calculate for themselves; and (3), that it acts as a savings bank. I can suggest no improvement in our mode of management. The society is under the management of a committee, consisting of a president (myself), a treasurer (a tenant farmer), a secretary (a plumber and glazier), and eight committee men (two of whom are farm bailiffs, and the rest agricultural labourers). The secretary receives no salary.

We have also a reading room (with a smoking room attached) and lending library; it is managed by a committee consisting chiefly of agricultural labourers; three daily papers besides weekly papers are taken in at the library. The subscription to the library is 1*s.* a year; this is far too low; the expenses have to be borne chiefly by the gentry and farmers. We have lectures and penny readings there during the winter months. I think that these institutions are of great benefit in keeping the men away from the publichouse. There is a beershop here, but no publichouse. There is no publichouse in any village owned entirely by Lord Leigh. No complaints are made on account of there being no publichouses. The keeper of the beer house has been persuaded to keep it closed on Sundays, except between 1 and 2 p.m. and 6 and 7 p.m.; this arrangement has led to very satisfactory results.

72. *Mr. George Jones*, agent and solicitor to Lord Leigh at Stoneleigh.—I have lived here for 40 years, and have had the management of Lord Leigh's property for 14 years. I have the superintendance of property in 27 parishes in Warwickshire; these parishes are much scattered about in different parts of the county. I am acquainted with the system of agriculture and the mode of employing labour which prevails generally throughout the county.

It is impossible to give a general description of the farms in Warwickshire; they vary in character in different parts; about here they vary from 100 to 400 acres, and about one-third is grass; in the south there is a larger proportion of grass than here; in the north also a considerable proportion of grass, but not quite as much as in the south. In the north it is the practice to graze cattle. A small dairy is attached to each farm throughout the county, but the cheese made here has little sale in the London market. The crops grown are the ordinary agricultural crops; there are few market gardens, no hop grounds. The price for labour in the county varies very much; it depends entirely on the farmer. I should think that some farmers spent more than 2*l.* per acre, and some less than 1*l.* I think 1*l.* 10*s.* per acre would do it well.

Women are employed in agriculture in this county in couching and weeding the crops in the spring, then in haymaking, then harvest (when very few reap, but bind up and rake for the farmer), then picking potatoes and cleaning turnips. The turnips are usually pulled up by men and cleaned by women. Women are not employed at dung spreading; occasionally, but rarely, employed with thrashing machines.

Girls begin to work about the age of 16; their work is the same as that of the women. Women's wages are about 1*s.* a day in summer, and less, perhaps 10*d.*, in winter; they work from 8 a.m. to 5 p.m. with intervals for meals; they are rarely employed at piecework. When employed in weeding, &c. a number of women are sent to work together, but they are engaged and paid separately. Nobody is specially employed to superintend them when at work; the general superintendence rests with the farmer himself (if the farm is small) or with his foreman. Most of the females are married women. The girls who work in the fields consist of a class who dislike the control incident to domestic service. I don't think that the employment of women in field labour is necessary for the purpose of carrying on the cultivation of land in this district; no doubt in times when work is pressing every hand is of great use, but I think that female labour might as a general rule be dispensed with without increasing the expense of cultivation. I expect that the introduction of improved machinery in farming operations will have the effect of improving the cultivation, diminishing the weeds, and consequently the necessity for female labour. Of course any sudden withdrawal of women from field labour would be inconvenient, but I think that they might be gradually withdrawn from it without serious loss to farmers. I have the strongest possible objection to unmarried females being employed in field work, and I have prohibited bailiffs and others over whom I have control from so employing them. I think field work has a very bad effect upon their morals, and unfits them for their future domestic duties. As regards *married* women I think it a very great pity that they yield to the temptation offered by the wages of 1*s.* a day, but I feel sure that they save more for their families by attending to their domestic duties than they can earn by going out to field work. The number of women who are employed in the fields is I think decreasing; they do no hard work, and no work which in my opinion is unhealthy; and I doubt whether it is desirable to interfere by law in their case. Boys are first employed in tending birds and sheep, but the first continuous employment in which they are engaged is going with the horses. One boy is employed with each team, and they are engaged in that kind of work from the age of 8 upwards. Boys' hours of employment are usually from 6 to 6 in summer and winter. When at plough the horses go out at 7 and return at about 4; they stop for some time in the middle of the day to feed the horses and to enable the men to eat their dinners. I think that the early work is physically injurious to them; many accidents occur from their inability to control the horses. The hours of labour are too long, and their nourishment is insufficient for the exertion they are called upon to undergo; they have not time to attend school and obtain a sufficient education and proper moral training. I think that the best plan would probably be to make the employment of any boy illegal unless he could produce a certificate of having attended school a certain time or of having attained a certain amount of proficiency in school work.

Great efforts have been made during the last few years to improve the cottage accommodation, both as regards the health of the occupants and the separation of sexes. No doubt in the case of many of the old villages the cottages are placed at too great a distance from the land to be cultivated. That is owing in a great measure to the enclosures which have taken place within the last 60 years. Before that time there were a number of open commons in

this county on which no cottages stood; these have now been enclosed, and labourers are required to cultivate them, but cottages have not yet been built on all the land which was formerly common. Although there is much still to be done in this county, I think it would contrast favourably with many other counties as regards the supply of cottages. The practice among the principal landowners in the county is to keep their cottages in their own hands; they do their best to accommodate their tenants by letting the cottages which are near their respective farms to the labourers employed by the tenants; but it is not the practice to let the cottages to the nominees of the tenants, and a labourer would not as a general rule be turned out of his house simply because he disagreed with his employer. I find that that system works well. It is for the mutual advantages of the farmer and labourer that they should agree well together, and in my opinion the practice of letting cottages with the farms gives the farmers too great a control over their labourers. Most of the cottages stand in gardens, but besides these gardens the allotment system is very general; the allotments as a rule don't exceed a quarter of an acre. The labourers are left to manage them very much as they please; they are expected not to grow corn, but they very often do; spade labour only is allowed. I think the system has been of the utmost advantage to the labourer, it has given him an interest in his house, it has kept him out of the publichouse, and added materially to his comforts. In the neighbourhood of the towns a portion of the produce of the allotment is usually sold.

Farm labourers are not usually hired by the year; some, such as cow boys and under earters, are hired by the year, and live in the farm houses. There are statute fairs at all the principal towns; they are held principally at Michaelmas. I think the statute fairs are one unmixed evil without any counterbalancing advantage; they are composed of two elements, the business of hiring and the amusements of a fair; a substitute could easily be found for the former, but not for the latter, and that constitues the difficulty in abolishing them.

No work is done on Sundays except what is absolutely necessary, such as feeding cattle, &c.

There can be no question that educated labourers are more useful than uneducated; at the present time you require a man who is more or less conversant with machinery, and if you have an educated man you can make him a foreman. We have sent many men from here to be bailiffs; we could not have done that if they had not been educated. Lord Leigh's cottages are let by the year, rent paid half-yearly, and six months' notice to quit necessary. I think that is the best plan for letting. We cannot build a cottage with three bedrooms, two rooms down stairs, and detached washhouse under 150*l.* each, and I feel sure that it does not answer to build cottages with less accommodation than that. The best position is as near the work as possible, provided they are not too far from the school.

By the enclosure of commons all the commons rights have been lost; but in return for that the commoners have now far more work to do and a greater opportunity of earning wages than formerly.

Stratford-on-Avon.

73. *Mr. J. S. Leaver*, clerk to the Becher Club.—This club was established in 1868 by the Rev. R. Morris, Vicar of Eatington. The name was derived from the Rev. J. Becher, of Stockwell, in Northamptonshire, who was the originator. This Becher Club is co-extensive with the Stratford-upon-Avon union. There is another Becher Club at Solihull for five of the surrounding parishes, there is another at Stewpony in Worcestershire. It is a *sine quâ non* of our club at Stratford that no meeeting shall be held at a publichouse. We used to insure women, but we have ceased to do that because of the difficulty incurred in ascertaining their state of health and the frequent demands they made upon the club. There is a great difficulty in ascertaining whether they are really ill when they demand relief, and whether they are simply staying at home without any sufficient cause, as experience teaches us that it is no great deprivation to a woman to remain at home although in good health. At the beginning of 1868 the balance belonging to the club amounted to 4,581*l.* 1*s.* 2*d.*, and the number of members 327, of whom 197 belonged to Stratford. The class of people belonging to the club in Stratford are chiefly artizans of the better class and day labourers (not agricultural). In the country districts they are composed chiefly of agricultural labourers, with the exception of some quarry men. Those agricultural labourers who belong to it are principally carters and men who are earning more than the ordinary rate of wages.

All the country parishes have little clubs, but they are all publichouse clubs, we find that their competition operates against us on account of the attraction of the publichouses. The habit of belonging to clubs is certainly increasing; there has been an additional lodge of Odd Fellows and a court of Foresters started since I have been in the town (27 years), in addition to the clubs existing before. I have never known a member of the Becher Club apply to the Board of Guardians for relief because they are usually the better class of men (the majority of them subscribe for the highest rate of payment we can give them, viz., 10*s.* a week), but I believe that men belonging to the other clubs do apply for parish relief and are not refused. We have no difficulty in the management of our club because it is generally supported by the clergy and gentry of the neighbourhood, the members are in the habit of examining the accounts most carefully and with great intelligence, but in country villages where labourers are the chief supporters of clubs, the members are more apt to be influenced by the social attraction of a publichouse than by the solvency of the finances.

I think that all clubs should be obliged to publish a detailed balance sheet, showing the items of income and a detailed statement of the amount spent in each parish (if the club spreads over more than one parish). The accounts should also be audited by professional men every year, and the tables should be approved by an experienced actuary. Unless these requirements were complied with no officer of the club should be answerable for defalcations.

Tysoe.

74. The *Rev. C. D. Francis*, vicar of Tysoe and rector of Compton Winyate.—Lord Northampton owns the whole of Compton Winyate, and about one-third of Tysoe. The soil here is stiff; it lies between the oolite and the blue lias, and is very fertile; the rent varies from 35*s.* to 45*s.* as a general rule, but that is less than the best land is worth. There are several proprietors in Tysoe. Lord Northampton, Lord Leigh, Lord Redesdale, Lord Jersey, and Lord Willoughby, Sir W. Cope, and Christchurch College, all have land here, besides other proprietors. There is an ample supply of labour in Tysoe. Compton Winyate contains 997 acres, and only 27 inhabitants. There is only one cottage there in which there are eight people. The labour necessary for the cultivation of that parish comes from Tysoe, distant one mile, but it is almost all grass, and very few labourers are required. There used to be more cottages there, but they were pulled down many years ago before I came here, which was 17 years ago.

Lord Northampton has a residence at Compton Winyate, but usually only resides there for a few weeks in the year.

A good many young boys go to work in summer, and come to school in winter. The boys are employed in scaring and dibbling; it is the usual practice to dibble beans in the neighbourhood. The inclination of all the women is to go to field work, but we compel all the unmarried if possible to go to service. There is a clothing club here, and one of the rules is that any parent who keeps an unmarried daughter

Warwickshire.
Mr. Norman.
A.
i.

from domestic service without sufficient reason loses the benefit of the club. I think the parents usually like to get the girls out, but the girls all prefer the liberty and fun of the field work, although if they once become habituated to domestic service they are unwilling to give it up.

I think it would be impossible to fix beforehand upon any slack time of the year when children might be sure of not being wanted for field work; at the same time there are always certain times of the year which they might devote to school without interfering with the farm work. These times they could select for themselves if they were obliged to devote a certain portion of their time to school until they passed the fourth standard. They should have permission to secure the necessary amount of school attendance either at day or night school, or a combination of both. I think that the proper persons to enforce the law would be the relieving officer; he might ascertain from the schoolmaster what boys had failed to attend achool the requisite number of times. The parents should be finable in the first instance if the boys did not attend school; and the farmer should be punishable only if he employed a boy with a knowledge that the occupation for which he engaged him must necessarily interfere with the number of attendances which the boy was bound by law to devote to school. I think that it is desirable that a boy should go to work a short time every year as soon as he can; if he does not go to work until the age of 12, he acquires a distaste for farm work.

There were a number of cottages built originally on the waste by the labourers; but they have most of them now passed into the hands of farmers and tradesmen.

I think that night schools are of great value; I think that those who attend them learn as much during the three months they attend as the day school children do in six months. I have always found great difficulty in getting regular attendance at night school. This year I have made each scholar pay 1*s.* on joining the night school, which I give back to him if he attends the requisite number of times.

Every boy who attends the day school has to get leave from the master when he wants to be absent, and if they are absent a week without leave, they have to pay double next week. At Radway, where the school is free, the children pay when they are absent.

There is a benefit club here called the Tysoe Provident Society; it was started about nine years ago, and takes in a few members from five or six surrounding parishes, but the great majority of the members belong to this parish. It is started on temperance principles. We have a tea meeting every year. It is very popular among the labourers, and contains 226 members (chiefly labourers). Balance in hand 1,248*l.* There is also a small club for women founded on similar principles. The payments are regulated according to the age of the assured; they can purchase an annuity, and insure for relief in sickness for any amount below their earnings. There were three public-house clubs here before this was started; one of them was broken up, but the other two have given up the public-house principle. I met with great opposition from the publicans when the club was first started.

I think that the great obstacle to the education of young men is the publichouses; the men prefer them to the night schools. We have a good library, and are just starting a reading room.

Warwick.

75. At a meeting of the Board of Guardians for the Warwick Union held at Warwick on Saturday, November 28th, after hearing the statement of the Assistant Commissioner, the following resolutions were agreed to:—

1. That no legislative interference is necessary with respect to the employment of women in the fields.

2. That no child should be employed in the fields under 10 years of age, nor between the ages of 10 and 14, unless they can produce a certificate of proficiency signed by the Government Inspector, minister, or schoolmaster.

76. *Mr. H. Thornett, Mr. W. B. Bone, Mr. E. Stephens*, relieving officers for the Warwick Union.

No complaints can be made on the ground of ill health against the agricultural labour performed by women and children in this district. The children do occasionally suffer from ill health when their parents go to work; we have known several cases of children having been burnt. Many of the houses are filthy and wretched when the mother goes to work; the cottages are not more comfortable in consequence of the money earned by the mother. The illegitimate children are chiefly the children of domestic servants. The clause in the Sanitary Act of 1866 against overcrowding has not been enforced in this district, but there is a case of a house with one bedroom at Kenilworth in which it probably will be enforced. There are in that house a husband and wife and eight children. The cottage accommodation is now quite inadequate; there are many houses with only one room upstairs and one downstairs. The labourers don't often have to go more than one mile to their work, but some few have to go as much as two or three miles. The ordinary rent for cottages is 1*s.* 6*d.* a week. In some places cottages have been built upon the waste. The owners are labourers; they are usually miserable places. The guardians are certainly anxious to enforce the Nuisance Act to the best of their power.

Minutes of Meeting of the Agricultural Chamber, Warwick, 12th Dec. 1868.

77. Agreed that in this county,—

No girls are employed under 11 years of age, except for a short time in spring and autumn.

That employers would not be put to inconvenience if they employed no boys under 10 years of age.

That, as a general rule, none except the wives of labourers are employed in field work. Women are employed in spring in stone-picking, then in weeding the corn, hay and corn harvest, cleaning roots, and rarely with the threshing machine; their hours of work are from 8 to 5, and their health very good.

Fire-arms are not entrusted to young children.

Small boys are often sent out in charge of horses too young, but the employers oftener suffer from it than the boys.

That the Chamber prefers the system of requiring a certificate of proficiency to a certificate of school attendance as a means of education.

That it is very difficult to carry out night schools in thinly-scattered parishes.

That a boy of 10 years of age gets 2*s.* 6*d.* to 3*s.* a week; he gets employment under that age for dibbling; but that work is done for the parents, and employers rarely want a boy under 10.

That the women who work in the fields are usually the best description of women, and are more tidy in their houses than others.

Whitnash.

78. The *Rev. J. R. Young*, rector of Whitnash.—I have been here for 22 years. Children from 7 to 12 are employed here for three weeks in the spring at bean-setting, and three weeks in the autumn for wheat-dropping, and occasionally in bird-tending. Boys and girls are so employed. There are three men in the village who take this job, and they employ four children each when engaged in it, and sometimes a woman in the place of the children when the children cannot be obtained. The children so employed are usually their own children, but occasionally those of neighbours; the children are paid about 6*d.* a day.

No case of harshness, ill-treatment, or immorality has been known. I have questioned some of the most reliable women upon the point. The children come back to school in the intervals, and I think that the advantage they derive from the experience thus de-

rived of field work, combined with the benefit done to their health from being out of doors, more than counterbalances the loss they sustain from being obliged to absent themselves for a short time from school. The boys of the poorer families begin to go out regularly to work about the age of 10. There are no children in the village who don't go to school now. All the parishioners are within reach of the schools, except those who reside in two cottages attached to a farm two miles from the village. The children from that cottage do attend school, but less regularly than others. I don't think that the boys who leave school at the age of 10 have received sufficient education; they can pass about the fourth standard. I find that they retain the power of reading but not of writing. I think that they should attend up to the age of 12 in order to acquire an amount of education sufficient for their position. I have a night school here now, which enables the boys to retain and improve what they have learnt at the day school. The boys in the village were very anxious to establish a night school, and got it up of themselves; they have now got up some penny readings. My family assists at the penny reading, but the rules are formed and the arrangements made by the attendants at the night school themselves. I am diocesan inspector of schools, and inspect 22 schools in this district (six of which are in Leamington). The girls usually remain in the schools until they get into the first class; not so the sons of the agricultural labourers. I think that there is no such deficiency of education in the district which I inspect as to require the interference of Parliament to remedy it. I think that the only mode in which the education can be improved would be by requiring a certificate of proficiency as a condition of being permitted to work; but I don't see upon whom the responsibility of summoning the farmers for breach of this regulation can rest; certainly not on the clergyman, as he would thus be led into disputes with the farmers; and I think that the advantages which would be derived from some compulsory scheme would not be sufficient to counterbalance the difficulties to be met with in carrying it out. I have been in the habit of sending my own children to the parish school when they were young, up to about 7 years old. I have been quite satisfied with the results, and I think that my example has acted as an inducement to others in my parish to send their children regularly. I don't think that females suffer any harm morally or physically from the work they do in the field. One great cause of complaint is the "yearly wake," which takes place during the week beginning the second Sunday after Trinity; it lasts three days. I think that our own people do not behave badly, but the difficulty is that it attracts bad characters from Leamington and Warwick. I find that the expense of educating children in the agricultural districts amounts to 1*s.* a week per head. I calculate thus:—Expense: schoolmaster's wages, 50*l.*, and the school pence 60*l.* to 65*l.*; other expenses, such as rent, fire, books, &c., raise the expenses to 100*l.* a year. This would provide education for 50 children in regular attendance; perhaps there would be 70 on the books. The 50 children might attend 40 weeks per annum, which, at 1*s.* per week, would produce 100*l.* per annum. Men's wages are about 13*s.* a week, that is higher than in the country parishes. On account of the proximity to Leamington, women get a good deal of employment there both as washerwomen and charwomen. I used to pay my schoolmaster 50*l.* and the pence; I now give him 36*l.* a year and a capitation allowance, making the pence up to 3*d.* a head; the children themselves pay 1*d.* or 2*d.*; I make it up. Out of 88 children examined by me in two purely agricultural parishes last year there were 24 girls and 11 boys over 10 years of age.

WELLESBOURNE.

79. *J. Ford, Esq.*, Moreton Morrel.
J. M. Mordaunt, Esq., occupier of 500 acres.
Mr. John Moore, bailiff.

The parishes of Wellesbourne Hastings and Wellesbourne Mountford belong chiefly to Sir C. Mordaunt, H. S. Lucy, Esq., and G. H. Granville, Esq. The farms contain about 250 acres, and the soil light, chiefly turnip and barley land. There is very little grass. There is more than enough labour to supply the necessities of the parish. Men go to work from here at Charlecote, Walton, Newbolt Pacey, and Moreton Morrel. The cottages belong chiefly to Sir C. Mordaunt; those belonging to him are let for about 2*l.* with a garden; others at from 3*l.* to 5*l.*, some with and some without gardens. The cottages belonging to Sir Charles are chiefly old, those belonging to other proprietors are principally new; all in decent repair. There is no superfluous labour generally; but this year there are some men out of work in consequence of the root crop having failed. There are not many cottages with three bedrooms. There is one church for the two parishes. There is an endowed school here, and also an infant school. There are usually about two cottages let with each farm, but almost all the population is accumulated within three-quarters of a mile of the school.

The parish of Moreton Morrel belongs chiefly to Mr. Ford, Mr. Little, and Captain Ward, it contains nearly 2,000 acres. It is a very strong wheat and bean soil; there is a small portion of light land on which the four-course system of cropping prevails, but on the remainder wheat and beans are grown alternately. The supply of labour is quite sufficient. The cottages belong chiefly to the principal landowner as well as to a few small proprietors. The cottage accommodation is very insufficient; rent 3*l.* to 4*l.*; only three or four have gardens, but there is an ample supply of allotments, both at Wellesbourne and Moreton Morrel. There is a free school under a mistress at Moreton Morrel very conveniently situated for the population. No resident clergyman. The majority of the wives of agricultural labourers go to the field work; some of them all the year round, but they only do light work; their work during winter consists of trimming turnips, that is piecework, done at 8*s.* to 10*s.* an acre, they also go out with the threshing machine; they are all married women. No harm arises from the employment of women in this neighbourhood. Lads come to work at the age of 10 or 11 at Moreton Morrel; they don't go to plough until the age of 12 or 13 on account of the stiffness of the soil. Very few boys are employed under the age of 10 or 11 for occasional jobs such as scaring, &c. There is very little dibbling done, and that is the only work in which they are employed under their parents. No interference by law is necessary for the purpose of improving the state of education; there has been a great improvement in that respect of late, and as a general rule the labourers take advantage of the opportunities they have. Men's wages are 12*s.*, waggoners and shepherds 12*s.* to 14*s.* with cottage and garden; during harvest the men get 1*l.* 1*s.* per week for four weeks, besides 1*l.* or 1*l.* 2*s.* for beer. As a general rule the reaping is done by strangers, and the regular staff gather the harvest; where the corn is cut by machinery the machine is managed by the regular staff. Mr. Mordaunt does dung carting and spreading by the piece, but that is not a usual practice.

Steam is used a great deal; the effect of that is to require as many men but fewer horses than the old practice.

WESTON.

80. *Mr. F. Wells.*—I farm 260 acres of arable land. The soil is stiff and requires four horses for the plough. I employ about four boys from 11 years old upwards. They are employed all the year round; their wages are 8*s.* a week when they begin; they are employed with the horses; their hours of work are from 6 to 6, except during haytime; they have half an hour for breakfast and one hour for dinner. In winter they work from 7 to 5. When at plough they come in at 4.30. I employ three or four women during the summer; I employed none last winter;

Warwickshire.

Mr. Norman.

A. i.

they do no piecework except stone-picking. The piecework done by men consists in draining, dibbling, and hoeing turnips. Men's wages are about 12*s.* a week; they vary from 11*s.* to 13*s.* Perhaps the work done by the piece would raise the wages about 1*s.* a week all the year round, besides what is earned during harvest. Women's wages are about 9*d.* a day. There are very few cottages in this parish; they are not sufficient in number; Lord Clifford is the chief landowner. My men come from Cubbington. They are very restless and independent because I have no cottages for them; there are about 30 cottages, one half at least have only one bedroom; they belong to various owners. There is no school here except a Sunday school; but there are schools at Cubbington and Hunningham, distant two miles each, to which the children go. The waggoners and shepherds have about 1*s.* a week more than other labourers. Cottage rent is 1*s.* or 1*s.* 6*d.* per week. I don't think that any Act of Parliament is required in the Midland districts either for women or children. Cottages have gardens, but they are usually very small; there are also some allotments. Boys are not employed in piecework. An evening school is much wanted for boys after they begin to work. Labour costs me about 2*l.* an acre on my farm, but I think that is more than is usually paid in this neighbourhood.

Evidence substantially similar to the above has also been received from Mr. H. J. Carter, Babington; Mr. H. Thornley, Brickenhill; the Rev. A. A. Fanshawe and Mr. W. A. Grimes, Bubbenhall; Mr. R. Hawkes, Charlecote; Mr. D. Galton, Claverdon; Mr. Brierley and Mr. W. Loud, Coleshill; Mr. W. Jaggerel, Cubbington; the Rev. J. L. Morris, Fillongley; Mr. T. Wells, Haseley; Mr. J. L. Colman, Hunningham; Mr. David Bower, Kenilworth; Mr. J. Brown, Kinwarton; Rev. H. Hutchins, Maxstoke; Mr. J. Smart and Mr. R. Potter, Meriden; Mr. S. Gibbs and Mr. J. Jackson, Norton-Lindsey; Mr. J. A. James, Old Stratford; Mr. J. R. Ward, Oxhill; Mr. J. Cattell, Sheldon; Mr. R. Horton, Sherbourn; Mark Phillips, Esq., Snitterfield; Mr. T. Avory, Solihull; Mr. J. Nelson and Mr. M. McNicoll, Stoneleigh; Mr. T. Garner and the Rev. T. Leveson Lane, Wasperton; and J. Dugdale, Esq., Wroxall.

Wiltshire.

WILTSHIRE.

Amesbury.

81. *Mr. William Long.*—I farm 1,800 acres; not quite half is grass. I pay 1,500*l.* a year in wages. I am sure that the great want in the district is the want of cottages. I hire eight cottages with my farm. I require one cottage for every 100 acres to supply myself with labour. I never allow two families to inhabit one cottage. I complain both of the insufficient number of cottages and the want of accommodation among those that exist.

I employ about 30 men, 16 or 18 women, and about 17 boys. Boys are employed from the age of 9 upwards. It is a very bad thing for labourers to be obliged to live on the downs at a distance from the villages, but where stock has to be looked after at a homestead it is absolutely necessary that somebody should live on the spot; farmers ought to be careful to put labourers who have no children in the distant cottages. The medical man here has told me that his work has increased enormously in consequence of the practice of building cottages upon the downs. Where men live at a distance the master is liable to be robbed. I am in favour of education; those who are the best educated are by far the best labourers. All the boys I employ can read and write. I don't want any boys before they are 10 years old; I am pestered to death by the mothers who come to get me to find employment for their boys. No farmers about here require boys until the age of 10, and I think that the parents might easily maintain them up to that age if they did not go as much as they do to the public house. I advocate education because I find that it makes men much more trustworthy and reliable and useful as farm labourers. The instances where uneducated men make good farm labourers are extremely rare.

Girls come out to work at the age of 12 or 14, and we find employment for them. They mix a good deal with the young men, and harm ensues. The language used is often very bad, and the scenes at night in the town are disgraceful. They get a taste for this sort of thing from going out to field work and from overcrowding in cottages. It is impossible to stop immorality by altering the law, or to prevent women working with men; but I think the law should prohibit girls working in the fields under the age of 14.

Ashton Gifford.

82. A meeting was held at the residence of J. Ravenhill, Esq., at Ashton Gifford, on Wednesday, January 20, 1869, for the purpose of meeting the Assistant-Commissioner. About 40 attended, consisting of noblemen, gentlemen, clergymen, medical men, and farmers, and among them the following:—Lord Henry Thynne, M.P.; the Hon. W. Holmes A'Court; the Hon. and Rev. S. Best, of Abbots Ann, Hants, Secretary to the Southern Counties Adult Education Society; Rev. J. Constable, Principal of the Agricultural College, Cirencester; the Rev. J. Wilkinson, Secretary to the Diocesan Prize Scheme Association; Mr. Brown, Inspector of Workhouse Schools; the Rev. J. E. Philipps, President of the Art Exhibition; the Rev. D. Morrice, of Longbridge Deverill; the Rev. C. Lawford, Diocesan Inspector of Schools; the Rev. J. J. Jacob, Secretary and Chaplain to the Wilts Reformatory; the Rev. H. E. Ravenhill, Secretary to the Southern Counties Adult Education Society; the Rev. H. Wightwick; the Rev. E. C. Collard; the Rev. R. Payne, Rector of Downton; Lieut.-Col. Everett; Mr. Bleeck, surgeon, Warminster; Mr. William Davis; Mr. James Rawlence and Mr. E. P. Squarey, of Salisbury; Mr. Stratton; Mr. Melsome; Mr. Chisman; Mr. Snelgrove; Mr. Wilce; Mr. Notley; Mr. Bevan.

The questions proposed by the Assistant-Commissioner, with an abstract of the observations made upon them by the gentlemen present, are given below.

1. What amount of education is it desirable that the children of agricultural labourers should receive?

2. What is the present state of education among the children of agricultural labourers?

The *Hon. and Rev. S. Best.*—I should consider reading, writing, and ciphering indispensable; but they are not education, but only instruments of it. I do not believe in the possibility of education without religion. Religious teaching in some form is necessary, but it need not be dogmatic. The present state of education clearly falls short of what is desirable, and is therefore decidedly deficient.

Mr. Brown.—Children should be taught as much as the time they can devote to school permits. It is impossible to restrict the education to a few subjects. I don't think that anything can be gained by endeavouring to define accurately what should be taught. Religion should certainly be taught; that tests the teacher more than anything else. No education without that is sufficient. Geography also gives children a wide interest, and calls out their dormant faculties as well as mental arithmetic.

The *Rev. J. J. Jacobs.*—I don't think it is necessary for the State to interfere for the purpose of educating a child to an extent necessary to raise him above the normal condition occupied by his parents, although every facility should be given him to improve himself.

Mr. W. Stratton (Kingston Deverill).—We need only teach the children the three R's; we should not educate them above their position. I don't object to

any amount of education, but I think they can best educate themselves by night schools and by reading. Most labourers have an opportunity of improving themselves, and many do so. [Mr. Stratton here mentioned several instances of labourers within his own knowledge who had educated themselves.]

The *Rev. J. E. Philipps.*—We all think that the means of education offered in the schools are sufficient, but the education of children is usually defective, because they don't remain long enough at school to profit by the means of education there offered to them.

3. To what causes is the defective state (if any) of education among the children of agricultural labourers due?

The *Rev. D. Morrice.*—The real cause of the defective state of education is the unwillingness of parents to forego their children's earnings. In a few cases the parents are indifferent about education. Where children go to work at an early age it is not often owing to pressure placed upon them by employers. The parents are usually much more anxious to get their children out to work than the employers are to take them.

The *Rev. E. C. Collard.*—A short time ago I had not a single labourer's son aged 8 in my school; the parents assured me that all their children had been pressed by their employers to go to work for them. Dorsetshire may differ from Wiltshire in this respect, but with me the children leave school at an early age either because their parents are induced by their poverty to send their children to work, or the employer practically employs pressure to oblige the children to come out to work.

The *Rev. J. Wilkinson*—Persons in our condition of life are not sufficiently considerate towards labourers. We should remember that the children's earnings may increase the income of the family by 50 or 60 per cent. None of us are called upon to forego such an addition as that to our income for the purpose of educating our children; and yet our children require for success in their career a high education, whereas, for what the agricultural labourer can see, learning makes little difference, certainly none with the farmer, the usual employer.

The pressure used by employers no doubt varies in different districts. In Hampshire it is often the practice for farmers, when they engage a man, to bargain for his children as well. I don't think, however, that the children are often then taken away as young as 8, because their labour is of very little value at that age, except for keeping birds, or the like. Another cause (not mentioned in the programme) of this defective state of education is the indifference of the owners of the soil; they take little interest in the condition of labourers, except of those who live in their immediate neighbourhood—"out of sight out of mind." Our squires don't do what they ought.

Mr. Brown.—There are many thinly populated parishes where there is a want of schools easily accessible to the children. The teachers, too, are often bad. A good master will teach twice as much as a bad one, and the difficulty of obtaining good masters has probably increased since the introduction of the Revised Code. I should like to require a certificate of proficiency from all school teachers, but this would be impossible at present.

The *Hon. and Rev. S. Best.*—I do not think that the parents are generally indifferent about education, but really useful and practical subjects are so seldom taught in our schools, that they are not made attractive.

The *Rev. J. Constable.* — The real evil is the amount of support given to the lower orders; we think that feelings of independence cannot exist among people below a certain condition of life. In Scotland things are different, because there the people are independent and self-reliant. On two occasions I have threatened to close the schools in the parishes in which I have been if no effort were made by the inhabitants to keep them up, and in both cases the result has been successful. I maintain that the poor do desire education, if you only bring out the good qualities they possess; I have never had to complain of indifference among them. The real complaint is the alienation of the poor from the soil, they must have the means of living, and they are now entirely dependent on their wages.

4. How is this difficulty to be remedied?

5. What real value is to be attached to night schools? Can they be relied on as a systematic means of education?

Mr. Rawlence.—The Factory Acts are not at all applicable to agricultural districts. I have had considerable experience in night schools, and I believe they would furnish all further necessary education, if a boy were kept at a day school until he could obtain a certificate up to the standard of class four before going there.

The *Rev. J. J. Jacob.*—A boy should be able to pass the fourth standard before going to a night school; if he cannot do that, the night school will be of little use to him. There are several reasons why night schools are not of much real use, they are not held often enough, and the boys who want them most like them least, besides which they should be conducted by good masters.

[The Rev. R. Payne was then requested to explain the plan proposed by him of requiring a certificate of proficiency from every child as a condition of being permitted to earn wages; the plan is explained at page 107, and is therefore not repeated here].

Mr. Stratton.—Farmers would be quite willing to dispense with boys' labour under the age of 10 years, except during harvest, when they should be permitted to employ boys between the ages of 7 and 10. I object to the certificate system; if a boy were kept from work up to the age of 13, he would be as useless as a workhouse boy. I object to compulsion altogether, it is impossible to make a good member of society by means of school education.

The *Rev. J. Constable.*—If compulsion is introduced at all it should be universal and apply to all classes; I know other classes besides labourers who require it. My opinion is that certificated masters should be provided in all schools, and that boys should be prohibited from going to work under 10 years of age; the rest the labourers should do for themselves.

Mr. Squarey.—It should be recollected that young boys are not free agents; their parents are apt to prefer the temporary benefit gained by their children's wages to the ultimate advantage obtained by giving them a good education. The principle may be properly admitted, that children are entitled to receive protection from the law when their parents interfere with their obtaining an education which is now open to them. I think that the plan of requiring a certificate of proficiency the only one which provides for all that agricultural children require and that they are entitled to. The certificate should not be available until the holder is 10 years of age, moreover, the standard should not be too high, and there should be a power of dispensation in special cases of incompetency.

[The Assistant-Commissioner here mentioned what appeared to him three objections to the certificate plan,—

1. That it would be unfair on boys who lived at a distance from good schools.

2. That it would be difficult to provide sufficiently frequent examinations.

3. That there would be a difficulty in enforcing the Act, because it would be impossible to have a sufficient number of inspectors, as in the case of factories, and because it would never be enforced if left to local authorities].

The *Rev. J. Wilkinson.*—If there be not a sufficiency of accessible schools, there soon will be under the certificate of proficiency. Parents will see to that. The examination need not depend on the visit of the inspector to the school; centres should be appointed within walking distance of the school like the bishop's centres of confirmation; there a non local inspector

Wiltshire.
Mr. Norman.
A.
i.

should hold quarterly examinations. The act requiring a certificate of proficiency would enforce itself. Parents, employers, clergy, would all be interested in enforcing it. Night schools cannot be relied on as a systematic means of education. They are good makeshifts and palliatives. To make them more valuable a money value must be attached to proficiency according to age at night schools as proposed at day schools.

The *Hon. and Rev. S. Best.*—The examinations might be carried on by papers, as is now done in night schools and schools of art. Night schools are valuable as a third school to those who have attained to a certain proficiency, but are useless as substitutes for the day schools.

6. Would it be practicable to annex an industrial department to schools in agricultural districts? And how could this best be done?

The *Rev. J. Constable.*—We have failed to combine the two departments at Cirencester, I have now given up the attempt. It may be possible to make a man handy by means of gymnastics and drawing lessons, but it is impossible to teach practical things. Labourers' children require to be taught to handle horses, no horses can be provided for them in country parishes.

Employment.

1. Is it desirable that the employment of women in the fields should be restricted or regulated by law and, if so, how?

Mr Bleeck, surgeon, Warminster.—I think that the out of door work is physically beneficial to women. Morally it is a bad school, and it causes them to get some hireling to take care of their children when they themselves are out, and the children suffer in consequence.

Mr. W. Stratton.—I have had 20 years' experience as a farmer. I have never seen anything in field work tending to the demoralization of the women employed. The agricultural women are in a better condition than the town women.

The *Rev. E. C. Collard.*—I have again and again heard women say that they would not allow their children to go and work in the fields, on account of the immoral influences to which they are exposed

2. Is the labour performed by children in the fields, physically injurious to them, and what, if any, legal regulations are desirable for the purpose of protecting them from the injury so caused?

Mr. Bleeck, Warminster.—There can be no doubt that to send a very young boy out to work is physically injurious to him; he is compelled to work so early and late, that he does not get enough sleep and grows up stunted. If anything can be done to protect farm labourers, boys should not be employed until the age of 10, and I should prefer 12. I think it very desirable that some restrictions should be applied to the number of hours of work, and it would be very desirable if they could be better fed, as their muscular development is wretched in the extreme. A good dinner of butchers' meat and bread three or four times a week would be of immense benefit in improving the physical condition, and making the boys grow up much finer and stronger men, and at the same time be the best possible inducement to the parents not to take the boys from school at too early an age.

Mr. Melsome.—The only way to give them better food would be to keep their parents from the beer house.

3. What, if any, alteration in the law is necessary for the purpose of improving the cottage accommodation.

The *Rev. J. Wilkinson.*—There are two Acts to be considered,—

1. "The Labouring Classes Dwelling Houses Act, 1866."

2. "The Artisans and Labourers Dwelling Act, 1868."

The first grants loans at four per cent. on first-class securities with expensive formalities for limited periods. In two years only four loans have been been granted under this Act; the precautions, however necessary and proper, render the Act inoperative. In one case it cost 136*l.* to obtain a loan of 6,900*l.* The second Act gives the initiative to the local authorities, that is, in agricultural districts, to the vestry, who certainly will not move. I should suggest that, admitting that any such exemption is bad in principle and only to be excused under exceptional circumstances, admitting that it would be a bounty out of public funds in aid of wages and indefensible on economical grounds, I would suggest that in respect of all dwellings under 6*l.* annual value, the small tenement rating Act be extended, so that they be exempt from local taxation. I would combine with this indulgence certain stringent provisions, such as the right of inspection to cottages, a condemnation of human pigsties, and the consequent power of compelling the erection of better habitations. But I would chiefly rely on improved moral character, and the rise of social and domestic wants consequent on labourers' increased culture and intelligence.

83. *Mr. Sotheron Estcourt's Observations on the Questions proposed at Mr. Ravenhill's Meeting.

1. What amount of education is it desirable children of agricultural labourers should receive?

1. As much as they are capable of digesting and turning to account.

But they never turn to account the greater part of the learning they now receive, because it is poked into their heads at an age too early to be really comprehended, and it is not supplemented by what they see and learn at home, but the contrary; and it is not kept up, much less increased, after they leave school.

As matters now stand, I think no sort of teaching turns to any good account, except that which is purely elementary; but if in any way children could be induced or aided to carry on their education till 20 instead of 10 years old, then I would let them learn as much as they could be brought to attend to.

2. What is the present state of education, &c.?

It varies so much in different dioceses and different parishes that I cannot give a general answer. In Wiltshire and Gloucestershire education is not neglected.

3. To what causes is the defective state of education due?

(*a.*) To want of schools?

No.

(*b.*) To inefficient instruction?

No.

(*c.*) To poverty of parents?

(See next question.)

(*d.*) To the indisposition of parents to forego their children's earnings?

Yes, but they are not to be blamed for this.

(*e.*) To indifference of parents?

Yes.

(*f.*) To pressure by employers?

I think not. Employers are willing to take children after 10 years old. Parents are willing to let them go and earn their keep.

4. How is this deficiency to be remedied?

(*a.*) The half-time or alternate day system?

I tried this at Bowden, and found it fail. Even in field labour a continuity of the same hand and head in any labour is necessary.

(*b.*) Print-works Acts?

I have never tried this.

(*c.*) By a certificate of proficiency?

Useless unless the certificate has a direct money value.

5. What real value can be attributed to night schools as a systematic means of education?

* The Right Hon. T. H. Sotheron Estcourt was unfortunately prevented from attending the meeting at Ashton Gifford, the minutes of which are printed above [A. 82]. He was, however, kind enough to supply in writing his opinions upon the questions there proposed. These opinions are here inserted.

Night schools are good because they are the only means of keeping up some learning in boys. They are valuable only for such boys as choose to attend them. Therefore, as a systematic means to be relied on, they cannot be depended on. But I think it would be a benefit if half the money now spent on schools for children between 3 and 10 was bestowed on night schools, and if the schoolmaster, often a proficient, instead of grinding out his soul in trying to rouse prematurely some sense in children before their brains are developed, were employed to cultivate only such schools as are frequented by boys between 10 and 20.

The principal objection to a transfer of this master from the present school to the night schools exclusively would arise from the clergyman or manager of the schools. Their Government grants would be diminished, their pet school be less well managed, they would lose a valuable assistant in training the young of their flocks, &c.

Nevertheless, I believe we are at present cutting blocks with a razor. The master is too advanced a scholar and too expensive a luxury for this office of teaching children between 3 and 10.

6. Would it be possible to annex an industrial department to schools?

I tried this for some years at Bowden. I also visited other schools where the experiment has been tried, and my inspection is unfavourable.

I put in a loose note some suggestions which I have long had on my mind, but cannot carry into effect in either of my two parishes because the clergy, farmers, parents, and Government inspector all concur, year after year, to praise so highly the present system that I cannot venture on a change.

[NOTE.—Be content to teach in schools for children, before they go to work, mere rudiments, and let the teacher be a cheap dame or old soldier, or some such person, and let him or her receive the whole of the children's pence, and keep school on the old-fashioned plan.

Bestow all that is now raised or raiseable by voluntary aid or from the Government grants, so far as may be legally permitted, on night schools in summer, converted into day schools in winter, for boys above 10.

I am supposing that such boys would work for masters during the summer, and might obtain such capitation grant from the resources I have above mentioned as would enable them to dispense with work and wages in winter, and attend the adult school.

For instance, it might be possible to board all such adult boys during the period of the winter day schooling, and to give them a supper during the summer night school season, so you would ensure attendance for the sake of board; and the penalty of losing their supper in summer and three meals in winter would guarantee both attendance and attention.]

[The following communication was subsequently received from Mr. Sotheron Estcourt in answer to some further questions addressed to him by the Assistant Commissioner.]

---

84. Paper supplied by the Right Hon. T. H. SOTHERON ESTCOURT.

1. Mr. Payne, of Downton, suggested to the meeting at Mr. Ravenhill's house, held January 20th, 1869,—

"That no child should be permitted to be employed for hire in any farm work under the age of 13 or 14 years, unless he or she can produce a certificate signed by some Government officer of having passed the fourth standard of the Revised Code."

My opinion upon this is that it is simply impracticable. Who is to enforce the penalty? How is the child to be fed and clothed who has no such certificate? What will parent, child, and employer think of education if it is to involve a penalty affecting all three?

I am certain the only penalty must remain what it has always been, a lower class of labour and of wages. The real reason why wages in agriculture are so low is, that all the well-educated intelligent boys go from home and enter into superior walks of livelihood. Now if the stupid are to be debarred by law, there will be a great outcry.

2. How to deal with drunkenness and the licensing system?

I think the only check on the former is to be found in the countenance given by the upper classes to sober servants. And on the latter question I think no licence should be granted by any but justices, and to persons, not to houses.

3. *Cottages.*—I see no way of effecting a *general* improvement of these, except by cheapening the cost of building. I am trying Fall's patent, and hope to reduce thereby the cost by one-fourth or even one-third.

Perhaps it would be well if it were the custom for landlords to do no more than erect the bare outside walls; leave the whole fitting up of the inside to tenants, with a right to repayment in case of ejection. This would diminish the immediate cost of building with one, and increase the interest in the cottage and its good keeping with others.

4. Can anything be done to improve benefit societies by legislation?

I think not. Solvency is dependent not so much on rules or a certificate of an actuary as on management. This can clearly be kept in order by none but the members themselves.

5. Your concluding remarks suggest one more point; you allude to the indifference of the labourers themselves to education.

I believe this is chiefly caused by education of children being altogether taken out of the hands of parents, and provided by the clergyman or benevolent persons in a parish on a general system.

It would be an improvement in my opinion if the schoolmaster were paid entirely by the parents, who might individually be aided to any extent by the clergyman or other benevolent parishioners.

The children be taken to church, not by the master, but by the parents, and if the latter fail the children suffer accordingly.

School prizes, not books or other articles, but hard cash (however small in amount) paid to the children themselves, so as to connect in their minds the idea of learning with money; and this money should be receiveable by the master in the form of a penny bank.

T. H. SOTHERON ESTCOURT.

22nd March 1869.

AVEBURY.

85. *Mr. George Brown.*—I have two occupations, 467 acres of my own and 129 as tenant farmer; about 40 acres of which are pasture and 80 down; been here all my life except six years. I employ five boys under 13, and four from 13 to 18, two of them are aged 9, one 10, and two 11, all ploughboys; they begin to work regularly between 8 and 9 years of age, and hang about the yards and stables before that. Extra boys wanted in sowing time at spring and fall, when we have extra teams, and occasionally for scaring, but I prefer an old man for that. I do not send boys out sheep tending on the downs, as they cannot be trusted. Sheep go out occasionally on downs during winter but only for an hour or two.

I seldom employ girls under 13; none of that age are now at work here, they usually begin at 12 or 14.

Women are employed in weeding, hay making, sometimes spreading manure; very little in winter; their position in this county does not drive them to go out; have 11 or 13 usually in spring and summer; all live in the village distant half a mile. Boys come about 5.30, they go to plough at 7, return in from plough at 3.30 or 3.45 to dinner, leave at 6.

All the education labourers want is to understand the agreement with their master; those who come to work after being brought up in workhouses never turn out so useful as others. Those who have been to school and learnt to read and write turn out quite

Wiltshire.
Mr. Norman.
A.
i.

as good labourers as others, but not better. I think that if boys remained at school up to the age of 10 it would not be as easy to instruct them in their business as labourers, as if they are allowed to frequent the farmyards and see the operation of farming before the age of 10. I am sure that night schools are very useful, both for the purpose of enabling boys to learn what is useful for them, and also to keep them out of mischief in the evening. I could not carry on my farming operations if I employed fewer boys than I do at present, in fact I should like to have one or two more. It would be often convenient to set a boy on to hold a plough for a man, to enable the man to take some other job. No parliamentary interference is necessary. I find females very useful, without them the corn would get foul, they are indispensable. I hardly know of a case of bastardy which has occurred from their being employed. There is a National and another school in the village; not less than 70 children attend these; it is a practice for the children to go to school until they get employment in the fields. The inhabitants of the parish are very respectful and not insubordinate when properly treated; drunkenness is very rare. The supply of cottages pretty good; no two families live in one house; all the cottages are in the village. I think every farmhouse should stand in the middle of the farm with the cottages round it. Water supply good. Rent about 2*l.* to 30*s.* in the average.

Gardens or allotments. Farmers give their men 10 lug of ground, which they plough, and bring home the potatoes for them when grown.

Wages for men are 10*s.* a week. The total earnings average 12*s.* or 13*s.* a week. Women have 8*d.* and 1*s.* in harvest, and boys get 2*s.* 6*d.* to 4*s.* per week, and generally 1*l.* at Michaelmas. They are always hired by the year. The labourer's condition is very much improved since I was a boy.

All the farms round here are managed on the three or four course system, and labour is employed about on the same system as on my farms.

Bishopton St. John.

86. *Mr. Edwin Dibbens.*—I farm nearly 1,800 acres (about 100 water meadows and pasture).

Boys begin to work from about 8 or 10 years old; we require them from Lady-day to Michaelmas, but we keep them on in winter for the purpose of aiding their families and to secure them in the summer; never more than two horses used for ploughing here, except in the valley; one or two small boys are wanted to assist the shepherd; we sometimes want them younger than 10, but as a general rule 10 is quite young enough for them to come out for all purposes. Young girls very rarely employed; sometimes in weeding and hay making. Sometimes we have 20 to 30 women in spring and summer; very few in winter; only four at present, 26 October; sometimes one or two are employed with threshing machines; some have to go a mile to work, but generally less. There are only six cottages in the parishes out of the village. The supply of labour in the parish is very good. Women work from 8.30 to 5, one hour at least for dinner; boys 7 to 5, sometimes kept later than 5 to clean up. I think that all should be able to read, write, and cipher, and it would be no hardship to parents to deprive them of the earnings of their children until they can; but I cannot say that men are necessarily either better or worse labourers in consequence of having been to school. I think the worst women go to the fields and the best to service. I am not very fond of employing them, and think it is very bad for their families for them to be in the fields. Women's labour is not cheap unless well looked after.

The cottages are almost all in the village. A few cottages (about six) belong to the labourers themselves; they are always very bad. Some have been built recently. These men are decidedly worse off than those who pay rent; it costs more to keep them in repair than the ordinary rent, 1*s.* a week. There are some cottages built on speculation let at above 80*s.* a year with little or no garden, but with that exception all have gardens, allotments, or both. Lord Pembroke has allotments to every parish; he has built a great number of cottages. At present wages are 10*s.*, when I came 28 years ago they were 7*s.*; carters about 15*s.* The average earnings of labourers with task work are about 13*s.* or 14*s.* The cost of cultivating the land now is higher than it was when I came, but the produce is also greater than it was.

Bramshaw.

87. *Mr. William Rawlins*, No Man's Land.—There are from 30 to 40 cottages here; some are freehold, some leasehold; they were built by the original occupiers themselves. No Man's Land contains only about 15 acres. Some of the cottages have 30 or 40 poles of ground, some two or three acres. Those who have the smallest quantity of land work as labourers. Three or four acres are not sufficient to give employment to or furnish food for a family all the year round, but a man who has regular work can manage half an acre. We have a right here to turn cows into the forest. The men who have two or three acres of land cannot take regular work as labourers; they grow chiefly vegetables and roots for the cows; they are better off than men who have regular employment as labourers. Some of them go miles away to get harvest work. There is no harvest work to be had here. Boys are not wanted as young here as they are in most places. There is no regular employment for women and children in the New Forest. The small occupiers here sell a little butter, but no milk; some have apple trees and make cider, but not all; and bees are kept occasionally. All took up with the school directly it was established; I have heard them say it was the best thing that ever was done.

Broughton Gifford.

88. The *Rev. J. Wilkinson.*—The Oxford clay provides the best pasture land in Wilts. This formation extends from North Bradley in the south-western part of the county up the valley of the Avon to Malmesbury, then across the watershed down the valley of the Thames to Cricklade in the north-eastern part of the county. In the Avon valley, with which I am best acquainted, it frequently underlies extensive beds of drift gravel 6 or 8 feet thick, which again are covered by 3 or 4 feet of brick, earth, or loam. This is the best pasture land in Wilts; none better than that by the river side in this parish. As the ground rises above the river, the gravel thins out, the clay comes nearer the surface, and the ground is colder. This is the dairy land of Wilts. The farms upon it usually contain about four-fifths pasture. The north-west of this strip is cornbrash and oolite, and contains more arable. In the pasture district the farmers require a little arable land for straw, and to grow roots as winter food for graziers. Boys and women are very little employed upon the pasture land. Boys may sometimes drive the cows from the homestead to pasture, and women occasionally do some "beating." There are 40 acres of common land in this parish. As a general rule commons are very scarce in this county. I do not think there is any necessity for interfering by law with the employment of women in the grass country. Boys are not employed to assist in milking on the dairy farms. The youngest milker in my parish is going 13; he is the youngest I ever knew.

As a general rule girls remain at school until the age of 11 or 12, and boys until the age of 8 or 9; they can then usually pass the third standard, but that is not sufficient to enable them to read, write, and cipher with ease. The fourth standard would give them greater facilities, but not sufficient for self culture, such as implies a taste for literature. If the certificate plan is adopted, some inducement might be held out

to schoolmasters to get the boys on quickly, *e.g.*, the master might receive a bonus of 10*s.* for every boy who passed the fourth standard by the age of 10. I do not consider it any objection to this proposal that it would induce masters to favour particular boys. These best boys would be the leaders of public opinion in the school, and raise others up to their level. On this plan the examination for the certificate must be held frequently, and within walking distance of our villages, as it is important that the parents should not be deprived of their children's earnings longer than is absolutely necessary. It is quite the exception for boys to come to thenight school; they only come when they are making an effort to advance themselves by gaining some particular appointment on the railroads or in the police force. When they do come, they could not usually pass more than the second standard. I do not think that night schools can be looked to to do more than enable the scholars to keep up what they have acquired at the day schools, except in the case of those who have some particular object in view to make them diligent. I should wish very much to supplement the certificate by requiring a partial attendance at school for a few years after the certificate has been obtained; but it appears to me that it would be hopeless to attempt to carry out any such scheme. There are fatal objections to the half-day or alternate day schemes, such as I have stated in my Report on the Agriculture of Hants, Royal Agricultural Society's Journal, vol. xxii. Whatever the regulations, none but the simplest would ever be carried out. Everybody but the clergyman would be leagued together to defeat them. Agricultural labourers require training from an early age in their particular business; but no doubt if you increase a man's powers of perception and general intelligence by means of school instruction you thereby increase his usefulness as a farm labourer, more particularly since the more general employment of machinery.

Day wages here are 11*s.*, and I think the piece-work usually done would raise the average weekly wages to 12*s.* or 13*s.*; besides that every labourer is allowed at least 1½ quart of beer a day, and an unlimited supply in hay-time and harvest; the beer costs the farmers 9*d.* a gallon, and this would raise the wages to at least 14*s.* When I first came here 20 years ago wages were 8*s.* a week. The wages of young men have risen more than the wages of older men, because formerly wages were paid with some regard to the *necessities* of the families; farmers were afraid of the married men with families being thrown upon the parish, and therefore paid them perhaps more than their labour was worth. About one-third of the population in this parish is engaged in hand loom weaving; the children at very tender years assist in "quillying and changing shuttles;" their parents let them out at so much a week. The Workshops Act of last session is a dead letter; we have never heard of it.

Burbage.

89. The *Venerable Archdeacon Stanton.*—I have been vicar of Burbage for 16 years. This is a very poor parish. There is an excess of population here, *i.e.*, more people than are required to do the work of the parish. I attribute that state of things partly to the fact that the cottages have always been let by Lord Ailesbury at very much below the market price. For a cottage with a good garden the ordinary rent has been from 2*l.* to 3*l.* per annum. The rents have lately been raised, and wages have risen a little; but the low rents have, I think, until recently prevented the surplus population leaving the parish as readily as they otherwise would have done. Very few women are employed here on account of the number of men there are to do the work. There are a good many men in the parish who hold small pieces of land from two acres and upwards in extent; they usually grow vegetables, root crops, and turnip seed, and their wives and children do a great deal of work for them; they sell their produce as cheap as the larger growers, but I don't think that that system of letting land has a good moral effect upon the occupiers; they don't take to regular farm work because so much of their time is occupied on their own land, and they get into desultory and irregular habits; their children too are irregular in their attendance at school because they are so often kept at home to work for their parents. I don't think that these men are as well off as many who work regularly as day labourers. If they get an unusually good crop they become extravagant, they don't save, and suffer from want during the winter when no work is to be had. I think that the practice of working by the piece often has a bad effect upon labourers, they often become exhausted by over work, and are induced to go to the public house to recruit their strength; they then indulge in drinking for two or three days and spend all the money they have earned, and are often in great distress during the winter. The very best piece worker in the parish is a man who has 9 or 10 children, he has had parish relief for three of his children during each of the last two winters. They have in fact been in the union house at Pewsey. In this neighbourhood wages are almost always paid monthly; *that is a very bad plan*, the shopkeepers are obliged to give credit, and are obliged to charge something extra on that account; the people are always in debt, they become embarrassed, and are tempted to be dishonest. The cottage rents are usually paid half-yearly; that plan is more convenient to the occupier than paying more frequently, and I think it is the best plan where the occupier can be trusted. Nothing tends so much to ruin girls' characters as working in the fields; the demoralizing language they hear, and the gross indecencies they see, have the very worst effect upon them. I decidedly think that women under 25 should be prohibited from going to field work except during harvest time.

Education does much to prevent their going to field work. Those girls who remain at school long very seldom go to field work; education disqualifies them for it; they feel above it. Some girls go out to service as young as 9 or 10. I think that physical injury is sometimes caused to young boys by the early work they perform (handling the plough, &c.).

I came to this parish in 1852. In 1855 the expense of the school amounted to 49*l.* 7*s.* 3*d.*; last year (1867) they amounted to 179*l.* 16*s.* 7*d.* In 1855 the children's pence amounted to 9*l.* 9*s.* 2*d.*, last year they amounted to 33*l.* 3*s.* 11*d.* These figures about represent the progress which has been made in education in this parish since 1855; wages have risen during that period, but the children don't remain longer at school now than they did then, although many more come to school. They have learnt much more by the time they leave than they did formerly, because the teaching power has improved, and because there is a good infant school; the children usually leave the infant school at the age of 7, when they can read, write, and cipher a little, and have learnt to behave well and are better able to take in instruction than they otherwise would be. It is difficult to name the age at which the elder children leave the National mixed school, they leave in a very desultory manner, but the bulk of them leave altogether before they are 10 years old, and before they have passed the fourth standard of the Revised Code. Hardly any children come to the school from other parishes (not more than four), although I would receive them if they brought a letter of recommendation from the clergymen of their own parishes.

I have observed that the people here have become *much more decent, orderly, cleanly,* and better behaved since the good schools were established in this parish than they were before. The education has been the cause of a good many young men and women leaving the parish who would not otherwise have left it, but there has been no lack of labourers on account of the numerous population of the parish. Farmers' sons don't usually attend the school, only the children

Wiltshire.

Mr. Norman.

A.
i.

of *little* farmers. I think that those who remain at school up to the age of 10 or 11 can usually pass the fourth standard; I think that those who can pass the fourth standard can read and write with sufficient facility to keep up by themselves what they have learnt; that the fourth standard represents an amount of education sufficient for the requirements of agricultural labourers. Night schools cannot be relied upon as a means of extending education; very few of those who attend them do more than revive what they have previously forgotten. It is very desirable that the Government should pay for results at night schools without requiring certificated teachers. I am opposed to compulsory education in any form; I prefer encouragement to compulsion, and think that education is making satisfactory progress. I think that the half-time system might, in many cases, be applied to agricultural children; boys might be employed in cleaning knives, shoes, or the stable, &c. in the morning, and might go to school in the afternoon. I don't think that parents can afford to keep their children without their going to work after the age of 8 or 9 in this district. I don't think the certificate plan would answer; it would cause great hardship in poor parishes where the means of obtaining instruction were not good, and where consequently dull children could not get on fast. It would be impossible to make attendance at night school compulsory after work has commenced, on account of the fatigue which the boys have undergone. Lads who come to a night school regularly after hard work deserve great credit. They sometimes fall asleep over their books.

I am decidedly of opinion that the Legislature will do better by encouraging education as they have been doing than by attempting to enforce it by compulsory measures.

THOMAS STANTON, M.A., J.P.,
Vicar of Burbage and
Nov. 6, 1868. Archdeacon of Wilts.

90. *Mr. W. H. Gale*, Burbage.—I farm about 450 acres. There has been a good school in this parish for many years. Many boys have left this parish to get employment in other than agricultural work, in consequence of the education they have obtained here. I cannot understand why a man should not be able to plough, &c. just as well when they can read and write, as when they cannot; but I have not observed that the educated men are much more useful than others. I don't think schools have been established long enough or sufficiently generally to enable a sound opinion to be formed as to the effect of education. I have two machines, which I send about this district in charge of some of my men and let out to the neighbouring farmers. It is very inconvenient to me that the men who have charge of these machines cannot read and write; when they have to make appointments for the hiring of the machines they have to come back to me for me to write the letters for them. We have always had plenty of labour here, although the best educated of our boys have gone away. There is a charity here of 60*l.* to 70*l.* given in flour every year; that induces many to remain here who would otherwise leave; this is quite a pauper parish. Many girls now go to service who used to go to work in the fields, but I do not find that the cultivation of my farm has been rendered more expensive in consequence of the changes which have taken place in the parish. The men about here don't do much work when put to day work; but when they are put to work at piecework, they can do as much as any men I ever saw. There is always enough work in road mending, &c. to be done to keep the men employed in winter as well as in summer. I see no objection to old women working in the fields; there may be a greater number of illegitimate children among field workers than among others, but I attribute that to their leading more healthy lives; some of my under carters live over the stable; they board themselves, but I always supply them with milk or broth or small beer before they go out to work in the morning. I have no reason to complain of my men for being disrespectful to me. I have had as good a set of men during the last three or four years as I ever had before in my life; they never leave me.

I think boys are placed to work too young; if labourers' sons are compared with other boys, it is evident that the former are not so big as the latter; when they arrive at the age of 15 or 16 they earn higher wages and begin to grow. I don't think that the early work is productive of disease, but it certainly prevents the early development of the frame. As regards education I think all ought to be able to read, write, and cipher; that amount of education should be forced upon them, not by law, but by the parents and the employers. I think that farmers would be put to some little inconvenience if they had no boys to work for them under the age of 10, but considering the necessities of the case I think they might be expected to dispense with boys' labour under that age. I think it is absurd to say that boys could not learn their business unless they begin to work at the age of 9 or 10. Fewer boys are employed now than used to be, and I think that fewer still might be employed. From Christmas 1866 to Christmas 1867, 12 of my men earned on an average 13*s.* 9*d.* each per week.

CALNE.

91. *Rev. John Duncan*, vicar of Calne.—I have been here three years. I was incumbent of Lyneham for six years before I came here. I don't think that the work performed by women and children in the fields is the cause of physical injury to their health; they may suffer from insufficient food, but this cannot be attributed to field labour.

As regards education there is a deficiency. Assuming that reading, writing, and arithmetic are sufficient, there can be no doubt that many boys in this neighbourhood fail to acquire this amount of instruction; this is due to their leaving school too young, the result of which is, either that the children never acquire the power of reading and writing, or acquire it so imperfectly that they soon lose it. I do not think that any general complaint can be made in this district on account either of the insufficiency of the school *accommodation* (the quality of the teaching is often inferior) or of the indifference of the parents. The poverty of the parents of a large family is the principal cause of the boys being insufficiently educated. This complaint cannot be made to the same extent of the girls, who usually remain at school as long as can be desired; that leads to the opinion that it is only the need of obtaining the wages of the boy which occasions his being removed at so early an age from the school. The chief occupation for boys are bird keeeping and plough driving.

From what I have heard from the farmers, and from what I have myself observed, I am of opinion that the half-day and alternate day systems are inapplicable to agriculture; but I think there should be some fixed age below which it should be illegal to employ a child; that age might be 10. Some higher age should be fixed before which children should not be permitted to go to work unless they can at least read and write; when they have passed the higher age they should be permitted to work without any test being required. I think that a standard is suggested by the present system of the Committee of Council, which contemplates that a child of 10 years old should have passed the fourth standard. I don't think that any further attendance at school should be compulsory; but every facility should be given for the acquisition of further knowledge. I think that important results would follow from this plan: 1st, the parents would endeavour to keep their children regularly at school in their early years, in order that they might go to work at 10 years old; and 2nd, the employers would be anxious to provide a good school, or to improve the already existing one in order, that they might get the

labour of the children at the age of 10. I think it is likely that in this way the highest attainable scale of education would be reached without a compulsory law. Night schools cannot be made to do the work of day schools.

The majority of farmers would not, I believe, from my acquaintance with them, object to children under 10 being prohibited from work. They would object to the half-time or alternate day system.

That the poverty of the parents of large families is a real obstacle to their keeping their children at school can hardly be doubted. I have known large families which from the wages earned in winter had only a halfpenny wherewith to pay for each meal of each member of the family ; without the proceeds of the allotment ground and the assistance of others (including the farmers of the parish) they must have starved. The farmers are not to blame for this. It is a matter of supply and demand. The parents of such families could not afford to loose the earnings of their children, however small the earnings might be.

A good schoolmaster is undoubtedly an inducement to the parents to send their children to school. I have observed this; but it is not an inducement strong enough to overcome the demand of poverty for the 1*s.* or 1*s.* 6*d.* a week earned by the child.

I do not think that industrial training should have a place in elementary education. The parents of the poor object to it, and I think rightly, as taking up the time required for learning to read and write, which cannot be learnt afterwards as a trade can. Needlework should be taught to girls ; this is desired by the parents.

A great and rapid revolution appears to me to have been going on in the English labourer within the last few years ; it is due to the meeting together of two things—the education of the poor in our village schools, which have given to the bulk of the population the power of reading ; and the penny newspaper, which has given to the labourer matter to read, and interesting matter which he likes to read. It would be unwise to overlook this. The labourer is very rapidly becoming another man than he was some years ago, and will make his voice heard in the future. Hitherto his intelligence and spirit have been crushed by the absence from his life of all hope and possibility of elevation. Education, facility of locomotion, an amended law of settlement, are greatly altering the labourer's condition and character.

I think that education will fail in its proper object unless the dwelling houses of the poor are sufficient to accommodate the families with decency. This has by no means been always the case. Insufficient cottage accommodation has done fearful evil in this country. The cottage supply is entirely dependent upon the will of the landowners. Where a landlord has neither the taste nor the means to provide good cottages then I think that the law should interfere. The owner of landed property occupies a different position from the owner of all other property in this respect—the landowner who neglects his duty inflicts much more serious injury upon others than the owner of other property. Insufficient accommodation for the poor is one of our principal present evils. No effort should be spared to remedy it. The rights of property may well be curtailed if by their curtailment this evil can be remedied. I do not object to a farmer's having two or three cottages with his farm. I have not seen how the system works when a large number is let with the farms. Many of the villages in this neighbourhood are scattered, *i.e.*, the cottages are not collected upon one spot; the men have consequently, for the most part, not far to go to work ; but I am in favour of concentrated villages, as affording facilities for the education of children, and as having other advantages. I am strongly opposed to mop fairs ; no doubt in one respect they are a convenience, but they are very demoralizing, and there is no more necessity for having them here than in other places where they do not exist.

In a letter to the Assistant Commissioners, dated November 24, 1869, the Rev. J. Duncan writes as follows :—

If my evidence on the subjects of your Commission is of the slightest value, which I do not suppose that it is, there should be added to it my opinion that were the plan of a minimum age adopted, as I have suggested, the wages of labourers would not be diminished, inasmuch as—

(1.) Labour would be scarcer by the withdrawal of the little boys, and therefore the wages of both the parents of families and of the elder brothers in families would rise.

(2.) Labour would be scarcer by the emigration of young lads to better parts of the country, which would ensue on better education.

(3.) Labour would, perhaps, be more valuable, inasmuch as it would be in a higher measure skilled labour; but not much weight should, in my opinion, be attached to this in the case of farm labour.

92. *Mr. J. Spencer*, agent to the Marquis of Lansdowne. — Boys generally commence the agricultural life in this neighbourhood as "crow boys," or keeping birds from the newly sown corn in spring and autumn. The usual wages for this employment are from 3*d.* to 5*d.* per day ; in some cases 6*d.* The boys have to be in the fields at daylight and remain till dusk ; afterwards they get employment with the farmers' teams. I do not think that the number of boys employed on farms varies much with the description of soil, because, although they may not be engaged in driving plough, there are many other occupations, such as harrowing, rolling, &c., which boys can assist in doing ; and such work is incident to all classes of soils, increased, as a matter of course, where the rotation of crops follow each other quickly. I don't think that the services of carters' boys can be dispensed with in this neighbourhood without causing some inconvenience and adding to the expense of cultivation. Old men who are able-bodied can get more profitable employment, and the infirm could not compete with boys, and, indeed, could not perform the work that boys are called upon to do.

I am of opinion that no boy should go to work under 10 years of age, and even then he should be a strong boy of his age to be allowed to work full time each day. Many parents with large families cannot afford to keep their sons idle up to the age of 10, and I think if they are compelled to send them to school a grant should be made by the Government to assist with the maintenance of every child who remains at school up to a certain age. I don't think that by keeping children at school for a longer period than they are kept at present would have the effect of raising the parents' wages, at least in this neighbourhood, where the supply of labour is in excess of the demand, and the labouring population have not sufficient means of moving to a distance, to make it probable that a rise of wages should take place. As regards education, I am in favour of supplementing the present system very considerably, so as to give every boy and girl a chance of obtaining an education up to a certain point ; and to effect this I think that in many places the number of schools must be increased. My inclination is opposed to a compulsory education, although I should prefer that to the general ignorance of the population in many districts at present. In this neighbourhood there are many middle-aged and even young men, who cannot write or even read. I think that a more decided benefit would arise from the *general* establishment of night schools in rural districts, where boys who had been only imperfectly educated might get improvement without infringing upon their labour hours ; and from knowing the benefits which night schools have effected in this neighbourhood I can strongly advocate their use, both as a means of giving a finish to an education already commenced, when the boys have had the opportunity of going to school, and also of imparting a certain amount of instruction to those who have had no previous education, and at the same time inducing habits of morality by keeping those who attend them from bad company and evil habits.

It is much the practice for women to go out to work in the fields in this neighbourhood ; besides the ordi-

Mr. Norman.

A.
i.

nary work of weeding, hay-making, &c. they also find considerable employment in June and July in pea picking, a great many peas being grown in the neighbourhood for the Bath and Bristol markets within three or four miles of this place. The peas are picked mostly by women and girls, at so much per sack. Young girls go to work usually with their mothers or neighbours. The employment is a healthy one, and as a number are employed together, and they are superintended by the master, there is but little to say against the employment of young girls in this occupation casually. Girls of from 14 to 17 years of age are employed in field labour of a light nature, but not generally, as they usually obtain situations from home at that age as domestic servants. I don't think that Parliamentary interference would do any good with respect to the out-door employment of females in this neighbourhood.

With respect to the education of females, I think that during the later period that they attend school considerably more care should be taken in teaching them the rudiments at least of such branches of domestic economy as cooking and the preparation of food, baking, brewing, washing, &c., as also some information on the laws conducive to the preservation of health, cleanliness, ventilation, and the management of the sick, as I find, with but few exceptions, a great want of knowledge and even of ideas on such matters among the wives of our labourers, and owing to which they make bad housewives and nurses of the sick, and incapable of making the most of their husbands' and their own earnings, in the way of providing for their families. The same observations apply to some extent in the education of boys, who I should like to see receive some kind of instruction in rough carpentry and mechanics, such, for instance, as to show the principles of construction involved in making a wheelbarrow, cart, or plough, &c. They should also I think be taught the general principles of the screw, inclined plane, lever, and pulley, &c. This is the more necessary, now that machinery is fast taking the place of manual labour in farming operations, and of course the more a man knows about the working of machinery the more valuable would he be, and the higher wages would he command, and also because it would lead them, if possessed also of other good qualifications, to places of trust and responsibility, as overseers and bailiffs, and would also assist us in getting rid of a surplus population.

There are a number of young men in this neighbourhood for whom at certain seasons of the year there is but little work, and who could not get work in manufacturing districts could they get there, owing to want of skill in manufactures, and the branches of labour depending on or connected with manufactures, and from want of education. These remarks apply also to labour connected with railways and their traffic, excepting the construction of earth works. The average wages here may be stated as 10*s.* and 11*s.* per week during winter, and 11*s.* and 12*s.* during summer, carters and "milkers" usually getting 1*s.* a week extra. At the lower rate the men have usually either beer or "beer money" equal to about 1*s.* 3*d.* or 1*s.* 6*d.* per week, which is increased during harvest. All able-bodied men disposed to work can earn from 12*s.* to 15*s.* a week by piecework in spring and autumn, and from 15*s.* to 18*s.* by hoeing wheat and turnips. Of course for mowing and reaping they get much higher wages, but with some drawbacks when the seasons are wet. The farmers are getting more into the habit of letting piecework to their men every year. The surplus labourers here are in the habit of going into the down district (when labour is not so abundant) as soon as the autumn sown wheat requires hoeing. They then follow on with spring sown crops, and then with swedes and turnips, which take them on till the harvest. This over, they return here, and get what work they can during the autumn and winter, the usual employment being draining, quarrying, &c. I think that the price of labour has risen from 20 to 25 per cent. within the last 30 years in Wiltshire. This applies to both men and women.

The piecework done in the county is chiefly hoeing swedes and turnips and pulse and grain crops, mowing, reaping, and harvesting, and during the winter, trenching, grubbing, &c.

The cottages on Lord Lansdowne's estate are not usually let with the farms, for out of 481 cottages on the estate, 49 only are let with farms, and these in districts where labourers are not so plentiful. Letting cottages with farms round here is the less necessary, owing to the large supply of labour in Calne, Bremhill, and Studley, in which most of Lord Lansdowne's farms are situate; but I consider it necessary where there is a short supply, as on the down, or where the men would have to walk a long way to get to their work. I do not consider that there is any necessity for letting cottages absolutely to the farm tenants with their farms; there is, however, much to be said on both sides of the question. The case could be met where the necessity arises by the landlord allotting a certain number of cottages to each farm, and allowing the farmers to select the tenants for them, which would of course be their own labourers. The cottages on the Bowood estate are let at rents varying from 40*s.* to 84*s.* a year; the latter are new ones, and contain everything necessary for the comfort of the occupiers. All or nearly all have gardens of from 20 to 40 poles in extent. Lord Lansdowne has also 580 acres on his estate let out to 832 labourers and small holders as allotment land. This system was commenced many years back, but was largely increased about 30 years ago when great distress existed among the Wiltshire agricultural labourers. The land is let out at the usual agricultural rent of the locality, the landlord paying the rates. The quantity let to each tenant varies from 40 poles to 2 acres, and in some few instances $2\frac{1}{2}$ acres. Where so much as 2 acres are held by one it arises from exceptional causes. The tenant has not the opportunity of getting constant employment, or he forms one of the class alluded to above who are compelled to leave their home in the spring and summer to seek for work on the downs, and we find that the land fills up their spare time on their return; the cultivation of it during the summer being undertaken by their wives and children. In other cases the tenant has probably strong lads at home who assist. In these cases I do not think 1 acre or even $1\frac{1}{2}$ acre too much for a man, as it is desirable that he should have sufficient to change the rotation by growing potatoes, &c. one year, and the next wheat, beans, or barley. He is thus enabled to get some straw for littering his one or two pigs, which of course is converted into manure for his land, without which he would have no right to become an occupier. By these means he obtains potatoes enough for his family and to fatten a pig, and the larger holders manage to get sufficient wheat to provide their family with bread for a good portion of the year, or if they grow beans, these, beyond what go to help to fat the pig, are sold, and bread purchased with it.

These allotment lands are well managed, very many of them admirably so, and the produce exceeds the general average of the district; the rents also are paid with but few exceptions very regularly.

It has often been observed to me that the largest of the allotments was too much for any one labouring man to occupy. In this district I do not think so. In places where the labouring population have regular employment and good wages 40 or up to 80 poles would be ample; but, as I have before stated, the increased size of the allotments on this estate has arisen to meet an exceptional case, where the supply of labour is in excess of the demand, more particularly during the autumn and winter months, at which time the allotment has their labour, and fills up their spare time which they would otherwise find a difficulty in employing at that season.

Of course, the larger holders require to be looked

after; that they cultivate properly and follow the rules for cultivation laid down for them.

Castle Combe.

93. *Mr. Benjamin Blake.*—I farm 250 acres; about 100 grass. I have had the farm seven years, but have lived for 20 years at Castle Combe.

I usually employ three boys from 9 to 14 all the year round; sometimes an extra boy with sheep, but I don't want one this year, because there are no turnips. Two are ploughboys, and one for general purposes. Some employed dibbling beans with their fathers, but not many. No girls employed. I occasionally employ women in spring and summer; scarcely ever in winter, except when we have a machine. All come from Upper Combe, distant a quarter of a mile. My shepherd lives one mile off, because he can't get a cottage. Hours of work, from 6 to 6, and in winter during the light. Boys are not wanted in the stable after 5 or 6 in winter. Women work from 8 to 6, except in harvest. I don't think it desirable to restrict the age at which boys should begin work. I don't think they go out to work here before 9. They are not injured in health. I don't think that too much education has any good effect upon them. I think that all should be able to read and write; not so much need for ciphering. There is an ample supply of boys here. I think that we are better supplied with labour here than in the surrounding parishes. There is a larger population than is necessary to do the work in this parish. I would just as soon employ a boy who cannot read and write as one who can, so far as his usefulness to me goes, but I think all boys should be able to read and write for their own sakes. A good many boys go away, but that may be not because they can get better employment elsewhere, but because there is an over population here. I sometimes employ the boys who have been at school until they are 13 or 14. I don't find they are at all more useful than others.

Wages here 10*s.*, with beer in summer (two or three quarts); women 10*d.* a day, and boys begin at 4*d.*

I think that the neighbouring farms are managed in the same way as mine.

I had a farm at Yatton, where there was not much opportunity of education, and I found I was as well supplied with labour there as here.

94. *Rev. R. C. Christie.*—I find that the children of labourers remain at school up to the age of about 11 or 12; that is the general rule. There are about 12 or 13 boys who come to our school during the winter in the morning and evening, and go to work for farmers in the afternoon; that can only happen when the night school is open. The farmers find work for them. A good many boys go away from our school and get well-paid situations as clerks, &c. Besides my ordinary Sunday school I have an adult class on Sundays, and one man who attends it is 38 years of age. There are no children in the village who are growing up without being able to read and write. A good deal of pressure has been used to induce them to attend school. Our schoolmaster has 90*l.* and the mistress 35*l.* a year, besides her Government certificate of 20*l.*, with a house rent free for each. The school has been as good as it is now for the last 20 years, and there has been no lack of labour in the parish during that time. This is a purely agricultural parish. The wages here have not been particularly high. Up to one year ago 10*s.* was considered high. The boys between the ages of 8 and 10 are rather irregular in their attendance; they go away from school for gleaning and potato digging. After the age of 10 they again become regular till 12. The farmers say that they think the education given here is too good, but they assign no reason for that opinion. The boys who attend this school are certainly of a better class than those who generally attend National schools. There is a co-operative store here, which has been in operation for three years. The sales last quarter amounted to 192*l.* 10*s.* 1½*d.* We deal in grocery and drapery. All deal with it who are out of debt, and so can afford to pay ready money. There is a village lending library of 800 books, which are lent to the parishioners on the payment of 1*d.* per month.

Chippenham.

95. *Mr. Edward Little*, Lanhill.—I am well acquainted with the district for 10 or 12 miles round Chippenham, and with the system of agriculture and the mode of employing labour there. I farm 400 acres, and have been engaged in farming for 30 years. On the whole I think about two-thirds of the district I have referred to are arable. In the valley of the Avon, from Malmesbury to Meltsham, the cultivation is principally pasture and devoted to dairy purposes; the district to the west and north-west of the vale is the "cornbrash" formation, and it contains more arable, and is mostly devoted to sheep farming. On the arable land women are employed in weeding corn and picking couch on the fallows from April until hay time, and occasionally in dibbling beans and potato planting, which, however, are not grown largely as a crop. In autumn and winter they are employed in threshing with machines, chaff cutting (in which they prepare the hay for the machines), and in pulling and cleaning turnips (which are pitted), and dung spreading. Boys are employed in driving plough, tending sheep (*i.e.*, assisting the shepherd), pig-keeping, and "starving." On the grass women are employed in clod-beating and cleaning the pastures in the spring, but chain harrows are more used for this purpose than formerly. There is no special work for boys on the pastures; occasionally they are used instead of women. None under 12 can be trusted to milk. I know of no employment which I consider injurious either to women or children. Perhaps cleaning turnips in winter may be injurious to women, as it exposes them to the cold and wet, because they are obliged to go out in rain, &c. to supply sheep with food, but are usually supplied with thatched hurdles as a protection. I cannot recollect any instances of cases where injury has been thus caused. I have now four boys in my employment. They went to work at the respective ages of 6, 8, 10, and 11. I think the ordinary age is about 9. The boy who began to work at 6 is the best I have, and can read and write now. As a general rule, when they once come out they are employed all the year round. I don't think that farmers could spare them without inconvenience after the age of 9; there would not be enough boys to do the work if you restrict the age to 10. Wages for boys are 4*d.* a day at the age of 8; women 9*d.* (they work from 8 to 5). Men's wages are 10*s.* and beer (two quarts a day in summer and one in winter); some, however, give 1*s.*, or 1*s.* 6*d.* a week now in lieu of beer. Carters, shepherds, and herdsmen get 2*s.* a week more than other men; carter gets 1*s.* for every load of corn taken out, and shepherd gets a gratuity at the lambing season of 1*l.* to 2*l.*, and a plot of 20 perches for potatoes. No men are, as a general rule, hired by the year, but occasionally shepherds and carters and under carters are so hired. The object is to secure their services; they are rather indisposed themselves to accept a yearly hiring. I don't like hiring fairs at all, and think we could do without them. I have not hired a man or boy at a fair for seven or eight years. It is the usual practice to let cottages with the farms, but Sir J. Neeld, of whom I rent my farm, is in the habit of keeping all his cottages in his own hands, and letting them to the nominees of the tenants. The rent, 1*s.* per week, is paid half-yearly, and they are let subject to a monthly notice to quit. That plan has been in operation here for more than 20 years, and is, I think, the best plan which can be devised. I think that where there are good schools (of which there are many in this district) the children attend as regularly as can be desired, and I thing that if you could establish *good* schools everywhere no compulsion would be necessary. I think that all should be able to do the three R's fairly, and that they are better labourers if they have acquired

Wiltshire.
Mr. Norman.
A.
i.

that instruction. In those parishes where there are the best schools there is as ample a supply of labourers as there is in parishes where the supply is not so good, and although a certain number of the boys go away to get better places, there is always sufficient to do the work required by farmers. There are many worse districts in the county than this. The farms vary from 500 to 100. The 27 & 28 Vict. c. 114. has not been made any use of here. I find that good cottages cannot be built under 150*l.* The rent here varies very much; from 25*s.* to 50*s.* an acre; and the cost of labour on the pasture varies from 15*s.* to 20*s.*, and on the arable from 30*s.* to 35*s.* per annum.

DOWNTON.

96. REPORT on the PRESENT CONDITION and PROSPECTS of the WILTSHIRE AGRICULTURAL LABOURER.

[Paper communicated by Earl Nelson, Trafalgar.]

Our corner of Wiltshire, bounded on the west by the Avon and on the south by the New Forest, is rather a peculiar one.

The villages of the plain are always scant of labour, and in the summer are dependent on extraneous help. We, on the contrary, generally find sufficient for summer work, and consequently have too often to deal with many out of work in the winter both at Whiteparish and Downton. There is nevertheless a demand for cottages on the outlying farms, and indeed all over the district, from the farmers on the one hand and the people on the other, and yet though there is no apparent decrease in the population there are many proofs that the farmers, even among us, are in fear of a scarcity of hands. It is curious to trace the causes of this accumulation of labour in our corner of the county. At Whiteparish the "Hop Gardens," though they have long ceased to exist, still give a name to a portion of the village.

At Downton, the large water power, now only used for a mill and a paper factory, originally had cloth works. While at Morgans Vale, Redlynch, and Hamptworth bordering on the New Forest, the common lands give facilities to the squatter, and subsequently the enclosures furnished building sites for the freeholder and the cottage speculator.

In these districts we have three distinct types of cottages, the comfortable two-storied mud house in a large orchard or garden of a sufficient size to pay the rent or (in the case of a freehold which most of them originally were) the interest of the mortgage too often upon it.

Next the low mud hovel on a small plot cribbed from the roadside by the squatter. And thirdly, the two-bedroomed thin walled cottage in a small garden at 5*l.* a year, by which the cottage speculator gets interest for his investment.

From a general knowledge of the people for the last 35 years, I have no hesitation in bearing my testimony to their great improvement in soberness, general intelligence, and independence; the young carry themselves better, are brighter in their expression, their hair better kept, their clothes better, and their appearance altogether in advance of their forefathers. I cannot agree with the political economist who would place the agricultural labourer below the same class in towns, either in intelligence, position, or morality, and although their code of morality is not so high as that among the upper classes of society, it is much more generally and strictly observed than the higher code attempted among ourselves.

A glance at the men who generally come to me when out of employment in the winter, will give a good idea of the two extremes among them.

There are a certain number who, from habits of drunkenness, old age, or bodily infirmity, or natural idleness, or stupidity, are always depending on casual work, and could only expect to receive a low wage for that which would be badly and irregularly performed. But among the winter unemployed I get some of the best labourers of the district, men who are the best wood men, bark men, sheep-shearers, or turnip hoers, fully to the shepherd, carter, and foreman in the farmer's regular employ. These men never work for the farmer except by piecework, and are willing to make out the winter by casual jobs at 10*s.* per week.

Having sometime ago a place vacant as woodman, it was refused by two of these, though the place was considered worth more than 1*l.* a week would be in the town.

I would gladly see all the able-bodied sober labourers brought up to this level. If you put aside for a time the bad managing wife, those in ill-health, and at trying times the very large families, it would not be so difficult to do this as is generally imagined, for as I before stated they have already made a great advance on their position in former times, but there are still several things which keep them down.

Though I ask for a remedy for these hindrances to their well doing, it would be as disheartening as it is untrue to consider all that has been done a failure; the undoubted advance which has been made must have arisen from some beneficent cause. The National and British schools have done a good deal, though much fewer than we could wish have gained the full benefit of their teaching. All have gained something by the greater order and cleanliness which is part of our school system. All must have been imperceptibly raised by the higher type of master and mistress now set before them, and though it is thought hard to build good three roomed cottages for those who do not appreciate them, a good cottage must ever be a great educator to the family brought up within its walls. Again, the relaxation in the old settlement laws (which I hope soon will be entirely abolished) has already done somewhat to this end. The effect of railways (without which the cry against the old settlement law would long ago have been irresistable) have done much to open their minds to enable them to beat about for work to bring them in contact with men better educated than themselves instead of their past confinement in person and in ideas within the four corners of their parish.

But allow me to make a few suggestions for a still greater advance by the removal of some existing evils.

And first as to education. It is clear that some modification of the Factory Acts must be applied to the agricultural labourer. I have met with two proposals for effecting this. Mr. Grant, a late school inspector, suggests that no child should be allowed to work till he is 8 years old, unless before that he has passed the lowest certificate which he might do at 7, and that no child should work for more than half the year till he is 12, unless he passed the second certificate, which he could do at 11. Mr. Payne's is a simple but more arbitrary plan of saying they shall not work without a certificate of proficiency, but it is very difficult to enforce any law unless it is thoroughly accepted by the people, and neither plan would really effectually educate the children. This can only be done by the night school, and I should strongly urge the Committee of Council on Education to allow children to go to the night school whenever they left the day school, at whatever age that might be, and some inducements should be held out to boys and young men to attain to higher certificates of merit. I believe if more money was given to night schools to encourge education by securing a good teacher, and by a liberal system of prizes for different orders of merit, and a prospect held out to the best boy in a district to get some appointment under Government, it would give such a stimulus to the night school that there would be a much better attendance and a great willingness to pay higher fees for the instruction.

But to make any proposal a success the local authority or committee of management must be a reality, and this can only be done by forming district boards, to consist of the leading managers of each school in the district, with *ex officio* members from the magistrates and guardians of the poor. All returns should

be sent to the Committee of Council, and all grants transmitted through this district board, and they should be empowered to enforce any new law on the subject. The energetic educationists who are now buried in their own school would gain a much larger sphere of influence.

And now I would say a word as to cottage accommodation. I do not think a really good pair of cottages with hollow walls, shooting and outhouses can be built under 350*l.* or 175*l.* each, and the least that they should let for is 6*l.* a year.

If by thin damp walls, no shooting and drainage, and scant sleeping accomodation, you seek to reduce the price to enable you to make a profit with a lower rent, you at once do away with the great educational power which a good cottage has, and your cottage of such a type would soon compare badly even with the old mud thatched cottage, which has certain peculiar comforts of its own. How then is the rent to be obtained, for unless you can get a fair return for your money, people will never build enough or good enough cottages.

I find that while my cottages run from 2*l.* 10*s.* to 4*l.* with very fair gardens, the speculator's inferior two-bedroomed cottage with a very small garden, if any, would let for 5*l.* If all cottages were brought up to this, I think wages must be raised to meet it, but at present the wages are reckoned on the landowner's low rent, and other poor people have to pay their 5*l.* out of the low average of wages thus formed; the other 1*l.* might, I think, be obtained for a good quarter of an acre garden ground, which in allotments would generally fetch three times the average rent of the land of the larger farms.

But while an increase of cottages is the manifest remedy against overcrowing and the gang system, the seeds of a greater evil are likely to take root if the landlords and the public are not warned against it. The tenants ask for cottages to be let with their farms, and on outlying farms this is a necessity, and some farmers seeing the advantage of this from the hold it gives them over their labourers, are renting cottages in the villages round to underlet to their labourers. I willingly admit that a large majority of our tenant farmers would never dream of using this as a means of oppression, but in the hands of a capricious master it is a fearful power to be able to turn a man out of his house and garden at a short notice, and goes terribly to sap the proper wholesome independence of the labouring classes.

Under this power some deny them from keeping a pig, some claim the work of the women of the family in the fields, whether they consider it the truest economy or not. I have known a case in which a parish shopkeeper speculating in cottages has obliged his cottage tenants to deal with him at his high percentages under fear of immediate dismissal.

A general arrangement for a full month's notice to cottage tenants would be some remedy.

The helplessness of the labourer under such an arrangement may be imagined when I describe the system or rather want of system upon which the rise or fall of wages is regulated. When bread is high complaints are made by different men to their employers, and at last, after some weeks pinching under high prices, a rise of a shilling is announced. When bread is lower again some day a general lowering of wages is simultaneously agreed to by the farmers at their ordinary, no individual farmer taking the responsibility, but all acting together on some arbitrary principle unknown to the labourer, but it is useless for him to resist; even while I write such a mysterious fall from from 10*s.* to 9*s.* has been agreed on, but though bread is from 3*d.* to 4*d.* a gallon lower, cheese, butter, and bacon are excessively dear, and potatoes are generally a failure.

This system of keeping the general wages down to just above starvation level has a very deteriorating influence, and much jealousy and suspicion takes the place of sympathy and mutual good will between master and man, which a legalised plan by a mixed committee or arbitration for the regulation of the scale of wages would tend to secure.

But after all, perhaps the greatest evil they have to contend with is the tick system at the shops, and yet it is next to impossible for them to leave the shop and take to ready money payments. They know that their pig is too often made the security on which the tick at the shop is based, and that they are obliged to kill it at the dictation of the shopkeeper at times disadvantageous to themselves. They know that they pay more for their tea and other articles and get them of an inferior quality to those supplied at ready money prices to myself, but though I have offered to pay their debt on their promise to leave the shop, they will not do so; their position is so precarious at a sudden fall in wages, at loss of work, or from sickness, that not wishing at once to go upon the union, they would starve if they had not the shop at hand to trust them. Living so near to the full amount of their regular pay, trusting to piecework for their rent, fuel, and clothing, the least accident sends them into debt, and I fancy few of the average run of labourers are not a week or fortnight behindhand at the shop.

A better plan on some fair principle for the regulation of wages, a ready and immediate system of relief when a man is really disabled, nurses and parish cottage hospitals in time of sickness, and a course of industrial training for the girls would somewhat palliate this evil; but until some of the things I have referred to are altered for the better, it will be in vain to look for any general rise of the labourers class to that independent position which is essential to their real comfort and to the good of the nation.

F. Norman, Esq. NELSON.

98. *Mr. George Mannings*, Downton.—I am a miller and malster, and farm 300 acres of land. I don't think that farmers require boys to work for them under the age of 10 years. The parents don't care anything at all about education; they were not nearly as indifferent formerly; I don't think that the Factory Acts could be applied to agriculture, *i.e.*, the fixed rules as to time could not, but I approve the suggestion of granting a certificate as a condition of employment. I think parents could afford to keep their children up to the age of 10; the money they earn before that is not sufficient to be of much importance to them. I think 15 is rather too late to keep them from work in any event. Girls are usually employed here in indoor work, shirtmaking, &c.; they used to be employed in lacemaking, but that manufacture has ceased.

It is very much the custom about here to let cottages with the farms; the farmers let them by the week, with the power of turning the inmates out at a week's notice; that applies to all except yearly servants, who have their houses given them by the year; I think that that plan is often made a means of oppressing the labourers. Besides that, there being a large number of houses at Downton, some of the farmers speculate in house property; they hire every house they can obtain, and compel all their labourers to occupy these houses, even although they may be previously provided with a convenient house. The farmers make use of their cottages to make their labourers work when they otherwise would not work, and sometimes at a price which they would otherwise refuse. A farmer has plenty of opportunities of oppression if he chooses to make use of them. I don't think they often compel the women and children to come out because they have abundance of men's labour. I have never heard of cottages being taken by tradesmen for the purpose of compelling their tenants to deal with them. There are many cottages about Redlynch and other places near here which have half an acre or an acre of land attached to them, some of the cottages belong to the occupier. These men do not take work regularly as labourers, but do jobs in piecework and earn a great deal of money in that way. I think that every cottage should have a quarter

Wiltshire.
Mr. Norman.
A.
i.

of an acre at least, and where the family is large, more. It answers to give a good deal of land to the tenants of the cottages, because they can afford to pay more than an agricultural price, and that helps to lessen the loss which must necessarily occur in cottage buildings; I think a man could generally manage half an acre and work as a day labourer besides. The allotment system was introduced here about three years ago; but the farmers now get the allotments into their hands and underlet them.

Draycot Cerne.

99. *Rev. C. R. E. Awdry.*—It is quite clear that no legislative interference is necessary on the ground of health. There are about 150 people in this parish. There are always 30 in attendance at the school. There are only one or two boys or young men in the parish who can neither read nor write. I have now 18 candidates for confirmation aged from 14 to 21, and all of them could read and write when they first came to me. The youngest boy who has left my school was aged 9. I think that all who live in the neighbouring parishes can read and write unless they have refractory and ill-conditioned parents. I don't think it is desirable to avoid all education; I think they should be able to read well; I don't care about their writing; I have no objection to their being taught to write, but they are always ready to learn it for themselves; I also think that some arithmetic is desirable. The clever boys who are educated at Christian Malford are not nearly as useful for field-work as others; the farmers won't have them. I am strongly opposed to over-education; the servant class have certainly been injured by it. The boys leave my school about the age of 9 or 10; they can then read capitally. I never bother my head about writing; I don't find that they forget the reading they have learnt. The girls leave about the age of 13 or 14. The farmers will never give assistance to education, and should be compelled to do so. The boys go out scaring too young on Sundays and all. They ought not to be employed seven days in succession. I don't think that the power of being able to read and write would injure them as farm labourers.

East Grafton.

100. *Mr. Stagg.*—I farm 500 acres, 80 of which are grass. I don't employ any boys younger than 10. I don't employ young boys for shepherding, because in this district, where there are hedges, they are not wanted for tending, and are useless unless they can carry hurdles. I have been here 28 years. The supply of labour of all classes has diminished during that period; there is a great scarcity of boys. There are no men out of work in winter. There has been a short supply of cottages in this village, and the young men, when they have married, have been obliged to leave. The most handy man I ever had left because he could not get a cottage; three others also left. Those who remain are less well behaved than they used to be, more particularly the young, but they are as well qualified to do the work as the men I formerly used to get.

The school has been established during the last 20 years. The people are certainly not so subordinate or respectful as they used to be before its establishment. The weekly wages of labourers always used to be the average price of a bushel of wheat; they are now equal to about the price of 1½ bushel. My head carter has 12*s.* a week, 4*l.* harvest money, one gallon of ale a day during harvest, and one quart of small beer a day during the rest of the year, and 1*s.* whenever he goes out with corn, which he does on an average about once a week. That amounts to about 16*s.* a week. I employ more men now than I used. Boys come out to work at as young an age as they ever did. There are plenty of cottages here, but some are occupied by men who don't work in the parish. I have had until lately no cottages with my farm, and if one of my men left me I could not put another into his house. I have often been put to great inconvenience on this account.

East Knoyle.

101. *Mr. J. C. Corbin.*—I farm 680 acres, of which 280 acres are grass and down. We employ three boys under 18, one aged 9, second 11, and third 14. They are employed all the year, but I could do without No. 1 in winter. Two are shepherd's boys; the other minds cows and goes errands. No carter boys under 18; find men more useful. Plough with two horses. Have extra boys sometimes when carrying. No girls employed and no women in winter; but a little in spring, not more than two. They have about half a mile, at furthest, to come to work. Boys work from 7 to 5 in winter, and to 6 in summer; one hour for dinner. No restrictions needed on account of health.

This hamlet (Upton) is about one mile from East Knoyle. The people are very indifferent about education. More went last winter to night school because the clergyman promised a supper. I wanted to form an evening class in my house, and invited all who chose to come; none came, not even our own boys. We could do without them up to 10, and then we do not want them in winter for a year or two. I don't find those who are educated are much better labourers, but it is a bad thing for a boy not to be able to take up a Bible and read a chapter when he wants to. The educated might be more useful where machinery is used. Under carters are engaged by the year because they are inclined to leave. Wages of men of that class have increased more than others.

Great Durnford.

102. *Mr. Stephen Smith.*—I farm over 700 acres, about 50 acres grass; some down and small water meadow. I employ six boys all the year round; not younger than 9, and generally older. Had only two extra this summer, one for pigs and one for horses; no use for scaring. Been short of boys lately. I think that farmers would be put to serious inconvenience if they were prohibited from working after the age of 8. Employed no girls this summer. Girls come out about the age of 12, and do the same work as women, *i.e.*, weeding and hay-making. I employ from 5 to 12 women, as I can get them; only one has gone to work constantly this autumn. They begin about April and go on till harvest. They don't hoe turnips. Boys are not employed in singling turnips or weeding.

There are sufficient cottages except during harvest time, and they are conveniently situated. I have 20 cottages; I don't allow the occupiers to take in lodgers. Good water supply and ventilation. All have gardens of about 12 to 15 poles. The labourers all have allotments. There are some permanent allotments, but I let each man have nine perches of land at a rent of 1*s.* 6*d.* per perch. I manure it and generally plough it once, and they dig it afterwards.

I think all my neighbours manage their farms in the same way as I do. Men's wages are 10*s.*; women's 6*d.* in short, and 1*s.* on long days; boys 2*s.* 6*d.* a week and upwards; the shepherd's boy has 1*s.* a week more because he is out in all weathers; little boys at first 2*s.*

Heytesbury.

103. *Mr. T. Wilce*, farmer, and *Mr. Snelgrove*, maltster, and churchwardens.—The cottages are not usually very far from the land to be cultivated, but where they are at a distance the time occupied by women in going to their work is reckoned as the master's time. Boys when they first begin to work get 3*s.* to 5*s.* a fortnight; it is usual to pay wages fortnightly about here. Boys do not usually begin to work until the age of 10. No harm arises from the older women going out to work in the fields. Education certainly disinclines the people from agricultural employment. We have always been well supplied with agricultural labourers. There is a factory near, and that always attracts a considerable population. The factory is preferred to agricultural labour on account of the higher wages earned and the society

obtained from the numbers working together. Educated are decidedly more useful than uneducated men as agricultural labourers, especially since the use of machinery has been introduced; but if boys remain at school too long, and learn too much for their position, they become discontented when they grow up, and will not betake themselves to agricultural employment. We are often obliged to employ labourers because they are old men, and we do not like to turn them off, although the work they do is not worth half the wages we pay them. The great evil is being obliged to pay all men, good and bad, weak and strong, alike; but it is impossible to pay different scales of wages to day labourers, because if you did the men paid on the lower scale would all leave you. We are certainly in favour of sufficient amount of education to give a man an acquaintance with the three R's. We think that by means of night schools we improve the education boys have received in the day schools. We have here penny readings, and we endeavour to read papers on scientific subjects connected with ordinary work which may be useful to the men as labourers.

Farmers might easily dispense with the labour of boys up to the age of 10, and we think that the employment of boys should be prohibited up to that age. Mr. Wilce always requires that a boy should have attended school before engaging him; he does so because he wishes to support education. The public opinion is certainly not now in favour of school rates. The boys are wanted all the winter; we keep them on because we have work for them to do, and not because we dislike turning them off in the winter months. The only mode of providing for education after work begins is by night schools, and we do not think that any compulsion is necessary to induce them to attend the night schools; they are quite ready to attend without that. The shepherds' boys never go to church except in the evening, when they are free. Here, where there are no enclosed fields, their services are absolutely necessary all day long. Two or three of the men who have the care of the stock must have cottages on the farms, but as a general rule cottages should be placed in the villages. Labourers who have families are preferred for cottages on the farms, because a man who has one or two boys to help him can take charge of a team of horses; but such men usually require extra remuneration as an inducement for them to live away from the village, and an extra shilling a week and garden or potato ground is usually the inducement employed.

Horningsham.

104. The *Rev. J. J. Jacob.*—This parish contains 2,488 acres, and there was a population of 1,065 in 1861, but there are not nearly as many now. The best boys go away to London or emigrate, and others who poach and get into trouble go to the iron-works in Wales. I have been here 10 years. When first I came there was a glut of labour in the parish; they used to come to me and complain of want of work; and after harvest Lord Bath and the farmers used to meet and divide the men between them for the winter. I suggested to the men that they had better go away, and now there is not a single man out of work, and the farmers are sometimes placed in great difficulties for labourers. There are] but few young men now in the employment of farmers; the wages of men of that age have not risen very much. Men's wages were 9*s.*, now they are never less than 10*s.*, and in summer 11*s.*

There are three dames' schools which take children under 6 years of age, when they come to Lord Bath's school; some boys never come to our school. The education difficulty is the indifference of parents. The children pay 2*d.* a week, and Lord Bath provides clothes for each child with 8*s.* 8*d.* every Christmas; I think that has the effect of keeping the children at school longer in this than in the surrounding parishes. If any compulsion is necessary, it should be to make them regular in attendance from the age of 5 or 6 up to 12. The irregularity arises from the children going out to pick up acorns (for which the farmers pay them 6*d.* a bushel) and other small jobs; they are not much employed in scaring; nine agricultural boys left our school last year; they averaged about 11 years and 9 months. There was formerly a silk factory here, which was given up some time ago; there was a surplus population in the parish in consequence, which is now disappearing, and the population is now about sufficient for our wants. Those children who have left school over the age of 12 could about pass the fourth standard; the remainder could pass the second or third. We have a night school; 60 on the books and 33 in average attendance; some boys have learnt everything they know at night school and can read fairly. I find that those who have not attended the day school exert themselves and make great progress at the night school; but all make steady progress. I don't think we need compulsion; public opinion among the poor is in favour of education and coudemns those who neglect it. I was at Fisherton near Salisbury; there the education was kept up by the boys attempting to get places as errand boys, in which attempt they failed unless they could read; the girls there went out early to nurse babies. I think that the education difficulty can be got over if the clergy use their influence. Lord Bath lets very few cottages to the farmers; he keeps most in in his own hands. There are 246 cottages in this parish. The average age at school is certainly lower now than formerly, I presume because there is a greater demand for labour.

Latton.

105. *Mr. Edward Lane.*—I am well acquainted with this portion of Wiltshire as far as Malmesbury, Purton, and Swindon. About one-third is grass. I farm 400 acres, half of which is grass, and have been here 17 years. Women are greatly employed in agriculture; they work as follows:—

March to end of May, hoeing the different corn crops and couch-picking.

June, July, and August, hay and harvest.

September to 1st March, stubble raking, chaff cutting, turnip cleaning, winnowing, and threshing with a steam machine.

Hoeing is always piecework. Each woman undertakes the work alone, but sometimes brings a sister or a child to help her. Couch-picking is always done by the day; for that purpose three or four go out to work together. Where women are used for chaff cutting, they turn the machine under cover, but a great deal is done by horse or steam power. In turnip pulling, the women pull the turnips up and clean them, and put them into heaps for the shepherd to use; they ought never to be employed in that work. It is usual for three or four to work with the steam threshing machine; they feed the machine and take away the chaff. Women's wages are 1*s.* a day in summer and 8*d.* in winter, when hoeing they get 3*s.* an acre. I think they average about 1*s.* a day while at piecework. Men's wages are 9*s.* to 10*s.* in winter (October to May); from May until harvest they have an increase of 1*s.* a week, and during harvest, when they are not reaping, they receive 2*s.* a day. Carters and shepherds receive 2*s.* a week more than common labourers. Boys begin to be employed at the age of 10 in driving plough; that occupies them all the year; they do not often begin as young as 10; we plough with three horses as a rule, sometimes only two. The carter boys come at 6, they go home at 7 for breakfast, and go out to plough from 8 to 4, leaving off for one hour for dinner, and they stay to clean the stable out after the team comes home. Young boys not usually younger than 10 are also employed for bird keeping and pig keeping. For bird keeping they are employed in July and August; not so much in the spring, when men are employed with guns. Boys are not employed above four months in the year for these jobs. Girls begin to go out with their mothers at the age of 15

Wiltshire.
Mr. Norman.
A.
i.

or 16, but do not work before that. Boys receive about 2*s.* 6*d.* to 5*s.* for driving plough, and about 2*s.* a week for bird keeping. All the women go to field work who have not families to keep them at home. Where there are only two or three children they are sometimes sent out to be taken care of by other women, but if more than two or three, the eldest stays at home to look after the others. Many women who work in summer never go out to work in winter when wages are low. I employ three boys under 16 on my farm of 400 acres.

Statute fairs are held in this neighbourhood at Cirencester, Highworth, Swindon, Wootton Bassett, and Malmesbury, and in all the large town in the county; in arable districts they are held once a year (Michaelmas), and in dairy districts twice, at Michaelmas and Ladyday, because the dairy farmers require additional hands in summer. My experience is that if there were no mops, you would have a more respectable and lasting set of servants; all the out of door servants who attend to horses, sheep, and cattle, are hired at mops as well as dairy maids; 10 times more immorality arises at mops than at any agricultural employment. Men are hired at mops for 12 months, and the general practice is for masters to ask their men, when the 12 months have expired, whether they intend to remain longer. Dairy and nurse maids are boarded in the farmers houses, but as a rule no men are boarded. No work is done on Sundays except attending to the sheep, horses, and cattle. As a general rule women and boys don't live more than one mile from their work. Women who have families detest mops, because when their husband gets a new place they have to move. Women work from 8 to about 4.30 in winter, and in summer from 8 to dark. They are very healthy. I have observed no evil consequences arising from the field work. We have only had four bastards in this parish born during the last 15 years; two were the children of domestic servants, and the other two mothers were women who did not go to field-work. Girls are invariably smarter, more tidy, and less immoral for going out to field-work. In winter I could dispense with women's work by using machinery, but in summer I could not. No pressure is put upon the women. Few go out to turnip cleaning. All the young men and boys in this parish can read and write; almost all the children go to school; the parents like to send them because they desire them to be educated, and also because they wish to get them out of the way while they go to field work. New cottages with two bedrooms and a quarter of an acre of garden let for 52*s.* a year, those with three bedrooms for 70*s.* Where they are the property of small owners the rent of three roomed cottages is about 4*l.* a year without a garden.

Manningford Bruce.

106. *Mr. J. Stratton.*—Cultivation is chiefly arable; the Pewsey Vale is almost entirely arable, east of Devises. I farm 900 acres, 600 under plough the remainder sheep-walk and pasture. We hardly ever employ boys before 10, we had rather not; employ them all the year round; in exceptional cases the very young ones go home to school in winter; they begin by bird-keeping and driving plough; probably about nine now at work for me under 13; wages begin at 2*s.* 6*d.* a week.

I have two girls at work now aged 12½; 12 is the youngest age they ever come to work; they are employed in weeding, spreading dung, and other light work, they do the same work as women; they will work all winter when fine. I have only six girls altogether at work now.

Married women don't care to go out except in harvest, no women at work now over 15; wages, women, 8*d.*, girls, 6*d.* and 7*d.* I used to employ 20 women; I think they earn their money very fairly, and that it is cheap labour where superintended; I always send a foreman, an old man, and 8 or 10 women to work together.

The village at which they reside is close to my farm, but the farm extends for three miles, and they sometimes have to work in the distant part, the time occupied in coming and going is my time.

The hours of work are, in summer, 7 a.m., and in winter 8 a.m. to 6 p.m. or dark, with two hours rest in summer, and 1½ hours in winter; boys from 6 to 6 except when carting.

I think it very desirable that some steps should be taken to improve the education of the labourers' sons, but I think it would be very difficult to manage boys if they did not go to work before the age of 12; I employ more boys than I want now in order to assist their parents; I don't think any system of partial school attendance practicable when boys are at work. I think that 11 is early enough for them to begin to learn their trade; up to the age of 11 I could let the boys go to school in winter.

In the case of females no restrictions are necessary. There is a dame's school here carried on by a woman and her nephew. On Sundays I and my family attend to the children the whole day, they attend well because I put the screw on. There is a night school in winter. There is no cause of interference with education except early labour.

Cottages are sufficient in number; all are in the village and are not much crowded; only one cottage out of about 20 lets for more than 40*s.* a year with garden.

All have gardens and allotments up to half an acre besides if they like; I charge 2*l.* an acre for allotments and pay rates and taxes. I don't at all object to their having half an acre, it does not interfere to an inconvenient extent with the work they do for me.

Wages, 10*s.*; cowmen, 12*s.*; head carter, 12*s.* and house, and double pay for one month in harvest. I pay wages once a month, but as a general rule I let the wages run for two months (but this year for three months) at harvest; almost all the piecework which is done is done at that time.

[Mr. Stratton was good enough to supply me with the following calculations of the earnings of 11 of his labourers during the three months which included harvest.

		£	*s.*	*d.*	
1.	-	11	17	11½	with wife (reaping only).
2.	-	12	12	7	without wife.
3.	-	11	5	1½	do.
4.	-	11	4	5	do.
5.	-	11	4	0½	do.
6.	-	12	0	10½	do.
7.	-	10	6	3½	do.
8.	-	10	13	4	do.
9.	-	9	15	5	do.
10.	-	11	10	4	do.
11.	-	10	16	9	do.
		123	7	1½	

= 11*l.* 4*s.* 3*d.* each.

These men had no beer. The head carter earned 9*l.* 4*s.* during these three months, besides having his house and garden rent free.—F. H. N.]

Orcheston St. George.

107. *Mr. W. B. Canning.*—I farm 1,870 acres (about 300 grass). I employ six or eight boys of 10 to 14 years old all the year round. I very rarely employ extra boys, sometimes one, but last year none; they are not employed much here because this is two horsed land. I don't employ them for scaring, but they are employed with horses all the year, and with sheep from about May to October, but young boys are not often employed for that. Young girls about 12 go weeding and hay making, I sometimes have three or four; if

they ask for work we give it them, but don't want them. Of women, old and young, we may have 15 through the spring and summer. They weed in spring, make hay, and now (September 28th) pick up docks and couch; they work in winter at spreading dung and threshing if they like. We always find them work if *they* like.

The village is less than one mile off; the time employed in coming to work is my time, and they leave this farm house at 5 p.m. to go home, stop work one hour in the day. No restriction is necessary in this district.

In Tilshead parish I know of one family living on the down who don't attend school except on Sunday; that is the only family I know who do not attend.

There are sufficient cottages in point of number, and they are conveniently situated. I have 26 cottages; that sufficient with the under carters, who sleep over the stables and board at the carters; good water supply. All the cottages have gardens; we allow each man 20 poles of land which we manure and plough. Men's wages, 10*s*. I think that ordinary labourers earns 13*s*. to 14*s*. a week, women 8*d*. and 10*d*. in long days, boys 2*s*. 6*d*. I allow beer without limit in harvest, haytime, and threshing. I offered 1*s*. a day in lieu of beer during harvest; it was refused. Some of the best men I have can neither read nor write. I cannot say whether or not the educated are more useful than the uneducated.

I was at Chisledon, near Swindon, before I came here. I think women worked more there than here, and children as much. I always have considered, wherever I have been, that the greatest evil in country parishes, are the beer shops.

PEWSEY.

108. *Mr. William Fookes*, Pewsey Wharf, Marlboro'.—I occupied a farm of 400 acres on Salisbry Plain for 16 years, but I have now given it up. There is no trace of public gangs in this country, and the only mode in which private gangs are at all employed is the practice which sometimes prevails of sending from six to 12 women out to weed together under the superintendence of an old man, but in all cases labourers of all kinds act as free agents. I know this county thoroughly, particularly the chalk district, and I know of no part in which the health of the women and children who work in the fields is at all injured by the work they do.

I think there are many cases in which the education should be improved. I don't think that a man is necessarily a better labourer for having been educated, but he is not a worse one. The very best man I have ever employed could neither read nor write, and did not wish to learn. Many farmers attribute the present unsettled condition of the agricultural population to increased education; this is a great mistake; in my opinion it is due entirely to the variety of employments now open to men and to the increasing facilities of communication, and a conviction among the labourers that if they don't get employed here they can in other places. Farmers must compete with other employers of labour, and I think the wisest course for them to take with respect to their labourers is to try to convince them that they may be as well off as agricultural labourers in Wiltshire as in any other employment. Boys under the age of 10 are very little employed by large farmers; they are more employed by smaller farmers, but their labour is not of much value in agriculture.

I don't think it can be said to be impossible for labourers to keep their children at school up to the age of 10 or 11, because some parents do keep them at home up to that age as it is, and what some do others might do.

The Factory Act, I am fully persuaded, after giving the matter full consideration, is *wholly* inapplicable to agricultural districts; this is not my opinion alone, but also that of some others, whose experience in public matters *generally* makes those opinions of some value and weight.

I have made careful inquiries among the farmers in this neighbourhood in order to ascertain what amount their labourers earn on an average. I have examined the books of six farmers in the chalk district, and ascertain that in every case all the able-bodied men at work upon their farms have been earning on an average from 13*s*. to 14*s*. per week throughout the year. This is besides potato ground which is allowed to each man. Skilled men earn more. This is considered an over populated and consequently a poor neighbourhood, and I think I am justified in inferring that what can be earned here may be earned universally throughout the chalk district of Wilts.

The cost of labour has increased lately; it probably averaged about 25*s*. per acre on the chalk land, and 15*s*. per acre on the grass lands; that amounts to 250*s*. per week for 100 acres. As a general rule about one boy at least is employed for every 100 acres, and is paid 2*s*. 6*d*. a week; if the very young ones were prohibited from working, the gross expense might be increased 1*s*. or 2*s*. a week, but that is nothing compared with the whole outlay for labour.

I think that mop fairs should be put a stop to; there is no reason why they should exist in one district more than another, and great evil arises from them. In some parishes there are feasts and frolics every year; they lead to great immorality and dissipation, and interfere with the farm labour for a week.

I have frequently known men leave this district to go to Kent, Surrey, or Essex to get work, but return after a time when they found they were not as well off there as here.

PRESHUTE.

109. The *Rev. A. G. Bleeck*.—There can be no doubt that the state of education in this parish is at present decidedly defective, partly from not sufficiently competent teachers, and more especially from the scattered nature of the parish. There is a population of about 90 who live on the downs, and are out of the reach of any school; the children there are growing up without any education at all. There are schools accessible to all the rest of the parish, and I think that all the children are in the habit of attending school for a short time, but certainly not long enough to enable them to learn to read and write easily, and retain what they have learnt. This parish is six and a half miles long, and about three and a half broad. There are two schools in it, not much more than infant schools; the teachers in both cases are uncertificated mistresses; I am unable to get certificated teachers, because there are no houses for them, and the schools are not sufficiently well supported to enable me to provide the accommodation required under the revised code as the condition of a grant of public money. The attendance of the children in this parish is not as general or as regular as I have found it in other parishes. There is not a sufficient population in my parish on the downs to support a school there; they are within the reach of Rockley, which is a hamlet of Ogbourn, but there is no school there. The only mode I see in which education could be provided for these scattered cottages is, by means of an itinerant master, who might take classes in different cottages or farmhouses on different days of the week. I doubt whether any system of education short of compulsion will be really effective; I am myself in favour of compulsion, but if that plan cannot be introduced, I think that the "certificate" plan would be most likely to prove successful. I don't think that boys should ever be allowed to leave school before 10; but I think that they might learn enough for their position by the age of 10 if they attended regularly. The poor are not utterly indifferent about education, but they manage their children so badly, and are so unwilling to forego any chance of their earning a casual wage of any sort, that they will accept any excuse for keeping them at home. The farmers are in many cases opposed to education, and attribute to it much of difficulty they meet with in

Wiltshire.
Mr. Norman.
A.
i.

getting sufficient labour. No doubt domestic servants are more difficult to get, and are not as good or as ready to work as they used to be, but that is not due to education, but to the increased facilities of communication which enable servants to hear what is going on in other places, and what other employments are to be had, what increased indulgences or greater liberty are granted, &c., &c.; these circumstances make servants restless, unsatisfied, and constantly desirous of changing places. The same observations apply in a degree to farm labourers. Middle-class employers generally, such as farmers, tradesmen, and that class generally, are also indifferent to and not disposed to support training colleges [for domestic servants] that is because they (the middle-class employers) cannot get servants to suit them from those institutions. The fact is that girls trained there are highly trained as servants, but are accustomed to certain indulgences, and a more comfortable and luxurious style of living, and to be petted and made much of, which they cannot obtain anywhere but in first-class places. A boy who has left the day school at 9 or 10 would forget all he has there learnt in about two years, unless he keeps it up by reading at home, or by attending the Sunday school or the night school. I have a night school, and allow any boys to attend it who have left the day school. Night schools cannot be relied upon as anything but partial and imperfect substitutes for day schools, unless they are kept open summer as well as winter, and not less than three or four nights in a week. I don't disapprove of three or four cottages being placed in each, in fact I think every employer *should have* one for his shepherd, one for his carter, one for his bailiff, and perhaps another for a useful general labourer; but I think it is unsafe to let them have more. I know cases where the labourers who occupy cottages under the farmers have been exposed to great oppression and unfairness in consequence of having their employers for their landlords; besides it has a very demoralizing effect in the hands of unscrupulous and unprincipled employers; and therefore I consider it to be a useful check on all employers and employed when an impartial and intelligent agent keeps the control over the majority of the cottages on an estate in his own hands. The divided nature of the proprietorship of this parish has had an unfavourable effect on the general well being thereof. There is no uniformity either in the character of the dwellings, the amount of house rent, or the selection and encouragement of well conducted tenants. There is no one pervading sense of care or interest in their general welfare, so often visible on the estates of high-principled conscientious landlords, which leads the tenants to feel that they are looked upon as somewhat more than mere engines of labour, and gives them a higher self-respect, and induces them in their turn to give a more careful heed to their own lives, and that of their children; but in the present instances, the landlords are, to say the least, careless and indifferent about their tenants' dwellings, seldom or never visiting them personally, and not sufficiently alive to the necessity of being ever careful to keep a constant watch on all arrangements conducive to the health, physical and moral, of their cottagers. Lodgers are nominally discouraged, and even forbidden, but in too many cases overcrowding is unavoidable from insufficiency of apartments; and I have known more than one instance in which suggestions made by myself or other influential persons in the parish, for the application of remedies to the abatement of some nuisances, have been altogether unattended to, or only imperfectly carried out. What I may call the absenteeism of the proprietors (who are many, and small holders, and who seldom or never personally interest themselves in the cottages) has had decidedly a demoralizing effect on the occupiers, who feel themselves uncared for and let alone, and who in too many instances have been the weedings-out of more strictly regulated estates, that there is a very low standard of life, and a carelessness and indifference to the opinions of others concerning them. Self-respect being but low, drunkenness is, I am sorry to say, a universal failing, and the habit of running into debt and deferring payment much too common. Under these circumstances it must not be surprising that education is not in a very flourishing condition in this place. To no place would I feel sure a little moderate coercion be more useful than to this; but I must suggest that in strict justice that coercion should be impartial, and should include both sides, both landlords and tenants. A little legislative interference regulating the condition of some of the dwellings, insisting upon a decent number of apartments, and the invariable supply of fresh water and certain necessary conveniences in every case, should *precede* the desirable enforcement of attention to the mental culture of their inhabitants; then having learned that they are held in *as high* estimation as the beasts of the stall, they may begin to think that they are in one respect *superior*, and be induced to seek, for its own sake, the cultivation of that talent which distinguishes them from the beasts, and which might in a while open to them purer pleasures than they at present even dream of, and might one day induce them to prefer the reading room and the institute to the beershop and the skittle alley, and the cultivation of melody and the line of beauty to the uproarious shouts of drunken revelry and the filthy scriblings of obscene jests; but let me in conclusion again assert my earnest conviction that an Act enforcing the duty of the landlord in *providing decent habitations* for him, must accompany, if not precede, an Act for *educating* the labourer.

SALISBURY.

110. Messrs. Rawlence and Squarey, Salisbury, land agents and extensive farmers.

The employment of women and children in agricultural labour is not prejudicial to their health. It is invariably the practice for all, except those employed as shepherds, to go home in wet inclement weather. No young girls work in the fields as a general rule, except during the haymaking and harvest. Girls from 15 years upwards are generally in service, and there are not more than 10 to 15 per cent. of girls employed in labour. The practice of women going out is decreasing; indeed, during the winter it is with difficulty that enough can be obtained to carry on the ordinary work of the farm. We do not think there is more immorality among the women so employed than amongst those otherwise occupied. Nor do we think that field work causes women to neglect their families more than any other calling. It very frequently happens that the children are taken into the fields, &c. where their mothers are employed. If therefore it be necessary for the Government to interfere in the case of outdoor labour, it is equally necessary in other cases. Mr. Rawlence employs boys on his farm of 1,000 acres, situated close to Wilton, from the age of 8 upwards; between the ages of 8 and 12 he employs them between the months of March and October only, and sends them to school in the winter months; although he could, if he thought proper, find employment for them during the winter months; from the age of 12 upwards he employs them continuously all the year round. Mr. Rawlence does not find that the cultivation of his farm is rendered more expensive in consequence of his adopting this system of employing boys, but we think that in out of the way country parishes, where there is a scarcity of labour, the system might have the effect of increasing the expenses.

About 35 years ago the uneducated labourers were the most contented we had; but now education has advanced so far generally, that all have received some smattering of it, and the young men before they marry are all anxious to try the labour market, and to find occupations in other than agricultural employment; and being thus independent, more difficulty is found by the employer in arranging the terms of their wages. As a result of this it may be pointed out that the wages of young men from 15 years of age

until they marry have increased 30 per cent. more than the wages of men of other ages. For example, Mr. Squarey lately wished to engage a man of 18 or 19 as under shepherd; the wages asked by the candidate were 10*s.* a week, dog to be kept and a tax paid, lodging free, and 50*s.* at Michaelmas, about 13*s.* a week. It is true these terms were not conceded, but 10 years ago such a man would have received 7*s.* a week and 30*s.* at Michaelmas, 7*s.* 9*d.* a week. This shows a rise of about 60 per cent.; during the same time the wages of older men have only increased about 10 to 12 per cent. It is useless for farmers to think that they can resist the demand for education which has now set in; such resistance would be impossible, and the proper course for them now to adopt is to direct it and to make such provision for the education of their labourers as may least interfere with the working of the farm.

Education can never become general unless some compulsory system is adopted to overcome the indifference of a large number of parents, and the best form which compulsion could take would in our opinion be the system of requiring a certificate of a certain amount of proficiency as the condition of employment. The amount of education which would entitle a child to a certificate should be moderate. It should embrace good reading, writing, and an efficient study of the first rules of arithmetic. With the opportunities afforded by night schools, the education of the abler and more energetic amongst them would reach as high a point as the State may feel itself called upon to insure. This first thing to be done is to provide good schools. Small parishes are unable to do this, but in the chalk districts of this county all the population is collected in the valley and then the villages are near together. In many cases two or three villages might be consolidated for the purpose of maintaining a really efficient school at some central spot, without the distance from the cottages being too great for all the children of those parishes to attend. In the grass country in the north of the county this system of consolidation would be far more difficult, because there the population is distributed in scattered cottages and not concentrated in villages as is the case here. It is impossible to lay down any strict rule as to the age up to which the labour of children could be prohibited without interfering to an inconvenient extent with the earnings of the families. No two cases are alike, and each must depend upon its own merits. We always recommend our clients to build five cottages with three rooms to every two with two rooms, *i.e.*, we think that five-sevenths of the cottages built should have three bedrooms and two-sevenths two bedrooms. A few cottages should always be let with the farms, in order that the farmers may supply themselves with carters, shepherds, &c. and the more important of their labourers, and these cottages should be left to the absolute control of the farmers. We have known of cases of oppression which have resulted from this system; on the other hand it is most necessary that the farmer should be well supplied with labourers, and after considering the advantages and disadvantages of different plans we are decidedly in favour of the system of letting a certain number of the cottages to the farmer without any restriction. We think that no legislation can be of any use for the purpose of improving the cottage accommodation. Any law passed with a view to increase the amount of accommodation or to compel an unreasonable removal of minor nuisances must necessarily interfere with the free development of building and render the expense of cottage building greater, and so thus probably diminish the number to be built. The remedy will come of itself, as everybody now sees the necessity of good accommodation, and is making an effort to provide it. Indeed, farms cannot be let in outlying districts without an invariable stipulation for an increased number of cottages. Moreover, the rising generation of labourers appreciate more than their predecessors the additional comforts of a good cottage, and, as a rule, they stipulate for the occupation of these. We have tried Mr. Moule's dry earth system for cottages and find it answer well when under proper control. Indeed, we regard it as the true solution of the nuisance difficulty. There are no mop fairs in this neighbourhood, but it is very generally the practice to hire the more important labourers by the year; this system is beneficial, because it gives the labourer a settled interest, and frequently leads to a permanent service.

We have made great use of the powers of the various Lands Improvement Companies for erecting labourers' cottages on settled and other estates and approve their powers.

We think some modification might be permitted when a large number of cottages is built as to the number of bedrooms, &c.

We may conclude by remarking that an increased area of garden attached to a cottage is to the landlord a cheap means of limiting the loss of interest on capital and the building of cottages. Labourers are invariably willing to pay 4*d.* to 6*d.* per pole for garden lands, which agriculturally are not worth more than 1½*d.* to 2*d.* This system may not be safely applied beyond an area of 40 or 50 poles for each cottage.

Savernake.

111. *Chas. G. Bolam, Esq.*, agent the Marquis of Ailesbury, Savernake Forest, Marlborough.—I have been acting as agent to the Marquis of Ailesbury for about 18 months; before that I was for seven years in Northumberland and Durham assisting in carrying on a farm and a general land agency business.

The Savernake Forest estate lies in a ring fence embracing the parishes of Collingbourne Kingstone, Collingbourne Ducis, Burbage, Easton, Great Bedwyn, Little Bedwyn, Shalborne, Preshute, Mildenhall, North and South Savernake, and parts of Milton and Wootton Rivers, Chute and Blagden, and St. Mary's and St. Peter's, Marlborough.

The greater portion is upon the chalk formation, the remainder upon the London clay and upper greensand. The forest itself occupies an arear of nearly 4,000 acres, and carries during the summer months, besides a very considerable herd of deer throughout the year, large flocks of sheep belonging to the tenants of the surrounding farms. These flocks are daily tended by shepherd boys and driven to and from the farms.

The farms on the estate vary in size from 150 to 1,000 and 1,200 acres. In the parish of Burbage there are a number of small accommodation holdings of from two or three to 20 and 30 acres. The land being very rich and productive the tenants are enabled to raise good crops at a comparatively small outlay. They pay an accommodation rent for these lands, and make a livelihood by growing vegetables, seed, &c., and making milk and butter for the markets. They are as a body almost worse off than many of the labourers, their capital is small, their work is fitful, at times very hard at others slack. The result of these intervals of comparative ease is too often the formation of vicious habits, and their want of education and training prevents them from profiting by this start beyond the ordinary farm labourer.

This system of "small holdings" is liable to great abuse, and when indiscriminately indulged in, tends greatly to unsettle the labourers. Numbers of men endeavour to get hold of even an acre or two, by means of which they hope to become independent; they throw up, perhaps, good situations and struggle on upon the produce of their land, getting into a worse position each year.

I think it advisable to have a certain number of these holdings upon an estate, and to select tenants for them only from farm labourers who have reached a certain age and had some experience of work, and who can bring characters from their employers for honesty, industry, intelligence, and skill.

It would, I believe, be a great incentive to labourers

Wiltshire.
Mr. Norman.
A.
i.

to persevere and earn such characters and give up their surplus earnings, if they could look forward to becoming possessed of one of these holdings, and so improve their positions; they would also be available as a sort of "reserve force" in time of harvest, turnip hoeing, &c. Their experience and steady training would enable them to succeed where younger, inexperienced, and untrained men would fail.

As to the employment of women in agriculture I cannot see any objection to the system if under proper regulation. I would not allow any girls to work unless with their mothers; by girls, I mean women under the age of 20, or even 23 or 24. I consider that from the age of 16 or 17 to 21 or 22 women in the rank of life of labourers particularly require to be protected from any influences likely to have a prejudicial effect upon their morals.

At this period of their lives too they are generally looking out for places in domestic service, and any time passed in field work would prejudice many people against them, indeed the question is often put to the girl by masters or mistresses, except in the case of the farming classes, who look mostly to the physical aptitude, "whether she has worked in "the fields," and an affirmative answer often closes any further attempt at an engagement. I do not intend to say that farmers are careless as to the morals of their domestic servants, only that they prefer and require general utility to appearance or refinement.

In every parish, or nearly so, there are a certain number of unmarried full-grown women, widows or married women without families, who depend almost entirely upon field work for their living, and these are the women whom the work does not harm, as their habits are formed and their chances and need of other employment gone by.

It is a question whether female labour on farms cannot be altogether dispensed with. In my opinion it can be reduced materially without affecting farmers' profits; for instance, "muck spreading" and turnip hoeing, often done by women by day work, can be done quite as cheaply by men on piecework, at the same time for weeding and for winnowing grain in the barn, and other jobs of this kind, women are very useful, and indeed almost indispensable, and cheapest labour on a farm.

Upon this estate farmers complain of the difficulty of getting women out into the fields to work. This dislike to field work on the part of women I cannot understand; the hours are not long, from 8 o'clock a.m. till 4 or 5 p.m., with an hour for dinner; the wages are certainly not tempting, usually from 8*d.* to 10*d.* a day, yet in the face of the outcry about low wages, it would seem an object for a woman to help where she has the chance.

I have seen women about here, who have refused field work, out in the very roughest whether collecting firewood, and even venturing into the copses among the saturated underwood; at other times out from 6 and 7 o'clock in the morning until dark gathering acorns for sale, be the weather wet or fine.

There is a strong impression among many people, and particularly clergymen, that field labour demoralizes women; this is no doubt true to a certain extent, and particularly when the master is indifferent and negligent, at the same time it is difficult to account for the greater morality of the women in the northern over those of the southern counties, when the former work in the fields to a very much greater extent than the latter. I think that if the standard of morality was taken in the respective classes of sempstresses, domestic servants, non-field workers, and field workers, it would be found that it was highest in the last named class.

I believe that field work conduces to their health; indeed, I know a case of a girl in domestic service in delicate health, being advised by her doctor to leave her place and go to field work for six months; at the end of this time she returned to her place recruited in health.

I do not think that, as a rule, women who do not go out to field work are any cleaner, tidier, or more civilized than those who do; they have ample time and opportunity to look after their families and keep their homes clean and comfortable, but too often both are wasted and abused at home.

In the employment of young boys on farms there is, no doubt, that great abuses exist, for instance, they are employed very often at the ages of 7 and 8, and without having had any schooling at all.

A certain number of boys are useful on a farm, and to become good farm labourers they should commence early; but I cannot see the economy or desirability of employing them permanently so young as 7 and 8, or even 9 and 10.

They are much employed in this neighbourhood as carters' boys to drive the teams when ploughing, their ages varying from 8 to 11 and 12.

I cannot understand the system of employing boys for this purpose. I have, in the north of England, always been accustomed to see reins used, and there the third horse, when required, is driven abreast with the other two. This I consider obviates the necessity for a boy with three horses, and with two it is simply absurd. When four horses are yoked a boy is necessary, but then I maintain he will drive steadier and better, and amply repay the trifling extra wage, if he is a well grown boy.

It is argued, "how can a boy learn to plough and "to become used to horses if he does not commence "early, and he cannot start better than in the way "here alluded to."

I think it is much more likely to spoil him and prevent his ever becoming a good ploughman, for he is often bullied and abused by the carter, and made to do all the rough work. In rough ground he can hardly walk, and "hangs on" to the leading horse, seriously checking it, and when the horses are in the stable he is made to take off their harness, and do the little grooming they get. He is the carter's "fag," his presence too is an incentive to idleness on the part of the carter in the field. In more than one instance I have seen the carter sitting down smoking his pipe, leaving the plough to go by itself, and the boy to manage the three or four horses, as the case may be, and during the operations of rolling and harrowing it seems to me to be an exceptional case where the carter drives the horses. He usually loiters about merely watching the progress of the work. In the same manner on the road he will go to sleep in his waggon and leave the boy to drive the horses, sometimes as many as six. I have myself seen what might have been serious accidents but for the assistance of persons happening to be at hand.

The unfortunate boy is generally made to suffer, although utterly unable to control the horses. These are, I admit, abuses and might be stopped if farmers would look more into the matter.

The usual method (in many counties) of teaching boys to become ploughmen is to start them at once with the plough raftering or cross ploughing for an hour or two each day under the care of the bailiff or the head carter, and at the end of a month or six weeks they are ready to take their places with the other carters. The boy is generally past the age of 15 when he makes his first essay.

The great difficulty at present is for agricultural labourers to keep their children at home sufficiently long for them to acquire the proper amount of schooling. They may do so when there is only one, or at most two boys in the family, but where there are more their parents cannot afford to do so.

Many labourers admit that it is cheaper to keep a single boy away from field work until he is of an age to earn at least 3*s.* a week, for the extra expense in washing, firing, clothes, and food is not met by any less sum than this.

I believe that field work is beneficial to the health of a boy, provided the hours are not too long nor the

work too hard, and that he is not compelled to go out in very rough weather.

They are also employed, though principally in driving the ploughing teams, in shepherding, going with the waggons, tending the pigs and cattle in the open fields, bird-keeping, &c. I know many farmers who employ extra boys merely because they are begged to do so by the parents as a matter of favour.

I am convinced that it is a far more economical and satisfactory plan to employ as few boys and old men as possible, but to have a staff of well paid and highly efficient men hired by the year, with the assistance at hay-time and harvest of any extra hands that may be necessary to keep up with the mowing and reaping machines.

If boys are employed they should be well looked after whilst at work, otherwise they get into idle mischievous habits, and grow up to be "tricky" and "shirking" labourers.

I would strongly advocate the passing of an Act of Parliament forbidding boys under the age of 10 to be employed in agricultural labour (except at harvest time, when they could assist their parents), and not even at that age unless they could read and write; to prove this a certificate from the inspector of schools should be given, and I would further compel their attendance either at day or night schools so many hours in the year. I think this could be done without interfering appreciably with farm work.

I think it is a matter of the first importance that agricultural labourers should be properly housed. Any attempt to improve them or their children must fail, unless their homes are made comfortable and adequate to their wants. Upon this estate their are from 1,200 to 1,300 cottages, some in good others in bad condition. Every effort is being made to improve those that will admit of improvement, and to build new ones to replace those that will not.

Hitherto the cottages, with a few exceptions, have been kept in the hands of the landlord, and let from year to year at extremely low rents, with large allotments, ranging from a quarter of an acre to an acre; for these cottages and allotments rents varying from 20*s.* to 40*s.* and 60*s.* have been paid. The tenants have been expected, in consideration of the low rents, to keep their cottages in repair, but have, as might be guessed, *not* done so, except in a few cases.

The consequence of letting the cottages so cheap, and with such large allotments, has been to give the labourers quite a mistaken notion of their position. They have worked hitherto for the farmers very much as a favour, and have on the least pretence left them to live for a time in idleness on the produce of their allotments.

This many people might consider a proper independence of the farmer on the part of the labourer. In my opinion it has been a great drawback to the labourers themselves, as well as the farmers, by generating an antagonistic feeling between them, and creating in the former an aversion to a regular system of living, and that proper control without which they cannot be well trained. I firmly believe that a great deal of the poverty, misery, and crime which exists is traceable to this system, and the effectiveness of the labourers reduced to a minimum.

I think that labourers should pay such rents for their cottages as will encourage landlords to build new and improve existing ones. Upon this estate the cottages are mostly collected in the villages. The labourers prefer this to being spread more evenly over the country. It is more sociable, they are nearer the clergyman and the doctor, the church and the school. Scarcely any cottages are as far as two miles from the villages. I think it is an important thing that the labourers should be as near as possible to their work. If a man has to travel two, three, and four miles to and from his work he must exhaust a good deal of strength to no purpose.

In my opinion the collection of the cottages in the villages in this manner is a serious evil. The public-house is the favourite rendezvous, and every kind of mischief originates there. Apart from this there is always in these country villages an undercurrent of vice and immorality, petty tyranny, gossip, and cliqueism, which is an effectual check on all attempts to raise the self-respect of the labourers and their wives and families.

The best arrangement for the farmer, and that which conduces most to the real well-being of the labourer, is when the cottages are in close proximity to the homestead; I mean the cottages for the staff of regular yearly servants. The cottages for the "day labourers" may, without inconvenience, be further removed. Where this is the case I have almost invariably found that the labourers are well cared for by the farmer's family, and in all ways more happy and comfortable. As I consider that it is most essential that farmers should have proper control over their labourers, I am giving to each, in proportion to the size of his farm, so many cottages, usually four, for which he pays extra rent. These cottages are for his principal servants, such as shepherd, head carter, groom, and bailiff, who hold them as part of their wages. The remainder are kept in hand by the landlord, and let on a weekly tenure; but each farmer will have the option of nominating tenants to so many more. This system I have been led to adopt by seeing to what great inconvenience and loss some farmers have been put to by men leaving them suddenly and yet retaining their cottages. It pressed hard upon the labourer himself in many cases, because if turned away from a farm to which his cottage was contiguous, he could, perhaps, only procure work on a farm some distance off, thereby not only causing him a long walk to and fro, but perhaps in like manner the man who replaced him. Whereas, if each farmer has a certain number of cottages in his own hands, and the power of nomination over so many more, he can at every change have his labourers near their work.

The men, too, in changing places, will in future have cottages ready for them to move into.

The Union Chargeability Bill has removed many obstacles in this neighbourhood to the adjustment of cottages to the requirements of farms.

As to the mode of hiring farm servants, although I deprecate statute fairs, I am an advocate for the system of yearly hiring. I think a farm servant should be as much bound as a domestic servant. The term of hiring might, however, be shortened to a quarter, and I cannot see why it would not work as well as the longer period if universally adopted, at the same time in the former case both the farmer and the labourer might secure themselves against the objections to this system, the one by insisting upon the production of a good character from the last employer, and the other by ascertaining the reputation of the person to whom he is about to engage himself.

In the north of England, besides making every possible inquiry respecting his future master's character, it is usual for the man to insist upon examining the cottage allotted to him, and seeing that it is suitable to his wants. Both master and servant must form a pretty accurate idea of what each has to expect from the other, and if deceived should make the best of the bargain until the year expires.

I think the nearer the approach to the day system the less will be the interest taken by the zealous labourer in the farm, and consequently in his work, for the obvious reason that he may not remain to see the results of his thoughtfulness and industry; and with a man of an opposite stamp it would tend still more to unsettle him and further reduce his effectiveness.

The principle of short hirings would strike a blow at the system of demanding characters, and I consider it a thing of the first importance for the labourer himself that he should be taught to believe it his highest aim to earn this passport to a better situation with the happier influences it brings to bear on his family as well as himself.

An important consideration with respect to yearly

Wiltshire.
Mr. Norman.
A.
i.

hirings is that the wages are paid to the labourer in sickness or health; not so in the case of the "day labourer." I also advocate the payment of wages partly "in kind." I believe in this way the labourer escapes the temptation to get into debt at the shops, and he undoubtedly gets a better quality of food, and at cost price. His purchases are reduced to a minimum, and the necessity for frequenting markets and fairs—generally resulting in vice and debauchery—obviated in a great measure. Of course the plan is open to abuse on the part of the farmer, but I have generally found the latter anxious to supply the best and most wholesome food, and the most comfortable accommodation he can. Indeed, except where labour is in excess of demand—an evil in itself—a farmer who did otherwise would find great difficulty in obtaining a good labourer. Men are becoming so much impressed with the idea now-a-days that farming can only be remunerative in proportion to the amount of skill, capital, and zeal brought to bear upon it, that it may be safely and confidently left to them to urge on every measure which will improve their labourers, and enlist their most cheerful and enlightened services.

Every cottage should have one good living room and a back kitchen, to serve also as a washhouse, with a copper and an oven downstairs, and three bedrooms upstairs. It should also have out-offices, with a pig-stye and a garden of 40 perches.

I would not allow any cottage to have more than this quantity of garden ground, and it should adjoin his cottage where possible. If he has more than this he is not worth so much to his employer, for he cannot attend properly to his own land without encroaching on the time and strength which ought to be spent in his master's service. For a cottage and garden as above described a labourer on this estate pays from 80*s.* to 90*s.* a year, 15*d.* or 17*d.* a week. I have raised the rents of the cottages throughout the estate to such a sum as will remunerate the landlord for laying out money for improving them. I have been told by many of the labourers that they would willingly pay more rent for better cottages. The cottages on this estate are too numerous, and are a heavy burden upon it, and by providing accommodation for a surplus population cause the supply of labour to be greatly in excess of the demand; consequently wages are low as compared with more thinly populated districts, and the quality of the labour affected; yet I can get scarcely any of the people to move to districts where the case is reversed. I attribute this in a great measure to apathy and indolence. The standard of work in this neighbourhood is decidedly low in comparison with more enterprising districts, and the labourers who have migrated thither have found this out and returned, preferring the easier work with its lower remuneration.

It is unfair to condemn farmers in this county, as some persons have done, for paying low wages. Although a strenuous advocate for high wages, I consider that they pay as high wages as the return from their labourers' services will permit them. It is for the labourer to qualify himself, so that from his superior work a larger sum may be profitably set aside by the farmer as a wage fund, from which the former will then draw his increased pay.

Education alone will enable the labourers to comprehend the true theory of the wages question, and stimulate that circulation so necessary to equalize the supply and demand, and better food and healthy competition will do their work in raising his energy and ambition.

On this estate every stimulus is given to education. There is a school in every parish liberally supported by the noble owner, as well as other institutions to benefit the labouring population.

Few estates are so well cared for in these respects.

STRATFORD.

112. *Mr. Edward Waters*, Salisbury.—I farm 800 acres of land. I pay wages fortnightly; my cottages are let weekly. No work is done by the piece in this neighbourhood which requires the labour of children to assist their parents. Day wages are 10*s.* a week; 15 or 16 years ago, when wages were at 8*s.*, I found that every able-bodied man I employed earned on an average 13*s.* a week. Young boys are not employed in minding sheep on my land, but they are so employed by some of my neighbours. It is the custom in this district to hire the shepherds and carters by the year every Michaelmas. The contract of hiring is in writing. My head carter is paid 2*s.* a week more than the barnsmen; he has also 200 faggots a year, 2 tons of coal, a fat pig at 1*s.* per score under the market price [this was allowed because the carters were not allowed to keep pigs.—F. H. N.], 12 gallons of ale during harvest [it is the usual custom in the neighbourhood to supply beer daily, but Mr. Waters paid extra money quarterly in lieu of beer, and allowed these 12 gallons to his carter as a gratuity.—F. H. N.], 5*l.* in money, and 1*l.* for drilling, 1*s.* for every load of corn taken over five miles, and 6*d.* per load for corn taken shorter distances. The under carters are paid in a similar manner, but rather less. The head shepherd has 2*s.* a week more than the barnsmen, house rent free, 3*l.* after the lambing season, 3*l.* at Michaelmas, 2*l.* at my option [*i. e.*, as a reward for good behaviour.—F. H. N.], 1*l.* for "cripping" [trimming], 1*l.* if he wins a prize for any sheep at a cattle show, and 18 gallons of ale at lambing time.

WILCOT.

113. *Mr. Lewin Arnold.*—I farm 750 acres (100 grass).

I usually begin to employ boys about 10. Some few commence younger. Younger boys are often to be found idling where work is going on, but are not employed themselves. I employ about 11 boys under 13. They work with carters, and one or two with shepherds, but in summer, from Lady-day to autumn, only.

Employ girls from the age of 12, but not often as young as that; they work with women, and receive from 4*d.* to 9*d.* a day. I have now six receiving less than woman's pay. In summer I employ 21 women and girls; they are regularly employed in summer and in fair weather in winter. Women generally work separately from the men, and usually in two or three parties, no man being employed to superintend them. All live in Wilcot; the farm is in the village. Women work from 7 to 6 (two hours for dinner) in summer, and 8 to 5 (one hour for dinner) in winter. Boys work from 6 to 6; they do not feed horses before going out to work.

I think that boys had better be at work after the age of 10, but up to that age they are better at school. No restriction on the employment of females is desirable.

The school is not under inspection. There is only one family who do not attend, but boys leave at 8 or 9. Boys once 9 are rarely found at school.

The cottages were all rebuilt by Colonel Wroughton, to whom they belong, about 25 or 30 years ago; rent 1*s.* a week, no overcrowding permitted; good gardens. I give potato ground to all my men, from 8 to 20 perch to each, at a nominal rent. I manure it for them.

Last year I employed 21 men, one of whom was the bailiff and one superannuated; the remainder earned an average 13*s.* 6*d.* a week.

It is difficult to calculate accurately what the women earn, because they are so much at home, but four women who worked most regularly last year earned on an average 3*s.* 10*d.* a week each, besides what they received in harvest, day wages being 9*d.* Labour cost me last year 33*s.* per acre; that is about 8 per cent. more than it cost four years ago, and the productiveness of the farm has not increased in proportion.

WILTON.

114. *Mr. W. Robson*, agent to the Earl of Pembroke, Wilton.—I am well acquainted with all this district of Wiltshire as far as Wiley, Fovant, Salisbury,

and the border of Dorsetshire. I think that boys usually begin to work at about the age of 8, and work continuously from that age. I think it would be very difficult to restrict the employment of boys. The employment of women in many places leads to great discomfort, and to great immorality, but I cannot see how the Government can interfere. It is always the practice to let cottages with the farms in this neighbourhood, without any restrictions as to the mode in which they may be used. On a broad principle, I think that that is a good plan. I have very seldom met with cases where the cottagers have been badly treated. Many cottages are let on life leases; these leases are granted at a nominal rent on payment of a fine. The lessees are often without the capital necessary to keep them in repair. The leases are assignable, and are sometimes assigned to tradesmen who compel the tenants to whom they let them to deal with them. None of these leases for lives are now being granted. Generally speaking, cottages ought to be placed near the church and parish school, but where the land to be cultivated is at a distance from the village, a few cottages are absolutely necessary near it, for the accommodation of those who are employed in looking after the stock; but they are so placed as to be at a convenient distance from the church where the situation of the farm admits of it. The farms in this neighbourhood vary from 300 to 1,200 and 1,500 acres in extent. In the bottom of the valley are meadows, next to that comes the superior arable, next the inferior arable, and above all the downs. The farmhouses are usually in the valley, with two or three "steaddings" [homesteads] on the hills. The usual cottage rent is from 1*s.* to 1*s.* 6*d.* a week, with gardens. The Union Chargeability Bill has certainly been very beneficial, and has given a greater scope to labour. I have used the General Land Drainage Act very much and decidedly approve of it; it gives an hereditary estate the means of improving itself. Two or three cottages to every 100 acres would be absolutely necessary for the proper supply of labour in this neighbourhood. The price of labour is about 1*l.* to 1*l.* 15s. an acre, according to the amount of down there may be on the farm. There are schools in every parish on Lord Pembroke's estate. There are no statute fairs in this neighbourhood. There are allotments in nearly all the villages; they are let upon the condition that no corn is to be grown upon them, and that not more than one-half is to be planted with potatoes. They are let at a rent of 3*d.* a pole. There are usually gardens round the cottages as well. Farmers now see the benefit of allotments; they become savings banks for poor people. There is a custom applicable in several parishes about here for people to collect "snap" wood; this gives them the right of entering certain woods and breaking off the dead wood. I think it is a bad thing for the people, because the women sometimes stay at home to collect this wood when they might be out at work.

115. *Mr. Eyres*, schoolmaster, Wilton.—I am auditor of the Sydney Herbert Co-operative Society; it was established in June 1867. Last quarter, ending September 17, 1868, the sales amounted to 12*l.* 16*s.*; they have been decreasing in amount ever since the first quarter; that was the most flourishing quarter. The principle has been found to act well, but difficulties have arisen among the members as to the management of the society. The store supplies mutton, bacon, and grocery. There is a branch store at Broad Chalk, to which goods are supplied from here; there drapery is sold besides the articles sold here. There is also another small branch at Bower Chalk.

WINTERSLOW.

116. *Mr. William Whitlock*, occupier.—Cultivation is chiefly arable, with a small quantity of pasture and some woods and maiden down, or permanent feed for sheep.

Boys work from 10 to 12 years of age; their work principally consists of going with the horses all the year, Sundays excepted.

Very few girls employed, and then only in the hay season and harvest, seldom under 15 years, and generally in the same fields as their parents; most of the girls are away from home as domestic servants.

Women are employed to a very small extent (excepting the harvest and haymaking, and then assisting their husbands). I employ on my farm regularly, about four days in the week, two married women, and I farm nearly 1,000 acres, principally arable. The distance to work varies, according to the situation of the farm, from 200 yards to a mile.

The boys come at 7 o'clock in the winter, and leave at 5; and in the summer, spring, and autumn their time is 6.45 in the morning and leave at 5.30 p.m., the hay season and harvest excepted, when of course they work much longer occasionally. The women come at 8 and leave at 5.30, busy times excepted. I consider that boys ought to be kept regularly at school until they attain the age of 10 years, by which time, if properly taught, they would be able to read, write, and know the simple rules of arithmetic, which is all they require in their position afterwards as agricultural labourers.

I consider that girls ought to be kept regularly at school, and taught the same as the boys, till 12 years old, and, in addition, plain needlework; they ought not to be permitted to work in the fields under 15 unless their parents are with them.

There is a good National school, two infants' schools, and a dissenters' school, also Sunday schools at the Wesleyan and Baptist chapels, also two Church Sunday schools. Nearly all the children receive education according to their position, and in some instances more than is necessary for them. In a few instances the parents are to blame for not keeping the children regularly to school, but this is the exception and not the rule.

There are sufficient cottages in the parish, but many labourers are obliged to walk half a mile or more to the different farms to work for want of cottages on the farms, which is an inconvenience to the labourer and a loss to the farmer as well. A large number have good gardens, and those that have not sufficient can cultivate their own if they wish, as the poor in the parish own 20 acres of garden land, which is divided among them, and each poor man can occupy his own allotment or let it, which he thinks best.

The primary cause of destitution and neglect of education in our parish (and the same would apply to nearly all in the south of England) is the great temptation afforded by the beer-houses in causing the poor to spend their money and time out which ought to be made use of at home. In our village last year there were established night schools and a reading room, but owing to the beer-houses being open they were badly attended. Now I will, as briefly as possible, state, in my opinion, what would meet those evils. In the first place, in every village where the inhabitants are less in number than 1,000 the sale of liquors ought to be prohibited on Sundays, and where they exceed that number special licence ought to be granted to houses, according to the number of inhabitants, to supply on certain hours of the day; secondly, I would suggest the limiting the sale of beer in all villages from 6 in the morning till 7 o'clock in the evening in the winter, and in spring, summer, and autumn from 5 a.m. till 9 p.m.; thirdly, the number of beer-houses ought to be made less than they are at present, and ought to be in proportion to the inhabitants.

I make one more remark on the education of boys, and that is, boys who have not acquired the education as before stated by the time they are 10 years of age ought to be compelled to attend night school at convenient times to their employer, from 6 to 8 in the evening, until they have acquired the necessary education, which ought to be decided by a Government inspector.

P.S.—There is in our village more than 500*l.* spent in beer and consumed on the premises of beer-houses

Wiltshire.
Mr. Norman.
A.
i.

by the poor, and the greater part on Sundays and late in the evening on other days; this certainly is a great evil, and results in causing pauperism, and ignorance, and neglect of home. I have been an employer of labour in the parish now 25 years, and pay away for labour only to my farm servants over 600*l.* per annum, which I trust will be a sufficient apology for troubling you with these remarks.

Wootton Rivers.

117. Extracts from letters from the Rev. W. J. Brodribb.

The parish of Wootton Rivers (a moderately fair sample of a Wiltshire agricultural parish) contains rather more than 400 inhabitants; of these almost all are farm labourers.

The school (which is under Government inspection) has an average attendance of 80 children, 1*d.* being in almost every case the weekly fee; it is a mixed school, and there is a class-room for infants. The children leave, on an average, at 8 years of age; in not a few cases they leave at 7. As a matter of course the training which they get is extremely slender and imperfect. An attempt is made to supplement this deficiency by means of a night school. This, though useful, appears to be a very inadequate remedy. Under the existing state of things I am convinced that the educational grant in such a parish as this fails to be productive of much permanent good, inasmuch as the school has not a fair chance of doing its work thoroughly and effectively. It cannot, in my opinion, have such a chance unless the children's schooling is prolonged to at least the age of 12. I cannot see how this is to be accomplished without the extension of the Factory Acts to agricultural districts.

In another letter, dated 10th November 1868, the Rev. W. J. Brodribb says:—

As to the mode in which the Factory Acts can be best applied to agriculture my impression is, the half-day at school and at work would be most convenient and effectual. For the children themselves I am decidedly of opinion it would be the best; for the employer it would, I think, be most easily arranged. But I ought to add that I am persuaded that any such arrangement, whether by the half-day or the alternate day, would at first be distasteful to employers generally.

Though there would, no doubt, be formidable difficulties in the way of a pure system of compulsory education, I cannot but think that an application of the principle of the Factory Acts to our agricultural population would be an important step in the right direction.

* * * *

The average rate of wages in this parish and in the surrounding district is governed by the price of wheat. When wheat is at 2*l.* 10*s.* per quarter (a fair average price) wages are 8*s.* a week. Lately wheat has been exceptionally dear, and wages have fluctuated between 9*s.* and 10*s.* a week. Some three or four years ago, when wheat sank to 2*l.* a quarter, wages were at 7*s.* a week. Persons who have been many years in the neighbourhood remember them to have been as low as 6*s.*

The following is the basis on which I calculate an agricultural labourer's earnings in this parish:—

	£	*s.*	*d.*
Wages, at 8*s.* for 52 weeks -	20	16	0
Harvest and piecework -	7	0	0
	27	16	0

This gives an average of 10*s.* 9*d.* per week through the year.

If you estimate in addition the value of his garden-stuff, potatoes, &c., I should reckon this as an average of 3*l.* a year. This will bring his weekly receipts up to about 11*s.* 10*d.* I am inclined to believe this to be a favourable estimate of a labourer's earnings throughout the year. No account is taken of sickness, &c. I believe this to apply generally to the district about Marlboro' and to what is known as the Vale of Pewsey. It is, however, one of those matters which it is difficult to ascertain with precision. Farmers are reluctant to give exact information, and the labourers are barely able to do so.

Wroughton.

118. *Mr. J. B. Bevan.*—I farm 226 acres, all grass. Most of dairy farms have some arable land. I keep 70 cows; a milker to each 10. I employ two boys, aged about 15, all the year round. I seldom employ additional boys. The boys assist the milkers; they should begin to do that about the age of 10 or 12, in order to get accustomed to it. During the day they have ordinary farm work to do, such as driving horses, &c. No young girls employed. Women are employed at hay-making, thistle drawing, clearing pastures; none in regular employment; they come in February, and go on until hay-making and harvest. I employ four or five women; they come out when they like. I have four cottages with my farm; that is sufficient at present, because all the wives and one daughter come out to work. When insufficient I get labour from Wroughton (two miles). Women work from 8 to 5; they leave home at 8, and have one hour for dinner.

No cases of hardship arise from the employment of boys.

With a view to education, it perhaps might be as well to prohibit boys from working up to 10. I think a restriction up to 10 would not be inconvenient in this locality, as a general rule. I think it desirable that boys should be educated, but I don't think that they would necessarily be better labourers on that account. No restriction on the employment of females is desirable.

The children attend a school at Wroughton, about a mile and a half from the cottages, until they go to work.

There is a demand for cottages, caused by the railway station [at Swindon]. The artizans walk far to work; the labourers not. Most of the farms are well supplied with cottages, and are not overcrowded. Each of my cottages have three bedrooms; all have gardens or allotments of from 20 to 40 poles.

My head cowman has 12*s.*, two quarts a day which cost 6*d.* a gallon, and a house, worth 2*s.* 6*d.* rent free, = 16*s.*

Other milkers have 1*s.* a week less; allowances the same.

Evidence substantially similar to the above has also been received from Mr. E. Tanner, Amesbury; Mr. T. Shear, Berwick St. John; Mr. Edgar Young, Broad Chalk; Mr. Flower, Chilmark; Mr. Bryan Wood, Chippenham; Mr. Jeffery, Donhead St. Andrew; Mr. Gay, Mr. T. Stacey, and Alfred Seymour, Esq., East Knoyle; Mr. Kellow, Fonthill; Mr. Futcher, Fovant; Mr. Kingston, Grittleton; Mr. Stratton, Kingston Deverill; Mr. G. Wedlake and H. B. Caldwell, Esq., Monkton Farley; Mr. Godding, Savernake; Mr. Tovey, Stanton Fitzwarren; Mr. Brunsdon, Stratton St. Margaret; Mr. Mayo, Swallowclift; Mr. W. Read, Swindon; Mr. Allen, Tisbury; Mr. R. Long, West Acton; Mr. Brown, Winterbourne.

WORCESTERSHIRE.

Bengworth.

119. *Mr. G. Field*, gardener.—I have lived in the neighbourhood all my life. I grow fruit and vegetables in about equal quantities. I don't employ children under 14 or 15 years o fage, except for minding birds on radish beds, &c. for about a month in the spring. The boys whom I employ for that purpose are about 10 to 12 years of age, but I should not usually employ more than one, whom I pay 3*s.* or 3*s.* 6*d.* a week, and his breakfast and dinner on Sundays. It answers better to employ big boys, to whom we pay 6*s.* or 7*s.* a week, than small boys for bunching radishes; I pay my men 13*s.* a week in addition to beer, worth 1*s.* 6*d.* a week. The wages of my men last week ran to 15*s.* 9*d.* a man. It was brought up by the work they did overtime. In some weeks the men earn 18*s.* I employ five or six women regularly; they have 1*s.* a week, and more when they work overtime. The day wages are paid for all the work done between 6 a.m. and 6 p.m.; and work done except between those hours is paid extra for. The women whom I employ are almost all married women. We don't pay in wet weather; I think that the extra money the men earn by working overtime is enough to make up for what they lose in wet weather; but this is not so with women. The women earn a good deal at pea-picking; I paid one woman 18*s.* or 19*s.* for a week's work. We have generally sufficient labour here; but many of the men who occupy only one or two acres come to work for us when they have nothing to do on their own ground. I pay 1*l.* per week during the harvest months.

120. *William Humphries*, gardener.—I have six acres of land. I grow all kinds of fruit and vegetables. I employ a boy now aged about 12, he has been working for me two years; but I think that gardeners usually begin to employ boys from the age of 8 upwards. The boys are employed from January to October. The employments are bird-minding on the radish and other seed beds (from January until April), then washing radishes, asparagus, &c. and weeding up to June, then picking fruit of various kinds until October, and from October to January they are not wanted again. They have about 3*d.* a day at first, and work from daylight until dark; in January from between 7 and 8 until 4, and now [May] from 4 a.m. until 6. p.m. on market day, but from 6 to 6 on other days. The girls are employed almost as much as the boys. I should not like to employ my daughter; I don't think the work is suitable for young girls, they hear obscene language, and it leads to immorality. I don't think the children employed are physically injured by the work they do. A man who employs his own children probably puts them to work for some time before they are 8 years of age, but that is the age at which boys are usually hired to work. There is no difficulty in getting boys to work, the parents are all anxious to get them out. I think that gardeners would be put to considerable inconvenience if no children were employed under 10 years of age. No machine has been used here by which birds can be effectively kept away for a continuance; the birds get accustomed to every machine. I am in favour of compulsory education; it would be inconvenient, but I think that the benefit which could be ultimately derived from it would be sufficient to compensate for the temporary inconvenience it would cause. I employ women in the same kinds of work as children.

Wages for gardeners are 12*s.* a week with drink, or 1*s.* 6*d.* a week more without drink; in the summer time for every hour they work before 6 a.m. and after 6 p.m. they receive 3*d.* Women have 1*s.* a day and 1½*d.* for beer, and 2*d.* an hour for extra time; and boys under 12 get from 1*s.* 6*d.* to 4*s.* a week, no beer money, but about 1*d.* an hour for overtime. The men are not paid in wet weather, and the extra money they earn by overwork would about make up for what they lose in wet weather; on an average they would earn about 12*s.* a week throughout the year.

Bransford.

121. Meeting at Mr. J. D. Onley's, February 2, 1869.

PRESENT:

Rev. B. H. Cocks, Leigh.
Mr. Onley, owner and occupier, Bransford.
Mr. George Essex, landowner and occupier, Leigh.
Mr. Trinder, occupier, Leigh.
Mr. James Essex, occupier, Leigh.

Bransford is a purely agricultural parish, and the greater portion of Leigh is agricultural; but a portion of the parish runs up to Malvern, and contains a suburban population. There is a good deal of glovving done on this side of Worcester. It is done by the wives of labourers; most of the daughters go to service. The best gloveresses who have no families earn 5*s.* or 6*s.* a week, but a woman who has children cannot probably earn more than 2*s.* a week.

There are at least 200 acres of hops grown in the two parishes of Leigh and Bransford. There are no fruit gardens, but a large quantity of cider is made here. The orchards are attached to the farms and in some cases to the cottages, and in the latter case the employers usually lend them a mill to make their cider.

As a general rule, women work very little in the fields, and the practice for them to work in the fields is diminishing. Mr. G. Essex has 13 cottages, and can rarely get above three or four women to come out to work. Mr. Trinder used formerly to have all his turnips topped and tailed by women, but now employs men, because the women won't come out. They are also employed with the threshing machines, but only on the ricks.

Boys are employed at bird-tending, &c. from the age of 11; but don't go to regular work with the team until about 13. Several employers about here have been summoned for allowing the boys under 13 to have charge of their teams.

Women are employed in hop-tying. They get 4*s.* 6*d.* an acre if there two poles to the stock, and 9*s.* if there are four poles to the stock. A woman if she works continuously can tie four or five acres, but they usually take less and work from time to time.

In the hop-picking time the whole of the inhabitants turn out, and a considerable number of pickers come from the manufacturing districts. A woman will pick about seven bushels a day and earn 1½*d.* a bushel; it requires a very good picker to earn 2*s.* a day. There is a saying here that 1*s.* earned indoors is worth 2*s.* earned out, and probably fewer women go to work here than in any other parishes around the neighbourhood.

The work is not injurious to the health of the women employed, but Mr. Cocks thinks that the cottages of the field worker are less tidy, and their children less regular in their attendance at school, than of those who don't work in the fields. Mr. Trinder's experience as to the condition of the cottages does not confirm this.

There are two schools under certificated masters here, one in Bransford and one in Leigh. As a general rule the children attend well up to the age of about 10 or 11. Most of the boys in the first class are the sons of artizans and shopkeepers.

Mr. Trinder and Mr. J. Essex thinks that a certain amount of education should be rendered compulsory as a condition of employment. The other gentlemen present think that every child should be able to read, write, and cipher, but that in this district there are few who cannot do so, and that the increasing desire for education will be sufficient to remedy whatever defect at present exists. The farmers generally encourage their labourers to send their children to school.

Worcestershire.
Mr. Norman.
A.
i.

Women and a few children are employed in picking up the apples which are shaken off the trees by men.

The supply of labour is sufficient, the cottages are tolerably good. Rent, from 4*l.* to 5*l.* with gardens; if no garden, the rent is about 3*l.* Men's wages here this year were 9*s.*, last winter 10*s.*; they are usually 1*s.* a week more in summer than in winter. Waggoners have 12*s.* a week. Cider is given all the year round; two or three quarts in winter, and sometimes as much as six in summer.

All except waggoners have piecework. Waggoners have 1*l.* a week in harvest, and about 12*s.* to 15*s.* in haytime. The others earn about 1*l.* a week in harvest, and about 15*s.* a week for about a month in haytime. The cider given is worth at least 2*s.* a week all the year round.

The hop cultivation is always done by the piece, and when there are four poles to the stock, the men receive 24*s.* an acre, and a man can take about four acres. Where there are only two poles, they get 12*s.* an acre. Here a great deal of the hoeing, &c. is done by horses. The men have drink whether at piecework or day work. Labourers pay about 15*s.* or 16*s.* for coals when hauled by the master, which is usually done. The practice of boarding the farm servants is being discontinued. The farms contain from 200 to 600 acres. Boys get about 2*s.* 6*d.* for tending, and 3*s.* 6*d.* when with the teams.

Bromsgrove.

122. Meeting held at Bromsgrove, February 9th. 1869.

Mr. Whitehair,	occupier,	Grafton Manor.
Mr. Wilson	„	Crutch.
Mr. Cole	„	Bromsgrove.
Mr. Rowe	„	Droitwich.
Mr. Smith	„	Grafton Manor.
Mr. Aubrey	„	Hanbury.
Mr. Lees	„	Upton Warren.
Mr. Gibbs	„	Dodderhill.
Mr. Featherston	„	Stoke Prior.
Mr. Russon	„	„
Mr. Partridge	„	Hanbury.
Mr. Edwards	„	Upton Warren.
Mr. Birch	„	Stoke Prior.
Mr. W. Partridge	„	Hewell,

And about ten other farmers.

The nail trade is carried on to a considerable extent in the district between Oldbury and Bromsgrove. The trade has been going down for a number of years, and those who were formerly employed at it are always anxious to get farm work to do if they can. They usually supply us with all the surplus labour we want.

In this district a few women are employed continuously, and a greater number during the hay time and harvest; they are usually married women. Their wages are 8*d.*, 9*d.*, to 1*s.* a day without beer, and they work from 7.30 to 6 p.m. Their work consists of weeding, stone picking, turnip pulling, haymaking, &c. The labour is not physically injurious to them. It is thought undesirable that young women should work in the fields, but they very seldom do work about here. The homes of the women who go to field work are tidier than the homes of the needle or nail makers. There are about 1,500 people dependent on the salt trade at Stoke, and 4,000 to 5,000 on the needle trade about Redditch, and about 7,000 on the nail trade.

Boys are employed from the age of 9 or 10, but not many under the age of 11 to 13. Those who are employed under 11 or 12 are engaged in bird-tending, running errands, and occasionally in leading horses in harvest. They are not continuously employed under about 12. They are paid from 2*s.* to 3*s.* a week; the work does them good.

In Grafton Manor there are six farm houses, and only one cottage; no church or school. It was extra parochial, and contains 1,375 acres. Population 50.

There is a school under a mistress at Upton Warren. At Hanbury there are two schools; at one there is a master, and at the other a mistress. The school is not under Government, and there are a considerable number of dissenters there.

There is a good school at Dodderhill, under a master.

At Stoke Prior, which contains 1,579, there are three schools; one under a certificated master and mistress, and the others under mistresses. Stoke Prior adjoins Bromsgrove, and some children from there attend the Bromsgrove schools. There are schools accessible to all the inhabitants of these parishes.

As a general rule the agricultural labourers are anxious for education, and in this respect compare favourably with the nail makers.

It is thought that as a general rule it would be desirable to make the education more practical. It is not thought that there is any necessity for Government interference to improve the education in this neighbourhood. There is strong land and light land in this neighbourhood, and on the former more boys labour is necessary than on the latter. The gentlemen present are of opinion that a law is desirable for the purpose of improving the education of agricultural labourers, although not generally necessary in this neighbourhood. The most convenient form of such a law would be to require regular attendance up to a certain age, say 10, and attendance for the winter months up to a later age, say 12. It is suggested by one gentleman that the restriction should not be applied to cases where children are employed under a labourer in doing contract work, such as singling turnips, &c.

Men's wages are 11*s.* to 13*s.*, sometimes beer allowed all the year round; with the piecework usually done the wages would usually amount to 13*s.* to 15*s.* a week. Very few lads are boarded; they are either carters' or cow boys, aged about 16 to 20.

There are statutes at Hanbury and King's Norton, Inkberrow, Pershore, and other places; a good many, both farm and domestic servants, are hired there. The gentlemen present differ in their opinion as to whether any harm comes from statutes. Some think they are convenient and harmless, and others that no good servants can be obtained there, and that they are a cause of great immorality.

In Upton Warren there is not sufficient cottage accommodation to supply the labour necessary for the cultivation of the land.

In Hanbury there is a bad supply both in number and quality. The rent is 3*l.* to 6*l.*, average about 5*l.* All have gardens or allotments. A good many labourers live in Bromsgrove.

Broughton Hackett.

Sir, February 24, 1869.

123. Being deaf I find it useless to attend public meetings, but hearing that you are seeking information with the object of promoting measures for bettering the condition of the agricultural labourers, I, a country clergyman of 33 years' standing, beg to offer you certain facts and inferences therefrom.

When I first came into this neighbourhood 29 years ago, both my parishes were full of poachers and other bad characters, and miserable half-starved ragged folk who constantly begged and made a parade of their poverty. During the first three years, at each recurring quarter sessions and assizes, there were some of my parishioners for trial. My congregations were small, there was no respect paid to the clergyman, nor did the people appear to respect themselves. The only schools were small dame schools, where little was taught at a charge of 6*d.* weekly; but a few big boys went to a school four miles off.

At the present time, I believe, there is not a single poacher, and I can call to memory only one prosecution for crime within a dozen years, we have few of the miserable begging class, my congregations are doubled, every respect is paid to the clergyman, and often respect of the most delicate and gratifying character. We have a school for boys and girls

within a reasonable distance at a low charge. The population is rather less, though the houses have increased about nine per cent., and there seems to be rising up a feeling against female labour out of doors, except at haymaking, harvest, and fruit picking seasons. The number of illegitimate children have diminished considerably, and the people *most decidedly value very highly the opportunity of educating their children.* As an instance of this I heard of a man taking his two boys from work at 2*s.* 6*d.* each weekly, in order to send them to school, thereby resigning at least one quarter of his income.

The weekly wages (at day work) have not, I think, greatly increased relatively to the increased cost of living. The only advantage the men have is that each cottager (almost all) has a field allotment of a quarter of an acre, which is a very great help. The squire is a Roman Catholic. His charities seldom pass through my hands. There is no co-operation, and therefore it cannot be said that I work under favourable circumstances.

The children are not overworked.

My inferences are that the new Poor Law, which was *very new* when I came here, has done much to discourage begging, but I attribute the improvement very much to our school, which has amongst other things taught the people to husband their resources, and by raising them in the social scale enabled them to labour more efficiently, and thereby earn more at piecework. Yet our school is condemned by the inspectors, who have no knowledge of what schools are really doing, and judge only by the quickness with which children *can give out what is in them.*

The diminution of population relatively to the houses seems to show that the people have a growing objection to receive lodgers.

The farmers are trying by degrees to give up the custom of partly paying the men with cider; but this must be brought about gradually.

I will tell you now my system. I have explained to the people in and out of the pulpit that every man, however poor, is entitled to respect in his own house from the highest in the land. That as I would not allow a duke to interfere in my affairs, so I have no right to interfere in the affairs of the labourer. If His Grace were to presume to meddle in my house, I must either resent his interference, or plead my comparative poverty and ask help. The labourer chooses the latter course, and becomes a beggar. If he *comes to me* begging, I then am at liberty to ask questions, and I do ask; but if he wants wine or other things medicinally, which are of course beyond his reach, I do not ask questions except as a doctor does; I say, "I give as one friend to another, after the same "fashion as the squire gives to me a brace of birds." Money I seldom give, but when I see it is really needed, I prefer giving the larger sum once to the smaller sum twice, because I wound the man's pride less. I also give secretly, and discourage too many thanks. So far from treating them as children, I always treat them as if they possessed more judgment than in my own mind I give them credit for, trying to the utmost not to wound their feelings.

It used to be the custom for clergymen to look up non-churchgoers and those who neglected school. I have avoided this, aiming at making them feel that church and school are for them to use if they value them, and that I am aware that they are not generally so stupid as not to value them, that in fact they know their own interests.

It so happens that between 1863 and 1867 I left my parishes in charge of a curate, and I took charge during that period of parishes in Leicestershire, Warwickshire, Herefordshire, Shropshire, and Surrey, and I did not find any better church attendance, school attendance, or better morals, greater cleanliness, more independence, *i.e.* self dependence, or anything to make me feel otherwise than proud of my own labouring parishioners. I attribute much of my success to the fact that I have no rich people to give alms, nor any fund whatsoever to draw on except a small amount of sacramental alms, and the trifle which I, who am not rich, can afford.

I come to the conclusion that to check female labour in the fields, to prevent pauperism, to encourage education, to promote cleanliness, honesty, and general good conduct, we *must not meddle too much, but must encourage self-respect and pride, and show respect ourselves towards the cottagers.*

I deprecate most earnestly any attempt to force education, or to check female labour by legislation. I am convinced, by long experience and much thought, that almsgiving largely is most mischievous, especially when given by trustees, whether of endowed charities or of funds collected from living donors, the said trustees not distributing their own money, but what belongs to other people. I believe most firmly that the four millions annually given in London is one great cause of London pauperism.

From these observations you will rightly conclude that I consider the cottages generally a disgrace to the owners, and a great cause of the evils we would remove. A family cannot respect itself if it is forced to live like pigs.

You may be assured that the agricultural mind is not nearly so dull as is usually supposed, but it is decidedly slow of utterance, it feels the difficulty of expression, just as an uneducated man, however intelligent, would feel the difficulty of writing down in clear language matters which he may thoroughly understand. The reports of inspectors on this head I consider contemptibly worthless.

When I was ordained, 33 years ago, not one parish in forty possessed a day school; now not one parish in forty but what has a school within reasonable distance. If so much has been done in one-third of a century, why should Government be in such a hurry to meddle? Give us parsons credit for an earnest endeavour and determination to complete the good work. For my own part I cannot help feeling that there is jealousy, and a desire to deprive the deserving of all credit for what has been done.

I have tried to compress as much as possible, but I could give illustrations of any of my assertions and suppositions, if asked for.

I am, Sir,
Yours very truly,
W. M. Sherwood,
Vicar of White Ladies Acton, and
Rector of Broughton Hackett,
near Worcester.

Churchill.

124. *The Rev. R. P. Turner.*—The land here is light, generally two-horsed land. No young boys are employed; none regularly under 14. I have not observed that the improved education has had the effect of rendering the people more respectful and subordinate than they used to be. Perhaps the children now feel that they are in a better intellectual position than their parents, and consequently pay less respect to them than they used. That may be in some degree owing to our being in the neighbourhood of a large manufacturing district. The children at our school pay 3*d.* a week if out of the parish, and 2*d.* for the first, and 1*d.* for every other child resident in parish. I don't find that the 3*d.* fee has the effect of preventing the parents from sending their sons. At present 16 children at the school are ex-parishioners. I am one of the trustees of the Stewpony Becher Club. It admits members who reside within 12 miles of Stewpony (Staffordshire). We insure against sickness, old age, or burial expenses. Members are not permitted to insure for sickness unless they insure for an annuity as well; but they may insure for either burial expenses or the old age annuity alone. No money is deducted for any kind of feasting. On December 31st, 1867, there were 204 members in the club (viz., 180 males and 24 females) and 39 honorary members. The accounts of each fund (annuity, sickness, and funeral) are kept distinct.

Worcestershire.

Mr. Norman.

A. i.

	£	s.	d.
The balance on the funeral fund amounted to - - -	491	3	5
On the annuity fund - -	2,684	18	2¾
On the sick fund - -	465	8	9½
On the auxiliary fund, deficiency	1	11	10

The auxiliary fund is kept to meet current expenses.

The accounts are audited by an independent member every year, and overhauled by an actuary every five years. We don't allow the money to be invested in any but Government securities. At the last quinquennial division the sum of 600*l.* (being one-third of the apparent surplus of the property of the society) was distributed among those members who had not received any allowance from the sick fund during the preceding five years. There were 39 members who received more than 6*l.* each. I think that the examination of the accounts by an actuary should be made compulsory, in order to give benefit societies a legal status.

I am also trustee to the Stewpony Allotment Society. The object of the society is to supply labourers with garden allotments. We have hired land in 22 parishes in Worcestershire and Staffordshire. The total amount hired is 193 acres, let out in allotments of one and a quarter acre each. This society has been going on for 23 years, and is now self-supporting ; it is managed by an agent under the superintendence of some of the local gentlemen. We take the land at a farming rent, and charge 8*s.* an acre extra for expenses. Not more than half may be cultivated with one crop. The tenants may grow corn, but I don't think that answers well to them. We give a first and second prize every year for the best two allotments in each parish. The farmers don't object to this system. The labourers are very anxious to have allotments, but at the end of the year 1867 the arrears of rent due from the tenants amounted to 45*l.*

Claines.

125. *Thomas Gale Curtler Esq.*, occupier and owner.—Population (census 1861) was about 8,000, and contains about 4,500 acres, but there are three districts taken from the parish in or near Worcester to which this return does not refer ; the population now left in Claines proper is about 1,500, and the acreage as near as I can calculate 3,800. The cultivation is of arable and pasture ; the arable is suited to the growth of all cereal crops, and is so used. A considerable acreage is used as garden land ; there are no hops. Boys from 11 to 14 years old are employed to a small extent on the farms, but very few. None on my farm or on my property, and no girls are employed to my knowledge. There are very few women employed. There are a few of the older women employed in spring and summer. Distance to work under a mile. The hours of work are from 7 a.m. to 6 p.m., having half an hour for breakfast or luncheon and one hour for dinner.

I think no boy ought to be employed in agriculture under 12 years of age. I know of no necessity for restricting women, but I think that no young female under 18 should be so employed.

There is an excellent National school supported by voluntary contributions and the children's pence ; there is no endowment ; it is well attended by the children of the poor, and those of almost every family in the parish are educated there.

Many of the cottages are very good, some otherwise ; sufficient in number for agricultural purposes, but many are occupied by persons from Worcester, so that there is always a demand for cottages. They are conveniently situated for the farms ; not overcrowded except in some cases where the children are numerous. Overcrowding kept down by the inspector of nuisances. Generally well supplied with water, and well ventilated. All or nearly so have gardens, and many of the tenants have allotments of land, which they pay rent for. The cottage gardens of course vary much in size.

P.S.—I consider this parish is exceptional on account of its proximity to Worcester. In many parishes boys from 9 and upwards are employed, two or three from one family, and earn a considerable sum towards the general support, without which much distress would arise, and I consider it is impossible where there is a large family that children could be supported and decently clothed for a school unless some provision could be made in lieu of the loss of such earnings.

Droitwich.

126. The *Rev. W. Lea*, St. Peter's, Droitwich.—Women and children are not much employed in farm work in this district. The women who do work are generally the wives of the labourers who work on the farm. They are employed in dropping beans and potatoes, haymaking, wheat hoeing (sometimes), dressing ground (*i.e.*, spreading the manure dropped by cattle), stone picking, tending the engine when thrashing, topping and butting swede turnips. This last is the only objectionable work, it is often very wet.

In the fruit parishes, *e.g.*, Ombersley, they have in addition the picking peas, gooseberries, currants, and plums ; this is generally taken by the pot ; they make on an average 15*d.* a day. Then at the potato harvest they pick up and separate the seed from the potatoes for sale, and in spring when the buries are opened "spurt" the potatoes.

Girls now seldom go to field work ; they take in gloving, which keeps them from going out to service or field work ; they get 4*s.* or 5*s.* a week, and spend it on dress.

Hours of work for women 8 to 6. Boys go out about 10 bird-tending, pig-tending, errands, driving plough, but, as a rule, are not regularly employed by farmers under 12 or 13.

Evesham.

127. *Mr. F. P. Webb*, land agent—I have lived here for 16 years. I think there are about 3,000 acres of garden ground within two miles of this place. The average rental of the garden ground is 4*l.* an acre. Some of the accommodation ground in the town is let at the rate of 30*l.* an acre. The principal crops grown are asparagus, rhubard, potatoes, carrots, parsnips, onions, cucumbers, peas, radishes. The gardens usually contain fruit trees growing between the vegetable beds, which consist of plums and damascenes. Currants and gooseberries are also grown. The gardens vary in size from ½ to 30 acres.

Women are employed in weeding (usually hand weeding), which lasts through the summer, planting peas, beans, and potatoes ; sometimes in scaring birds ; also in picking bush fruits and getting up potatoes. There is nothing for them to do in winter.

Children are employed chiefly in weeding, planting, scaring birds, and a little in picking fruit. Boys are more employed than girls. The women nearly always work by the day, and earn 1*s.* a day and beer during summer.

In the case of bean-setting women are almost always employed by the piece by farmers, and by the day by gardeners, because in gardens beans are generally grown in small quantities. Children are useful from the age of 9 to 15, except just to frighten birds, for which purpose younger children are useful. They earn 4*d.* to 6*d.* a day. The occupation for boys lasts from the middle of February until August. The number employed under 10 is very small ; gardeners would not be put to inconvenience if none were employed under that age. The busiest time of the year is from May until the end of August. All the female and child population go out to work then ; the children who are too young to work are wrapped up and laid on the ground where their mothers are at work. Gooseberries and plums are usually picked by the bushel. No work is done, either by women or children, which is unhealthy. Cottages are very scarce ;

the rent in or close to the town varies from 5*l.* to 10*l.* a year, with small gardens. Men's wages here are 2*s.* a day and beer. There is very little work to be done in the gardens in winter. I employ a large portion of the surplus labour in draining; I have about 200 in my employment now. The men who take the small gardens are very little better than labourers; they could make a living out of it if there were not so many public-houses. I think that a law which required children to attend school up to the age of 10 would be very useful; it would be very useful for the boys if not for the employers. I want to see technical education; I think such an education might be given by taking boys occasionally into gardens and showing them the practical operations of gardening.

Fladbury.

128. *C. Randall, Esq.*, Chadbury Evesham, occupier of 750 acres and land agent.

J. Webb, Esq., occupier of 800 acres at Fladbury and land agent.

Very few women are employed here; about one to every 100 acres, irrespective of those who go out to intermittent work. About 60 acres in Fladbury are gardens, and about 20 acres of hops. There are some large farms about here, some of 500 or 600 acres; but on the best land there are some small holdings of from 20 to 50 acres. These small holders do a great deal of the work themselves; they give no regular employment for labourers, but engage them for a short time for particular jobs and then discharge them. Women are very little employed; I have hardly ever employed any under 20 or 25. Boys are of use from the age of 10 upwards; but we know of no part of the county where they are of much use, in our opinion, under that age. In small enclosures they may be useful for scaring birds under that age, but where the fields are large and the land stiff they are not strong enough to get over the stiff clay land, and the birds do the damage before the boys can get at them. It is dangerous to give them a gun. As a general rule the supply of labour here is sufficient, except in the busy times, but Mr. Webb finds that the men don't care about earning high wages; if they are put to piecework they will not work long hours. Mr. Randall's experience does not agree with this. The lowest wages at Fladbury are at 10*s.* a week, and at Chadbury 11*s.* No drink is given in winter except for special work, such as threshing, but it is allowed in summer. Mr. Webb gives beer instead of cider; it is not so intoxicating. He had a difficulty in making this change at first, and some of his men, but not the best, left him in consequence. In harvest the men have 18*s.* to 21*s.* a week. Mr. Webb's men won't cut wheat; he employs men from a distance for that and for turnip hoeing. At Chadbury the men prefer reaping to other kinds of harvest work. Women's wages are 9*d.* now [February] and 10*d.* or 1*s.* a day in summer. Boys are never employed in weeding in this county, as is the practise in the eastern counties; and the only employments in which the children assist their parents are in picking peas, fruit, hops, and in planting beans and potatoes.

If a law is necessary at all, we think that it should be made illegal to employ any children under the age of 10. We have a strong impression that boys are more useful and teachable when they have received a moderate amount of education. Reading is certainly desirable, but it may not be practicable to insist on such writing as would be of any value.

The tendency of late years has been to scatter the cottages over the land. Some landlords let cottages with their farms, and some do not. It is most desirable that cottages, say one to every 100 acres where the farms consist chiefly of arable land, should be in the hands of the tenants. It is important to them that they should be able to provide cottages for their principal labourers, and Mr. Randall finds from experience that labourers so situated are better cared for in cases of illness than where they rent their cottages directly from the proprietors; moreover, it is an inducement to landlords to build additional cottages, as most tenants will willingly give a higher rent to their landlords than they charge their labourers. The cottage accommodation at Fladbury is very bad, except in the case of the new cottages. There is no nuisance inspector there; the law which makes overcrowding a nuisance should be made compulsory.

In Mr. Randall's parish, Norton and Lenchwick, the accommodation for labourers is very good. The cottages, which exceed one to every 50 acres, belong to the proprietor of the estate, H.R.H. the Duke d'Aumale.

The Acts of Parliament which enable owners of life estates to borrow money for improvements and charge it upon the inheritance are very useful; but we think they would be rendered still more useful if the money could be paid off within shorter periods; holders of leases for less than 21 years could then borrow money upon their leases. Power should also be given to borrow money to improve old cottages besides building new ones, *i.e.*, for making additions to old ones, not simply for repairs.

The expense of picking 11 acres of hops on Mr. Webb's farm at Fladbury in 1868 was 72*l.* 4*s.* 8*d.* (exclusive of male labour, *i.e.*, pole men, &c.). This was about an average sum. It was earned by 46 women, all of whom brought children, varying in number, with them. Of these 11 with their children earned sums exceeding 2*l.* each, and the remainder, with their children, less.]

Hanley Castle.

129. *Mr. Drinkwater.*—I farm about 300 acres, about half grass; I have been here five years. I employ about two boys to drive plough from the age of 12 upwards. I employ younger boys occasionally for leading a single horse in turnip hoeing or wheat hoeing, and apple picking; that work only lasts a month or six weeks. Wages for boys to drive plough are 6*d.* a day, and for the smaller boys 4*d.* or 5*d.* I employ women for hoeing, haymaking, and in harvest; I should employ more if I could get them, but they are most of them employed in gloving and slop work. One woman I employed last year in tying in harvest earned 5*s.* a day, but that is a rare case; when employed by the day they receive 10*d.* or 1*s.*, but about 2*s.* to 2*s.* 6*d.* for piecework in harvest time. They are not as much employed here as in Gloucestershire, where I lived for 18 years on one farm. I think the educated men are better labourers than uneducated. Farming is quite a different employment

Worcestershire.

Mr. Norman.

A. i.

from what it was; the implements now used are far more complicated than they used to be; the old men can more readily turn their hands to any farm work except machinery; but the younger men, if educated, can usually make themselves useful in using the machinery which the older men don't understand. The men about here would be more useful if better educated; I have never yet met a man who has been over educated; but I think it is a matter which had better be left to the employer and the employed and the parents of the children.

My carter has 2*s.* a day and three quarts of cider, and 1*l.* extra at harvest, or he may be let off his carter work and go to piecework if he likes, but he usually takes the money; carters can do nothing but their particular work; he will have four quarts after Lady-day; and he has a plot of potato ground.

Ordinary men have 11*s.* and cider; I don't think our men earn less than 12*s.* about this part (besides cider).

We profess to allow two quarts per man in winter, and three quarts to shepherd and carter; but it is raised one quart per head in summer. In hay time and harvest it is unlimited; they usually drink five or six quarts a day then, and I have known a man cutting beans drink 16 quarts. Drink is always given when at piecework as well as day work. Women have one quart in winter and two in summer. Boys begin with one quart. In Gloucestershire they drank more.

It makes old men of them before they are young, and prevents them from obtaining many comforts which they might procure if they had the value of their drink (about 2*s.* a day) in money. I see no way of getting off this practice, because farmers are not united; if all would agree to do without it, it might be done at once, but it is impossible for individual employers to do away with it. Individual labourers won't accept the value of their cider in money for fear of offending their fellow workmen. In order to introduce the plan of giving money instead of cider, two difficulties must be overcome: (1) the farmer who sold cider to his labourer would have to give credit for it, and the labourer might leave before he was paid off; (2) the employer must supply his labourers with casks, which would entail expense.

Hartlebury.

130. *Mr. H. H. Griffin*, occupier of 500 acres, about three-fourths arable. I have lived here all my life. This is a purely agricultural parish. In this parish and in Ombersley, which joins it, a great quantity of potatoes are grown; I should think from 300 to 400 acres in this parish alone. Some few early peas are also grown. The soil is peculiarly favourable for potatoes, and there is an easy communication from here to the black country, where they are sold. I employ from 13 to 15 men regularly, but cannot get a woman who belongs to this parish to come out to work; the only women who ever work on my land live in Kidderminster, and they won't come out under 2*s.* a day. I have not been able to get any of the women who live here to work for me for the last five years. I employ four boys of from 10 to 13; one of them is a carter boy, and the others work with sheep, and weeding, &c. I employ them all the year round.

Boys begin at 2*s.* 6*d.* to 3*s.* a week, with beer. The potatoes are usually both planted and got up by Irish; we cannot get a sufficient number of our own people to do it; the sorting in winter is usually done by our own men. The lowest wages I have given for two years are 11*s.* a week for *old* men with beer or cider (three quarts from Lady-day to Michaelmas, and two from Michaelmas to Lady-day). There are too many public houses about here. I pay wet or dry. My men have been with me many years; the labourers are apparently contented, but very independent, and a very bad class of labourers. I have not a single man who I can set to thatch or drill. There is no gang-work here, except sometimes some of the Irish contract to get up a field of potatoes and bring a number of their own people to help them; but they are chiefly women, very rarely children. There is an old endowed free grammar school here; children are admitted from the age of 7 years on reading a chapter in the Testament. There is also a dame's school, but a good infant school is wanted. The children don't remain long at school; the mothers who don't work themselves, send their children out at an early age to earn wages. I think every one should learn to read and write, but they should come out to work at about 10. The supply of cottages is improving. Rent, about 4*l.* 10*s.* All have good gardens.

King's Norton.

131. Meeting at Breedon House.

J. Baldwin, Esq., landowner.
W. Lort, Esq., landowner.
The Rev. J. Birk, Unitarian minister.
Mr. Walters, gentleman.
Mr. Hudson, gentleman.

The parish of King's Norton contains the ecclesiastical districts of Moseley and Withal, where there are churches, chapels, and schools. There is also a parish school at King's Norton. The two latter schools have both masters and mistresses, and are under Government inspection. There are also schools in connexion with the Unitarians, for Baptists, and Independents. This parish contains a few manufactories; some artizans who work in Birmingham live here, but the remainder of the population is engaged in agriculture. In this parish about two-thirds of the land is grass, but in the surrounding parishes a smaller proportion. Birmingham is supplied to a considerable extent with milk from this neighbourhood. There are no market gardens. The soil is stiff. The farms vary from 50 to 250 acres. There are also a considerable number of small occupiers of from 10 to 50 acres. The men who occupy these small quantities of land are either labourers or small dealers in hay, straw, vegetables, &c. Their position is rather above that of day labourers.

In this neighbourhood a few women are employed in stone-picking and bean dropping in the spring, and in haymaking, &c. in summer. They are employed to a greater extent towards the south and east; here they are very little employed in winter; but there are manufactures to employ them here, and they can also get washing to do. Girls do not work in the fields. The work does the women no harm morally or physically.

Boys are employed for plough driving from the age of about 10; they are employed a little for bird scaring, &c. before that. There are schools within access of all the inhabitants, but the charges at the Church school vary at the will of the clergymen, and are sometimes too high to enable the parents to send their children. As a general rule the children attend school. Some of the poorest are prevented from attending for want of proper clothes, but the parents are usually desirous of educating their children.

There can be no question that the education is defective and requires to be remedied by law; interference would be unnecessary if the parents were themselves educated.

No child should be employed under 10 years of age. School attendance should be made compulsory up to that age; free schools provided supported by rates. Mr. Hudson finds that at the age of 10 children can read quite well. At the dissenting schools they are taught reading and writing, but not arithmetic, on Sunday afternoon. They leave the school at the age of 10 or 11, and are absent a short time during the year before that, but not enough to interfere with their progress. It would be undesirable to require any school attendance after work commences; but perhaps they might be required to pass an easy examination as a condition of their employment.

There are scarcely sufficient cottages; many men have long distances to go to work; but the cottages

are tolerably good. Men's wages are from 11*s.* to 15*s.* a week, and usually 1*l.* a week for six weeks in summer; beer allowed in summer, and in some cases all the year round. Women have about 1*s.* day, and boys from 3*s.* to 4*s.* a week; scarcely any live in the houses now. Cottage rent is about 4*l.* to 6*l.* a year, usually with a small garden. The agricultural labourers do not take to factory work unless they begin young; some of the factory hands go to harvest work, but otherwise they do not take to agriculture. There is such a variety of manufactures about Birmingham, that men can usually get employment in one or the other.

[Mr. Baldwin was good enough to let me see some cottages he had built. They consisted of eight cottages in one block, built in two rows of four each, placed back to back. Each cottage contained a good sized living room and small pantry on the ground floor and two bedrooms above; the rooms were high and airy. There were four privies and two ovens to the whole block. The cost of building was 60*l.* for each cottage, and they let for 3*s.* a week each with a very small garden. These may be taken as a fair specimen of the better sort of cottages which are to be met with in the neighbourhood of large towns.—F. H. N.

Malvern.

132. *Mr. H. Lakin*, land agent.—A large number of cottages used to be let with the farms, but that practice is going out, because the farmers don't do the cottage repairs which always fall upon them, and because they frequently change their tenants, and the cottages are pulled about by each set of tenants who come into them. I think it is a good plan to let cottages upon the farms for the head labourers, and would be a good thing altogether if not abused. The labourers who live in these cottages are often subjected to undue pressure. The cottage rent is 3*l.* to 5*l.*; all have gardens. I have built a few cottages with three bedrooms and oven; the building of them has cost from 120*l.* to 130*l.* apiece.

I think that the large quantity of cider consumed is the great evil in this county. Some of our hardest and roughest workers are the greatest drinkers of cider; but then they probably cannot work six days a week; they are drunk one or two days. The average wages here are, I should say, 9*s.* to 10*s.* a week, besides cider. I have lately adopted the plan of paying 2*s.* a week additional in money on Lord Beauchamp's estate, in lieu of cider. We sell barrels of 25 gallons to the labourer at cost price (4*d.* to 6*d.* a gallon), and send it to their cottages. The labourers are perfectly satisfied with that arrangement; it has only been in operation six months, but it appears to act thoroughly well.

133. The *Rev. John B. Wathen*, Guarlford, rector of parish.—Cultivation is for wheat, barley, beans, and roots; also we have several extensive hop-yards and orchards of pears and apples, which in the seasons give unremitting employment to young persons and children. Guarlford is an entirely agricultural district, lately separated from Great Malvern parish, containing about 8 to 10 farms, chiefly belonging to two noble landowners, who support the clergyman in his labours to do good.

Boys are employed at 10 to 12 years of age at bird-keeping in the spring, at hop-picking and fruit gathering in the autumn. The waggoners and ploughboys are, as a rule, 13 years old. Girls are employed at hop-picking and apple and pear gathering from 8 to 16. Each farm about 10 to 12. Women are not employed to a great extent; a few clean roots, pick stones, hay-make, and sheave-bind, and of course go with their children to hop-picking; a few wheat-hoe. Distance to work, from one to two miles and less. Hours of work, from 8 a.m. to 6 p.m. in summer, and to twilight in winter.

No lad should go to work before he is 12, as I think he ought to be in school to that age; moreover, his little frame is much injured by exposure to the elements, and affects him through life.

I think no female ought to go in the fields, except with a parent at hop or fruit picking.

There is a very good National school, under a certificated master, mistress, and teacher for infants; the average in attendance is 108.

Cottage condition is very fair; more would be desirable, but that want is being met; they are conveniently situate, not overcrowded, because the landlords will not allow of immorality, under the penalty of expulsion. There is plenty of good water, and the ventilation depends upon the tenants in opening their windows, which are ample; they have not all gardens; there is an allotment ground in the neighbourhood, of which some take advantage.

Madresfield.

134. The *Rev. G. S. Munn.*—During the last two years more money was paid per acre for getting in the harvest than had ever been done before, but less was taken home by the men; the reason was that the cider was very strong; the men get drunk by the middle of the day; they go to sleep under the hedges, and only do half a day's work. Whenever there is a good crop of apples the farmers don't put any water into the cider, and the labourers are prevented, by the strength of the cider, from earning high wages in harvest time.

The practice of giving cider has been given up on Lord Beauchamp's farm (which is very large) within the last six months; no difficulty has been caused thereby. The language heard in the hop-gardens is very bad. There is one man here who will not allow his wife and children to go into the hop-gardens. Great pressure is put by the farmers on the parents who live in their cottages to induce them to send their children to work. Many children are taken from school too early to learn even to read, write, and cipher easily. The age at which the children leave school has risen since we have had a master. There is no public-house in this parish, but there are plenty all round. A man who has had a drop of drink during the day gets a taste for it, and wants another drop in the evening. It is often the practice for one man to drink the cider allowed for another fellow-workman who may not want his.

Martley.

135. The *Rev. H. J. Hastings.*—I have been clergyman here for 25 years. The farms in this parish average about 150 acres. Every farmer likes to grow a few hops, but I think that there is only one who grows as much as 15 acres. I think that the majority of women are in the habit of going out to field work, and all go to pick hops. Some of the most respectable women in my parish go out to work in the fields. The fruit grown here consists of apples, pears, plums, and cherries. The women and children are employed to pick up the fruit from the ground when it is shaken down from the trees by men.

Women's work consists in stripping bark for a tan-yard which there is here, then picking cowslips [for a wine factory at Worcester.—F. H. N.], and hop-tying; then hay and corn harvest; then hop and fruit picking. This occupies them from about April until nearly Christmas. No children are employed in stripping bark until the age of 13 or 14; but young children are employed in picking cowslips, hops, and fruit. The extra hands necessary for the hop-picking come from Stourbridge, Dudley, &c. and the mining districts. When here they usually sleep in the barns and sheds; but the men are separated from the females, and I do not think that much actual immorality takes place, although there may be some loose talk in the hop-garden. The gloving here is rather superseding the out-of-door work. I think the out-of-door work is preferable. The gloving girls are reckoned of rather easy virtue. A man comes from Worcester every week, and brings work for the

Worcestershire.

Mr. Norman.

A. i.

glovers; they make from 2*s.* 6*d.* to 6*s.* a week at that. In the case of the cowslip and hop-picking the children are not employed by the farmers, but rather by their parents. There is no work done on Sunday, except what is necessary. When I was a boy a great many men and boys were kept in the farmhouses; that was a much better plan than the present; the carter was close to his work, and could feed his horses in the morning on Sunday, and was then free to come to church; the boys, too, were kept under some control. Now the carter lives, very likely, a mile from his work, and the boys earn enough at the age of 13 or 14 to be independent of their parents.

136. *Mr. Rogers*, occupier, Martley.—I farm 250 acres; about two-thirds are grass, and about 20 acres of hops. We are not well off for labourers, I don't know why; we don't give them money enough, I suppose. We have not as good men as when we used to board them in the house.

I employ, perhaps, 8 or 10 under 15; the youngest may be about 12. I don't employ quite as many as that in winter. They get about 4*s.* a week at first, and 10*s.* a week for men, and cider. You cannot provide the cider for 2*s.* a week. I am sure it is a bad plan to give cider; they drink too much; some of them think nothing of five or six quarts. We could do with half the fruit trees after a little. I have tried to give money instead of cider, and have sold them cider, but I could never succeed for long, the men left me; but I don't think they drink quite as much as they did. During harvest a man will earn 3*s.* or 4*s.* a day for five weeks; but they don't earn much extra at other times of the year; they may earn 11*s.* a week, on an average, throughout the year.

We employ some women all the year round if they will come; they have 9*d.* and 1*s.* a day at hay-making; always cider.

It is desirable that they should be able to read, write, and cipher; they would be more useful as labourers, and better in every respect if they could; but I don't think it would do to force it upon them; they would kick if you did, that is, if it kept them from work after the age of 10 or 11; but they should receive all the education possible up to that age.

Overbury.

137. *Mr. W. Creese*, Teddington.—This is a hamlet of the parish of Overbury. I occupy nearly 500 acres, partly in Teddington and partly in the adjoining parish of Beckford. I have lived here all my life. This is a purely agricultural district, about one-third in pasture. There are no market gardens or hops here, but there are a few hops in the adjoining parish of Ashchurch.

Boys come out to drive plough at 11, and occasionally as young as 10. The land is stiff at Teddington, and requires four horses to plough, and sometimes more; but the greater portion of Overbury parish is light land. I employ eight boys now; the youngest is aged between 10 and 11, and receives 2*s.* 6*d.* a week. The remainder range up to the age of about 15 or 16, and their wages vary up to 6*s.* I scarcely ever employ additional boys. I don't employ very young boys to scare birds. They are very little employed under men who take piecework; the turnip hoers do all the work themselves, and there is very little dibbling done.

I employ from eight to ten women continuously, except in the dead of winter. They stop at home when they like, and more so if they have families; those who have several young children don't go out at all. They are principally engaged in wheat hoeing; not so much in bean and turnip hoeing, which is rather harder work than wheat hoeing. The women leave their homes at 8, and return at 5.30 or 6, except in hay and harvest. They stop for luncheon half an hour, and dinner one hour. The women here have 10*d.* in long days, and 9*d.* in the very short days. They hoe wheat by the acre, otherwise they do no piecework. The women all think the work very healthy. One woman who has worked for me has gone out to work not because she wanted the money (for she had plenty), but because she was in bad health, and thought it would do her good. The women earn a great deal by gleaning. I have known a family glean 12 or 14 bushels of wheat. The boys are not put to any work which does them any harm. I know the practice for many miles round here; the practice which prevails here prevails as far as Tewkesbury, Upton, Evesham, and Pershore, and I am sure they are not overworked. Many of the small farmers hire boys, and sometimes carters, by the year, and board them; but the practice has been given up by the better class of farmers.

There is a school at Overbury, and a dame's school at Teddington; there are also schools at Beckford and Great Washbourn, both of them at about two miles distant from here. The people desire education, but the opportunities of sending their children are not sufficient; they think that they sometimes get harm by sending them so far. I should like to see education general, but I think it would be straining the matter too far to require attendance up to 13, even part time. The boys are wanted as much in winter as in summer. I should like to see education made compulsory up to a certain age. They should not go to work before the age of 10, and after that they should attend a night school. I have had a night school in my own house for both girls and boys. I find that they take great interest in it and make great progress, whether they have received a good rudimentary education or not. I think that where there are infant schools the master should shorten the hours of attendance for the infants for, say, three days a week, and then have an evening class. I think it would be desirable to require a certificate of proficiency as a condition of employment. The law which makes it illegal to give the charge of a cart to a boy under 13 has been several times enforced about here. I think it is a very bad law, because many boys under that age might well be trusted. The great evil here is the drunkenness; the public-houses are far too numerous.

Cottages are sufficient in number, but most of them very poor things; the rent is from 3*l.* to 5*l.*, with gardens. Farmers usually have a few cottages, which they rent with their farms; I have six with mine. There are very few small occupiers, but most of the men have allotments. At Bredon the rector lets some allotments of one acre or more; the men who occupy those large amounts don't go to regular farm work.

Peopleton.

138. *R. Varden, Esq.*—Exclusive of roads and fences, Mr. Varden's gardens at Seaford, near Pershore, occupy 100 acres, and are planted entirely with apple, pear, and plum trees, and with gooseberry and currant bushes, no vegetables, but three or four acres of rhubarb, being grown. Apples, pears, and plums are picked, partly by men and partly by women, from the ground or from steps. The heavy baskets are carried by the men. Gooseberries and currants are picked almost entirely by women and children, no men and very few boys being employed. The work is done by measure, very seldom by the day, and the employer or his bailiff scarcely know who is at work, as all who come at the busy time are admitted unless they are known to have previously broken the regulations.

The picking is a species of ready money business, a metal token being given for each basket of fruit as it is weighed, and these tokens are exchangeable for money by the bailiff daily, or when the pickers wish. No accounts are necessary; some are paid daily, some weekly, and some at the end of the work. The tokens are of different sizes and colours, to represent the different sized baskets and kinds of fruit. In most cases the pickers come at 8 and leave at 6, but this they do as they please, except on the Friday, when no fresh picking is commenced after 1 o'clock, that

all baskets may be filled and sent off; for if the fruit stood over till the next week it would spoil. There are huts on the ground to shelter the pickers in wet weather, and an ample supply of tea is given them once or twice a day.

The pickers work together on the same or adjoining pieces of plantation, each family or party, usually consisting of a woman and two or three children, taking its row in rotation, no selection of rows being allowed. When the fruit is sent off in large baskets they are kept at the end of the fruit rows, near the path, and the fruit is brought to them in smaller baskets; the large baskets weigh, when full, 70 or 80 pounds, and are carried by men if the pickers wish, but as two women carry them the short distance to the scales easily they often do it themselves, only young girls and old women getting the men to do it. The pickers comprise a large proportion of the women and children of the county three or three and a half miles round, and some come from the town of Pershore three and a half miles distant; the women of our own parish are preferred when only a few are wanted, as is the case at the commencement of the picking. They mostly work in families, or little parties of their own arranging. A family of about four persons earns about 5*s.* a day. The advantage to them is not so much in better wages to the mother, but in the children's labour, which affords larger collective earnings not otherwise attainable. The family may make about 5*l.* in the season, and the money is mostly spent in clothing. The work is very much liked by them, all other occupations being put aside for it. The gloving women think it a most beneficial change for them, especially when their eyes or health have suffered from their close in-door application. In the busiest time seven or seven and a half tons of currants are picked in a day, in addition to gooseberries, but this amount of work is of very short duration; at that time it takes 300 women and children to pick, independent of the men to collect and pack the baskets, &c. Men do not like currant picking, they are too clumsy for it, and it is too tedious for them; they would not earn so much in a day as a woman or girl, viz., 1*s.* to 1*s.* 6*d.*, and a sufficient number of men to pick could not be collected except from the towns at high wages and travelling and lodging expenses, and they would be most likely loose, disreputable ones, not amenable to order.

If an Act to regulate female and infant labour in agriculture were passed, a period should at least in the first instance be exempted from its operation for fruit purposes. This need only be six weeks, but for the entire range of farm work it ought to be from the beginning of haymaking to the end of hop-picking; say 1st June to 30th September. The regulation of winter labour might be practicable, but this summer work could scarcely be regulated. Fruit growing and market gardening are increasing in the valley of the Avon, from whence Lancashire, Yorkshire, and Scotland are largely supplied. In my case any regulation as to age or certificates of children would be most difficult to enforce, and unless of a very mild character would compel me to discontinue bush fruit growing.

Out of the 300 persons who came to pick about one-half would be under and one-half more than 15. When it is known that the currants are ripe and are to be picked, women come from all parts of their own accord, and commence work without any special directions from me. One of my regulations is that no child shall be employed under the age of 10, because younger children are apt to smash the fruit, and thus occasion me considerable loss; but practically the rule cannot be enforced, because I have no means of checking the statements of the parents as to the ages of their children, nor do I in fact know who the children are who are at work in the gardens. Each woman brings her own picking basket, but the children usually make use of their mother's basket, two baskets to a party being sufficient.

The whole picking lasts about 10 weeks, but the very busy time only lasts about three weeks. Women and children are not employed in fruit garden cultivation except for the picking. I think that there are about 3,000 acres of market-garden land in Worcestershire.

Most of the other gardeners about here grow vegetables besides fruits; few of them grow more than 10 acres of currants; I grow 50 acres at least; it is the currants which cause the great rush of work. I employ more children than any of the other garden cultivators, because children are particularly well able to pick currants. The amount of female labour employed by others may be equal in proportion to what I employ, but theirs is distributed over a longer period of time.

PERSHORE.

139. Meeting at Pershore, February 24th, 1869.

John Whitaker, Esq., J.P., landowner and occupier, Pershore and Broughton.

G. Whitaker, Esq., J.P., landowner and occupier, Pershore and Broughton.

H. Hudson, Esq., J.P., landowner and occupier, Wick, Pershore.

Mr. Abell, occupier of 400 to 500 acres, Netherton.

James Cosnett, occupier of 20 acres of garden, Pershore.

Andrew Dufty, occupier of 50 acres, garden allotment and grass, Pershore.

Mr. Edward Humphries, owner and occupier, 250 acres, farm, and garden.

Timothy Blizard, owner and occupier, 30 acres, garden.

H. Williams, occupier, Pershore, 422 acres, farm.

Thomas Greames, Pershore, owner and occupier, 240 acres, garden and farm.

Richard Varden, Peopleton, owner and occupier of 242 acres, 160 acres of which is fruit garden.

The parish of Pershore contains very little grass, about 600 acres are devoted entirely to market-garden cultivation, besides a considerable quantity of fruit plantations which are scattered about the pasture land, and a considerable amount which are devoted to cabbages, potatoes, green peas, &c., which are grown as a farm crop. The fruit principally grown consists of apples and pears (principally for cider and perry), plums, with an undergrowth of gooseberries and currants.

Women are first employed in April and May in weeding, tying up onions, radishes, &c., thinning the garden crops. Then in picking green peas, then gooseberries and currants, raspberries, vegetables, and plums; plums they pick from the ground or by steps (the men do the ladder work); then picking up apples and pears and potatoes. That constitutes the whole of the garden work. The farm work they do consists of cleaning swedes and turnips and weeding the corn crops, and hay and harvest work, and working on the threshing machine. The town women are almost all employed in the gardens, and the country women in farm work. There was a good deal of gloving done here; that trade is rather slack now, but the glovers usually come out to work when there is much to be done, as in fruit picking. Probably about one woman and two boys are employed to every 100 acres in farm work about here. Young girls go out with their mothers from about the age of 12; they work for two or three years and then go to service. Women work from 8 to 5 or 6; they have half an hour for lunch at 10 and one hour for dinner at 1. Their wages vary from 8*d.* to 1*s.* in farm work.

The practice of giving cider is universal. In garden work they don't usually have less than 1*s.* a day, sometimes with cider. Hoeing and weeding, pea and fruit picking is usually done by the piece; when at piecework a woman working alone would probably earn 1*s* 3*d.* a day. There is no work either in the gardens or on the farms which does them any harm physically or morally. Gloving leads to far more immorality, in consequence of the women having nothing to do but gossip.

Worcestershire.

Mr. Norman.

A. i.

Probably not above one woman per 100 acres is employed all the year round, but a far greater number are employed at the busy times. No women come from a distance to work here in the busy time. A considerable number of women are also employed in pealing osiers for basket making. Without these women it would be impossible to carry on the cultivation of the fruit, peas, &c. as is now done in this district.

Children are not employed in the *general* occupations in which women are employed, but they are in the *special* occupations in which women are employed, which last from May until October or November. They are not employed in large numbers until June.

In fruit picking whole families come out, some employed in picking and some in minding the younger children while the mother is picking.

Boys are employed in driving teams from about the age of 10 upwards, but there is usually one boy under that age employed on every farm who is engaged sometimes in bird or pig tending, or doing any similar job. They get about 1*s.* 6*d.* or 2*s.* a week at first. Boys would probably never make efficient labourers unless they devoted a portion of their time to agriculture from the age of 9 upwards. It would be very inconvenient to farmers if they could not employ them for some portion of the year from that age, but it is impossible to say for how long or for which period of the year the boys could be spared. Boys usually work from 6 to 6 in summer, but in winter they could be spared from the time it is dark. The teams usually go out from 6.30 or 7 until nearly 3; in some cases the horses are brought home to bait for about one and a half hours in the middle of the day. Here the principal meal is taken, usually after the men return home at night, and the distance they live from the schools would often prevent them attending night schools.

There is plenty of school accommodation in this neighbourhood.

Men are more useful generally if they can read and write, although it does not make any difference as regards their utility in the actual work of the farms.

Men's wages here are 10*s.*, or 11*s.* (close to the town); gardeners have 12*s.*; all have drink, and are paid wet or dry; the value of cider would be about 1*s.* 6*d.* a week, except in hay and harvest when they have five quarts, which would bring it up to about 2*s.* per week on an average through the year.

Cottage rent is about 3*l.* 10*s.* to 4*l.* in the country, and higher in the town if they have gardens. In the country they all have gardens and generally an allotment besides, for which they pay extra 8*s.* for one-tenth of an acre, which includes rates and taxes.

Education has been advancing rapidly lately, and the schools are well filled.

The farmers generally are desirous that all the labourers should have a good elementary education, but they object to having any time fixed upon for compulsory attendance. The labourers also are very anxious to obtain an education for their children.

The gentlemen present think that the beerhouses are the cause of great evil in this district.

Rock.

Paper addressed to the Assistant Commissioner by the *Rev. A. James.*

140. District of Mother Church. Acreage, about 5,000; population, about 1,000.

194 inhabited houses.

39 farmhouses, whose occupiers do not use the school.

87 cottages, where there are no children of an age for school.

5 farmhouses, whose occupiers use the school.

35 cottages, from which children are now attending school.

28 cottages, where there are children of an age to attend school, yet from which they do not attend.

Average attendances of children having attended more than 200 times. Numbers on such average attendances, and of those presented for examination to Her Majesty's inspector; numbers also of passes:—

——	Average Attendances.	Number presented.	Passed.		
			R.	W.	A.
1864 - -	38	30	29	30	29
1865 - -	43	37	37	34	30
1866 - -	48	40	34	35	13
1867 - -	31	24	21	23	9
1868 - -	36	31	31	27	25
1869 - -	37	36	36	35	34

Rock is a wide agricultural parish; the farmhouses and cottages are scattered, there is no village. There is no resident landowner or tenant farmer, who has received a better education than what may be got at a commercial academy. The land, with the exception of that belonging to three non-resident gentlemen, is in the hands either of farmers tilling their own farms, or of proprietors possessing from 100 acres downwards. There is no lay encouragement whatever shown to education. Indeed, not only do the farmers not appreciate the value of it, but as a rule they are of opinion with respect to labourer's children that the more schooling the children get, the worse servants they get themselves. And in a measure they are right, for the more intelligent children who profit by their schooling seek employment, when old enough, elsewhere than among the farmers, where there is more money to be made, and there are greater openings for advancing themselves; for the farmers, always averse to parting with hard cash, will not advance the rate of wages, even to secure more intelligent hands, and so get the refuse of the labourer's children in their employ.

I myself think that it would work well, and prove a practicable scheme, if a restriction were placed in point of age on agricultural labour. I would allow no child to work for wages under 10 years old, and would insist on the attendance at school, between November and May, of children between 10 and 12 or 13, unless where any child had satisfied Her Majesty's inspector, in whatever standard might be fixed on as most suitable. And I think an education rate will be necessary. The landowners, with many notable exceptions, appear to have no conception of the necessity which lies on them of contributing to the expenses of primary education among the poor in the parishes where their property lies. In the 5,000 acres of this parish, in my care, there are only four subscribers to the school, each contributing 1*l.* And yet our endowment is under 15*l.* for school purposes. When funds are not raised by voluntary contributions, and there is no adequate endowment sufficient to provide suitable educational buildings, staff, and appliances in any district, the districts to be defined in some way, then I should like to see it in the power and the duty of some extraneous authority, whether board of guardians or otherwise, to provide necessary school accommodation and appliances, and that the expense thereof should be charged by way of rate on the proprietors in the district.

A. James.

Rock, June 1, 1869.

Stanford-on-Teme.

141. *W. H. Cooke, Esq.*, The Green.—The cider here costs the farmers about 5*d.* a gallon, but in the spring it would sell for 6*d.* or 7*d.* Where farmers give plenty of task work the labourers might get 12*s.* a week on an average throughout the year, but some farmers don't give much task work. Men who work

on the roads have 1*s.* 10*d.* a day and no drink. When I employ a man by the day I give him 2*s.* Cider is given at task work as well as day work; but the practice of allowing food varies with different farmers. I don't think that as a general rule labourers have more than 10*s.* a week on an average throughout the year. They don't come when it is wet, and a proportionate deduction is made from their wages unless some work can be found for them indoors. Either food or extra money is given them when they work overtime. It is always the custom in this parish for the farmers to haul the coals for the labourers, and also to supply them with faggots at a reduced price. Potato ground is sometimes allowed.

[Mr. Young, a tenant under Mr. Cooke, was present when the above observations about the earnings were being made and stated them to be correct.—F. H. N.] There are very few parishes in this county in which there are no public-houses. The women and children who live in the farmers' cottages are paid as much as those who do not. Several women are employed at gloving at Shelsley; a few are employed in trimming turnips in winter for about six weeks at about 7*s.* an acre. Very few men come from a distance to pick hops. There is not much apparent immorality among hop-pickers; but what there is is probably caused by the persons who come out from the towns, &c. to visit the hop-gardens on Sundays. I have often noticed that the hop-picking as well as all out-of-door work is decidedly beneficial. I have practised as a medical man, and have often recommended field work, and have found persons get benefit from it. Young boys under the age of 12 get 4*d.* or 6*d.* a day. An hour is allowed the women for their dinners, but they often have 1½ hours.

I certainly think that an Act should be passed to secure education to all, and that a rate should be imposed to provide school accommodation where the voluntary system fails.

I have an infant school kept by a labourer's wife, to whom I pay 5*s.* a week. The education is given free, and the attendance is very regular.

[I visited the infant school above referred to and found in it a girl of 6 who could read well, equal to about Standard III., and another, aged 3, who could read easy words of two syllables well. The woman, who had had charge of the school for 14 years, told me that she thought children could advantageously begin to attend school at the age of 2; that the children usually remained at the infant school until the age of 6 or 7, when they went to the endowed school at Shelsley, and many of them were placed in the first class there.—F. H. N.]

Upton Snodsbury.

142. At a meeting of the East Worcestershire Chamber of Agriculture, held at Upton Snodsbury, on Wednesday, May 12, it was stated,—

That the labour of boys under 10 years of age was not required by farmers.

That young girls were not employed in agriculture.

That the education in the neighbourhood was defective, but was improving.

The gentlemen present were divided in opinion as to whether legislative interference was necessary for the purpose of improving the education.

It was thought that the beer-house system and the gloving trade were the principal causes of whatever immorality prevailed in the district.

The cottage accommodation was said to be defective, but was improving.

Witley.

143. *Mr. W. Morris*, occupier (lived for 40 years at Holt, and came here last Christmas).

Mr. J. Twinberrow, occupier.

Men's wages here are 10*s.* or 11*s.*, and on an average more than three quarts of cider a day, which would sell for 2*s.* or 2*s.* 6*d.* per week, although it does not cost the farmer that. A good average workman does not get less than 2*s.* a day and his cider throughout the year. Supper is given when they work overtime, and usually dinner is given when they are drawing hay or corn. Potato ground is very often given, and the coals are drawn from the pit for them; they cost 9*s.* a ton at the pit.

From May until October a considerable number of women are employed in hop-tying, hay and harvest, hop and fruit picking; but in winter there is nothing for them to do but topping and tailing turnips. Women's wages are 7*d.* or 8*d.* and a quart of cider a day. Not many girls go to farm work except in hop-picking; round Holt some of them are employed in gloving, but that trade does not extend as far as this place. Not many strangers are employed in hop-picking about here, but when they are employed they come from the black country. No special accommodation is provided for hop-pickers on the farms; such accommodation is greatly wanted. We don't think that much immorality prevails, but they steal the fruit a great deal.

Boys are not required for regular work until they are 12; but they are useful for bird-scaring, which lasts about six weeks, and hop and fruit picking under that age. They get 6*d.* a day for bird-scaring and fruit-picking.

We think it would be desirable to have some Act to insure a certain amount of education for lads up to the age of 12.

144. The *Rev. D. Melville*, Witley.—I can better comply with the wish for information on the points contained in your circular of questions in one continuous answer, than I could by distinct replies to the several queries. Whilst there is a good deal going on in my neighbourhood bearing on the main point of your inquiry, both as to its industrial, moral, and educational conditions, it is not so precise and systematic as to fall easily under the definite details that inquiry follows. I will take each of your three general heads of inquiry in order.

1. There are three special forms of industry left in Worcestershire and Herefordshire which partake, more or less, of private gang work with their consequent evils,—

1. Bark pealing.
2. Fruit gathering.
3. Hop-picking.

The first and last have the most organized character, the second less so, being, of course, more uncertain.

The first is a private gang transaction generally. A district is to have a fall of oak. The wood forester or bailiff lets some middleman contract for the bark stripping, who hires a gang for the job. Women largely engage in it; the party is generally made out of the inhabitants of the locality. The work is rough and hard, and all the disarrangements to home and school incident to the mother's and elder child's absence, and the degradation and moral injury consequent on women and men mixing in a rough outdoor handwork, find their full realization.

Hop-picking is very like it, except that it partakes more of a saturnalia. To the wantonness in speech and act, which seems ever a coincident of occasional outdoor work shared in common by the sexes, there is in hop-picking always a holiday as well as a work element, which intensifies the bad characteristics of such pursuits. This is aggravated by many hands coming to this work from a distance, and the circumstances which attend the operation itself. In this neighbourhood the nailors of Staffordshire swarm to the hop-gardens. To them it is like a trip to the seaside is to the upper classes, just as the denizens of the lower haunts of London pour down into Kent for the same purpose. The farmers do not, perhaps cannot, make adequate provision for housing this accidental supply of labour. Barns and outhouses are converted into temporary and very promiscuous sleeping rooms. The hop-crib is the scene of romp and ribaldry, and though a few local families may pursue their work decently and quietly, generally a parish catches the fever, and everything is upset for the three or four

Worcestershire.

Mr. Norman.

A. i.

weeks during which the work of picking lasts. The whole family ordinarily goes into the hop-garden. It is task work, that is, paid by result not by time, and little fingers can pick something, and fingers too small to pick are too small to be left at home, and the home is left too early to send them to school.

Every kind of ill finds a very strong forcing-house in the hop-gardens, amongst which I should place as not the least the callousness to those ills begotten or indurated thereby in the mind of the employer.

For these temporary private gang-works it is easier to trace the evil than suggest the remedy. From bark pealing young women should be excluded. Children might come under some general enactment regulating their work and school conditions. Hops are a very exceptional growth. They are very valuable and very tender. Heat, wet, wind affect them very quickly and very seriously. Whole gardens wither or bruise into comparative worthlessness under scorching sun or tempest. To pick them as fast as the kiln will dry them is essential. Quality is everything with them, and quality may be lost in a day or two. Still better arrangements could be made. Farmers could show more care for order and decency. Except where the parties are of one family, and the parents can guarantee control, the sexes should be obliged to be kept asunder in the sleeping arrangements. Even then the field intercourse will be prejudicial enough. I would, if possible, have no unmarried females there older than 14.

Of organized field labour besides there is little or none. The wives of labourers do not at all generally work on the farms, nor do the children. Bird tending claims a few at odd seasons, and some wives go into the fields. Where this is the case the school and home of course suffer. Farmers certainly should be restricted from employing mothers of families on *Saturday*, and should pay wages on Friday. Many a Sunday is no day of rest, much less comfort or Divine Service, from the household work which Saturday in the fields and pay late at night make necessary.

In referring to the topics raised in the Sections III. and IV. of your inquiries, I will follow the same plan of reply. The facts to which those inquiries apply are not organized enough to admit of such systematic detail. Besides this, every district has of course its own peculiar circumstances, in harmony or at variance with ordinary elsewhere experience. Cider, for instance, in our neighbourhood is a very potent element. A cider producing county disarranges many data, and I doubt if any common measure could be struck between such an one and one totally different, say Northumberland. Think of a very cheap thin beverage, provoking the thirst it seems to allay, produced for almost nothing in a prolific year by the employers of agricultural labour themselves, not thoroughly stupifying or intoxicating till gallons on gallons are consumed, but working effects, mental and physical, of which its own washy and cheerless characteristics are typical, and anyone can see at once what an instrument of degradation it must be, whether you look to the craving desire of him who consumes, or the cheap means of influence through low gratification with him who supplies the beverage. If one of the great difficulties in solving the educational, social, and economic problems of agricultural labour consists in the hopeless circle within which the conditions of those problems return upon themselves, a cider-consuming district presents that difficulty in most formidable proportions.

An improvement is to be looked for through the more elevated sense and quickened intelligence of employer and employed. That is, strength is to be acquired through the better appetite of those who nauseate food. Where cider is the local beverage, the chance of remedying this deadlock through the operation of natural laws seems well nigh desperate. A sort of impotent fuddle of mind and character is the normal state of habitual cider drinkers.

Consequently it must be, I fear, for remedy in such districts as it is in the analogous state of a failing appetite with a necessity for increased consumption of food, if greater strength is to be attained. In such cases, the natural desire failing, it has to be artificially stimulated; a tonic has to be given. So with regard to the mind and character agricultural: the law must supply from without what is wanting of motive from within, if progress is to be made.

Your inquiries point to economic, domestic, and educational circumstances wherein that progress is to be desired. Of these the educational must lead the way, for in the present standard of intelligence and moral sentiment, it is hopeless to expect wages to be understood or home decencies and opportunities to be rightly regarded. And the farmers generally can see as far as this, and therefore, coupled with an instinctive hatred of parting with actual *money*, as distinct from money's worth, which is a farmer's clearest, closest hatred, mental improvement finds with them no advocacy. I say all this on experience. You cannot rouse the ordinary agricultural mind to enter upon the wages question on right and reasonable grounds, and they will huddle together in indecent discomfort still, letting off to lodgers the extra accommodation you provide if they possibly can.

In the educational arrangements it is extremely hard to setttle the conflict between the industrial and educational claims. What is best for one is just worst for the other.

What would be best for both, could it be, so far as the mental and physical energies are concerned, would be daily mixture of either. I know how each gives then a zest to the other experimentally. I have long been concerned with a reformatory. Our school work, taken as a relief from field labour for two or three hours daily, shows results quite comparable to the whole ordinary school day of our parish schools. But then farmers and their work will not admit of this half-day or intermittent operations.

The same objection would, I think, be fatal to alternate school days. The remaining plan of winter school and summer work alone remains, and should be continued to as advanced a period of life as possible; for the mental machine will run back a good deal by the summer's disuse.

Night schools in summer are, unfortunately, almost impossible; else, if they were not, and they could be systematized with the winter day school, the great hindrance to agricultural night schools might be alleviated, namely, the impossibility to classify the scholars. As it is, whatever the inequalities of school teaching, night schools involve almost individual instruction; one boy wants advanced teaching, another, perhaps older, wants to learn his letters.

Worcester.

145. *Mr. Maund*, bailiff to Mr. Smith, Lower Wick. —Mr. Smith farms about 400 acres at Lower Wick and about the same amount at South Littleton. He is the largest hopgrower in Worcestershire, and grows above 80 acres. He does not grow fruit.

He employs women for stocking turnips, cutting hop roots, stripping the bark off poles and dipping them in creosote, couching, hop-tying, hay and harvest, hop-picking, then stripping the bines off the poles.

About six or seven are employed all the year round; but at hop-tying we have about 20, and at hop-picking about 500 women with their children.

The hop-tying, picking, cutting the roots, and shaving poles is contract work, the remainder is day work. They get 8*d*. a day, with one quart of cider, when at day work, and 1*s*. at haymaking.

Hop-tying is done for 8*s*. an acre (four poles to the stock) or for 1*s*. a day when done by the day.

I don't think that any of these employments are injurious to their health; they say themselves that they are not as well when they don't come to work as when they do. None of the work is done by young girls.

We sometimes have boys as young as 10; their parents bring them here and want us to take them, but

Worcestershire.
Mr. Norman.
A.
i.

a little boy is hardly any use. We have four now regularly at work, the youngest is 13. We don't think they are of any use until they are 11. We may have a little boy for a week or so younger than that for tending birds, but I don't like them even for that; there is no certainty about them; it is cheaper to employ rather a bigger boy. We give them about 3*s.* a week at first. A great many hop-pickers come from Worcester and the black country, in fact, from all parts. Those that come from Worcester go back there to sleep at night [distance under two miles], the remainder sleep on the premises. The sexes are separated.

We have no employment for boys except as carter boys.

Our labourers live about one mile from here. There are no cottages just round here. We generally have a plentiful supply of labour. There are a quantity of people out of work now; I have had four apply for work this morning.

We never give less than 12*s.* a week to an able-bodied man, besides two quarts of cider in winter and a gallon in summer.

In my opinion the educated men are far preferable to others as farm labourers. There are parties about in the country who don't want men to learn anything, but I like them to be able to use their heads.

I think all parents should be obliged to send their children to school; there are many children running about here who never go to school.

Our carter boys are employed from 6 to 6 now (February).

Cottage rent from 2*s.* to 3*s.* When near Worcester they have no gardens.

Evidence substantially similar to the above has also been received from Mr. H. Manton, Alvechurch; Mr. H. Crane, Astley; Mr. Winnall, Berrow; the Rev. J. Goodwin, Mr. J. Tomson, and Mr. Russon, Bromsgrove; Mr. J. Birch, Churchill; Mr. J. Moore, Clifton-on-Teme; Rev. R. Holmes and Mr. Pensam, Eldersfield; the Rev. H. G. Pepys, Hallow; H. F. Vernon, Esq., Hanbury; Rev. T. Baker, Hartlebury; Mr. J. Walker, Knightwick; Mr. H. Lakin, Malvern; Mr. Duncan, Pensax; Dr. S. W. Smith, Pershore; Rev. M. Hill, Shelsley Beauchamp.

APPENDIX B.—EVIDENCE RELATING TO EDUCATION.

HEREFORDSHIRE.

Herefordshire.
B.

Ashperton.

1. *Mr. Moss*, schoolmaster.—The average of the boys in the first class here is 11 years 10 months, and of the girls 10 years and 11 months. The employments which interfere chiefly with the education are now [April] bark stripping, and they also occasionally go away for scaring. The summer holidays last eight weeks for harvest and hopping; but it is difficult to obtain a good attendance on the re-opening of the school after the holidays, because the children have got out of the habit of coming to school; and also because a good many stay away for fruit picking. I have known 20 kept away for that purpose. It is very desirable that some sort of industrial education should be given; but there is not time for it in many cases. Some of the children don't come to school until they are 7, and leave at 10, and have barely time to learn to read and write.

Bishop's Frome.

2. *Mr. T. Farmer*, schoolmaster.—I have been here eight years. There is a small dame's school, and a small chapel school in this parish besides this. As a general rule, the sons of labourers remain at school up to the age of 11 or 12; the attendance is very irregular after the age of 8 or 9. The fee here is 1*s.* per quarter for three quarters of the year, and 6*d.* for the quarter when the hopping takes place; deductions are made when more than one child of a family attends school. The principal causes of the irregularity are (for boys) pitching hop poles, driving plough, and haymaking; and (for girls) tying hops. The plough driving is chiefly done by boys, who lodge in farmers' houses; but sometimes as many as 12 are absent from the school at once for that purpose.

The fruit picking does not make much difference in the attendance at school. There are a few families in the parish who never attend school; but I think that all those who do attend could usually pass the fourth standard before they leave. We are constantly changing some of our pupils at the school in consequence of the system of yearly hiring. Servants are engaged at Michaelmas, and the change takes place the following February, when the men who have changed their master leave the parish with their families.

I have had a night school here for four or five years; seven or eight have attended, most of them men who have known something; boys have never attended. The only children who are insufficiently educated in this parish are those who are kept at home by careless parents.

The average age of the first class is 12.

Clodock.

3. *Mr. John Farr*, schoolmaster, Longtown.—This school is not under Government. There are 52 on the books; the attendance is usually very regular; it is worst during May and June, when the older (but not the younger) boys go out to work. The average age of the first class is about 12. I don't think there are any children about here who are growing up without education. Boys who have been out to service, and come home for a short time, sometimes put themselves to school here at their own expense. The fee here varies from 3*d.* to 6*d.* a week; the higher fee is charged where additional subjects are taught, but the labourers' sons only pay 3*d.* a week, no matter what they learn. There has never been a night school here.

Leominster.

Leominster,
4. Sir, May 13, 1869.

In answer to your letter of the 11th inst., I beg to inform you that the system of putting out young children from the union workhouse here has been practised for many years past, and is found more beneficial to the health and training of the children than education in the workhouse. The plan is as follows:—

When the guardians have the sole care of an intelligent child, the usual age for sending them out is from 7 to 10 years; they look round the district and find a respectable better-class labourer or small yeoman, who is willing to bring up the child for a fixed weekly sum.

We find that the children thus treated gain in health and strength, and become far more self-reliant than those brought up in the union, and from seeing in the houses of their foster parents the use and arrangement of domestic articles, become far better servants in a much shorter period than the union-bred children, who, in nine cases out of ten, know nothing of domestic habits, and have to commence their education in these matters after leaving the house.

Herefordshire.
Mr. Norman.
B.
i.

As you are aware, our union is very small, and the number of children to be put out very limited, perhaps three in a year; but being a purely agricultural district, and the number so small, our board has hitherto had no difficulty in finding places to send the children to, and find that the demand for their services when fit to fill situations is greater than the supply; indeed, commonly the clergyman's wife takes a kindly interest in the poor little creatures, and provides a place as child nurse or kitchen boy for them when old enough.

The usual amount of pay with the children is 2*s.* 6*d.* per week where the foster parents find the child in clothing, or 2*s.* weekly where the guardians provide the clothing. In case of illness the child is attended and supplied with medicine by the union surgeon.

The guardians make it a special condition that the children be allowed to attend the parish school and church, and arrange that they shall at any time they please have the child produced before them, that they may see that it is duly cared for. This last condition is not, however, much needed, as the children are never sent out of the poor law district, and the relieving officers in their weekly rounds see that the children are properly cared for.

I fear that the guardians, in adopting this course, have been contravening the regulations of the Poor Law Board, as they have never sought permission to pursue the plan, but having found it to act so well, they have braved the consequences in the hope that if discovered the upper board would wink at their neglect and disobedience of orders.

I shall be glad to give you any more particular information if in my power.

I remain, Sir,
Your obedient servant,
EDWIN GREGG.

Fredk. H. Norman, Esq.,
2, Victoria Street,
Westminster, S.W.

PIPE-CUM-LYDE.

5. *Mrs. Vaughan*, schoolmistress.—I have been here 28 years. There are about 23 children on my list, and usually 18 or 20 in attendance. The fee for those who live in the parish is 1*d.* per week. I think they usually remain at school up to the age of 12. Only the bigger children are irregular; they usually stay away from carelessness, want of clothes, or to assist their parents. They don't work in the fields except during harvest and hopping. They can usually read the second or third standard before they leave.

TREVILLE.

6. *Mrs. Lewis*, schoolmistress.—This is a mixed school. There are seven children in the school to-day. I consider 15 a good attendance, although I have had as many as 30. They have gone away now to pick up bark. [There are 500 acres of wood in the township of Treville; a great deal of this is oak, and woman and children are employed in picking up and stacking the bark during the months of April and May. The man who had purchased the wood belonging to the Rev. A. Clive told me that children under 12 years of age were of no use for this purpose.]

The attendance is very irregular from the age of 7 upwards; the girls are more regular than the boys. The time when they are most irregular is during spring, when they go away to mind sheep and cattle, and for the bark harvest; during summer, when their mothers go to work, and during autumn for fruit picking. They don't often attend school after the age of 10.

7. [The Rev. Archer Clive was good enough to show me round the township of Treville. He has built some good new model cottages. There are also about six very bad ones formerly belonging to squatters on the waste, but which Mr. Clive has now purchased, and lets for about 1*s.* per week. These cottages usually contained one bedroom, and occasionally a second bedroom in the roof. I went into one, which consisted of a small sitting-room in which I could not stand upright; a bedroom opening out of this without any flooring, and a small second bedroom in the roof over the sitting-room, without a ceiling and with two beds in it. The occupiers of this cottage had made about a hogshead of cider from the apples in their own gardens, but said they could not afford to make more. The women told me that they cannot usually get continuous employment for their children before they are 12 years old, but that there is a good deal of intermittent work to be done before that age, beginning, as the schoolmistress stated, at about the age of 7.—F. H. N.]

WITHINGTON.

8. *Miss Stride*, schoolmistress.—I have been here three months. It is a mixed school. There are 85 on the books, and between 50 and 60 in ordinary attendance. They are nearly all agricultural children. They come at the age of 4. The girls remain up to the age of 13 or 14, and the boys up to the age of 11. The attendance is pretty regular. The fee for children under 6 is 1*d.* a week, and for those older 2*d.* The chief causes of irregularity on the part of the children are scaring, trimming turnips, nursing, and picking fruit. Girls are not absent as much as boys. The boys who remain at school up to the age of 10 cannot read and write with sufficient ease to retain their instruction. There is a dissenters' school in this parish besides this. The boys who have left the school since I have been here cannot do simple addition and subtraction, and out of 16 who attended the night school last winter only two could have passed the third standard in reading. Some boys go from this parish to school at Lugwardine [the next parish where there was a school under a master].

WOOLHOPE.

9. *Ann Watkins*, schoolmistress.—I have been schoolmistress here for 23 years. It is a mixed school. There were 20 girls and 33 boys on the list at the last diocesan inspection, of whom 49 were present. The fee is 1*d.* if they do not learn writing, and 2*d.* if they do. I have never known a case where the parents of a child have refused to have the child taught writing on account of the additional fee to be paid. The boys and girls remain up to about the same age, which is usually 10 or 11, and occasionally 12 or 13. There are no tradesmen or farmer's sons. Yesterday out of 49 on the books 23 were absent all day, and three more were absent in the morning. The irregularity is greatest in the summer, when the parents are most employed; I think that the children are more often kept at home to assist their parents than to earn wages themselves; they can generally read about a third or fourth standard book when they leave. We don't profess to admit children under 5 years of age; they cannot attend under that age, and interrupt the older children. There are a great many who never come to school at all, either from indifference or want of clothes; and there is no school for them to attend here except this.

Evidence of a character similar to the above has also been received from Mr. Peacock, of Bosbury; Mr. Fisher, of Bridstow; and Mr. Sanders, of Hope-under-Dinmore.

SURREY.

Carshalton.

10. *Mr. Joseph Bickford.*—I was schoolmaster here for 16 years; I gave up three years ago. I think that on an average the children of the agricultural poor do not remain after 10 years of age. A great many went away for from two to three months in the spring for bird-minding and weeding after the age of 8. There was an infant school to which they went first, and they came to my school at the age of 7. Those who left at the age of 10 could generally have passed in the third or fourth standard. I had a night school for many years; the scholars varied from the age of 10 to 20. Those who had attended my day school could generally read and write, though they had not kept up nearly all they knew when they left the day school; others generally could not read or write. When they went to work at the age of 10 they usually went with the horses. When a boy first goes to work he loses all interest in his school, and becomes idle and negligent. I think that if they had attended regularly up to the age of 10 they might have learned to read and write with ease and fluency. I think that there is so much apathy and indifference among the parents that the children never will be educated until there is an Act of Parliament to compel the parents to send the children. I would prohibit labour in the field altogether up to the age of 10, and enforce half-time between the ages of 10 and 13. If reading and writing is sufficiently well taught in the first instance to be performed without effort it is not likely to be forgotten. I don't think the night school is of any use except to those who live near. I think that the half-time might be worked in this neighbourhood without any serious inconvenience to the farmers. I don't think that attendance at evening school could be enforced with the same advantages as attendance as day school. I think that there are some few now growing up in this parish without any education, owing to the indifference of the parents. Education is decidedly advancing in this place; but I think children are employed as young as they used to be.

Cranleigh.

11. *Mr. Mousley*, schoolmaster.—I have been here for three years. There are about 105 children in ordinary attendance. We take infants, but children usually come to school about the age of 5. Labourers' sons begin to leave school at the age of 9, and few stay after 11; they go out to work occasionally as young as 8, and are then absent in spring for looking after sheep and during hay time. They generally leave about April and come back in October; a great many of the labourers' sons leave in the summer in that way. Many children come two some even three miles to school; many little hamlets are scattered about in distant parts of the parish, and there is no provision for the education of the children who live there except our school. Only a small proportion of the children who live in the distant cottages come to our school; those who do come often come at the age of 7 or 8, and don't know their letters. Those who attend regular can pass the fourth, fifth, or sometimes the sixth standard when they leave; but those who are irregular can often only pass the first. We have a night school, but it is only attended by those who live in the immediate neighbourhood. We don't admit them until they are 12. Those who have left school for two or three years have usually forgotten about half what they knew when they left. I was in Derbyshire before I came here, and I think the education is better here than there. I think that the want of education is mainly due to the indifference of the employers; I have heard parents, who send their children when young to work, say that they do so because they might otherwise offend the farmers on whom their husbands depend for labour. I think that no farmer should be allowed to employ children under the age of 12 or 13 without sending them to school. Our night school is not successful; our present system of night schools is bad, because boys of that age are shy of being examined. The average attendance at night school was 14 last year. I think it would be a good step to take simply to limit the age at which children should be employed in field labour.

Farnham.

12. *Mr. Dewdney*, schoolmaster, Farnham.—I have been here 12 years. There are about 85 boys in general attendance at the school; they are chiefly the sons of labourers. There are about 120 on our books. The sons of labourers never attend school beyond the age of $11\frac{1}{2}$, and the average age is $10\frac{1}{2}$. Nobody comes to our school who cannot read words of one syllable. The children of the poorest parents leave for hop-tying and harvest. They are absent about three months a year, besides their holidays. Our school holidays are at the hop-picking time. The best of the labourers' sons usually leave school when in the second class, though a few get into the first class. Those in the second class can read up to the sixth standard; they have a general knowledge of geography; they can write from dictation and understand the first four rules of arithmetic (simple and in money). I think the majority of the boys leave before they reach the first class. I think that the great mass of the parents could spare their children up to the age of 11. The great curse of our school is the irregular attendance. If they attended regularly between the ages of 6 and 10 they would be able to read, write, and know a little arithmetic. They are often away for two or three days at a time. I don't think that a boy should be allowed to remain at school unless he attends regularly.

Godstone.

13. *Mr. P. Hardy*, schoolmaster.—We have three-quarters of an acre of land attached to the school, which is divided into 30 gardens of 4 poles each. I give the gardens to any of the boys I like; I make them, as far as possible, a reward for working well in the school. I don't give one to any boy below the first and second class, unless he be a big and hard working boy. The boys supply their own tools now (although we supplied them before the introduction of the Revised Code). Boys who have gardens are obliged to keep a debtor and creditor account of their income and expenditure connected with the gardens; and on leaving they are paid by their successors at a valuation for the crop growing in the garden. Our rules require that six kinds of vegetables at least shall be planted annually in each garden. The boys are allowed to work in their gardens on Tuesdays and Fridays in the afternoon, and after school hours are over; but not during the dinner hour. There are various rules for the purpose of providing that the borders and paths shall be kept neat and tidy. The produce of the gardens goes to the boys' families. The gardens have existed during the last 12 years. The children of labourers usually remain at school until they get into the first class. At present there are 39 in the first class, all over 10, and of these 18 are the sons of labourers; 24 pauper children are sent to school here by the guardians; the guardians pay 3*d.* a week for each. I have to supply the guardians each quarter with a register of the attendance of these children at school. As a general rule all the children of the labourers remain at school until they are 11 years old. They go away a little for hop-tying, scaring, bean-dropping, and swede-trimming. Very few go away for so long together as to interfere seriously with their education. They come here at 6 from the infant school. When they leave they can read the fifth or sixth standard, write a letter, and understand a tradesman's bill. There is ample school accommodation in this parish, but a want of it gene-

Surrey.

Mr. Norman.

B.
i.

rally in the surrounding parishes. I don't think the parents are indifferent as to education. The farmers do not employ the children to such an extent as to interfere with their education.

HATCHFORD.

14. The *Rev. J. P. Norris*, perpetual curate of Hatchford, and canon of Bristol.—I have been incumbent of Hatchford three years. Before I came here I was an inspector of schools for fourteen years in Staffordshire, Cheshire, and Shropshire, for one year in Kent, and occasionally employed in Wiltshire, Sussex, and Surrey. I also had a rural parish in Oxfordshire for one year. The result of my experience is that the education which the children of agricultural labourers are now receiving is wholly insufficient to redeem the next generation from the present quasi-pauper position of the class to which they belong. I think it desirable that all children for at least five or six years of their childhood should be brought under the civilizing influences of a good school; the actual instruction received is of secondary importance; but as the moral and intellectual results are generally coincident, and the latter only can be measured by examination, I am content that the school work should be tested by such a standard as that of the Revised Code. Adopting this test, therefore, I should say that children of the agricultural labourers should remain at school until they can pass in the fourth standard; in other words, a child should read with sufficient facility to make it a pleasure in after life, should be able to work easy money sums, and write and spell decently on paper. At present there can be no doubt that more than half the children never reach this standard. The cause of this is the irregularity of attendance and early withdrawal of the children from school, due to the indifference of the parents. I am acquainted with 400 or 500 parishes, and I think that speaking generally it may be said that half of those parishes are provided with sufficiently good schools, both as to buildings and teaching power; in the remainder of the parishes money would be forthcoming to raise the means of education to a satisfactory condition if there were any real desire for education on the part of the poor. An Act of Parliament which provides only for school accommodation misses the real difficulty of the question, which is, how to get the children into the school when built. This must be done either by (1) direct compulsion, (2) indirect compulsion, or (3) increased voluntary effort.

Direct compulsion is out of the question. None who are well acquainted with the inside of a labourer's cottage can suppose it practicable. No police would be adequate to enforce it, or if it were, it would not be tolerated. Whether a child of 9 or 10 years old goes to school is a question of ways and means to the cottager.

As to any application of the principle of the Acts which now regulate labour in all manufactures, I do not hope much from it, except as re-inforcing voluntary effort. What I mean by " re-inforcing volun- " tary effort " is this, that if those who are now persuading the cottagers to send their children more regularly to school were able to say " Your " child, if you neglect it, will a few years hence find " it difficult to get into hired service of any kind," his hand would be greatly strengthened. If, therefore, it could be made penal to hire the labour of children under 14 or 15 years of age, either for farm work or domestic service, without a certificate under the hand of a competent teacher (countersigned possibly by the inspector) that the child had passed the fourth standard of the Revised Code, the most cogent argument would be put into the mouth of those who are now endeavouring to promote a more regular school attendance. As to *half-time*, except upon model estates entirely under the hands of one powerful landlord, I have no hope of its ever being successfully applied to agricultural labour. I have repeatedly reported to the Education Department the results of the half-time experiments made on Lord Egerton's and Mr. W. Tollemache's estates in Cheshire, and by the late Lord Hatherton and Mr. Tollet in Staffordshire, and the result is what I have stated. The system of *half day* work is obviously impossible. Teams cannot be left in the field by their drivers; besides which the boys come from the field so wet and dirty that a change of dress would be necessary. *Alternate day* work presents equal difficulties; directions are given over night where the farm boy has to work the next morning, and could not well be given a day in advance; even if this difficulty were got over the supply of boys in the rural districts is seldom sufficient to furnish two relays. Besides which, a half-time scheme of any kind implies inspection, and an adequate inspection of field work is impossible. The provisions of the Print Works Acts are of such very little educational value that I should not think it worth while to attempt to apply them to agricultural labour. The occasional influx in bad weather of a troop of disorderly farm boys for a week or two at a time would only embarrass the school without much benefitting the boys. School attendance to be of any real value must be so evenly distributed as to preclude any lengthened absences.

I think that the only feasible plan is what I have indicated above. The law might require Her Majesty's inspectors at their annual visits to give all children who had passed in the fourth standard a certificate to that effect; in the case of schools not under inspection the certificate might be given by the teacher and countersigned by the magistrate. If it be thought that difficulty would arise from imposing this responsibility upon a local man, then the children in uninspected schools might be required to attend central collective examinations to be held by Her Majesty's inspectors for the purpose. (Soon it may be hoped inspection will be obligatory on all schools). The children being thus accredited to the labour market, I would make it penal for anyone to hire their labour under the age of 14 or 15, except in harvest time, without the production of the certificate. I should hope that if this plan were adopted the employers of labour would come to set so high a value upon these certificates that there would seldom be any wish on their part to break the law. Where it was broken a penalty should be recoverable at petty sessions on the prosecution of any informer, such as the clergyman or schoolmaster of the parish. The fine should go to the school funds. If it went into the pocket of the informer, I should be afraid of vexatious informations. I abstain from recommending any further interference by law, such as absolute prohibition under a certain age, because any such enactment would be a dead letter without inspection, and inspection I take to be an impossibility in the case of agricultural labour. I am aware that the scheme would not touch the case of unpaid labour for parents or relatives except indirectly; indirectly it would discourage any such engrossment of a child's time in this kind of work as would interfere with the obtaining of the school certificate. Adverting to the inspector's examination, a child who failed in one examination need not wait the whole 12 months for his labour certificate before trying again, but might be allowed to attend another examination at another place after a few months more preparation. I think that the certificates would be in most cases obtained at the age of 10 or 11, if the school attendance had been up to that time reasonably regular. I don't think that the plan would interfere to any serious degree with the resources of the cottagers. It is notorious that the children even of tender age do contribute very materially to the family purse, even if it be only by releasing the parent from the necessity of minding the house. It will be seen that the scheme which I have sketched leaves it open to the parent to utilize the child's labour as much as he can consistently with winning the certificate. Compared with any compulsory system there may seem but a slight gain; but any one who remembers how surely any interference with the occupation of children cuts

into the very vitals of the poor man's home, will, I think, be indisposed to press further the restrictions. I know it is said by some that really good schools are sure to attract and retain pupils; I can only say that in rural districts I have not found this to be the case. During the last 20 years the standard of instruction has been steadily advancing, and the standard of age and regularity has been either standing still or sinking. The few who are retained to a later age by the goodness of the instruction will be found on enquiry to belong to the class above that of the labourer.

I don't think that night schools can be depended on as a substitute for efficient day schools; at the best they are a mere supplement, enabling youths whose early schooling has been neglected to make up for it in some measure; but not more than one in three or four of those who need it will be found willing to avail themselves of such opportunities, and to require their attendance by law would be out of the question. Night schools at best must be left to philanthropic efforts and can never be relied on as any integral portion of national education. I have seen the system of annexing an industrial department to national schools (*e.g.* gardens, laundries, &c.) tried with excellent effect, but always under exceptional circumstances,—I mean as the hobby of some zealous squire or parson. To make this general is hopeless, however ideally desirable.

In workhouse schools the desirableness of such industrial training is obvious, and the difficulties far less, all the children being boarded and lodged on the premises. In respect of pauper children it is much to be hoped that our legislators may see their way to render two excellent acts obligatory on guardians instead of permissive, as at present; the one is the establishment of schools separate from the workhouse for pauper children, either for single unions or for districts; and the other is the universal enforcement of Mr. Denison's Act for the schooling of out-door paupers. Not only should the guardians be allowed to pay for it, but it should be made a condition *sine quâ non* of out of door relief. If the State relieves the parent it surely has a right to provide that the child does not grow up without education and therefore a pauper.

All that I have to say or recommend on this subject may be found in a *5s.* book, entitled "The "Education of the People," published by Laurie, Edinburgh.

Ockham.

15. *Miss Lushington*, Ockham Park.—There is an industrial school here for the sons of farmers, shopkeepers, &c. Labourers' sons don't attend, but we have had the sons of gardeners and gamekeepers. It contains about 60 boys and 40 girls. Those who board pay (boys) 20*l.*, and (girls) 18*l.* a year; weekly boarders *5s.* a week, and day scholars 1*s.* a week. They receive an ordinary education in English and mathematics. The only extras are music and French; about 50 per cent. learn one or other of these. There is an entrance fee of 2*l.* 2*s.*, paid by boarders only. We have 7½ acres of garden, which is managed by the boys under a gardener. The girls assist in the kitchen and laundry and house work, besides needlework. They all (boys and girls) have 5½ hours' lessons and 1½ hours' work a day. The ages are from 7 to 16, and each scholar has to undertake each branch of the work in turn for a week at a time. Many of the parents object to send their children unless they are excused doing housework, but this concession is never allowed. They generally leave us at about the age of 14 or 15. The girls become shop girls, telegraph girls, milliners, and teachers; some go out to service, and usually obtain places in gentlemen's families; boys are usually apprenticed to some trade; or some gets clerks' places. I don't think that the boys make more progress in their bookwork on account of the physical labours they perform than they otherwise would do. I have noticed that those who are lame, &c. and unable to work, get on faster at bookwork than others, but the out-of-door work has a very good effect upon their physique and character. English is taught regularly to all, and a few of the first learn Latin grammar. We have seven cows, and grow roots for them; the boys have to manage the cows, under a man's care and help. All the produce of the garden is consumed by the establishment. Formerly we charged 18*l.* instead of 20*l.* for boarders, and the school was self-supporting, but in consequence of the rise in the price of provisions we have had to raise the charge from 18*l.* to 20*l.*, and we hope by these means to make the establishment again self-supporting. Last year we lost 60*l.* Besides the common garden all the boys have nursery gardens and girls flower gardens of their own, the produce of which is often exhibited, and gains prizes. Before the Revised Code was introduced the parish day school, attended by labourers' sons, was worked with this school, and the two worked well together. The labourers paid 2*d.* a week for each child. I don't think that the children stayed at our school longer than at others; the parents objected to the system because they thought that the whole day should be devoted to "schooling," *i.e.*, bookwork. Since the introduction of the Revised Code the combination of the two schools has been forbidden, and there is now no industrial work done by the children who attend the parish school. In the industrial school there is a head and two assistant masters, one of whom superintends the out-of-door work, and one mistress and one pupil-teacher, besides a woman and servants, who looks after the whole domestic establishment; all the washing, baking, &c. is done on the premises. I said I thought the industrial school did not excite any desirable emulation or love of learning in the day school, but I have heard school teachers say the behaviour and conduct of the day scholars was superior to most day schools; this may be attributed to the general influences about them. The school has been in operation about 20 years. The great merit of the school is, I think, the education it gives the scholars in general usefulness. The amount of instruction they receive is not equal to that given in a first-rate middle-class school, but the system of giving each a different duty to perform every week has the effect of giving each an interest in the welfare of the establishment as well as an acquaintance with the ordinary duties of household work, and of the garden.

Reigate.

16. Letter from Mr. W. Beale, Secretary to the Surrey Association for Church of England Schoolmasters, dated Reigate National School, 25th November 1868.

Sir,

The following replies to the four questions that you left with me on Friday 4th September last, embody the opinions expressed by the members of the Surrey Association of Church of England Schoolmasters:—

1. The children of agricultural labourers usually leave school about 10 years of age, many before that age; the average given from the Dorking district is 9 years. A child of average ability at an average school has usually at the time of leaving advanced in reading, writing, and arithmetic as far as the fourth standard of the "New Code." Very few will have passed out of Standard IV.

2. An agricultural labourer's child, of average ability, who had attended school regularly from the age at which he could profitably receive instruction, would be expected at the age of 10 years to be equal to the requirements of Standard IV. Some think that girls might be expected to be a standard lower.

3. The universal opinion is that the evening school barely suffices to maintain the pupil's education at the point which it reached in the day school, and that scholars having left the day school at the average age and with the average attainments mentioned above can very seldom reach Standard VI. by their subsequent attendance at the night school.

Surrey.
Mr. Norman.
B.
i.

4. The chief difficulties encountered in carrying on night schools are those arising from—

1. A repugnance on the part of the boy to return to school after having once left it. Dislike to the necessary discipline of the school.

2. The indifference of employers to the education of the labouring classes.

3. The distance of the school from the homes of many of the lads.

4. Irregular attendance, attributable to—

a. Weather, dark nights, and wet.

b. Bodily fatigue.

5. The lateness of the ordinary hours of instruction.

The following remedies are suggested for the purpose of rendering evening schools more useful than they are at present:—

1. That teachers should be obtained who are not engaged in the day school; that these teachers should move in a station of life as much above that of the scholar as possible; such teachers will of course be voluntary.

2. That night schools be made as interesting as possible, not merely amusing; that the clergyman should avail himself of the opportunity which the night school affords to impress religious truth.

3. That prizes should be offered for conduct, attendance, and progress; that a supper should be given at the end of the session, occasionally at least.

4. That employers should be compelled to assist in providing for instruction in night schools.

5. That larger grants should be given by Government, and that these grants should go towards increasing the teacher's remuneration (where the teachers are not voluntary), at present inadequate.

One suggests that instead of attempting the (as he considers) impracticable task of improving night schools, it would be better to take measures for prolonging attendance at the day schools—

a. By making it illegal to employ children under 12 who are not possessed of the rudiments of knowledge.

b. By compelling all children to attend day school until 12 years of age.

Your obedient servant,

William Beale.

F. H. Norman, Esq.

[Mr. W. Beale was also good enough to supply the following information founded upon his own experience]:—

17. I have been schoolmaster here seven years, and was two years at Wonersh before that; I think that most of the labourers' children who are now growing up could pass in the third standard. I form that opinion from my experience at a night school here; in purely agricultural districts the standard would be lower. There are two causes of this deficiency of education: 1st, the children leave school too young; they leave altogether at the age of 10, and intermittently before that age; 2ndly, the field labour renders them intellectually dull. The amount of education the labourers' children now receive is not sufficient to be of any practical use to them, and is easily forgotten. If they could pass in the fifth standard at the age of 10, they would not forget what they had learnt. A boy might pass in the fifth standard at the age of 10 if he attended school regularly. If he afterwards attended half-time, *i.e.*, 200 attendances for two years, he ought to pass in the sixth standard. When boys leave school at the age of 10 they can usually pass in the third standard. I think it very important that children should attend an infant school; they should remain there until the age of 7, at which age they should have passed the first standard.

The chief difficulties in carrying on a night school are the irregular attendance and the maintenance of discipline.

Worplesdon.

18. *Miss Stapley*, schoolmistress.—I have been here one and a half years. I lived at Farnham before I came here. There are about 50 children in ordinary attendance here. They begin to come to school at the age of 3, and usually attend up to the age of 11 or 12. The girls stay later than the boys, and do not leave to go to work; the boys go away for a few weeks in the summer to tend sheep and cows, before they leave finally, but do not go away for long enough at a time to interfere with their school work until they are 9 or 10; at that age they are absent during the whole summer. They are irregular in their attendance; they will stay at home for any little excuse, and will not return to school when their work is over. There is a lending library, the books are provided by the Pure Literature Society, 11, Buckingham Street, Adelphi, where they can be purchased by subscribers at half-price. There are 70 subscribers to our library. They pay 1*d.* per month apiece. They are entitled to one book at a time, which they may not keep more than one month, and must change once a fortnight. Girls and young women read more than boys.

19. *Lady Bovill*, Worplesdon Lodge.—A night school was established in this parish six years ago; there had been none previously. It was held twice a week during five months in the year, for one and a half hours each evening. When it was first established we had 17 pupils, and at the end of the first year between 40 and 50. The teachers were my daughters, my governess, myself, and the schoolmistress (there is no schoolmaster here). The two curates attended on alternate nights. The night school was carried on regularly every winter until last year, when I ceased to reside here regularly. The last year we had 75 scholars on our books, and about 55 in regular attendance. The scholars ranged from the age of 12, upwards; many were grown up men. They were classed according to their proficiency, without reference to their age; the men did not object to being classed with the boys. No feelings of jealousy were exhibited on this account. They came to the school of their own free will, without any pressure being put upon them. They paid 1*d.* a week each, and 1*d.* for every copybook. They learned reading, writing, and arithmetic, and those who could read fluently were placed in a class together, and read some book of history or geography. The scholars made considerable progress; some who could not write at all when they came learnt to write tolerably well before leaving. They all seemed very anxious to learn, and some came considerable distances, as much as four miles. I have been told by the chief constable of the county that there has been far less crime in this parish since the night school was established than there was before. At the end of the first year the scholars subscribed to present me with a testimonial, in return for the interest which I had taken in the school.

WARWICKSHIRE.

Warwickshire.

Coventry.

Extract from a letter from Mr. M. G. Fretton, 88, Little Park Street, Coventry, Secretary to the Warwickshire Church Teachers' Association, dated 30th April 1869.

20. I have submitted your queries at two meetings, and have drawn the opinions that the age of children leaving school in this district (agriculture) is under 10 on the average, and that the progress they usually make is between the third and fourth standard; the opinion is that they ought at that age to reach the fourth standard on the average. Our members think that under very favourable circumstances the deficiency in the amount of education usually possessed

by a child leaving school at an early age might be adequately supplied, but that the difficulties in the way of the successful operations of night schools are such that it is only in favourable districts that they may hope to succeed. Distance, lateness of the hour, indifference, difficulty of maintaining discipline, and inability of a lad to continue the business of education after a hard day's work in the field, are all suggested as the chief difficulties in the way. As financial matters are concerned, they are generally found to be failures about here.

EXHALL.

21. *Mr. Duck*, schoolmaster.—I have been master here for four years. It is a mixed school, with an endowment of 22*l.* a year. The children pay 2*d.* if they belong to the parish, and the remainder 3*d.* each. The great bulk of those who come are miners' and weavers' children. At present there are only four agricultural boys in the school, aged 13, 12, 9, 8. [It happened at this time that the labourers in the parish had but few sons.—F. H. N.] I know of hardly any who might come to school and do not. There is no indifference on the part of the parents. The agricultural children usually remain up to the age of 11. When they leave they could usually pass the fourth standard. The mining boys stay longer than the agricultural, but are not sharper. There are about 80 on the books, and about 50 in average attendance here. There is a dame's school in the parish; besides this there are about 20 cottages on the outskirts of the parish (one mile from Bedworth, and two miles from here), the children who live there attend this school in summer, but not in winter, because the roads are bad.

HARBURY.

22. *Mr. John Shenston*, schoolmaster.—I have been here four years next Christmas. This is a mixed school; there are 50 boys and 70 girls on the books, and 88 altogether in average attendance. There is also an infant school in the parish. The great bulk of the scholars are the sons of labourers. Seven of the boys who are here to-day are the sons of tradesmen. They nearly all belong to this parish. I think that the sons of agricultural labourers leave school between the ages of 9 and 10. Both girls and boys can get occupation at bean-dropping and potato-planting from about the age of 8. Those employments occupy them for about two months each year. Most of those who have been over 10 years of age when they left could have passed the fourth standard. There is a night school here; no boy is admitted to it under 12 years of age. I think that if children could pass the fifth standard they would know the three R's sufficiently for ordinary purposes. I think that most agricultural children could pass the fourth standard by the age of 10 if they attended regularly. The attendance is more irregular at spring and autumn than at other times of the year. There are to-day [December 16th] 12 boys over 10 years of age in the school; four of them are the sons of labourers, the remainder are sons of tradesmen and small farmers.

KERESLEY.

23. *Mr. J. T. Jones*, certificated schoolmaster.—At the last inspection at this school there were 74 boys and 97 girls present. The average attendance throughout the year was 131; and 84 (being all over 6) presented themselves for individual examination. The children of one farmers' family attend school, but the remainder of the children are all agricultural. They usually leave altogether at about the age of 11, boys and girls at the same age. Formerly the girls went away to do trimming work, but since that work has failed we have had a much more constant attendance. We take them as young as they will come, because if we don't take the younger children the older ones are kept away to take care of them. About a quarter of the children here come two miles to school. The children who live farthest from the school are always the most regular in their attendance. The population of the parish is 792. At the next inspection I shall have at least 35 to present to the fourth, fifth, and sixth standard.

There is a good deal of irregularity during the bean-dropping (February) and acorn-picking (September) time. The girls go for bean-dropping, and not for acorn-picking. At other times the attendance is regular.

Last year the school was open 445 times, and each child attended on an average 348 times.

Inducements are held out to encourage regular attendance by means of a clothing club, the allowance to which is increased if the attendance is good; and also by entertainments periodically given to the children.

The parents consult their own convenience as to the attendance of the children. There is a very small proportion who care about the progress made by the children. I visit the parents, and know their feelings. Sometimes when I have set home lessons I have been told by the parents that the books shall be burnt and slates broken.

When the bead work was so flourishing we had a night school for girls, but that is now broken up.

LEA MARSTON.

24. *The Rev. L. Tuttiett*, vicar of Lea Marston, diocesan inspector of schools.—I inspect 22 schools in the north of Warwickshire. Of them I consider that 15 are excellent; in the whole archdeaconry not quite half are returned as excellent. I know scarcely any district within 15 miles of this place where there is not a school to which children might go. In many cases the school is bad owing to the bad attendance of the children, and this is often owing to some want of attractiveness on the part of the school or the master. Few parents are indifferent about a good school. When I go into other parishes from whence children come to our school I hear expressions of gratitude from many on account of the good education their children have received here in Mr. Adderley's school. The only parish I am acquainted with in this neighbourhood which is without any school is Curdworth, where there are 600 inhabitants, chiefly agricultural labourers, and a great number of public houses. Many of the children from that parish walk three miles to our schools, some four. There can be no doubt that the education is in many cases interfered with by the early labour of the children, even in this district where the condition of the labourers is particularly favourable. I think that the best mode of meeting these difficulties would be by requiring a certificate of proficiency as a condition of employment.

To this I know two objections are commonly raised.

I. First it is said, *such a scheme could not be carried out.* I do not in the least understand why.

(*a.*) Let a certain standard of proficiency be chosen, say the fourth standard of the Revised Code for boys under 12, and the third standard for boys under 13. I mean that no boy be allowed to receive wages for labour under 12 years of age who has not received a certificate of having passed the fourth standard, and no boy under 13 who has not passed the third standard. From boys over 14 no certificate need be required.

(*b.*) As to the means of obtaining this certificate, existing machinery might be used as far as it goes.

In schools under Privy Council inspection the master might be empowered at once to grant it to all who have passed in the required standards at the last examination. In special cases, as where the boy had not completed his year when the inspector came, the managers of the school might be required to countersign it.

In schools under diocesan inspectors, not under the Privy Council, the inspector might certify that proficiency had been attained equal to that required by

Warwickshire.

Mr. Norman.

B. i.

the Government standards. At each annual examination he might put a mark against the names of boys over 12 and 13 qualified for certificates. In special events the master might apply to him. For schools neither under Government nor under diocesan inspection, I think there ought to be appointed a staff of "*extraordinary inspectors*," who should be empowered to visit all public schools for the education of children, and to sign the necessary certificates of proficiency. Such inspectors need not cost much. They might be chosen out of the diocesan inspectors, with the approval of the bishops, or even out of the certificated teachers. There are comparatively few schools under no inspection, and many well qualified men would accept such an office for a comparatively small payment.

II. Secondly, it is objected that the employers of labour are unfavourable to such a scheme, and would reject it as a tyranny. My own experience, which is not inconsiderable, inclines me to a different opinion. Old prejudices are fast dying out. The farmers are learning more and more to value well educated labourers. A good school, even if it does not supply them with labour, is felt to be a blessing to the parish, and I believe they would many of them be thankful if no boys were allowed to offer themselves for employment without a certificate of proficiency.

There can be no doubt that the great need in our rural districts is of industrial training schools for girls. It would be a great blessing if such schools could be established in certain central places, and supported by liberal Government grants. If young servants could get certificates of proficiency of knowledge of their work from such accredited industrial schools, they would in time come to be much valued by masters and mistresses. No girl should be allowed to earn wages as a servant under 13 years of age, and then not without a certificate of proficiency. This might be according to a lower standard than that for boys, say the third standard of the Revised Code. Many farmers here would welcome such a law.

Extract from a letter from the Rev. L. Tuttiett, dated Lea Marston, February 13th, 1869.

25. "You ask how our farmers get their work done, seeing that so many of our well-educated boys are drawn away to other parts? They certainly find great difficulties; more Irish are employed here than in any other place I know, and in most of the farms boys from other parishes are employed, a sad hindrance to my work in the village, for many of these poor lads are extremely ignorant, and yet they will not come to night school or Sunday school. Our flowers are transplanted to other places, and we get their weeds instead."

26. *Mr. S. Neale*, schoolmaster, Lea Marston.—I have been here three years. At the school we receive all the boys from Curdworth and Minworth (where there are no schools), and a few (12) from other parishes where there are indifferent schools. They come here in preference to going to the schools in those parishes, because they find that they can get a better education here than there. They come here from the age of 6. There is an infant school for boys and girls to which they go before coming here. About half the boys in this school are the sons of labourers; the remainder are the sons of tradesmen, farmers, and artizans. There are 52 on the books and 43 in regular attendance. The labourers' sons are absent for about six weeks in the year, principally in the spring and autumn, for bird-tending and potato and acorn picking. That sort of employment begins about the age of 8 or 9; but they don't leave finally until about the age of 11 or 12. The majority of them get into the second class before they leave, but some into the first. The second class work in the fourth standard. The fourth standard enables boys to read and write with sufficient ease to retain it; but there is sure to be a falling off in ciphering and spelling. Some come three miles to school here. They are the most regular. There are now seven in the first class; only one is a labourer's son. There are 13 in the second class, of whom six are labourers' sons. There are none growing up in the parish without the power of reading and writing. Farmers pay 6*d.* for one son, and 4*d.* for every other; tradesmen and artizans 4*d.* and 3*d.*; labourers 2*d.* and 1*d.*

Formerly Mr. Adderley used to give money prizes for the most regular attendants; that payment has been discontinued this year, but the attendance is not the less regular.

Since I have been here 64 boys have left the school, 18 of whom have gone to agricultural work; of the remainder seven were the sons of labourers, and would probably have gone to field work but for the good education which they received here. I think that in the majority of cases the education is sufficient; the only difficulty I have to put up with is the six weeks' absence each year.

Rowington.

27. *Mr. Johnson*, certificated schoolmaster.—Boys remain at school here up to the age of 9 or 10; the sons of agricultural labourers leave on an average at 8 or 9. I don't think I shall present more than two of the labourers' sons above the third standard this year. They can usually pass the third standard when they leave. That only enables them to read and write mechanically; it would require a great effort on their part to keep up what they have learnt. I doubt whether the fourth standard would enable them to read and write with pleasure; but it might be otherwise if they received encouragement to practise at home. The cause of the irregularity here is the scattered character of the parishes; when the weather is fine the attendance is good, but it is otherwise when it is wet. The children don't attend regularly for three weeks after the harvest holidays are over.

Saltley.

28. The *Rev. Canon Gover*, Principal of the Worcester, Lichfield, and Hereford Training College.—In reference to education in town and country the most striking difference is that in the towns education exceeds in quality, in the country in quantity, relatively to the population.

In the large town the schools in receipt of State aid are as a rule under superior teachers and are mainly filled by the children of the better class of artizans. These parents can afford to keep them at school till they have obtained a fair education.

Below these the children of the unskilled labourer and drinking or shiftless workman are left to grow up almost or altogether destitute of instruction.

But in the country, generally speaking, there are schools and the children of all, down to the field labourer, attend them. Here and there, indeed, are spots where there is no school nor any within reach, and these places are dark enough; such spots are few and far between, but where they exist the matter ought to be dealt with promptly.

Whilst in the towns there are scarcely any public schools, unless State-aided schools, I have known of whole rural deaneries in the country where there is scarce a school under inspection, and yet not a parish without school accommodation sufficient for the population.

To measure the deficiency of provision for education by the number of unassisted parishes would be wholly delusive.

But, notwithstanding a few notable exceptions, the quality of education given and the standard reached in the country falls much below that in town schools.

Nor can night schools be depended on to make good the deficiences of the day schools, for they are least likely to be found where the day schools are inefficient; they are not likely to reach any considerable per-centage of the population; and at the best, amongst those who have been scholars in both, they do not appear to sustain the standard already reached in the day school. Their staffs are useful as guerilla

bands or an irregular light cavalry in the campaign against ignorance.

Much has been accomplished. What is wanted to make good our shortcomings is, in addition to (I.) schools for destitute parishes throughout the country, (II.) provision for improving the class of teachers, (III.) for bringing all endowments under the systematic supervision of the State, (IV.) for encouraging a more general and better education, and (V.) for securing the longer attendance of the children.

I. First, then, to secure provision where school accommodation is at present deficient.

Powers should be taken whereby, after reasonable time and notice given, adequate schools should be built in neglected districts, the whole cost of the erection to be defrayed from local rates. Such schools when built should be under a county or union board, and, so far as fees and Government grants did not suffice, should be supported in like manner from the rates, unless some approved voluntary agency undertook to maintain them.

But it is imperative that greater encouragement should be given by the State for the voluntary *erection* of schools. For their sustentation the expense falls pretty evenly on three parties, the parents, the voluntary subscribers, and the Government. But in their erection, where there are only two parties to furnish the means, the Government, instead of being more, become less liberal; instead of advancing the half the Government, under the old code, gave but one-third, whilst by a most unwise penuriousness they have reduced their aid, under the Revised Code, to one-fifth, throwing very unreasonably and unjustly four-fifths of the cost of erection upon voluntary efforts. Hence, as can be proved from the Minutes of Council, whereas before 1863 the annual increase of school accommodation was not only supplying the increase of population of school age, but overtaking past neglect at the rate of 10,000 children per annum, the effect of this unpolitic parsimony has been so to check school building that the annual increase of school accommodation is falling behind the annual increase of the population of school age by considerably more than 10,000 per annum.

An amendment of the rate of aid for building from Government grants is the first necessity in order that education may more completely cover the face of the land. There is so much value to the State in the education of those who become voluntary agents by the very agency itself, that it is unwise of the State to discourage by overburdening it; let it prove itself real and then let the State avail itself of its help to the uttermost. It were mere folly to try to supplant it and substitute for it the technical and lifeless working of a central or official organization.

II. The second point is the improvement of the class of teachers. Whether in town or country a good teacher attracts scholars and fills his school. The system of the Committee of Council has fallen short on account of its over-rigidity. With its strict requirement of certificated teachers it has failed after many years to penetrate to any extent the smaller parishes. After sending out my masters for 16 years, I can scarcely look round on any of them engaged in schools with an attendance below 50, unless where the salary is provided by an exceptional liberality on the part of the patron. It is true that to force it, certificates in the last few years have been granted almost wholesale to untrained teachers; but to confuse educated and uneducated thus together is only to disparage the certificate itself and discourage the higher class of teachers from entering or remaining in the profession, whilst the idea of the certificate examination bars a great number of country schools from placing themselves under inspection.

There is wanted the clear recognition that a distinct standard should exist for the teachers in a remote village from that for the master of the eager and intelligent scholars in our Birmingham or black country schools.

For any school, then, with an area below 800 square feet (class room included) let it be open to appoint a registered teacher. This should be either an ex-pupil teacher, or any person above 21 years of age, proposed by the managers, who should pass in some paper of the pupil-teacher's examination, not lower than that of the third year, at the district examination under the local inspector. He should also teach a class or conduct a school in the presence of the inspector or his assistant. And re-examination in this or the paper of a later year should be required on each subsequent change of school.

Having passed the paper of the fifth year, registered teachers should be allowed to rise to the rank of certificated by examination or good service. Their schools might be visited by the inspector's assistant.

III. Next, there should be systematic supervision by the State of all the smaller endowed schools.

The contemptuous indifference of the Minute on endowment wants reforming. As it now stands it discourages good and shelters bad schools. In two of similar and moderate endowments, by the same provision, the good school is made to pay for its excellence by the forfeiture of part of its grant; the bad school is screened from loss.

The remedy is simple. Render all endowed schools subject to inspection, at least to the extent of the endowment. Require that for each 30 shillings of endowment (the average cost of education) a child eligible by attendance should pass in a standard, that is, let the State see that the endowment fulfils its purposes. As soon as the whole endowment is thus accounted for let the Government grant begin to run on the next scholar. Where there is not a child successful for each 50 shillings of endowment, let the surplus income of the endowment be made forfeitable by the Committee of Council for the benefit of the neighbouring parishes or the relief of the exchequer.

IV. In order to make the schools more general for all the population the observance of a good conscience clause, providing that no child should be required to attend any service or religious lesson to which the parents object, should be the basis on which all grants should proceed, and all, except recent and specific endowments, be administered.

To encourage a better education, no grant should be made by the Committee of Council on Education on children under 5 years of age. It is not the duty of the State to assist in providing nurseries, or in relieving mothers of their duties. Moreover, to give such aid introduces a sham into the comparison of our education with that of foreign countries. Prussia takes no count of education under 6 (in some districts 7 or even 8) years of age in returning 1 in $6\frac{1}{4}$ of her population as under education. Of our return of 1 in $7\frac{1}{2}$ a great proportion (namely one-fifth) is due to infants under 6 or even 5 years of age.

But what would thus be saved in the Government expenditure should be devoted to giving higher grants for those who pass in the third or fourth standards. At present the temptation to managers and teachers is to present the children in as low standards as possible, so as to secure the longest succession of yearly grants. The increased grant on the above standards would be the payment of a premium for every child who had been brought up to the level of the ordinary education which the children of the labourer and artizan ought at least to attain in order that there may be some hope of their retaining their knowledge for after life.

The names of all children who have passed in the standards above the first (or second) ought to be made known to the managers.

V. We come, then, fifthly, to the measures for securing a better attendance of the children.

1. All children to whom the State stands in *loco parentis* by reason of the burden of maintenance should be required to be at school.

(*a.*) Evelyn Denison's Act should be compulsory; all children of paupers should be under education as a condition of relief, and the fees defrayed from the rates.

Warwickshire.
Mr. Norman.
B.
i.

(*b.*) Every illegitimate child, *nullius filius*, should be compelled to be under education; the fees as above to be defrayed by the parish, whether made recoverable or not from the putative father.

2. Where the neglect of the parent to educate his child is of public cognizance, the State should intervene.

The Certified Industrial Schools Act might be made to extend to children of school age wandering during school hours without being under charge of some one of labour age. The beneficial effect of this, however, would be mainly found in towns, where it would sweep the streets clear of truancy and neglect.

3. Where the State has a right to determine the conditions, since it gives validity to contracts for labour, education should be made a pre-requisite of ability to enter into contract.

(*a.*) It should be illegal to employ children under the age of *nine;* or, unless they had passed in the *second* standard, under the age of *ten;* for this purpose a half-time labour certificate should be requisite.

(*b.*) All children between the ages of *nine* and *twelve* should be required to show a school attendance of 100 days during the year and to have passed in the *third* standard at the latter age, as a condition of receiving a full labour certificate. If otherwise the labour certificate should not be issued till the age of *thirteen.*

(*c.*) All employers of children not in boroughs should be required under penalty to make a return of all children in their employ, *e.g.*, in the form for assessed taxes.

(*d.*) Labour certificates for half or full time should be issued by the inspector after examination by him or his assistant half yearly.

Mem.—In the above ages and standards the lowest number is taken which ought to be accepted; after a time it ought also to be practicable to raise the standards, and it may be the age, by one throughout.

These are compulsory measures strictly within the comprehension of the law of a State, at the foundation of whose institutions lies regard for individual freedom.

SOLIHULL.

29. *Mr. David Bond*, schoolmaster. — I have been here 15 years next Christmas. This is an endowed school under Government inspection. The children pay 1½*d.* if children of labourers, and 3*d.* if children of tradesmen, &c. This is a purely agricultural district. I think that there are rather more children of tradesmen and artizans than of agricultural labourers in the school. There are 78 boys on the books and about 56 in average attendance. I think that the sons of agricultural labourers very seldom remain at school after the age of 11. At the present time there are 22 boys in the first and second classes, and of these two only are the children of agricultural labourers, and they are in the second class. I should say that they begin to leave between the ages of 9 and 10. Up to that age they attend regularly except at seasons of hay, bean-dropping, and scaring; but they are not away a great deal. Every now and then a boy stays away for some time, but the greater number are not absent much. We have a rule that a boy's name should be taken off the list if he is absent constantly. I very seldom allow them to be absent more than a fortnight at a time. There is another school at Shirley, in this parish, for boys and girls; that is a separate ecclesiastical district. There are a number of scattered cottages in this parish; there are none out of reach of a school. This was a free school until two years ago; since a payment has been imposed I think that the attendance has improved. The only cases in which the education of the children in this parish is insufficient are due to the indifference of parents; they are few in number. I don't think there is any necessity for a change in the law in order to improve the education in this district.

SNITTERFIELD.

30. *Mr. I. E. Baker*, schoolmaster.—The sons of agricultural labourers usually leave this school about the age of 10; few remain until the age of 11; from the age of 7 or 8 I think they only attend about half the times the school is open. When they leave finally they have not generally attained facility in reading, writing, and arithmetic. I don't think they should leave until the age of 11; if they attend regularly up to that age I think they might learn the three R.'s with sufficient facility to retain their knowledge. There are boys in this school from Bearley (two and a half miles), Wolverton, and Norton Lindsey; there are no schools at those places. The attendance at school is about as numerous in summer as in winter; but a greater number of the older boys attend in winter, and of the younger ones in summer.

TYSOE.

31. *Mr. Dodge*, schoolmaster.—Last year the first, second, and third classes in this school contained 46 boys between the ages of 8 and 12. The school was open 426 times; all those boys except 9 attended over 200 times; on an average each of the 46 attended 210 times. There are 256 boys and girls on the books of this school, and of them only 125 attended 200 times, and were therefore presentable for examination. The younger children are less regular than the elder on account of the bad roads and the distances they have to come to school. The sons of labourers usually leave school finally at the age of 10, and can then pass the third standard. A very small proportion of those who have attended the day school ever come back to the night school, so that the majority never get beyond the third standard.

Evidence substantially similar to that printed above has also been received from: Mr. Booth, schoolmaster, Coleshill; Mr. Bullivant, schoolmaster, Eatington; Mr. J. Teague, schoolmaster, Fillongley; Mr. J. Rogers, schoolmaster, Radford Semele; Mr. Somergale, schoolmaster, Shustoke; Mr. G. Preston, Master of the Corporation School, Sutton Coldfield; Mr. J. Shaddock, Superintendent of the Warwickshire Reformatory, Weston.

Wiltshire.

WILTSHIRE.

AMESBURY.

32. *Mr. E. W. Flower*, schoolmaster.—I have been here for 16 years. When I first came the attendance at the day school varied from 24 to 42, it is now between 70 and 80 (boys and girls). The population has also increased, but not in the same ratio. There is also an infant school, at which there are 50 or 60 children; that school was in existence before I came here, but the attendance has increased as much there as in the day school. Other schools have been amalgamated with this, but there are still two other schools in the parish, but I cannot say whether the attendance has on the whole increased at those schools. Labourers' sons scarcely ever reach the first class; and many leave before reaching the second. I have now only one labourer's son in the school above the third standard. That is about the usual state of things. They generally leave while in the third standard, between the ages of 7 and 9. My night school has been in operation 10 years; all come to it after leaving the day school. Out of 47 who attended the night school last year 19 were under the age of 12. The age at which boys leave the day school has fallen. I have no hesitation in saying that on the whole the education has improved. The night school is open from October to March four nights a week; last year

out of 26 presented for examination, 25 passed in reading and writing, and 24 in arithmetic. On the whole my experience as to night schools is, that boys who attend regularly can keep up, and some of them can slightly improve, the education they acquired at the day school. When I first opened my night school 16 came to it, and of these only six could write their names; even now some come to my night school from another school, where writing is not taught, without any knowledge of writing or arithmetic. There is a great want of education among labourers here, which can only be supplied by longer attendance at day school. This want is apparent when they come to night school. I am quite sure from what I know of the state of education here, that some measure of compulsion is necessary. [Mr. Flower was good enough to supply me with the ages at which 40 boys, taken at hap-hazard, had left the school. From these it appeared that the average age at which boys left was 8 years and 10 months.—F. H. N.]

Bishopston.

33. *Mr. Knight*, schoolmaster.—I think the boys remain at school here until the age of 9 or 10; the girls until the age of 11 or 12. The attendance is tolerably regular until they leave finally to go to work. A few go away before that age at certain times of the year, but as a general rule I have no cause of complaint on account of the irregularity of attendance. The greatest number attend from October to March. When the children leave they can usually read, write, and cipher decently. There is a night school from October to March four nights a week for two hours each night; about 18 usually attend; they pay 4*d.* a week, and think that too much. Everything is found. I know of no house in this parish more than one and a quarter miles from the school, and I think that all the children attend.

Broad Chalk.

34. *Mr. S. Bottomley*, schoolmaster.—I have been here three years. There are 45 boys in the school; they come at the age of 3. The sons of labourers pay 1*d.* From about the age of 7 they go out to work in the summer months, from the end of May until Michaelmas. Most of them leave at the age of 8 or 9, when they have usually passed the third standard. I don't take them at the night school until the age of 12, and when they come back at that age they cannot pass the first standard; if industrious they can regain two standards by attending the night school during one winter, but many don't take pains. All who attend the day school as a rule come to the night school when they are old enough, and they can generally just keep up what they have learnt at the day school. Girls leave school about the age of 12 or 13. There are a good many who don't go to school at all.

Calne.

35. *Mr. James Brooks*, schoolmaster, Bowood School.—There are 32 boys at the school. The education is free, and each boy has a suit of clothes provided for him every year. There is a garden, and also a carpenter's shop attached to the school. I superintend the management of the garden. The boys take it in turn to work in the garden; two are employed there every day for the whole day. A carpenter attends to give lessons twice a week for two hours in the afternoon, on Tuesdays and Thursdays. Six boys have lessons in carpentering, and three of them attend on each of those days. These boys never work in the garden, but attend school in the mornings of the days the afternoons of which are devoted to the carpenter's shop. The garden boys never go into the carpenter's shop. A child who is absent from school for three days without excuse is expelled. Those who come here are almost all the sons of labourers, whether in the employment of Lord Lansdowne or not. There are 40 girls in the school, two of whom are employed in household work in the master's house every day. The children remain at school here longer than they do in parish schools generally. I don't think that the garden work prevents the boys getting on as much as they would otherwise do in school work. The boys are not paid for working in the garden, but the four oldest have each a plot of ground, the produce of which belongs to them. Out of 38 now in the school there are 18 over the age of 10, and their average age is 9 years and 4 months.

36. *Miss Baker*, matron of the Calne Institution for the Training of Servants, established 1849.—All the girls who come here are nominated by Lady Herbert or Lady Lansdowne. They come about the age of 15. The establishment will hold 16. They usually remain about one year, but the length of time varies according to the progress they make. Those who belong to Calne pay 6*l.* a year, the remainder 7*l.* 7*s.* They receive from 7*l.* to 16*l.* as wages when they first go into service. When they first come here they do general work, and may, after that, select whatever department they prefer. One evening a week is devoted to lessons, and the clergyman gives one lesson in religious instruction per week. They have to provide their own clothing while they are here, but when they leave the ladies who place them here usually provide them with an outfit.

Christian Malford.

37. *Mr. B. South*, schoolmaster.—I have been here four and a half years. The population of this parish used to be about 1,000; it is now between 700 and 800. There were two woollen factories here; they have been given up. There is no employment in this neighbourhood other than agricultural. This is a mixed school. There are 185 on the books. Last year there were 194 on the books and 109 in average attendance. We have about 12 of all classes who come to school here from other parishes. There are also about 25 boys who belong to the farmer class, besides the shopkeepers. The payment for labourers is 1*d.* a week. I don't think that the sons of labourers remain at school beyond the age of 10. Irregularity is the great evil. The third standard is always full, and the numbers dwindle in the upper standards. There has been a school here for many years. There are some boys in the parish who are unable to read, either from never having been to school or from having attended irregularly. I think that if they attended regularly they might pass the fourth standard before they were 10. I don't think they would acquire a taste for reading, &c. as an amusement if they could only pass the fourth standard; the fifth standard, if not the sixth, would be necessary for the purpose. If they passed the fourth standard at the age of 10 they might, by attending night school, as night schools are now carried on, attain the fifth or even the sixth standards, but it would be hard work. Most of the sharp boys who have been educated at this school leave the parish for railways, &c. We charge all extra-parochial children 4*d.* a week each, in order not to injure the schools in the neighbouring parishes.

Corsley.

38. *Mr. J. C. Turner*, schoolmaster.—I have been here one and a half years. The boys usually leave school to go to field work about the age of 9. They are absent a good deal after they are 8, for scaring birds, pig-keeping, working in their parents' gardens, and picking up acorns. The last two occupations are not done for the farmers. They can about pass the third standard when they leave finally. I was assistant master at the night school at Warminster for seven or eight years. That night school was kept open three nights a week from about October to April. The result of my experience is that the instruction precisely obtained can be kept up but cannot, as a rule, be improved by such attendance at night school. A portion of what has been learnt is often forgotten during the summer months, and never is regained at the night school. There are 46 girls and 29 boys on

Wiltshire.
Mr. Norman.
B.
i.

the books of the day school here. I had 34 at my night school, aged from 9 upwards. About one-third could read fairly. I don't think the remainder could have passed Standard II.

DOWNTON.

39. *Mr. G. Pearse*, schoolmaster, Redlynch.—The population of this district is about 1,100. Last year there were, on an average, 76 at school. Most of the boys leave school at the age of 9 or 10; there is one boy in the school now aged 13, but he is a cripple. The attendance is very irregular. The principal occupations for children are picking acorns and potatoes, and making heather brooms. This work is done for the parents, and not for the farmers. The land which is held with the cottages gives no special employment for children. As a general rule the boys can pass the third standard when they leave. None of the children have to come above one and a half miles to the school. The girls stay at school later than the boys; they go away occasionally for the same work as the boys (except the broom-making), but they don't work so much. I don't think we could teach any but the sharp boys the three R.'s, unless they stayed until after the age of 10. They come to night school directly they leave the day. I think they certainly keep up, and add a little to, what they have learnt before at the day school.

40. *Mr. T. Read*, of the British school.—I have been here 28 years. I have 110 boys on the books, 80 of whom are the sons of labourers. The average attendance at the school is 84. Labourers' children pay 1*d.* a week. They come at the age of 6, and leave between 9 and 10, when they can usually pass in the fourth standard. As a rule, they lose a great deal of what they know unless they attend a night school. I don't take them at night school under 13. Last winter 30 attended; they all passed, but not in the standards they would have passed in when they left the day school. They generally attend the school pretty regularly until they leave it finally. I think that if they could pass in the fifth standard they might retain what they know; the fourth would be sufficient if they would only apply themselves afterwards, which they will not do at the age of 8 or 9, but will do at the age of 12 or 14. Field work is the chief obstacle to education.

GREAT BEDWYN.

41. *Rev. G. D. Hodgson*, rural dean, Great Bedwyn.—The population of this parish is over 1,050. The boys leave school about the age of 9. They come to our night school at the age of 11 or 12, and as a general rule they are put into the first standard when they come. I think they make considerable progress, certainly great progress, considering the amount of attendance they give. We have many more infants at school in summer than in winter. As a general rule the boys attend the night school up to the age of 17 or 18, and can then pass the third or fourth standard. We had a reading room here five or six years ago; it gradually died out because the members took in penny papers, and did not care to come to it. I inspect the schools in about 20 parishes in this neighbourhood. I know of no reading rooms about here. Most of those who can, from their age and circumstances, attend the night school, do attend it. I think that the fourth standard would represent a sufficient amount of instruction to meet the ordinary requirements of an agricultural labourer. This might be passed by the age of 10 if boys would only attend regularly.

LONGBRIDGE DEVERILL.

42. The *Rev. Prebendary Morrice.*—On an average boys remain at school in this parish until the age of 9, but as a general rule labourers' sons in this district do not remain as late as that. They have usually passed the second or third standard when they leave. My experience is, that those who attend the night school can retain or slightly improve the education they have previously received at the day school. In order that children may be generally educated up to the fourth standard it is necessary that they should not be withdrawn from school as young as they now are. In order that we may secure a regular attendance at night school, we make the scholars pay quarterly in advance; before we did that they used always to be slack during the last three months of the night school season. They now pay in advance 1*s.* for the first three months, and 6*d.* for the second three months. Every boy who misses only three hours = two attendances, during the whole season receives back 1*s.*, and every boy who misses six hours = four attendances, received back 6*d.* Last year out of 58 upon our books, 21 received back 1*s.* and 16 got back 6*d.*; besides this every boy gets 4*d.* for every subject in which he passes the Government examination. We always have two clergymen, the assistant master, and five or six boys of from 16 to 20 to assist in teaching at the night school. I give these boys a small gratuity of from 12*s.* to 15*s.* at the end of the season. We have also a night school for the girls who work in the factory. It is carried on on the same evenings as the boys' school, and also on Saturday afternoons, but the girls go home at a different hour from the boys. In the year 1867 23 boys joined the night school, of ages varying from 10 to 17, all of whom were placed in Standard I. the first time they were examined. We try to push them on as much as we can. In the deanery of Wylie there are 29 schools in 22 parishes containing 1,189 boys, of whom 994 are under 10 years of age. I think we have in attendance at the night school full half of those in the parish who are of an age to, and so situated that they can attend the night school.

SALISBURY.

43. ANSWERS supplied by the Salisbury Church Schoolmasters', &c. Association to questions proposed by F. H. Norman, Esq.

1. At what age do the children of agricultural labourers usually leave school, and what progress has a child of average ability at an average school usually made in reading, writing, and arithmetic when he leaves?

Answer.—Boys not exceeding 9 years and to have passed Standard III.

Girls between 10 and 11 and to have passed Standard IV.

2. What progress would you expect a child of average ability, who attended school regularly, to have made in reading, writing, and arithmetic when he arrives at the age of 10 years? Assuming the school attendance to have commenced as soon as in your opinion it could advantageously have commenced?

Answer.—To have passed Standard IV.

3. Do you think that a child leaving school at 8 or 9, and being able to pass Standard III., could, by subsequent attendance at night schools, as at present carried on, be made to pass Standard IV.?

Answer.—No.

4. What are the chief difficulties you encounter in carrying on night schools? And can you suggest any practical remedies for rendering them more useful than they at present are?

Answer.—*Difficulties.*—(1.) In securing suitable teachers. (2.) In securing the attendance of scholars.

Remedies suggested.—More liberal grants should be given on more easy terms. (1.) There should be no restriction as to the employment of certificated teachers. (2.) All children should be eligible for the grant who have left the day school, and continue to attend the night schools, irrespective of age.

Swindon.

44. *Mrs. Goddard*, The Lawn.—The Wiltshire Society for Befriending Orphan Pauper Girls was founded in 1862. It was thought by the ladies who founded this society that orphan girls who were left without friends to be brought up from an early age in the workhouse were there liable to be exposed to influences which were likely to have a most injurious effect upon their future character, and upon their ability to provide for themselves honestly when they grew up. It was to obviate these evils that this society was founded, and the mode of its operations is as follows:—Leave is obtained from the guardians to remove those orphan girls to whom it is proposed to offer the advantages of the society from the workhouse. The management of each girl so withdrawn from the workhouse is assigned to the superintendence of one of the members of the society, and this member selects some labourer's family with whom each girl resides. The guardians allow 2*s.* 6*d.* a week for the maintenance of the child, and 10*s.* 6*d.* a quarter for her clothing, and the child herself receives this money at the end of each week from the parish officer, and takes it over to the family with whom she lives. Regular school attendance, both on week days and Sundays, is enforced, and in the event of misbehaviour on the part of the child, she is liable to be reprimanded by the relieving officer, or the guardians, or even to be sent back to the workhouse. The school fees for the child are usually paid by the members under whose charge the child is. At the age of 14, when, as a general rule, children leave the workhouse to provide for themselves, situations are, if possible, secured for these girls. Occasionally they are taken into gentlemen's houses for a short time for the purpose of enabling them to learn their future duties as domestic servants, after which they are sent forth to provide for themselves as servants free from all control. Since the establishment of this society in the Highworth and Swindon Union, about 23 girls have been thus under the supervision of the society, of whom eight have turned out fairly well, 10 are still too young for service, two have turned out badly, and the remaining three cannot be said to be going on quite satisfactorily. It is considered that the system has the effect of enabling the girls who are supported by it to acquire some experience of real life, which they would inevitably fail to acquire while shut up within the four walls of the workhouse. The society was established in 1862 by Mrs. Goddard, of the Lawn, and Mrs. David Archer, of Swindon. Since then its operations have become considerably more extended, there being now 20 members in it; and it is generally thought to have been attended with very beneficial results.

Warminster.

45. *Mr. Grosse*, schoolmaster at the Wilts Reformatory.—I have been here about seven weeks. There are 51 boys here, aged 10 to 20. For educational purposes they are divided into four classes; the first class receives on an average about 10 hours' instruction a week, and the three others about 15 hours. That is the rule in summer; in winter a longer time is devoted to the school. I was a National schoolmaster for three years before I came here, and I think that the boys here get on faster than the boys who attended all day at the National school. There are only four boys here who cannot read and write, although all know their letters. If tried by the standards they could pass the fifth, fourth, and second, except the four boys I have mentioned; they have one and a half hours to themselves every day; a half-holiday once a month, besides singing, &c. on wet days. They have also Scripture instruction on Sunday, and books supplied to them to read occasionally. The field work certainly does not dull the intellect when many work together, as here.

White Parish.

46. *Mr. W. H. Williams*, schoolmaster, White Parish.—I have been here eight years. I find that the attendance at school has become less regular lately than it was formerly. My first class contains 14 boys, about eight of whom are the sons of labourers. Since the school re-opened on the 28th September scarcely any of the first class have attended; this afternoon [October 28th] only three of the first class have been at school. All who have passed the first three standards are placed in the first class. As a general rule, the sons of labourers do not remain at school until they get into the first class. There are a few families who never send their children. They pay 1*d.* per week. Some come two miles to school; they are the most regular. The girls are just as irregular as the boys, but don't leave finally quite as young. Night schools are of no use for the purpose of improving the education. I see no means of improving it except by giving assistance to those who remain long at school in the form of substantial prizes, or by making the attendance compulsory.

Wilton.

47. *Mrs. Cope*, schoolmistress, Netherhampton.—I have been here 11 years. All the children who attend this school are the children of agricultural parents. I admit them at the age of 3; they usually come at that age, and pay 1*d.* a week. The girls stay until the age of 11. The boys leave between the ages of 8 and 9; they leave more often at 8 than at 9. They come back to the night school (where they are admitted as soon as they leave the day) and to the Sunday school. From the age of 7 upwards some of them go away to weed, during the months of May, June, and July; during three months they usually work with their fathers, who take piecework from the farmer, and employs them in preference to paying a stranger; usually all the boys over 7 get occasional jobs of that kind. When they leave at the age of 8 they can usually pass in the third standard, but after being absent for five or six months we have to begin again at the first; and sometimes they stay away altogether for a year or two, before coming back to the night school. The night school is divided into two divisions, according to the capacity of the scholars; the first division would pass in Standard IV., and the second in Standard I. Almost all who attend the night school remain until they are placed in the first division. Some come one and a half miles to the night school. As a general rule, no boys in the school could read a newspaper. This is an endowed school, and clothes worth at least 10*s.* are given away to every scholar each year; they would probably remain here longer than elsewhere. Girls go to work in the field; they do the same work as women; they sometimes go out at the age of 11 or 12; there are only two girls over 11 now in the school out of 20. There are 25 boys; none of them could write a letter when they leave. All the children in the neighbourhood do attend school; during the summer months many children are taken away to take dinners and teas to their fathers, and to mind children They are not employed by the farmers until they go to plough, when they finally leave school.

Evidence of a character similar to the above has also been received from Ellen Chandley, schoolmistress, Bramshaw; Mr. Tyler, schoolmaster, Castle Combe; and Mr. Albert Lawes, schoolmaster, Dowhead St. Andrew.

Worcestershire.

Mr. Norman.

B. i.

WORCESTERSHIRE.

Alvechurch.

48. *Mr. Mathie*, certificated schoolmaster.—Has been here five years. About half the boys in this school are the sons of agricultural labourers. The remainder are chiefly nailers' children; one or two are needle workers. I think that on an average the agricultural children remain at school up the age of 11, very few to 12. They go out occasionally for bean dropping and potato dropping for two or three months a year, from the age of 7 or 8. Perhaps about one-third of the boys may go out for those purposes for a short time every spring; that interferes very considerably with their school work, but we don't put them back into a different class when they return; their parents would probably take them away if we did. The agricultural boys don't remain as long as nailers, and the nailers do not go out to occasional work in the way the agricultural boys do. I think that the bulk of the agricultural boys could pass the fourth standard by the time they leave. Last year the school was open 438 times, and each child attended on an average 294 times.

Bengworth.

49. *Marianne Webb*, schoolmistress.—I have charge of all the children who are working in or below the first standard. I have been here two and a half years. I had 92 (of whom about 25 were over 6) on my register last year, and the average attendance was 57. 61 left during the year, but of those 20 came into the upper school; the remaining 41 will probably return occasionally for a short time.

The number who attended 200 times were (under 6) 32, (over 6) 22.

The irregularity in the case of the small children is greatest during winter, on account of the wet weather; this excuse is made, although the children have to come only from the adjoining street; and in the case of the elder children, the irregularity is greatest in the spring and summer, and is caused by the gardener. They begin to go out to the garden work at 6, and some have gone under that age; they go away for two or three months together, without coming back at all. The girls attend worse than the boys, but I don't know whether they stay away to work or to mind the children.

50. *Mr. Webb*, schoolmaster, Bengworth.—Been here two years and nine months. The number of children who attended over 200 times was 72. I think that the gardening work has the effect of reducing the attendance about 20 per cent. The boys leave finally about the age of 10; a few of the tradesmen's children stay until the age of 12. The majority of the whole school never get above the third class before they leave; and in the third class they are working in the third standard. I have made a sort of rough census of the parish, and think that there would be about 10 per cent. more on the books if it were not for the gardening. The age at which all the boys, except the tradesmen, leave is about the same; all the children work in the gardens, whether their parents are gardeners or not. The period of greatest irregularity here is April (when they plant vegetables and mind birds), and August, September, and October, when they pick fruit and potatoes. The girls stay longer than the boys, and are not quite so irregular.

Berrow.

51. *Mr. Plowman*, uncertificated schoolmaster.—I have been here 15 years. The boys pay 1*s.* a quarter, paid in advance. The remainder of the expense of the school is borne by Mr. Ricardo. We don't allow any irregularity here; boys are dismissed if they don't attend regularly. The parents have a sufficient desire for education to induce them to send their children regularly rather than not at all. We admit of no excuse for absence except illness and bad weather. The sons of agricultural labourers remain up to the age of 10 or 11, and a few up to 12; they are usually in the second class when they leave and could pass the fourth standard. We take boys from the age of 6 upwards, but only if they can read easy words of two syllables. Many more boys apply to come here than we have room for; I keep a list of the applicants, and admit them in succession as vacancies occur; I give them a lesson either in geography, writing, or arithmetic to do at home every day. I could not adopt the system of expulsion for irregularity until I had been here eight or nine years. At first we encouraged regularity by giving prizes to those who attended best; a statement of the attendance of each boy was sent home periodically to the boy's parents. I know of no school, except another which is supported by Mr. Ricardo in Gloucestershire, where boys are expelled if they don't attend regularly. Last year the lowest number on the register was 58, and the lowest number in average attendance for any one quarter was 50.

Droitwich.

52. The *Rev. W. Lea*, St. Peter's, Secretary to the Worcester Diocesan Board of Education.—The reports of the diocesan inspectors connected with this society relate to the whole of Worcestershire, except the portion which is in the diocese of Hereford, and to the deaneries of Warwick, of the Kinetons and Alcester, in Warwickshire. The district where the school accommodation is worst, with respect both to the number and efficiency of the schools, are the deaneries of Feckenham, Pershore, Bredon, Evesham, and Upton. The whole of the central part of Worcestershire is well supplied with schools. It is impossible to have a good school in every small parish. The system of providing a good district school conveniently situated for the accommodation of thickly populated rural parishes has answered well where it has been tried. The school at Cutnall Green has been in operation for five years; there are now 87 children on the books, and 60 in avarage attendance, of whom about 20 are working in or above the fourth standard. That school supplies acommodation for the following parishes:—

	Population.
Elmley - - -	350
Elmbridge - - -	390
Hampton - - -	185
Rushock - - -	159
	1,084

The proper system on which to carry out this plan is to have dames' schools for infants in each parish, and then to send the elder children to the central school, where there should be a certificated master, at the age of 7 or 8. It is no hardship for a child of that age to walk two or three miles to school. Certificated mistresses are not necessary for these infant schools. The proficiency attained by the children in the rural schools of this district may be inferred from the following figures:—

	No. on Books.	Equal to Standard IV.
In the deanery of Bredon there are -	621	41
„ „ Evesham (from which only seven returns were sent)	403	28
„ „ Feckenham -	403	18
„ „ Pershore -	467	36
„ „ Upton -	1,154	36

Our diocesan examinations are carried on by a test about equal to the Government standard. I have no means of ascertaining what proportion of children remain at school until they have passed the fourth standard. Children stay longer at school where the schools are good.

The following figures give the average age of the first class in the parishes referred to :—

DEANERY OF WICH.

Schools in which Certificated Masters are employed.

	Average age of First Class. Years.	Months.
Stoke Prior	12	0

Welland	9

In the city of Worcester there was only one school under an uncertificated teacher last year; the average age of the first class was 9 years and 6 months. The other Worcester schools vary from 10 to 11 years and 2 months. This school has been, since January 1, under a certificated teacher.

The condition of the country districts, with respect to the number of children growing up without education is not nearly so bad as that of the towns, but even in country districts some legislation is necessary for the purpose of improving the education. The best plan would be to require a child to pass the fourth standard before going to work, but if a partial attendance in winter can be secured the third standard might be sufficient in the first instance. If the fourth standard were considered unattainable I see nothing but to allow boys to go to work in summer when they have passed the third, and compel attendance in winter till the fourth is passed; but this would be much more cumbrous and difficult. I think the fourth standard would be best. This would lead to an increased demand for certificated teachers. I have reports before me of 24 country schools, in which not *one* child reaches the fourth standard in arithmetic. The boys in my school can pass the fourth standard before the age of 10; but this proficiency could not be attained except where there is an infant school. I think it useless to pass a law requiring less than the fourth standard. Nothing less than that would be really useful. I have not much faith in night schools; they are attended by two classes, one who have neglected schools, and the other who have attended well and want to improve themselves. It is impossible to teach these two classes together, and a boy who had been at work all day would be too tired to learn much at night.

I should be very glad to see the Government grants extended to small *country* schools, with uncertificated teachers, provided the payments were made for *the same results as* in schools where the certificated teachers were employed; but uncertificated teachers even then should not be allowed capitation grants, or pupil teachers. I think this would lead to more certificated teachers being employed than any other plan.

EVESHAM.

Paper supplied by *Mr. G. S. Barker*, schoolmaster, Evesham.

I. THE CONDITION OF EDUCATION IN THIS LOCALITY.

53. I have been in charge of this school for five years, and from my observation and experience during that time, I am of opinion that there is a deplorable amount of ignorance amongst the children of the labouring classes in this neighbourhood. I remember being very much struck with this ignorance when I first came here; and having had the superintendence of the night school for several winters, I have become very strongly impressed with the conviction that our present educational appliances are quite inadequate to cope with the appalling ignorance and moral destitution so prevalent in this locality. In the night school the instruction of nearly two-thirds did not rise above the bare requirements of the first standard; none were presented above the third standard; whilst one-third of the whole had to be presented in the same standard in which they were examined in the preceding year.

II. THE CHIEF CAUSES OF THIS DEFECTIVE STATE OF EDUCATION.

1. *The early age at which children leave school for work.*—Year by year our registers point out the sad fact that the average age of the highest class becomes lower. So early do most children leave, that a very few weeks suffices to efface the instruction which has been imparted to them during the year or two they have spent at school; and when they turn up again, in the Sunday or night school, it is truly pitiable to see the condition to which they have degraded. I have analysed the list of those who left the day school in one year, and find, that with an average of 62, no less than 36 boys left for work who had not passed the fourth standard, and of this number only seven had passed the third standard.

2. *The irregular attendance of those who are nominally scholars.*—Not only does the cause of primary education suffer from the early removal of children, but also from the constant interruptions by which their attendance is broken whilst nominally at school. This irregularity is the result of two causes :—

(1.) *The employment of children in the gardens.*—During the winter months, *i.e.*, from about the middle of September to about the middle of February, our attendance is nearly double what it is during the rest of the year. In the spring, earlier or late according to the mildness or severity of the season, children ranging through all the standards, *i.e.*, from 6 years of age and upwards, are sent into the gardens "bird-"minding," and, with perhaps the exception of a few weeks' schooling during bad weather, are kept there at the various operations of raddish-tying, pea-picking, potato-gathering, &c., until the end of autumn, when they return to school in a most lamentable state, utterly demoralized by contact with their elders in age and wickedness, all ideas of discipline scattered to the winds, and the instruction, which had cost so much pains and labour to impart during the winter months, absolutely lost.

The following extracts, selected from the school log book, will put this more forcibly :—

"1867, May 21. C. G. returned after six weeks' absence; F. W. after 14 weeks' absence; T. W. after 18 weeks' absence."

Worcestershire.
Mr. Norman.
B.
i.

"Sept. 5. G. C. away again, in Standard II.; he only came back last week after 12 weeks' absence."

"Sept. 16. M. H. returned after nine weeks' absence; he only returned in May after eight weeks' previous absence. J. R. returned after 23 week's absence."

"1868, Aug. 17. E. S. returned after an absence of seven weeks; he was a very backward boy in Standard IV."

"Aug. 25. W. P. has returned after 10 weeks' absence."

Sept. 28. T. B., in the third standard, has returned after an absence of 22 weeks. He had nearly made the 200 attendances before he went out to work, and was pretty well up in the work of his standard; now he can do nothing, and it is a hopeless task to prepare him for the examination."

"Sept. 29. J. D., in the second standard, has come back to-day; he has been absent for 13 weeks."

"1869, Jan. 26. There are several boys in the second standard, and who have only just come out of the infant school, out bird-minding."

"April 19. C. B. came back to day after 12 weeks' absence."

"April 19. E. H. came back to-day after 11 weeks' absence."

"April 19. F. B. came back to-day after eight weeks' absence."

"April 26. C. J. came back after 16 week's continuous absence, excepting a few attendances during a fortnight of that time. E. G. came back after 16 weeks' continuous absence. W. B. came back after 10 weeks' continuous absence."

These are but specimens of many such like entries.

Again, in the year alluded to above, in the day school there were only 66 who had attended 200 times and upwards, whilst 91 had been in attendance less than 200 times, and the average number of attendances made by each child during that year was only 172. But the school was open 432 times; hence the children here, on an average, do not attend school much more than about *one-third* of their time. Nor is it any better in the night school, where, out of 66 names on the books, only 26 attended for 24 nights, thus leaving 40 who had not come up to the very moderate minimum of attendances required by the Government. In the girls' school, in the same year, there were 67 who had attended 200 times, and 120 who had fallen short of that number. In the infants' school there were 72 who had made 200 attendances, whilst 68 had made less. In the adjoining parish of Bengeworth, in the mixed school there, 124 had attended 200 times, but 177 had attended less than 200.

(2.) *The carelessness and caprice of parents.*—This is another fruitful source of bad attendance, and occasions a different kind of irregularity, viz., uncertain, desultory attendance, as contrasted with the prolonged and fixed absence of those out at work. It is astonishing, and would seem almost incredible to those unacquainted with the matter, how small a thing suffices with so many parents to keep their children away from school. Perhaps the teacher has been too strict, or not strict enough; he may have set them too many lessons, or none at all; there may be a show, a fair, a funeral, or a meet of the hounds; it may be a wet day, or threatening for one; anything, no matter how trifling or absurd, will do as an excuse for not going to school. In fact, such children as these go or stay away almost as they please, here one day, and away the next two; thus their attendance is frittered away. How, then, can we make any abiding impression on them? How can we teach them anything? As fast as we pour in at school, it leaks away out of school. Thus they become a continual source of irritation and annoyance to the teacher in his endeavours to keep them on a par with those who are rarely absent, and leave school with a mere smattering of instruction, which, after a few months, is utterly lost. Nor should I omit to mention here the pernicious influence which the drunken habits of many parents exercise upon the attendance of their children. Week after week we have scholars absent for no other reason than that their parents, having spent their wages in drunkenness, have no means of furnishing the necessary school fees, and this, in the case of some earning from 20*s.* to 30*s.* per week. Many more would be absent for this reason, were it not that private benevolence furnishes the means for that education which the drink-caused poverty of their parents would otherwise prevent them from obtaining.

III. The Remedy suggested.

I have no hope of amendment but in some form of compulsory attendance, *direct* compulsion in the case of those neither at work nor at school, and *indirect* in dealing with those who are out at work. There are many forms of indirect compulsion, but the most efficient, in my estimation, would be not to allow any child to be sent out to work under 10 years of age, and not then unless the parents can produce a certificate from a properly qualified officer of the child's ability to pass the fourth standard. This plan would have the double advantage of giving the instruction of the schoolroom a direct money value in the estimation of the parents, whilst it would effectually secure the co-operation of their employers by making a certain amount of instruction the passport to employment.

Geo. S. Barker,
National School, Evesham.

Great Witley.

54. *Miss Greatwood*, certificated schoolmistress.—About half the children who attend the school are the children of labourers, the remainder are the sons of tradesmen and of Lord Dudley's servants. As a general rule the children of agricultural labourers remain at school until they reach the second class; they would then be working in the third standard. They leave at about the age of 10. The school fees range from 1*d.* to 6*d.* a week, according to the condition of the parents. The attendance is very irregular, chiefly in spring and autumn. The girls are more regular than the boys, and don't leave at so young an age.

Martley.

55. *Michael Coleman*, certificated master of the boys' school.—I have been here three years. The labourers' sons remain at school until the age of 10 or 11, and some up to 12. They are absent chiefly in March and April for tenting birds and helping their parents in their gardens; and in May for cowslip picking (but the girls are more employed at that than the boys). From June to August some of the bigger boys are kept away to do odd jobs on the farm. In September and October they are employed in hop and fruit picking. The school is fullest from November to March inclusive. The irregularity of attendance usually commences when boys are about 9 years old.

Hagley.

56. *Mr. W. Stephens*, schoolmaster.—I have been master here for 24 years. This is a mixed school. There are 56 boys on the books and 18 girls. Last week the average in attendance was 47 boys and 17 girls. About a quarter of the boys come from other parishes, but only one of the girls. Nearly half belong to the agricultural labouring class. The poorest class pay 3*d.* a week; the artizans and small tradesmen pay 4*d.* each; small farmers, 5*s.* a quarter, and large farmers 7*s.* 6*d.* No deduction is made if more than one in a family attends. Many of the poorest are helped by the gentry. The school is inspected by Government, but is not quite self-supporting. Before the introduction of the Revised Code we allowed the scholars over 12 years old to be absent on any alternate days or weeks, or during the busy times of the year, according to their convenience, but such absences were not to exceed half the time the school was open.

That plan worked very well. Lord Lyttelton used to give them a capitation prize (worth 3*s.* to 2*s.*, but not given in money). We have had to give up that plan on account of the introduction of the Revised Code. There are 10 small allotment gardens attached to the school, 100 square yards each. They are given to 10 of the boys as a reward for good conduct. They cultivate them out of school hours. Lord Lyttelton finds manure and lends tools. The land is rent-free, and the boys have the produce of the gardens themselves. On an average they make 6*s.* or 7*s.* a year profits. There is also a carpenter's shop. A carpenter comes to give instruction on two afternoons in the week. About 16 of the elder boys take that up. They are divided into sets of four each, and each set has one lesson per fortnight. The rector pays the carpenter and provides tools. There are a few (perhaps six) children who don't come to school at all. That is owing to the indifference of the parents. Some come to school three miles; they are quite as regular as those who live nearer. Labourers' sons, as a general rule, stay up to the age of 11 or 12. They go away a little before that, usually to plant potatoes in the spring, but not for long enough time to interfere much with their school work. The old half-time system enabled us to keep the boys longer than we have been able to do since. The school was open last year 464 times, and on an average each boy attended 438. There is an infant school here; they come here from that school at the age of 7. I think that a boy could read, write, and cipher a little with ease by the age of 10 if he attended school regularly. Eight boys passed the fourth standard last year; they were aged from 11 to 13. But we are in the habit of keeping them back in order that they may be sure of passing a standard every year. A good many of the labourers' sons are diverted from farm work in consequence of the good education they receive here; but there is nothing in the system of agricultural labour in the neighbourhood which interferes with the education of boys. I think it is very desirable that some system of the Factory Acts should be applied to agricultural children. I should prefer the plan which requires a certificate of proficiency, and should be glad to be able to put the screw on sometimes.

I have had a night school here for many years. I find that those who have had a good education at day school make considerable progress at the night; but those who have not learnt much before cannot get on well at the night school.

Littleton.

57. *Miss E. J. Wilson*, schoolmistress.—The attendance here is very irregular, both among boys and girls; the girls are as irregular as the boys, but the boys leave finally before the girls. They sometimes go away for a year or two, and then come back. The irregularity commences from about the age of 8. The children go away scarcely at all for currant and gooseberry picking, but are employed a little for pea and apple picking, planting and sorting potatoes, and frequently on their parents' allotments.

I think that all the children who attend regularly up to the age of 10 can be taught to read and write well. Very few of those now growing up cannot write, but there are many who read imperfectly. They could certainly learn the first four rules of arithmetic simply and in money by the age of 10, if they attended regularly. There are scarcely any so dull that they could not do this. It is desirable that they should begin to attend school at the age of 4.

Madresfield.

58. *Thomas Gowland*, schoolmaster.—I have been here nearly a year and a half. All the boys here are the sons of agricultural labourers, except one, whose father is a sawyer. The average age of the first class is 12. Only one of the first class has left the school since I have been here, and two or three of the second class.

The attendance is regular. That may be in part due to the fact that Mr. Munn [the clergyman] has a clothing club for the school children, of which they lose the advantage if their attendance is irregular.

The school is most empty just after the holidays.

Worcestershire.

Mr. Norman.

B. i.

Worcester.

59. St. Martin's School, Worcester,
23rd June 1869.

Dear Sir,

I beg to forward you a report embodying the opinions of members of the Worcestershire Church School Teacher's Association on the subject of agricultural education in Worcestershire. This subject was discussed at a meeting held in St. Martin's School, Worcester, on Saturday, May 29th 1869.

I beg to remain, dear sir,
Your obedient servant,
F. H. Norman, Esq., John Pember.

Agricultural Education in Worcestershire.

Age at which children of labourers leave school.

The children of agricultural labourers in Worcestershire leave school on an average about the age of 10.

Amount of proficiency usually acquired by such children.

At the time of leaving scarcely any in aided schools have passed the fourth standard of the Revised Code, or, if in unaided schools, are able to do so. The majority are about equal to passing in the second standard. The amount of knowledge they possess is practically valueless. It is not sufficient to induce in them a desire for more knowledge, and the result is that such children relapse into almost total ignorance. As a proof that the majority of scholars leave at an early age, possessing but limited knowledge, the Rev. W. Lea, Diocesan inspector, stated at the meeting that in the archdeaconry of Worcester there were (only lately) 26 schools in which not a single child had reached the fourth standard, and there were a great many country schools in which not above two or three children were equal to passing in it.

Obstacles to Education.

1. Want of schools.

A want of schools is not an obstacle of much importance. With very few exceptions, perhaps seven or eight, every parish in Worcestershire has a school of some sort.

Although the number of schools is nearly sufficient yet they are often disadvantageously placed. In some cases two inefficient schools have been built near together, and where obviously one efficient school would be more serviceable and more economical.

2. Inefficient instruction.

An obstacle of more importance is the number of inefficient schools. These are generally unaided schools of which there are about 80 or 90 in the archdeaconry. The diocesan inspector says that of this number only about 10 are equal to an average school taught by a certificated teacher.

3. Poverty of parents.

The poverty of parents is another obstacle. The wages of labourers in this county is about 10*s.* per week, yet out of this small wage many poor parents are regular in their payments; in other cases kind friends assist. Many, however, with families are obliged out of sheer necessity to withdraw their children from school at an early age for the sake of their earnings.

4. Indifference of parents.

Some parents, uneducated themselves, care little for the education of their children. In what are called "open" parishes, where cottages may be had by anyone, this indifference is greatest.

5. Pressure of employers.

The obstacle perhaps of the greatest importance is that of the pressure of employers. Employers find it their interest to employ children to whom they give only a small remuneration. In many cases farmers will not employ labourers unless they can also have the services of the men's children.

Remedies suggested.

Compulsory attendance not practicable.

A compulsory law requiring parents to send their children to school regularly till a certain age would remove some of these obstacles, but it would be very oppressive in the case of under-paid labourers with large families and would raise a most formidable opposition amongst farmers and others. Under present

Worcestershire.

Mr. Norman.

B. i.

Indirect compulsory measures recommended.

circumstances it would probably be best to introduce indirect compulsory measures. Some of these, viz., the half-day system, the alternate day system, and the Printworks Act, have already been in operation in manufacturing districts. The half-day system would be inconvenient where the school is at a long distance from the field or farm where the child is at work. School and work on alternate days would be preferable, but this method would be inconvenient in busy seasons of the year and would be unnecessary in slack times. The principle of the Print-works Act might be applied with more advantage. Under this Act instruction must be given for 150 hours every six months. Such a system with its long breaks between one period of school instruction and another would, however, be valueless in the case of ignorant children. The requirements of the Act would be satisfied if six weeks instruction were given at the beginning of the year and six weeks at the end. During this long break an ignorant child would loose the knowledge he had acquired. Additional measures are therefore needed.

No remedy can be suggested which will meet every difficulty, but the best seems to be the combination of a proficiency and age test.

No child, under any circumstances, should be allowed to work under the age of 10, and not even at that age unless it could pass the fourth standard of the Revised Code. A child who can only pass in Standard II. or III. will soon loose the power of reading if withdrawn from school. Its thirst for knowledge will not be sufficient to lead it to try to read books for information, and the knowledge of only the simple rules of arithmetic will soon pass away from their unattractive nature. After passing the fourth standard a child will be very likely to read any book that comes within its reach, and the power of solving questions in money rules will not readily pass away.

Between the ages of 10 and 13 a child should not be allowed to work unless it can produce a certificate of having passed Standard IV. It should not be allowed to work full time but be required to attend school for so many hours in the week or in the year. The former plan would protect the child from being overtasked, the latter would probably be most convenient to the farmers, since there are certain periods of the year when child labour can well be spared.

After the age of 13 both dull children and proficient ones should be allowed to work full time. It would be an advantage to them, however, if instruction could still be provided for them in properly taught night schools. If pressure were put upon young people to attend them, and if at the same time larger money grants were given for their support, night schools would be far more numerous and flourishing than at present.

This plan does not directly interfere with a parents liberty in keeping his children at home if he likes, but it appeals to his self-interest; it makes him feel that the sooner he can get his child sufficiently instructed the sooner he may reap the benefit of the child's wages; it protects the child from having its strength tried too early; is a barrier against the pressure of employers, and ensures a certain amount of knowledge which can easily be improved under favourable circumstances and under unfavourable circumstances will not readily be lost.

APPENDIX. C.—MEDICAL EVIDENCE.

HEREFORDSHIRE.

Herefordshire.

C.

1. *Mr. Lingen*, surgeon, Hereford.—I am now consulting surgeon to the Hereford infirmary, and for nearly 30 years was surgeon to that institution. I do not think that in these districts women are injured by the agricultural labour they ordinarily perform. Some years ago women occasionally met with serious accidents when employed with thrashing machines, then generally fixed in barns, but those accidents are not as frequent as they used to be, and women rarely assist with such outdoor machines as are now in use. I consider that boys ought not to be put to field work before they are 11 years old, and I don't think it is common here to send them out under that age. A considerable number of boys also have met with grave accidents in various parts of the county which are brought to this infirmary. In many cases their hands have been mutilated by machinery, such as thrashing machines and straw or "turnip cutters." Horse accidents are not of great frequency, and accidents caused by boys being sent with fire-arms to scare birds are of rare occurrence.

I consider good average cider a wholesome drink, which I believe is attested by the known longevity of our labouring men, most of whom drink largely of cider, and not a few of them drink to excess. It is said by long continued usage to cause rheumatism, but I am not of that opinion; there is a good deal of rheumatism among agricultural labourers, especially in this county (perhaps in excess of some others), but to an extent far less than formerly, when this district was very thickly wooded, and being for the most part a clay soil was then very damp.

Much wood has, during the last 50 years, been cut down; this country too has been surface drained to a very great extent, and rheumatism has diminished in consequence. Cider it is true, or rather lead in cider, is often the cause of grave attacks of colic and its consequences; this results from lead taken up by the cider, either when the mill has been repaired with metallic lead, or when old casks have been extensively repaired with sedge and white lead, or when lead pipes instead of zinc have been used to convey cider to the taps in public houses, especially when the cider is suffered to remain long in the pipes. Lead is taken up more readily by cider than by other beverages on account of any excess of acid it may contain. Lead in cider affects different people in very different degrees, for instance, six men will drink from the same faulty cask in similar quantities, and two or three only may suffer, and suffer severely. Not a summer or autumn but cases of this kind occur, which, though rarely fatal, produce after consequences of a paralytic kind, affecting chiefly the wrists and hands, which are long in recovering.

The cottage accommodation in this neighbourhood, with few exceptions, is utterly inadequate to provide for the health, decency, and morals, of the inmates; the cottages are wanting not only in space and ventilation, but the apartments are too few for the family, and the partitions are inadequate. Deficient drainage is not so serious an evil in the country as in the towns; there is reckless neglect in this particular, and many instances have come under my notice of fevers having been initiated and diffused by badly drained premises with accumulation of refuse and filth about the cottages. The farmhouses too are often unavoidably unhealthy in consequence of the close proximity to the farmyards, where large quantities of decayed and decaying organic matters are ceaselessly evolving emanations insiduously but surely injurious to the family. I consider this a widespread and very powerful evil, and that it accounts for the remarkable fact, well known to the Registrar-General, that the well-fed families of farmers exhibit a low standard of health. As to the occupations of women, mostly married women, in this county in hop-tying,

hop-picking, and apple and potato picking, I believe these to be almost indispensable services,* and none of them are injurious to health, though the herding and crowding of one class,—namely of hop-pickers of both sexes brought together from remote districts, in barns and outhouses,—cannot fail to become a serious source of mischief, moral and hygienic, and one worthy the attention of those in authority, who should enforce arrangements for such accommodation by night as should effectually lessen the evils of overcrowding. A few farmers I know will not employ women on Saturdays, in order that they may on that day do their own marketing and clean up their houses, &c. for Sundays.

2. Extract from a Letter from Mr. Linden. Herefordshire. Mr. Norman. C. i.

"Dear Sir,

"There is very strong reason for believing that cider is to a certain extent protective against calculus in the bladder.

"The cases of stone that have occurred in this infirmary since its erection are very few indeed, half a dozen at the most, and two of those in children who did not drink cider. I think I gave you my opinion of cider, that if a man must habitually get drunk, it had better be with cider. Norfolk is the county for stone."

SURREY.

Surrey.

Carsharlton.

3. *Mr. W. E. Creasy.*—I have been medical officer to the Epsom union for 14 years. There are no peculiar complaints among the poor in this district. About one-sixth of the women work in the fields; they work all the year; about half of them are Irish who have settled here. They are chiefly employed in weeding and picking stones and potatoes; they do no hard work, and none which is injurious to their health. This is not a purely agricultural district; many men are employed in gardens and stables, and many work in the physic gardens. That is all light work; those boys who go to work go at about the age of 12. Cottages are totally insufficient in number, and the ventilation and drainage are very bad. There was no nuisance inspector until about three months ago. The drinking water is poisoned by soaking cesspools in every direction; we are now going through an epidemic of fever and diarrhœa caused by bad water; we have magnificent springs in every direction, but they are poisoned, and we have to get our water supply from the next parish (Sutton); more than 100 families have drunk water at the mill-head, and have all had diarrhœa. The late medical man said that fever was never known here, but then the population was smaller than at present, and all the new houses are drained by cesspools which allow the contents to escape. We want a compulsory system of drainage. Cottage rent is about 4*s.* a week; agricultural labourers' wages 15*s.*; gardeners, 1*s.* 1*d.*, and for those who work in the medical gardens about 18*s.* The chief evil existing here is the habit of drinking and smoking, which prevails among the young.

Farnham.

4. *Mr. E. Y. Knowles,* surgeon.—I have practised here for 30 years. The hop-picking is decidedly a healthy occupation both for women and children. There are different opinions as to the effect of the drying upon the men employed in the kilns; many who suffer from rheumatism select that occupation. I think that the warmth and sulphur have a good effect upon them; overcrowding and want of accommodation in the sheds in which they live are the only causes which have a bad effect upon the health of the pickers; fevers sometimes break out here in consequence, or the pickers catch fevers here, which do not show themselves until after they have returned home at the conclusion of the picking. The gipsies are pretty healthy, but the tramps who only occasionally camp out get ill. This year the pickers are suffering from diarrhœa more than from any other complaint. Formerly the growers were more particular about the accommodation they provided for their pickers. There were two spare rooms at the tops of the cottages; the men slept in one, and the women in the other; the women were locked in at night. Formerly the class of persons who came out hop-picking were more respectable than those who now come; the respectable people will not now come out because the accommodation is insufficient, and they are unwilling to associate with the low class of persons who now come out. Many of the sheds in which the pickers sleep are used for common farm purposes, such as storing guano, during the year; they may be thrown open for a few weeks before the pickers arrive, but are often imperfectly purified. Another source of evil is the want of a sufficient supply of clean straw; the straw should be changed every fortnight; but a sufficient supply cannot be obtained, and if the season only lasts about three weeks it is thought unnecessary to change the straw. There is no washing accommodation; many don't wash during all the time they are here. About 5,000 strangers come into the town and neighbourhood at the season. The principal danger arises from the propagation of disease owing to overcrowding; but the evil results I should expect from this are lessened by the healthiness of the employment. There is no privy accommodation, but no harm arises from the want of it. The pickers live chiefly on tea, herrings, and potatoes; they do not drink much except in wet weather when they have nothing else to do. Wet weather increases the unhealthiness of the employment greatly, because the pickers have no changes of clothes, and have no means of drying their clothes when they get wet, besides which the damp rots the straw of which the beds are composed. The infants who come with their mothers do not suffer if the weather is fine.

Guildford.

5. *Mr. R. Eager,* surgeon.—I have practised here above 40 years, and have been medical officer to the workhouse above 20 years. I am one of the medical officers at the hospital, which was established above two years ago. My family have farmed their own land in the neighbourhood of Guildford for several generations. The boys are not at all unhealthy. The diseases which occur most frequently among the agricultural poor are, (1), strumous diseases of the bones and glands; these are indigenous, and out of door employment is beneficial for them. (2), rheumatism, which however does not attack young children, and when occurring late in life is not attributable to early labour. (3), consumption is very frequent, but is not at all confined to the agricultural population. The accidents, which most frequently occur are caused by machinery, which has been gradually much increased for farm purposes during the last 20 years, and many accidents to farm labourers are caused by men sitting upon the shafts of carts and waggons when in motion, and then jumping off, are run over, and crushed by the wheels of these vehicles.

Many of the cottages are very old and the windows and doors don't fit, but the newly built ones are good and substantially built. Those built by the labourers themselves on the waste are usually very bad. They

* I have used the word "indispensable," for the men are not only not to be spared at the time for such purposes, but are far less fitted for them. I refer especially to tying and picking hops.

Surrey.
Mr. Norman.
C. i.

all have good gardens; the ventilation is usually good, but the drainage is always infamous; there are usually no facilities for getting rid of the refuse of the house; it is generally thrown into a ditch close to the cottage where it stagnates. Numerous cases of fever have come to my knowledge, which I attribute entirely to imperfect drainage. I don't think the cottages are much overcrowded; I have not met with cases of illness which I can attribute to that cause. The old cottages are usually commodious.

Evidence substantially similar to the above has been received from Mr. C. R. Thompson, of Westerham, and Dr. Kough, of Bagshot, and Mr. A. Napper, Cranleigh.

WARWICKSHIRE.

Warwickshire.

Knowle.

6. *Mr. J. H. Kimbell*, surgeon.—I have practised at Knowle for 27 years, and have been parish officer for 20 years. Women go out to work very little; only about six in my parish go out. Neither women or children suffer from the out-of-door work. Boys very seldom meet with accidents, although it is a wonder that they don't, when one observes how young they are when they go out in charge of horses and carts. The only evil is the cottages. The supply is quite insufficient; almost all the illegitimacy is due to crowded cottages. The drainage, &c. is abominable; I know about a dozen cottages at Balsal where the people don't use the privies. We have outbreaks of fever which we can trace entirely to nuisances. If they have good cottages they take in lodgers and reduce them to the condition of the worst unless they are strictly supervised. The number of public houses is also a great evil; they sell unwholesome and adulterated beer.

Warwick.

7. *Mr. T. W. Bullock.*—I have been medical officer to the Warwick district of the Union of Warwick during the last six years. My district comprises seven agricultural parishes. I have not observed that the women who work in the fields suffer or are subject to any diseases which can be attributed to the field work. I have several times observed that the children suffer when their mothers go out to work. I have known at least eight cases in which children left at home have been burnt or scalded; three or four of these have resulted in death. I have occasionally known an opiate in the shape of Godfrey's Cordial or Daffy's Elixir given by the mother to the children to keep them quiet. I think boys go out to work at too early an age; they don't get sufficient education; and their health suffers. I have noticed occasionally that boys who are sent to work early frequently are laid up with rheumatism, which in the case of young boys has a greater tendency to affect the heart, and produce an incurable disease, than in the case of older children. I think that boys should not go out to work before the age of 11 or 12. I have had to attend cases where boys have met with accidents from horses and machinery, but these cases are not very frequent.

I don't think that the cottage accommodation is insufficient. About two years ago some cases of fever and diphtheria arose from bad drainage at Wasperton, Barford, Beausale, and Rowington, but the guardians have taken the matter up, and the drainage has been improved.

WILTSHIRE.

Wiltshire.

Amesbury.

8. *Mr. C. Pyle*, surgeon.—I have practised here 33 years. I find that the young women who work in the fields suffer from erysipelas in the legs; they now wear gaiters, which are not, however, a sufficient protection. The disease does not attack strong men, and usually only girls between the ages of 15 and 20. The general health in this neighbourhood is good, the most frequent diseases are inflammatory rheumatism, phthisis, and bronchitis (more particularly among children). I think that the development of boys is retarded by field work, but this is partly caused by wearing bad boots. The girls who are left at home to take care of the children are often awry from carrying too heavy children; but this evil is now being remedied by perambulators. I don't find that the children suffer much by their mothers going to work.

The morals are very lax and are worse among field workers than among any other class. The field workers are certainly the lowest class. I do not find that a great number of accidents are caused by the use of machinery. The old cottages are very bad. The ventilation is obtained by the door only; the windows often don't open, and the accommodation is generally insufficient. I knew of one instance were 14 persons slept in one room. All the new cottages built upon the downs are *perfect*.

Salisbury.

9. *Mr. W. M. Coates*, surgeon.—I have practised here upwards of 30 years; and for 20 years I have been connected with the infirmary, which is the principal hospital in the county, and which receives patients from all parts of this and the adjoining counties. My impression is that field work is not physically injurious to either women or girls; I see no harm in girls going to work at the age of 15 or 16; but morally and mentally the field work is very injurious to females; they associate with men and with women of loose conversation and become demoralized. Judging from my experience in the infirmary, I have no reason to believe that the early labour is the cause of physical injury to boys. I have examined all the military and naval recruits who have been enlisted in this district during the last 25 years; I examined more than 200 last year; those who are enlisted from among the agricultural class here are particularly fine men; in fact, I am told that some of the finest men who are enlisted in the army are taken from the agricultural classes in this neighbourhood. I do not think that the early work in the fields prevents the frame being fully developed. The most frequent diseases in this neighbourhood are rheumatism, consumption, and struma; and I have certainly noticed that, since the abolition of the Corn Laws, the scrofulous diseases have considerably diminished in consequence of the people being better fed. We have many accidents arising from the use of machinery for agricultural purposes, and some of the most serious arise from the care of horses being entrusted to small boys. The accidents from the old horse machines were more frequent than those caused by the steam machines; I think that was because since the use of steam greater care has been taken, and more intelligent superintendents employed. Notwithstanding my opinion that no injury to health arises from ordinary work in the fields to young people, it is my decided opinion that, considering the serious accidents to boys from their inability to control cart horses, and the demoralizing effect of want of education, and bad association, young boys and young girls should not be employed in the fields. I would limit the age in the case of boys to 15, and I think that the field labour must always be demoralizing to girls of any age. This can

only be remedied by better education and training. I think that the diseases from which the agricultural labourer suffer are chiefly caused by insufficient food and clothing, *i.e.*, by poverty.

10. *Dr. Roberts.*—I have been practising here 14 years, and have been physician to the infirmary during the whole of that time. According to my experience women are not physically injured by the labour they perform in the fields; as a class I consider that the women who work in the fields are healthier than other classes; they are not subject to any special diseases. I have no recollection of any diseases that I can attribute to field work among women; I think however that women who work in the fields have more illegitimate children than women of any other class, and that, with the exception of professional prostitutes, they are the lowest class of the population. I think that if the employment in the fields gave rise to any special class of deseases I must of necessity have known it.

I have noticed a number of cases of heart desease arising from rheumatism among the boys who go out to work at an early age; the girls are not subject to the same complaints, I suppose because they do not go out as much in all weathers as the boys. It is a rare thing for the infirmary to be without some cases of boys between the ages of from 10 to 15 who are suffering from heart diseases so caused. They are incurable. I think that the insufficient cottage accommodation does not affect the agricultural labourers to a very serious extent, because they pass so much of their time in the open air.

SWINDON.

11. *Mr. John Gay*, surgeon.—I have practised here 25 years, and am medical officer to the union. The women who work in the fields in this neighbourhood are benefited by it; they do not work hard, and there is no work in which they are engaged which is injurious to them. The work has no bad effect upon boys, unless they go to work at too early an age, and are constitutionally weak; they are not injured by working too long hours or by too hard work. Perhaps in large families the children have not sufficient sustenance, otherwise they are quite well. The cottage accommodation is generally fair, but in every parish bad specimens may be found; the evil arises from an insufficient supply of bedrooms, whereby diseases are continued and spread. The drainage and water supply are fairly good. Machines are greatly used in agriculture, and women are employed with them. The most injurious machine is the thrashing machine; that is injurious to all who have weak lungs on account of the dust. The accidents are not sufficiently numerous to furnish a real ground of complaint.

WORCESTERSHIRE.

ALVECHURCH.

12. *Mr. Gaunt*, surgeon, practised here 28 years; medical officer to the Bromsgrove and King's Norton unions.—I don't think that the work done by women in the fields in this neighbourhood is physically injurious to them. The field work has a tendency to destroy that delicacy which ought to exist among women, more especially in the case of young women at hay time. There can be no doubt that the homes of the field workers are far less comfortable than those of others. The beds are never made nor the excretions removed until the return of the women in the evening. The children suffer when left in charge of one of the elder members of the family, as is usually done here. I think that the work with the thrashing machine is the work least suitable for women.

According to my experience boys go out to work at 9 or 10 years of age; there is nothing in the work which does them harm; but they earn only 4*d.* to 6*d.* a day, and have nothing but bread to eat, which is not enough to keep them in health. The accidents which occasionally arise (such as loss of fingers from chaff-cutting machines) are usually due to the carelessness of the boys. Heart disease is not common among children in this district.

The health of the agricultural population is decidedly better than that of either the nailers or needle makers.

The ordinary agricultural wages here are 10*s.* to 12*s.* a week, sometimes with and sometimes without beer. The extra work which is done in hay time and harvest is usually done by nailers and Irish. I think that on an average the labourers' wages would amount to 12*s.* a week throughout the year including everything. The cottages here are decidedly bad. As a rule there are only two bedrooms to a cottage. They are far too much crowded; much immorality arises from this cause. As a rule there is no drainage or ventilation. About five years ago typhus fever broke out in a row of five cottages, where there was only one privy to accommodate 36 persons; the drain from this was stopped up, and impregnated the drinking water. I have often been able to trace illness to bad cottage accommodation.

UPTON-ON-SEVERN.

13. *Mr. C. Braddon*, surgeon.—I have practised here 27 years. The women go to work in the fields a good deal about here; but I don't think the work done by them is injurious to the health; the women like the work themselves. I don't think that the field workers are more immoral than others, and I have noticed over and over again to my surprise that the cottages of the field workers are more tidy and comfortable than those of the women who don't work in the field; the reason I believe to be that they are better off. They never do heavy work here.

I have seen boys employed at scaring as young as 7. I think it a bad thing for them to be employed at so early an age; I think it stunts their growth; they are frequently exposed to attacks of bronchitis; I don't think they ought to go to any field work under 10 years of age, either on physical or intellectual grounds. It is a fact that rheumatism is more frequently accompanied by heart affections when it attacks young persons than when it attacks old.

Nine-tenths of the cottages are abominable, they are overcrowded, damp, and not air-tight. They are defective in drainage, but drainage is not so necessary in the open country as in towns, because people live so much less in their houses; and in the country many cottages are rarely accumulated together.

The men here drink any quantity of cider. There is a great deal of chronic rheumatism here which I attribute to the cider; but all the men deny that. The longevity is quite as great as in places where no cider is drunk, and disease is not more rife here than elsewhere, with the exception of rheumatism. Cider is not necessarily an unwholesome drink. I have often had to order cider to invalids in preference to beer or wine, because beer and wine is either unwholesome or distasteful to persons accustomed to cider.

Evidence substantially similar to the above has also been received from H. D. Carden, Esq., of Worcester, and Dr. Davies, of Pershore.

Herefordshire.
Mr. Norman.
D.
i.

APPENDIX D.—EVIDENCE OF LABOURING MEN, THEIR WIVES, CHILDREN, &c.

HEREFORDSHIRE.

BRINSOP.

1. *Richard Lawrence*, labourer.—The wages of common day labourers here vary from 10*s.* to 12*s.* a week, according to the ability of the man, besides drink. In harvest time they usually get 1*l.* extra. No food is given in harvest if the 1*l.* is allowed. Only a few men get mowing and hedging set them; and there are no regular privileges. Most of the farmers allow their men to plant potatoes at 1*d.* a score [*i.e.* a row of 20 yards] less than they will let their land to anybody else. A shepherd or waggoner gets 1*s.* or 1*s.* 6*d.* a week more than common men. Boys are useful for minding pigs, &c. at the age of 10 or 11, but they cannot get a "place" before they are 13 or 14. Some of the women who live in the farmers' cottages and work for their landlords only receive 6*d.* a day.

DORSTONE.

2. *Mrs. Wood*, labourer's wife.—I have had 10 children. I have always been to work as much as I could. I used to take my children out from about the age of 9, when I went to pick stones, and occasionally when I went to clean roots; they carried the roots to me to clean. They are no use for other purposes when very young. They can get places from about the age of 10 to 13, but boys younger than girls; boys can go out scaring from the age of 7.

Surrey.

SURREY.

ALFOLD.

3. *Mrs. Matthews.*—My husband is a labourer; he earns 12*s.* a week. I have nine children (four boys aged 21, 13, 8, and 6). My boys went out to work, I think, before they were 9; the eldest had 1*s.* 6*d.* a week when he first went to work. He went "cleaving" [*i.e.*, splitting wood] with his uncle. Boys do not usually go to wood work as young as that, although I think they do to farm work; the money they earned would not keep them when at work. I think 9 is quite young enough for boys to go to work. Wood work is said to pay better than farm work. My boys were generally healthy, although they had colds occasionally. The rent of my cottage is 6*l.* [old, but roomy and comfortable, two rooms and scullery downstairs.—F. H. N.]

BYFLEET.

4. *William Muggleton*, gardener to Mr. Spicer.—Boys go to work in the fields about the age of 10; girls do no work until they go to service. Boys earn about 4*s.* a week at first. The rent of cottages is 3*s.* a week for a cottage with two bedrooms and one sitting-room, usually all on the ground floor. I don't think the children's earnings are of much value to their parents until they are 12 or 13, although many parents send them very young to work. I don't think women save much by working in the fields, there is so much waste at home. I had six children; none of them went to work until they were 13 or 14. I think they can learn their business as labourers well enough if they go out to work at that age.

FARLEY.

5. *Joseph Gattland.*—I am half past 6 years old. I look after the sheep; I have not been at it a week; I have done it once before; I shall go to school again as soon as the holidays are over. I earn 1*s.* a week. I come to work at 9 and go home at 6. My mother does not work in the fields.

[This boy was minding a flock of sheep in a stubble field when I saw him, August 15th.—F. H. N.]

FARNHAM.

6. *Mary Ann Hackman*, aged 16.—My father is a labourer, and has 10 children; I am the fifth. My mother goes out haymaking, hop-picking, tying, and washing, and she does other work when she is well enough, but she has bad legs now. I have one brother aged 20, and another aged 12; he earns 3*s.* a week; he has been at work 1½ years; he minds the cows; he went to school before he went to work. He used to go away from school occasionally for a week or two to mind a horse; he got 1*s.* a week for that; he usually only stayed out from 9 to 3. I went to work at turnip trimming last year; three of us went together; we got 9*d.* a day, and worked from 8 to 5. It was about November. It took half an hour to walk to work. We all go out to help hop-tying. We can all read a little. Father and mother are scholars and want to have us taught. When we are all at work it costs 4*s.* or 5*s.* a week more to provide for us than when we are not at work; I heard my mother say so. The rent of this cottage is 2*s.* All my brothers and sisters are at home.

[The cottage in which this family of father, mother, and 10 children lived was a very small one. The whole of the family slept in one room, which was divided by a wooden screen, the screen however was not carried quite across the room. There was only one window to supply light and air to the whole room on both sides of the screen. Said to be a very respectable family.—F. H. N.]

7. *James Bryant.*—I am a labourer; have a wife and 10 children; the eldest is 14. The five eldest are daughters (two of whom are out in service), and the five younger are sons. My daughters never went to work in the fields except in hop-picking. My eldest son is 7. There are some boys about here who go to work at 10, but that is young. A strong boy would be fit to go to work at 12, but I don't think he should go before. I think it stops their growth if they go to work before the age of 12. Several women work in the fields. I think they had better be at home looking after their children to keep the place tidy and clean. Four of my children go to school; they begin to go to school at about 3; we pay 2*d.* for one, 3*d.* for two, and 4*d.* for four or more. Most children go to school. I know a few who do not. I never went to school for a day myself. A boy might go out scaring or weeding a little before he is 12, but not for any other work. I live 2½ miles from here, and work from 7 to 5 summer and winter. I am absent from home from 6 to 6. I pay 5*l.* a year for my cottage and garden of 30 poles. I also have about half an acre of land with my father, for which we pay at the rate of 25*s.* a year. We grow corn and potatoes. My wife comes out hopping, and brings all the children out; it takes almost all the time of the elder children to look after the younger. A child can pick a few hops at the age of 5. My wife and family earn about 15*s.* a week for three weeks. My wife goes out tying in May for a month, and earns 10*s.* a week at that. She does not go to work in harvest Our hops are cultivated by the piece, and are not let by the acre. My wages are 15*s.* a week, and I don't do much task work. My children who have been at school can read and write; they have to go 1½ miles to school; they read to me sometimes.

8. *George Bryant*, aged 15.—I have been at work three years. I never went out to work at all before three years ago. I have been to night school during the last three winters. Very few boys go to the night school. I have one brother and three sisters. There are three bedrooms in our cottage.

[Read a little. I was told that this boy and the last were very favourable specimens in point of education. They both gave their answers well, but this boy was quite unable to read a second standard reading book fluently.—F. H. N.]

SANDERSTEAD.

9. *Mrs. Hook.*—My husband is head carter. I have three boys at work; they none of them went out to work before the age of 10; they none of them earned less than 6*d.* a day when they first went out. When they go bird-minding they start before 6 a.m., and go out on Sunday. I don't like bird-minding, the boys are so exposed to the weather. Boys are not fit to go out with the horses before the age of 13 or 14; at that age they earn about 4*s.* 6*d.* a week. Carter boys go out about 4.30 a.m. and return home at 6 p.m. When a man is constantly employed by a farmer the farmer will often find regular employment for his sons under the age of 13, otherwise boys under the age of 13 are usually only employed about six months a year. Most of the boys about here are pretty good scholars; I don't think they can learn enough by remaining at school up to the age of 10 only, *i.e.*, if they do not attend at all afterwards. It never answers for a woman to go out to work; if you earn 1*s.* you lose 1*s.* 6*d.* I used to go to work, and then had to sit up at nights to wash. I think it would be very fair to pass a law to make children attend school; when they grow up they lose many a good place for want of education. It does not pay to send children to work until they can earn 6*d.* a day.

THORPE.

10. *G. Taylor*, labourer.—Men's wages about here are 13*s.* in winter, sometimes 12*s.* They have never varied much within my recollection. Boys are as useful for farm work when they have not been educated as when they have. Carters and shepherds have 15*s.* It does not pay to keep a sow except for manure. You can have two litters of pigs a year; usually about 10 in each; the young pigs fetch 10*s.* when about seven weeks old. It would cost 2*l.* 10*s.* to keep the sow during the seven weeks the young are with her, and about 6*d.* a week at other times.

[If she has two litters a year the cost of keeping the sow would be 5*l.* during the 14 weeks the young were with her, and 19*s.* during the remaining 38 weeks of the year. Say 6*l.* for food per annum; two litters of 10 each at 10*s.* = 10*l.*, showing a profit of 4*l.* if they live and do well, but this is a great chance.—F. H. N.]

WONERSH.

11. *Mrs. Canning.*—My husband is a labourer. I have had 12 children, 10 are alive, and six of them at home. There are only two rooms in my cottage, one bedroom and one sitting-room; good garden; rent, 2*s.* a week. All my boys went to work at the age of 7 or 8; they earned 1*s.* a week at first, and then 1*s.* 6*d.* Some of them have been at school a little, but not much; the school is so far off that it is difficult for them to go regularly. Most boys go to work at the age of 10 or 11, but my family is so large that I could not keep them at home up to that age. We get our supply of fuel from turf which we cut off the common.

[This was one of several cottages all of the same character on a common. They were at a long distance, nearly two miles, from the village, and consequently neglected.—F. H. N.]

WORPLESDON.

12. *Mrs. Bullock*, labourer's wife.—I have lived here two years; I lived in Norfolk before that. I think women work in the fields as much here as in Norfolk. I went to work in March "couching," and have been at work pretty regularly since, when the weather permits. There are three rooms to my cottage, and the rent is 2*s.* 6*d.* a week. There have generally been two more women at work with me when I have been at work; I don't often go to work between October and March. I had a better cottage in Norfolk than I have here, and only paid 1*s.* a week, but the garden was not so good as my present one. There are no gangs of any kind about here. I have never seen children under 12 years of age at work here. I find I am about as well off here as in Norfolk.

WARWICKSHIRE.

ALLESLEY.

13. *John Sanders*, labourer. — When at day work I get 12*s.* a week and beer. I can get take-work in winter for six weeks or two months, but cannot earn more money in winter by take-work than by day work. In summer we can get about two months take-work. When at harvest we can earn on an average about 1*l.* a week, at hoeing 2*s.* or 2*s.* 6*d.* a day, and rather more than that at mowing. I have two children, the eldest is 10; boys do not go to work about here much before 13. I rent a cottage and 1½ acres of land of my master for 8*l.* 10*s.* a year, and another 1½ acres of another gentleman for 5*l.* It is all grass, except a small garden. I have kept a cow for the last seven years; I make and sell butter, and also keep a pig; I don't drink much milk myself. I am very well satisfied to pay the rent I do for my land. I have to be absent from my regular work for about three weeks a year to make up the hedges, spread dung, and make hay on my own land; but that work comes principally in winter when my master can spare me. My wife milks and looks after the cow. I think I am better off than I should be if I worked all my time as a farm labourer.

[Mr. Burton, this man's employer, told me that he had tried the practice of letting land to his labourers in other instances than the above, and that he fully approved of the system. He thought that it made his men more contented and satisfied as labourers, and less disposed to leave him. At the same time he thought that the object should be to enable them to keep a cow, and that it would not answer to give them much arable land.—F. H. N.]

EXHALL.

14. *Thomas Loach*, farm labourer.—I have been working for Mr. Startin for four years; I overlook the other labourers. I get 16*s.* a week with house and garden, fire and candles found, that is for myself and my wife; she looks after the diary, and has nothing extra for that. The labourers here get 12*s.* a week with or 13*s.* without beer; they get the same summer and winter. At Stratford-on-Avon, where I was brought up, labourers received 11*s.* in winter and 12*s.* in summer, and 4*l.* during the harvest months. Here they have no fixed allowance during harvest; they make what they can. I could not get a good house here under 1*s.* 9*d.* a week; firing is cheaper, but rent dearer here than at Stratford. I have heard many labourers say that they would like their children to have more education, but that they cannot afford to give it to them. I don't think any boy should go out to work until he is 15, at any rate not in winter. I left school at the age of 12. I think I should have been more useful to my master if I had remained at school up to the age of 15 or 16. Many

Warwickshire.
Mr. Norman.
D.
i.

of the parish schools are not good; I have heard men say that it is of no use sending their children to certain schools because they are not well taught. I think that most parents could do without their children's earnings up to the age of 11 or 12 without inconvenience.

15. *John Enser*, labourer, Exhall.—I have worked here all my life. Children should go to work at the age of 8 or 9; parents could not afford to do without their earnings after that; but farmers don't want them from the end of October until March, and they could go to school then. They are that stubborn and masterful that you could not teach them unless they were taught early. Boys under 12 earn 2*s.* or 2*s.* 6*d.* a week. They get headstrong if they are at school too long. There are very few men here who can do all work, such as hedging, draining, thatching, &c. I never knew women go to work except during harvest. Parents are really anxious to send their children to school until they can get work for them. I don't think it would be a hardship to prevent them going to work until they can read and write.

HARBURY.

16. *Mrs. Austin.*—My husband is a labourer, he earns 12*s.* a week. I have no children. I go to work whenever I can get anything to do. I usually work for Mr. ——— at Chesterton. I can usually get regular work from April until after harvest. When I work by the day I earn 8*d.* a day; the only piece-work we do is reaping. When I go to work at Chesterton I leave home at 8, and get home at 5 in winter and 5.30 in summer. After harvest we can get work at turnipping at about 8*s.* an acre; I cannot turn an acre of turnips a week. I have not done any work now (December 16) for this month, but if this had been a good year for turnips I should have had work every day.

I have nobody but my husband to look after, and I have plenty of time to do that before and after work. It costs a good deal more in boots and in clothes at work than at home; I don't make much, but I have been used to work and like it better than staying at home. Women can earn more at harvest than at any other work. I once earned 5*s.* a day at harvest, but cannot usually do that. I went to work when I was 10 or 11 years old.

The children about here are sent out to work when they can get 4*d.* a day; it does not answer to send them out for that money; if it does them no harm it certainly does them no good to "maul about" in the wet.

KINWARTON.

17. *William Sadler*, farm labourer.—Most farmers about here employ boys with the horses. I went to work when I was 6, they now go at the age of 8 or 9. I have two sons, they both went out between 6 and 7. It does them no harm if they are used as they ought to be, that is if there parents can provide for them; it does them no harm going to plough, but sometimes they have to carry water for threshing machines which mauls them. They have to be at work from 6.30 a.m. until 6 p.m. They stop for lunch at 11, and dinner at 2.30 or 3 after they bring the horses in. They sometimes come in for dinner in the middle of the day and go out again. The weeding is done sometimes by women and sometimes by boys. Women do a smart bit of work in summer but not much in winter. Hoeing is the hardest work they do except harvest. They earn 9*d.* a day; some women who have children put them out at 3*d.* a day. When boys first go out to work they get 2½*d.* and some 3*d.* a day. I think it is worth while for a parent to send them out for 2*s.* a week but not for less. I think some parents send their children out to work to please the farmers; the farmers let the cottages on condition of the woman and children going to work for them, and press the women to come out oftener and the children younger than they otherwise would do. If there is a strong family (say four), a man could not afford to keep his children at home until 10; after boys begin to work their employment continues all the year round. More boys are wanted now than can be had. Men's wages here are 10*s.* with beer or 11*s.* without. I had sooner have two quarts of good beer a day than 1*s.* a week. During the four harvest weeks they get 1*l.* a week and beer without stint. There is a statute fair at Alcester; I don't see that it does any harm. Many are hired at the Chronicle office now, that does as well as hiring at a fair. Employers generally ask for characters now.

SHERBOURN.

18. *James Bostock*, farm labourer.—I work for Mr. Hortin. I have 13*s.* a week, and pay 3*l.* a year for my cottage and garden, and 16*s.* for my allotment. We have no beer allowed. Mr. Hortin pays 1*s.* a week more than others instead of beer. Sometimes we don't make 10*s.* extra by piecework during the whole year; we can never make 2*l.* (this was besides the 5*l.* allowed at harvest as stated by Mr. Hortin.—F. H. N.). My wife never goes out to work in the fields; she has four children to see to at home. Lads should not go to work till they are 10 or 11; I have none old enough to go. I had as soon rent a cottage under Mr. Hortin as Miss Ryland (the landowner), but farmers ain't all like master. I think all the children about here go to school. Lads who have been to school are more useful than others; they can usually get work about the age of 11, and are old enough to be trusted with horses then. The education is better now than it used to be when I went to school; we never learnt to write. We have a medical club here but no other; a man who has four or five children has no money to give to a club. I think it best for lads to board at their masters' houses; they have a good bellyfull of victuals then, and they cannot go where they like and get into mischief on a Sunday then; they will get a doing what they ought not if they are not looked after; and if they are under a master they have to go to church once or twice on a Sunday, besides prayers before they go to bed. I dont think any harm comes of statute fairs; many lads can get places at them who otherwise would not be able to get them.

STONELEIGH.

19. *John Thomas.*—I work for Mr. Simpson. I was carter to Mr. Robbins for 10 years. I have lived all my life in Stoneleigh. I was 10 years old when I began to work; few go to work as young as that about here. My two sons went out, one at 8 and one at 10. I think they ought to begin between 10 and 11. I don't think that the money earned by boys of 8 or 9 years old is sufficient to make it worth while for parents to send them out at that age. I think a boy could learn his duty as a farm labourer if he began to work at 10 years old. Boys of 10 cannot control the horses if they are any ways resolute horses. I have won five prizes at ploughing. I have seen a plough used with three horses abreast; but three horses in a line which walk on the hard land of the subsoil can draw more easily than three, two of which walk on the slippery unploughed land. Where three plough abreast it is a decided advantage that there are three instead of one horse to draw the plough out at the end of the field. Women go out to work in hay-making and harvest, but very little at other times; it is very healthy, but not really economical. They don't earn enough to make it worth their while to go out. If I had to work at a distance, say two miles from the village, I should prefer to live there than in the village. No beer is allowed here; I think we should be stronger and better workmen if it were. I take my cottage by the year, and pay rent half-yearly; I prefer that to a weekly tenancy. Some farmers in this neighbourhood take cottages with their farms; that is a good plan, but I should prefer to rent of the landlord. The farmers never use any pressure in order to induce a woman or boy to work for them. I have

a quarter of an acre of allotment. I can manage that with only a loss of two days to plant and two to get up potatoes. I think it would be a very good thing to pass a law to make all read and write; although it might be a hardship on some.

A good deal of work is done about here by the piece; I think that an ordinary labourer would earn the following wages by piecework:—

	£	s.
Turnip hoeing, 3 weeks at 16s. =	2	8
Mowing 3 „ 30s. =	4	10
Harvest 4 „ 54s. =	10	16
Cleaning turnips or wurzel, one week at 18s. - =	0	18
	18	12
41 weeks day work at 12s. =	24	12
	43	4

= about 16s. 7d. per week throughout the year.

20. *William Harris*, labourer, Stoneleigh.—Has 13s. a week; three children at home, eldest 15.

Thomas Painter, labourer, Kenilworth.—Has 13s. a week; three children at home, eldest 23.

We work for Mr. T. Harris. Painter's eldest son went to work when he was 6. Many boys go out to work before they are 10, where there is a strong family; we think 12 quite soon enough for a boy to go out; we think there is a very little profit in sending a boy out to work when they earn earn only 2s. a week or so. Painter pays 2s. 1d. per week for his cottage at Kenilworth, with a very small piece of garden; Harris pays 40s. a year for his cottage at Stoneleigh with a good garden. It is a great benefit to a man to have land at a reasonable rent. Some women go out to work here; it answers very well for women who have no children to go out to work in summer; they can do a little house work in the morning and evening, and are sometimes allowed a day a week for charring. All the boys about here go to school; a boy who has been to school is much more useful to a farmer than one who has not. There are some allotments at Kenilworth let at 2s. or 2s. 6d. a perch. A man can manage a quarter of an acre of land with his ordinary work.

We have 13s. a week in summer and 12s. in winter, and we can usually earn 18s. a week for a fortnight at mowing and 20s. a week for one month at harvest work; this is besides the beer we are allowed worth 1s. a week.

According to the above statement the annual wages may be reckoned as follows:—

	£	s.
2 weeks mowings at - 18s. =	1	16
4 „ harvest at - 20s. =	4	0
23 „ day-work at - 13s. =	14	19
12 „ „ - 12s. =	13	16
	34	11
Beer = 1s. per week =	2	12
Annual wages -	37	3

= rather more than 14s. 3d. per week.

Wolverton.

21. *Mouser*, labourer.—I am in receipt of parish relief on account of an accident I had. There is no school at Wolverton, there never was one. The children have to go to school at Snitterfield (nearly two miles). That is too far; children cannot go above half a mile to school in winter. I pay 55s. a year for my house. [The house consisted of one room downstairs and one up, there being a bed in the downstairs room which was used as the living room. The rooms were very small, and the cottage in very bad repair.—F. H. N.] I had sooner pay 8l. if I could work and had regular wages, than live here. No house should be built with less than two bedrooms; there are many here with only one. S—— with his 13 children had only one room; he has 11s. a week; most wages has sunk to 11s. now; not much piecework is done. Men get about 4l. extra for harvest.

WILTSHIRE.

Ashton Giffard.

22. *John Topp* and *William Olden*, agricultural labourers.—We have lived here all our lives. Boys don't go out to work here as young as they did formerly; they now go out to work about the age of 9. They then usually get about 1s. 6d. a week, and can usually get work all the year round; if they go on Sunday they get an extra 6d. a week. It costs about 1s. a week more to provide for a boy when he is at work than at school; but we are glad to send him out to work for whatever we can get by his labour. The money is so important to us that we are obliged to send them to work. Our regular wages here are 10s. all the year round paid wet or dry. Olden goes mowing at 2s. an acre if in the fields, or 3s. an acre in the water meadows. He can earn about 3s. 6d. a day at that, but no beer is found, and beer costs 10d. a day; that lasts about six weeks. At harvest we usually have about one week's reaping in which we earn 30s., then mowing barley and oats for about a fortnight, at which we earn as much as at grass mowing; but no beer is allowed at harvest. If strangers come (many of whom do come) they have beer allowed.

Topp does not mow, but hoes turnips; that lasts about two months, and he can make about 3s. a day at it.

Wages are paid here fortnightly on Mondays or Tuesdays. There are not one out of five men who earn as much as we do. There are many men who earn nothing more than the regular 10s. a week all the year round. But those who do not get the extra work after harvest (such as mowing barley and hoeing turnips) have the extra 12s. a week for three weeks during harvest in addition to their regular pay; but that is on condition of their coming at 5 a.m. and working until 9 or 10 p.m. The money does not average more than 10s. a week during the regular hours. Topp belongs to a club, not the county club, in the village, but Olden does not. Some women go out to work in haymaking and harvest, but not regularly at other times. We think a woman gets out of pocket more than she gets in by going out to work; they are paid 8d. a day.

Most of the labourers here live in the farmers' cottages; that is a very bad thing, because if you don't do just what the farmer wants you have to leave the cottage. They always expect the boys to work for them. They wants to know if yourv'e "got ere a boy big enough to come out, and if "you don't let un come out they don't like it."

Olden's Earnings.

	s.
6 weeks mowing grass at 21s. =	126
1 week reaping - at 30s. =	30
2 weeks mowing barley at 21s. =	42
43 weeks - - at 10s. =	430
	628 = 31l. 8s.

= about 12s. per week.

Wiltshire.

Topp's Earnings.

		s.
8 weeks hoeing	- at 18*s.*	= 144
1 week reaping	- at 30*s.*	= 30
43 weeks -	- at 10*s.*	= 430
		604 = 30*l.* 4*s.*

= (about) 11*s.* 8*d.* per week.

BERWICK ST. JOHN.

23. *Mrs. Lush.*—I have been in the habit of going to field work for 20 years. There is no regular work for boys until they can go into the stables at about the age of 12; there is very little work for them before that age. I sometimes go out thinning mangold; when at that work eight or 10 small boys and sometimes girls are set to work together with a woman to look after them; they are paid 4*d.* a day, and they work from 8 to 5, with one hour for dinner. The children who do that are from 7 to 10 years old, and the work lasts about a fortnight; no other crop is thinned in that way. I think it is best for all women to stay at home; I shall never go to work again. Field work is bad for the health; women have enough to do at home; they cannot make the best of everything if they are absent from home all day, besides which the family has to live entirely on bread and tea because there is no time to cook vegetables. If small children are put out to be taken care of that costs 1*s.* a week for each child, besides food. If left at home with a big child sometimes they come to mischief. I think boys should not go out to work until they are 12; they are better at school up to that age, and can learn their work as labourers well if they begin at 12. Many cottages here are held by farmers; wages are paid once a month, and when they are paid the rent for the cottages is kept back by the farmers; sometimes the women who live in the farmers' houses are compelled to work for him when he is short of hands. There is no work done by children in this neighbourhood to interfere with all staying at school up to the age of 10, and many until 12.

BIDDESTON.

24. *William Woodman*, labourer.—I don't think there is much difference in the amount of schooling boys get now and used to get formerly. Very few of those who are now growing up can read. We have constant work for boys from the age of 7 or 8; parents could not afford to keep them at school up to the age of 10. It costs very little more to provide for a boy when at work than when at school; I have three sons myself. I am a carter; my wages are 11*s.* 6*d.* a week; I receive no beer, except in the summer. I pay 80*s.* a year rent for my cottage, and 13*s.* 4*d.* for an allotment of quarter of an acre; I pay my cottage rent quarterly, and think that that is the best plan. There is a school in the parish kept by a schoolmistress; not half the boys who go there learn anything; I think they would attend more regularly if there was a master; they do no good now. Everybody should be able to read and write. No young men are leaving the parish; one family went away last year. All the people here work in the fields. The wages are 10*s.*, and sometimes only 9*s.* in winter. I have no extra money allowed me in harvest. The women go to work a little in summer but not in winter. I don't see how poor people could afford to keep their children at school up to the age of 9 or 10 with their present wages. It is a bad plan for landlords to let cottages with the farms, because if you affront the farmer you are turned out at once. I have an allotment of a quarter of an acre; I can easily manage that. I grow a little corn; we don't often get one sack off 20 poles; the farmers don't object to our growing corn. Bread has cost me about 6*s.* 6*d.* a week this summer when bread was at 7*d.* or 8*d.* My family consume about 10 loaves a week.

[When I saw this man he was accompanied by a carter boy aged 6, who had been at work nearly one year; he was going to school this winter, and expected to have permanent work from next spring. W. Woodman told me that the boy could be trusted to drive carts, &c. alone, and also drive plough.—F.H.N.]

25. *Eli Howell.*—My father is a farm labourer. I went to work when I was 6; a boy who bids hard gets 3*d.* a day at first at "starving;" I have never been to school since I first began to work except on Sundays. I have two brothers younger than myself; they went to work about the age of 8 or 9; that is the usual age for boys to begin; they drive plough at that age, and can generally get work all the year round. I now earn 6*s.* a week; that does not much more than pay for my victuals; my father helps me to buy my clothes. Neither my brothers nor myself can read or write; very few of the boys about here can. My mother works in the park all the year; she receives 1*s.* a week for it; she is away from home from 8 until 5; she often has to sit up late to mend our clothes, &c.

BISHOPSTON.

26. *Thomas Halliday*, labourer.—I work for Mr. —. He farms above 1,000 acres. He employs six boys. The youngest began to drive plough at the age of about 10, and earned 2*s.* a week at first. Mr. — employs as many boys as any man. He might employ one more in summer than in winter, because more teams go out. The smallest boy goes to school again in winter if he is not wanted to work. Occasionally a boy is employed for shepherding in summer, and for scaring, but not on this farm. No dibbling is done here. Girls go out to work about the age of 12 or 13. I have three sons; one aged 21 went to work when he was 10; another aged 10 has been minding pigs one summer, but I have kept him at school this. The wages here are 10*s.* in winter, and 11*s.* in summer; we usually have 1*s.* a week less than in the surrounding parishes. Lump work is mowing, harvest, and hoeing; a man gets 3*s.* or 4*s.* an acre for hoeing, and can hoe about 4½ acres a week. Carters and shepherds get a 1*s.* a week more than other men, and no houses are allowed. Not many women go to work in winter, but almost all go in summer; the husbands could not earn enough without their wives to keep the family. Carters get 1*s.* a day extra during harvest; and the shepherd gets double money or his food allowed him during the lambing season. About 14 or 15 years ago we only had 6*s.* a week. One year we had to work on the road for only 5*s.* a week, and I had four children then. I have a small bit of bacon every day now, it costs 10*d.* or 11*d.* a pound. I buy two bushels of malt in summer to make beer; they reckon 18 gallons to the bushel, but with sugar and ginger I have made double that. I think the landlord is the best man to keep the cottages in repair; he ought to keep them in his own hands, they are cheaper rented when it is so. I have known a man have to leave his house when he offended his landlord by not letting his wife and children go to work. I rent my cottage by the year; I prefer that because a man is not liable to be turned out; but cottages here are let on various terms; if a cottage is let by the week, and there is a garden to it, a man may be turned out before the crops which he has sown come up. The women who go to work go from 7 a.m. to 5 p.m.; they only work in dry weather, and get 9*d.* a day. I have an allotment of a quarter of an acre for which I pay 13*s.*; a day labourer can manage that. A few of the new cottages here have three bedrooms but most only two.

BURBAGE.

27. *M. Blundy*, labourer.—Seven children (four boys), eldest aged 19.

George Ruddell, labourer.—Seven children, eldest 16 (two boys). Lived at Burbage. Our boys went to work first, some at 8 or 9, and some at the age of 12, they had 2*s.* 6*d.*; 12 is older than most boys go, but they usually go at about the age of 8 or 9, and earn 1*s.* 6*d.* or 2*s.* a week. I think that it would

answer to keep children at school until they are 12; it is not worth while to send them out for 2*s.* a week, but parents don't think of that, they want the ready money. Most parents send their children to school a little, but not long enough to learn to read and write; the children don't care about learning themselves until they are 11 or 12, and the parents don't take pains to force them to go to school up to that age, which they should do. I think that a boy going to work at 12 would earn as much as they do now at that age, although they begin at 9 or 10. They could get better places on account of their education. Farmers like errand boys, &c. who can read and write. They would be able to learn to plough as well if they began at 11 or 12 as if they began younger. It is not economical on part of farmers to employ young boys; the horses and ploughs are not worked nearly as well by them as they are by older boys. We think a boy might learn to plough well if properly taught although he did not begin until the age of 13 or 14. We have not known of any cases of boys being injured by overwork at a young age. We think there would be no hardship in compelling parents to send their children to school, if they could only provide for them, which would be a hardship where there were several young children.

We have cottages and 50 or 60 lug of ground; we don't want to grow corn, it does not answer; we want to grow vegetables. We both of us live in the village; we had sooner live in the village than live one mile or 1½ miles from it, close to our work; it is more convenient for the children. Blundy has always earned 2*s.* a day regularly, besides hoeing, for about 13 weeks at 7*s.* an acre; he can hoe five acres a week on an average. Any able-bodied man who works hard can earn about 13*s.* or 14*s.* a week.

[Blundy's earnings were—

		s.
39 weeks at 12*s.*	=	468
13 „ 35*s.*	=	455
		923

= 17*s.* 9*d.* per week.]

BROUGHTON GIFFARD.

28. *John Woodham*, farm labourer.—I have lived here more than 40 years. My master's farm is quite small. For about the last seven years my wages have been 11*s.* a week. I have two pints of beer allowed per day all the year; that is worth about 1*s.* 6*d.* a week. I get extra work in the summer at mowing and reaping; that lasts about one month; but on a large farm lump work would last three months. I have to milk all the time I am at that work, and earn 2*s.* 6*d.* a day. If the farm were large I should be able to work at lump work all day for about three months, and should earn about 4*s.* 6*d.* a day. I could mow about an acre and reap about half an acre a day; on an average about 10*s.* an acre is paid for reaping. No beer is allowed when men are at lump work. No potato ground is allowed us. There is no hoeing to be done in this neighbourhood. Some men go away from here on to the downs to reap; there the harvest is 10 days earlier than it is here, but milkers cannot go away. There are generally about two odd men on a large dairy farm of 300 or 400 acres, and none but they can go away to get work elsewhere. I used to earn more money when I worked on a larger farm than I do now. All the time a man is at lump work beer costs him 10*d.* a day, besides the expense of tools; allowing for these expenses he can only make 3*s.* 6*d.* a week.

[This man's earnings were—

		s.
4 weeks piecework at 15*s.*	=	60
48 „ - at 11*s.*	=	528
Beer - at 1*s.* 6*d.*	=	78
		666 = 33*l.* 6*s.*

= (about) 12*s.* 9*d.* per week.

Said to be rather above the average as a labourers.—F. H. N.]

29. *John Marks*, farm labourer.—I have always worked at farm work, but chiefly at job work. I never worked for two years for the same man. 10*s.* a week with two pints of beer a day are the ordinary wages about here; if men work on Sunday they have 1*s.* a week extra. I could usually get six weeks work at mowing during the hay time, but only about two weeks harvest. I could mow 1½ acre a day at 4*s.* an acre, but beer costs 1*s.* 2*d.* a day; we always find our own tools, and work over hours to earn that. Very little work at draining can be got about here. I never went out of the place for work in my life. Some go away for weeks together and come back not a penny better off than they went away. In winter I could get jobs at hedging, draining, and drawing timber. I think I was about as well off as the men who stuck to regular work. Not one in 20 men could mow as much as I could.

30. *William Hurn.*—I have worked at farm work here since 1844 on a dairy farm of more than 300 acres. I have always had the superintendence of the cattle. I get 12*s.* a week, and two quarts of beer a day. I never do lump work. Besides this I get a sort of present of 26*s.* at Lady-day, and the same amount again at Michaelmas. The common labourers get 10*s.* a week, and milkers 1*s.* a week extra. In summer they have two pints of beer a day, and three in winter. On our farm there are five milkers and two odd men; some boys of 10 can milk, but that is very young. They go away from school before 9, and earn about 1*s.* 6*d.* a week. Most of the farmers let their labourers have potato ground, some rent free and some not. I have 20 lug at 4*d.* a lug. The farmers sometimes ploughs and manures the ground for us, and sometimes not.

[This man's earnings were—

		s.
52 weeks at 12*s.*	=	624
Extras at Lady-day and Michaelmas.	=	52

		754 = 37*l.* 14*s.*

= (about) 14*s.* 4*d.* per week.]

DURNFORD.

31. *Mrs. Viney.*—I have six children, five of whom are boys. The boys generally go out to work about the age of 8; I think that is about the age they should go to work unless they are very small. They do not go to school after they have once gone to work. They earn 2*s.* a week when they first go to work. It is very desirable that all boys should be taught to read and write if they could be provided for. Women only get 6*d.* a day for working, except during hay time and harvest. It is not a good plan to let the farmers hire cottages with their farms; those who live in the farmer's cottages have to put up with a great deal, because if out of occupation you are out of your house. If the farmer wants the women to work for him they are obliged to go whether they like it or not.

GREAT BEDWYN.

32. *George Grace*, labourer.—I work for Mr. ——; I have worked for him for three or four years. I work at chaff cutting for about seven months in winter, and at hoeing, mowing, and harvesting in summer. Wages now are 9*s.*; they are usually raised to 10*s.* in summer if the price of bread rises. I can usually get about a fortnight's hay mowing, and earn 3*s.* a day at that; after that I get turnip hoeing for one month, and earn 2*s.* or 2*s.* 6*d.* at that; during harvest I earn 4*s.* 6*d.* a day reaping for one week, and 3*s.* 6*d.* a day mowing barley for three weeks. No beer or potato ground is allowed. I hire 20 lug

Wiltshire.
Mr. Norman.
D.
i.

of ground of Lord Ailesbury, for which I pay 5*s.* a year. Most of the men about here earn about the same as I do. Master pays about the same as the rest.

[This man's earnings were—

		s.
2 weeks mowing at 18*s.*	=	36
4 weeks turnip hoeing at 13*s.* 6*d.*	=	54
1 week reaping at 27*s.*	=	27
3 weeks barley mowing at 21*s.*	=	63
42 weeks at day work at 9*s.* 6*d.*	=	399
		579 = 28*l.* 19*s.*

= nearly 11*s.* 2*d.* per week.]

33. *George Williams*, aged 60, farm labourer.—I have lived in this parish all my life. Wages here have been 10*s.*, but have, I think, lately been dropped to 9*s.* [This was so.—F. H. N.] I go grubbing wood all the winter, and earn about 9*s.* a week at that. I don't go to regular work; a good many men about here do job work like myself. I can usually earn 2*s.* 6*d.* a day at hoeing in summer; and get about three weeks hoeing in summer, but last year I only had one week in consequence of the failure of the turnip crop. I can earn 3*s.* a day at grass mowing for about eight or 10 days. I receive about 10*s.* an acre for reaping at harvest, and earn about 30*s.* a week for three weeks. I can only get about eight weeks job work during the summer. No beer is allowed, except just a little during the grass mowing; no potato ground is allowed. I pay 40*s.* for my house and quarter acre of garden ground. I don't earn more than 9*s.* or 10*s.* a week during the rest of the year. 10*s.* is the highest sum I have ever earned for weekly wages. I think I earn just about as much as farmers' regular men. For several years past wages have always been 10*s.* in summer, and usually only 9*s.* in winter; seven or eight years ago they were 8*s.* There are more men here than there is work for; there is not as much work as there used to be on account of the machinery. I should be better off if I had regular work, but I cannot get it. I have tea and bread and butter for breakfast, bread and bacon for dinner, and the same for supper. I don't drink beer more than once or twice a month. I don't belong to a club. I have had 10 children.

[This man's wages were—

	s.	*d.*
3 weeks hoeing at 15*s.*	= 45	0
1 week mowing at 18*s.*	= 18	0
3 weeks harvest at 30*s.*	= 90	0
45 weeks day work at 9*s.* 6*d.*	= 427	6
	580	6 = 29*l.* 0*s.* 6*d.*

= (about) 11*s.* 2*d.* per week.—F. H. N.]

HORNINGSHAM.

34. *Mrs. Butt*, labourer's wife.—I have had 13 children; eight are alive, but only three of them at home. Two of my boys went out to work at the age of 10; that is young for this neighbourhood. Another son, who is 13, has only been out for occasional jobs, and gets 2*s.* a week. Boys don't often go to work about here before they are 11 or 12. There are too many boys about; they only get 1*s.* 6*d.* when they first go out, but it is hardly worth while sending them out for that money. Parents can afford to keep their children up to the age of 10 or 11 without inconvenience. Women don't go out to work much; it does not answer for those who have families. We pay 1*s.* 3*d.* a week for our cottage; it is paid half-yearly. I don't object to paying the rent half-yearly. My boy also goes with the horses; goes out at 5 in the morning and does not get home until 7, or later. A good many times last winter he missed the night school from coming home too late. The night school is at a quarter past 7. None of the boys about here are hired by the year. The shepherd boys have to work all Sundays.

LATTON.

35. *Mrs. Ann Howes.*—I have been at all kinds of farm work; I have been at it all my life since I was 11; I have had 13 children; 11 are now alive, and four at home. It does not answer for women who have children to go to work; they cannot work at home and in the fields too. I was very strong, and could work night and day, but the hard work injured me; it affected my heart. I always liked field-work, but many women are broke down by it. I used sometimes to leave five or six children at home with one to look after them; a girl can do that. It is good for women to go to work in spring and summer, but not in winter; I always got behind in my family work when I went to work in the fields. I think it might answer for a woman who had no children to go to work in the fields, but she could do better if she remained at home and got a little needlework to do. If I had to begin again I would not go out to work except for hay and harvest. My youngest daughter, aged 15, has been out for haymaking and hoeing two summers. My boys never went to regular work until the age of 10, although they did a very few jobs before that age. All my children can read and write. I never heard of farmers putting pressure on women and children in order to induce them to come to work; women work quite as much now as they used to do. I have been in the turnip field pulling turnips with the ice covering my dress half way up.

MANNINGFORD BRUCE.

36. *Emmanuel Farr*, labourer.—I work for Mr. J. Stratton; I have eight children, five sons and three daughters. One of my sons is at work here as an agricultural labourer, and two are in London. The boys about here usually begin to work about the age of 9 or 10, or if they are small not until they are older; they usually receive 2*s.* 6*d.* a week at first. One of my sons who went to work 16 years ago received only 1*s.* 6*d.* at first. In hard times it is worth while to send a boy out to work if he can only earn 1*s.* 6*d.* Men are never hired by the year about here. If a man has a wife and four or five children he could not afford to keep his children at school up to the age of 10; if he had only two children he might. I think that every labourer about here can earn on an average an extra shilling a week at piecework besides his ordinary day wages of 10*s.* a week, and besides his extra earnings during the two harvest months. No married women go out to work here. My daughter went out to work; it is better than remaining at home idle, and I don't think that any harm comes to them from it. I think it would be a hardship to poor people to prevent their sending their children to work until they can read and write.

STRATFORD-UNDER-THE-CASTLE.

37 (a). *Mrs. Archer.*—I have two sons at work; the eldest, aged 12, went to work when he was 6½; he worked for about six months in the year for 2*s.* a week until he was 9, and has been at work continuously since then; at the age of 9 he began to get 2*s.* 6*d.* a week. If I had my time over again I would send him to work at the age at which he went. His health has always been good. My second son went to work when he was 7 or 8; he was cowkeeping from about May until November at 1*s.* 9*d.* a week; he used to go to school before he went to work, and will go again when it is over. I think that other boys go to work as early as mine did. My husband earns 10*s.* a week.

WOOTTON RIVERS.

37 (b). *Daniel Fubbens.*—I am no scholar; I don't know how to spell my name. I have worked here ever since I was a boy, pretty near 40 years. I am carter to Mr. Keevil; I get 11*s.* a week, one quart of beer a day, and 3*l.* at Michaelmas; I also get 1*s.* for every 20 sacks of corn I take out; I don't think that comes to more than 1*l.* a year; perhaps I might earn another pound by doing piecework at harvest. Some of the

farmers have sunk the wages to 9*s.* for the winter. Wages have been about 10*s.* for some time past.

[This man's wages were—

	s.
52 weeks at 11*s.*	=572
Extra at Michaelmas	= 60
Corn taken out	= 20
Piecework during harvest	= 20
Beer	= 50
	722 per year=36*l.* 2*s.*

= nearly 14*s.* a week—F. H. N.]

38. *William Lay*, farm labourer. — I have worked on this farm for more than 50 years. I receive 10*s.* a week now; I think I have been getting those wages for five or six years; master pays 1*s.* a week more than other farmers. No beer or potato ground is allowed about here. At harvest we earn about 3*s.* a day for three weeks or a month, but we have to provide ourselves with beer then, which costs from 6*d.* to 1*s.* a day. I think it is 10 years since I received 8*s.* a week, and several years since I received 9*s.* I get about 30*s.* extra at harvest, and a very little hoeing, not worth 10*s.* to me. Master has a thrashing machine; I get 2*d.* an hour when at work with that, and generally a pint of small beer, but the machine work is worth very little to me, not 10*s.* a year. I live in a lodging and pay 30*s.* a year for it (that includes washing and mending), and 1*l.* for firing.

[This man's earnings were—

	s.
52 weeks at 10*s.*	= 520
Extra for harvest	30
Extra for hoeing, threshing, &c. (say)	10
	560=28*l.*

=(about) 10*s.* 9*d.* per week.

I read the above statement over to this man's employer, who said that he thought it was about correct. He was not aware, however, that he paid 1*s.* a week more than his neighbours. He said this man was a steady common labourer.—F. H. N.]

WORCESTERSHIRE.

Alvechurch.

39. *Thomas Phillips*, labourer. — Four children, eldest 20. The wages here are 12*s.* a week; some farmers give beer and some don't. We usually get about three weeks work at harvest, when we earn about 3*s.* a day and are allowed five quarts of beer. We only have about one week's haymaking, during which we earn about 3*s.* beyond our ordinary wages. At hoeing we cannot get much above the day wages. I have two sons. Some few boys go to work here at the age of 10, but I think that as a general rule they are not much fit to go until they are 14. A man cannot make much money by sending his boys out to odd jobs. I think that the parents here can afford to maintain their children up to the age of 12. We have a piece of meat every day. My wife does a little charring.

[This man's earnings were—

	s.
One weeks' hay at 15*s.*	= 15
Three weeks' harvest at 18*s.*	= 54
48 weeks at 12*s.*	=576
	645=32*l.* 5*s.*

= about 12*s.* 5*d.* per week, exclusive of the beer allowed in harvest.—F. H. N.]

Bransford.

40. *John Salt*, farm labourer. — I have had eight children, three of them are dead. My wages now are 9*s.* a week, with two quarts of cider a day, and usually 10*s.* or 11*s.* in summer. During harvest I can usually earn 1*l.* a week, and 15*s.* a week while mowing; at other kinds of piecework I can only earn about 1*s.* a week above my regular wages. My sons began to work at the age of 8 or 9 years old; that was 9 or 10 years ago; they first got 2*s.* a week, and have had constant work since that time; they have never been to school except on Sundays, and night school since then; one of them is a good scholar and the other is not.

Another man and myself contract to cultivate eight acres of hops at 1*l.* an acre; it is three pole work. It takes us a fortnight to throw down the earth and cut the roots; another fortnight to pole the hops, a week for curfing, and, after picking, another fortnight for stripping, sharpening, and piling the poles. My wife works at smock frocks and not at gloving, but the smock frock work is going out. She cannot earn 3*s.* a week at it. I have a bit of bacon every day.

[This man's earnings were—

	s.
4 weeks' harvest at 1*l.*	= 80
2 weeks' hay at 15*s.*	= 30
7 weeks' hop work at 11*s.* 6*d.*	= 80
39 weeks at (say) 10*s.*	=390
	580
Cider, at 1*s.* 6*d.*	= 78
	658

=about 12*s.* 8*d.* per week.—F. H. N.]

Bromsgrove.

41. *William Nutting*, carter to Mr. Russon.—Wages, 12*s.* and beer, two quarts a day in winter and three in summer; has had five children; all but one now at work.

W. Barnes, cowman to Mr. Russon.—The same wages and beer as W. Nutting; three children, eldest 20.

George Dyson, shepherd to Mr. Russon.—Has had a family; only one now at home; wages and beer as above; and house rent free besides.

Boys can get continuous work here from the age of 11 or 12 upwards. They usually receive 2*s.* 6*d.* to 3*s.* 6*d.* a day at first. They can get a few little jobs under that age; but you cannot depend upon getting those jobs for them, and it is not worth while, because it costs more in clothes than they bring in.

Master always gives 1*l.* extra in the harvest month, and dinner and supper when we are late.

Dyson's wife and daughter go to field work, but the other men's wives do not; they can get a job every day if they had a mind to it. All our children went to school, except Dyson's eldest, who was kept at home to look after the others. Dyson used to send his girls to a dame's school, but he found they did not get on much, so he has sent them to Bromsgrove school for the last three years. None of us can read and write. It would be a good thing to have a law to prevent any boys going to work until they could read and write; it would be hard where there is a large family, but what we have done others could do.

Barnes pays 1*s.* 9*d.* for his cottage in Bromsgrove, two bedrooms, but no garden. Nailers could be better off than field labourers if they chose to work, but they are their own masters and are often idle.

[When I saw the above men Nutting was ploughing with three horses in a line, without any boy to drive. Mr. Russon told me that he did not employ

Worcestershire.
Mr. Norman.
D. i.

boys as a general rule, one having been killed a short time previously on his farm by a horse.—F. H. N.]

HARTLEBURY.

42. *Mrs. Smith*, labourer's wife.—I have four sons, the eldest is 17. They can get regular work at the age of about 12, but at the potato planting boys from 8 upwards can get employment setting potatoes or pouring in the grains. That will occupy them for a fortnight or three weeks at 6*d.* or 8*d.* a day. They are also employed in scaring. I used to go work when I was younger. Fewer girls go to work than used to; they are more ladies now than they used to be. I sent my boys to school at Stourport; I paid 3*d.* a week for them; I sent them there instead of to the free school here, because at the free school they are compelled to attend regularly, and I could not have sent them out to work when I could get a job for them.

I have two sons who can read and write a little, the third never liked school, and the youngest is at school now.

[The husband of the woman was a carter in the receipt of very good wages.—F. H. N.]

MADRESFIELD.

43. *Mrs. Summers.*—My husband is cowman to Mr. Hill. He has 11*s.* a week, his cottage rent free, three quarts of cider a day, and 2*l.* at harvest. I have six children, two are out at work. I think 12 is young enough for boys to go out to work in the fields. My boys went to work at 8, because Mr. Hill wanted them; he pays them 2*s.* 6*d.* a week, but it is not worth while to send them out to work at that age. I go to work when Mr. Hill wants me for 10*d.* a day.

It is the custom for women who live in farmers' houses always to go to work for the farmers whose, houses they occupy when there is any work to be done.

[This man's earnings were—

		s.
52 weeks at 11*s.*	=	572
Cottage at (say) 1*s.* 6*d.*	=	78
Extra at harvest -	-	40

		768 = 38*l.* 8*s.*

= (about) 14*s.* 10*d.* per week.]

MARTLEY.

44. *Mrs. Grout*, labourer's wife.—I have six children, the eldest is 17. I have always lived here and have worked in the fields a great deal. The first work I get to do in spring is stone-picking and ground dressing at 8*d.* a day and one quart cider (spreading the droppings of the cattle). Then in May and June hop-tying; last year me and another took 10 acres at 4*s.* an acre, two poles to the stock; we usually only get 3*s.* or 3*s.* 6*d.* an acre. It takes all a woman's time to tie five acres; children cannot help at that. Then from June to August haymaking and harvest; children do not work at that except in gleaning. In September hopping, at which I can earn 1*s.* 2*d.* a day; I have never had above two children at work with me at that, and with them I can earn 2*s.* a day; then comes fruit-picking at 8*d.* a day and cider; and last, topping and tailing turnips at 7*s.* an acre. No children go to work under the age of 10 except at hop-picking. From about the age of 10 they can get work all the year round at 1*s.* 6*d.* or 2*s.* a week. I always work for Mr. Davis, who rents this cottage and underlets it to us. It answers well for women to work when they have no children, but it does not answer to me because I have to take my children out with me and therefore to provide them with good shoes; but I am tied to go out, that is part of the agreement under which we hold the house; that is the usual arrangement. I get 8*d.* a day when I work for Mr. Davis, and 1*s.* a day when I work for any body else, but then there is an understanding that Mr. Davis is to employ me in preference to any other woman when he has work to do. I don't think women get any harm from going to field work. The glovers make more and don't spend so much as the field women; but those who go to service are best off. We pay 3*l.* 10*s.* for this cottage.

[A very respectable and civil woman in an old but decent cottage, the living room of which she had just papered herself, and purposed papering the ceiling as well.—F. H. N.]

PEOPLETON.

45. *Mrs. Dolphin*, husband a carpenter.—I have a girl aged 12 and a boy aged 15. I have been employed in fruit-picking for nine years; I work for about two months each year in picking green gooseberries, currants, and ripe gooseberries; I never go to farm work. My girl came to help me from the age of 7 and my boy at the age of 11. One day with another I can earn 1*s.* 6*d.* a day. Children can pick well from about the age of 8; but they smash the currants if they try under that age. I think a child of 8 or 9 could pick half as much as a woman. No fruit is picked on Saturdays; the women can go out just when they like. It is a beautiful thing for the health; it is liked by all, and is pretty well talked about for a month before they begin. I don't go to any work except harvesting and fruit-picking. I can earn from 5*s.* to 6*s.* a day during harvest. My son went to work from about the age of 8 or 9; he has had constant work since then, that is the proper age for them to go out; it is not more expensive to provide for boys when at work than at school. My daughter has had work for the last two or three years for about one month a year at hay-making, clover and barley turning, besides the fruit-picking.

46. *Stephens*, Gardener.—If I went to farm work I should require five quarts of cider from 1st June until 1st October, an additional two quarts during haytime and harvest, and two quarts a day from the 1st October to the 1st June. The cider costs the farmers about 5*d.* a gallon. If I were to buy it in quantities of not less than 4½ gallons, it would cost me 8*d.* a gallon. I might buy fruit and have cider made at the public mill for 10*s.* a hogs-head; but it would not answer, as we have no place to keep either the fruit or the cider. I would accept 2*s.* 6*d.* but not 2*s.* a week in lieu of my drink all through the year.

[The cider required by the man was—

	Quarts.
120 days (1st January to 1st October) at 5 quarts - - - - =	600
Extra during hay and harvest, say 45 days at 2 quarts - - - =	90
190 days, 1st October to 1st June, at 2 quarts - - - - =	380
	1,070

= 267 gallons 2 quarts.

267 gallons 2 quarts at 5*d.* - = 5*l.* 11*s.* 3*d.*
Ditto at 8*d.* - = 8*l.* 16*s.* 4*d.*

This man was employed in Mr. Varden's garden, where I saw him.—F. H. N.]

WHITE LADIES ASTON.

47. *Cooper*, labourer.—Wages here are 8*s.* or 9*s.* in winter and 10*s.* now (May). I would not accept an extra 2*s.* a week instead of my drink. I can usually earn about 25*s.* a week for three weeks during harvest and from 15*s.* to 18*s.* in hay time. The farmers here don't allow potato growing.

[This man's earnings were—

	s. *d.*
3 weeks harvest at 25*s.* - =	75 0
2 weeks hay at 16*s.* 6*d.* - =	33 0
47 weeks at 9*s.* 6*d.* - =	446 6
	554 0
Cider at (say) 2*s.* - =	104 0
	658 0 = 32*l.* 18*s.*

= about 12*s.* 8*d.* per week.]

APPENDIX E.—CONTAINING THE ANSWERS GIVEN TO THE QUESTIONS CONTAINED IN THE PRINTED CIRCULARS OF QUESTIONS.

I.—AS TO THE EMPLOYMENT OF PRIVATE GANGS.

The only case in which the existence of private gangs is noticed in the returns which have been sent in to me is in the return sent in by the Rev. A. H. M. Ingram, from Harvington, Worcestershire. He states that private gangs are employed in pea-picking in summer, and that four males between 13 and 18 and one over 18, and four females between 10 and 13, five between 13 and 18, and five married and two unmarried females over 18 are so employed. He states that they work for nine or 10 hours; that they have quarter of an hour for breakfast, and one hour for dinner; that the sexes work together; and that the effect upon morals is that outrages on modesty and decency in young females often occur, through the direct encouragement of some depraved woman from the corrupt society of some town in the neighbourhood; that the physical powers are not injured; and that neither the young or females are subjected to any ill-treatment; that the state of education is deficient among the young, and very deficient among the adults. He recommends that the sexes should be separated; that where females are employed there should be a licensed female superintendent; and he would define a private gang to be a group of more than eight females working in the same field with males.

2. TABLE giving the NUMBER and AGES of the WOMEN and CHILDREN EMPLOYED.

Parish.	Population.	Males.					Females.							Remarks.
		Under 8.	Between 8 and 10.	Between 10 and 13.	Between 13 and 18.	Total Males.	Under 8.	Between 8 and 10.	Between 10 and 13.	Between 13 and 18.	Over 18. Married.	Over 18. Single.	Total Females.	
HEREFORDSHIRE.														
Ashperton	534	—	—	—	—	—	—	—	—	1	11	1	13	
Byford-cum-Mansel-Gamage.	332	—	1	10	—	11	—	—	—	1	12	3	16	
Downton	178	—	2*a*	2*a*	6	10	2 or 3 occasionally.				3	—	3	*a* These work occasionally.
Frome Bishop	850	—	—	10	30	40	—	—	3	5	50	*b*	58	*b* A few, but generally women living with men.
Treville	140	—	3	2	—	5	—	—	—	—	—	4 widows.	—	
SURREY.														
Alfold	500	—	—	10	20	30	—	—	—	—	20	—	20	
Bramley	—	—	—	—	—	—	Female labour is not general.							
Byfleet	770	—	—	20	30	50	—	—	—	—	20*a*	2	22	*a* Almost entirely in harvest time only.
Carshalton	—	—	—	—	—	—	Women do not generally work in the fields, but some Irishwomen have settled here and they do work.							
Chobham	2090	—	—	—	—	—	It is very rare to find women employed except in haytime.							
East Horsley	228	—	4	8	8	20	—	—	—	—	10	—	10	
Frimley	2620	—	—	10	20	30	—	—	—	5	10	5	20	
Send		Very few indeed; some in haymaking.												
Shalford	—	—	—	—	Perhaps 60	60	None as a rule under 18. A few of the wives of labourers, but the number is decreasing.							
Stoke d'Abernon	—	—	—	—	—	—	I don't think any under 18. A few older occasionally.							
Titsey	167	—	—	5 or 6		--	No females.							
Thorpe	550	—	—	10	14	24	—	—	—	—	8	—	8

Upton-on-Severn	2676	About 40 under 18.					Hardly any women or girls are employed in agriculture, a few find employment in the gardens.							

QUESTIONS (22 *d*, *e*, *f*, *g*) relating to the EMPLOYMENT of CHILDREN, YOUNG PERSONS, and WOMEN in AGRICULTURE.

Name of Parish.	Name of Person making Return.	Do Women and Children Live on or near the Farms?	Usual hours of work.	Mealtimes. Breakfast or Lunch.	Mealtimes. Dinner.
HEREFORDSHIRE.					
Ashperton	Rev. J. Buckle	Yes.	8 to 6.	Quite sufficient.	
Byford	Rev. B. L. S. Stanhope	Generally.	Summer, 8 to 6. Winter, 8 to 4.	½ hour.	1 hour.
Dorstone	Rev. T. Powell	Yes.	8 to 5.30.	Nearly 2 hours.	
Downton	A. R. Boughton Knight	Yes.	Winter, 7 to 5. Summer, 6 to 6.	½ hour.	1 hour.
Frome Bishop	Rev. W. P. Hopton	Yes.	8 to 6.	½ hour.	1 hour.
Staunton-on-Wye	Rev. H. W. Phillott	Yes.	6 to 6.*	—	—
Treville	Rev. A. Clive	Near.	Women, 8 to 6. Boys, 6 to 6.	½ hour.	1 hour.
SURREY.					
Alfold	Rev. R. T. Sparkes	Yes.	8 to 5 (mostly).	—	1 hour.
Bramley	Rev. H. B. Power	Yes.	8 to 4.	—	1 hour.
Byfleet	Rev. N. T. Spicer	Near.	Women, 8 to 5. Boys, 6 to 6.	—	1 hour.
Carshalton	Rev. B. A. W. Cator	1 to 2 miles.	Women, 8 to 5.	—	1 hour.
Chobham	Rev. S. J. Jerram	Fairly so.	6 to 6 summer. 7 to 5 winter.	½ hour.	1 hour.
East Horsley	Mr. R. Boreman	Near.	Women, 8 to 5. Boys, 7 to 6.	1½ hours.	
Frimley	Rev. C. Stonhouse	Yes.	8 to 4.	2 hours.	
Oxted	Rev. A. Brenan	½ to 1 mile.	Summer, 10 hours. Winter, 12 hours.	½ hour.	1 hour.
Send	Hon. F. Scott	Generally.	Women, 8 to 5.	—	1 hour.
Shalford	A. Grenfell, Esq.	Yes.	7 to 5.	—	1 hour.
Stoke d'Abernon	Rev. F. P. Phillips	Generally.	9 hours.	1½ hours.	
Titsey	G. Leveson Gower, Esq.	In most cases.	7 a.m. to 6 p.m.	½ hour.	1 hour.
Thorpe	Rev. G. Drury	Within 1 mile.	Women, 8 to 5. Farm boys, 5 to 5.	—	—
Wanborough	Rev. G. Chilton	1 to 2 miles.	6.30 or 7 to 5.	—	1 hour.

* Farm boys have, after this, to attend to the horses, perhaps till 8 p.m.

QUESTIONS (22, *d*, *e*, *f*, *g*) relating to the EMPLOYMENT of CHILDREN, YOUNG PERSONS, and WOMEN in AGRICULTURE—*continued*.

Name of Parish.	Name of Person making Return.	Do Women and Children live on or near the Farms?	Usual hours of work.	Mealtimes.	
				Breakfast or Lunch.	Dinner.
WARWICKSHIRE.					
Allesley	Rev. W. Bree	Yes.	6 to 6 in summer. Daylight in winter.	—	1 hour.
Alveston	Sir R. N. C. Hamilton	Yes.	8 hours.	—	1 hour.
Barford	E. Greaves, Esq.	Yes.	Summer, 6 to 5 or 6. Winter, daylight.	½ hour.	1 hour.
Bubbenhall	Rev. A. A. Fanshawe	Near.	8 to 4.	—	1 hour.
Exhall	Mr. H. B. Bomford	Yes.	Women, 8 to 5. Boys, 7 to 5.	2 hours.	
Kinwarton	Rev. R. Seymour	Yes.	Boys, 10 hours. Women 8 hours.	1 hour.	
Leek Wootton	Rev. F. L. Colvile	Yes.	6 to 6.	½ hour.	1 hour.
Rowington	Rev. P. B. Brodie	Usually 1 mile.	7 to 6.	—	1 hour.
Shustoke	R. F. Croxall, Esq.	1 mile at most.	7 to 6.	½ hour.	1 hour.
Snitterfield	Mark Phillips, Esq.	Yes.	8.15 to 5.	—	1 hour.
Solihull	Rev. P. M. Smythe	Yes.	8 to 5.	—	—
Tysoe	Rev. C. D. Francis	Yes (chiefly).	8 to 4 winter. 8 to 5 summer.	—	1 hour.
Wasperton	Rev T. L. Lane	About 1 mile.	8 to 5.	—	1 hour.
Wellesbourne	J. M. Mordaunt, Esq.	Yes.	7½ hours.	—	1 hour.
WILTSHIRE.					
Ashton Keynes	Rev. R. Bishop	Near.	Males, 6.30 to 5 or 6. Females, 7 to 5.	1 hour (winter). 1½ hours (summer).	
Broad Chalk	Dr. R. Williams	Yes mostly, rarely over 2 miles.	9 hours.	1½ to 2 hours.	
Broughton Gifford	Rev. Preb. Wilkinson	Near.	8 to 6 summer. Less in winter.	2 hours.	
Burbage	The Ven. Archdeacon Stanton.	Yes, generally not more than 3 or 4 miles.	—	—	—
Castle Combe	Rev. R. C. Christie	Near.	6 to 6 summer.	8 to 9 a.m.	1 to 2 p.m.
Chicklade	J. Locke, Esq.	Yes.	—	—	—
Christian Malford	Rev. R. V. Law	Few more than ½ mile.	7 to 6.	2 hours.	
Clyffe Pypard	H. N. Goddard, Esq.	Chiefly near.	8 to 5 in summer. 8.30 to 4 in winter.	1 to 1½ hours.	
Corsley	Rev. J. H. Waugh	Near.	8 to 10 hours.	Summer, 2 hours. Winter, 1 hour.	
Donhead St. Mary	Rev. R. W. Blackmore	Generally near.	10 hours.	2 hours.	
Downton	Rev. R. Payne	Generally near.	Women, 8 to 5.	—	Women, 1 hour.
Durnford	Edward Hinxman, Esq.	On the farm.	7.	1 hour.	
East Knoyle	Rev. R. N. Milford	Some nearly 2 miles.	In summer, 7 to 6. In winter until 5.	1 hour.	1 hour.
Great Bedwyn	Rev. D. Hodgson	Yes.	Summer, males 10 hrs., females 9 hrs. Winter, less.	1 to 2 hours.	
Heytesbury	Lord Heytesbury	—	Summer, boys 6 to 7, women 7 to 6. Winter, boys 7 to 6, women 8 to 6.	2 hours.	
Longbridge Deverill	Rev. W. D. Morrice	Various distances.	Boys, 5 to 6 or 7. Women, 8 to 4 or 5.	(Say) 1½ hours.	
Netherhampton	Rev. D. Oliver	Yes.	Winter, 7 to 5. Summer, 6 to 6.	—	1 hour.
Stratford-under-Castle	Mr. Edward Waters	Within 2 miles.	Summer, women, 8 to 6; winter, 8 to 5. Ploughboys, 6.30 or 7 to 5.	½ hour.	1 hour.
Wroughton	Rev. J. C. Waugh	Yes.	—	1 hour.	
Wootton Rivers	Rev. W. J. Brodribb	Yes.	Summer, 12 hours. Winter, 8 hours.	2 hours.	
WORCESTERSHIRE.					
Alvechurch	Ven. Archdeacon Sandford.	Yes.	Females, 8 to 5. Males, 6 to 6. (Light permitting.)	½ hour (in summer).	1 hour.
Churchill	Rev. R. P. Turner	Yes.	8 to 5.	—	
Fladbury	Rev. J. Haviland	Yes.	Women, 7 to 5. Children, 6 to 7 or 6.	Nearly 2 hours.	
Harvington	Rev. A. H. W. Ingram	Yes.	Males, winter, 9 hrs; summer, 11 hrs. Females, winter, 8 hrs.; summer, 9 hrs.	¼ hour (males.)	1 hour.
Madresfield	Rev. G. S. Munn	Yes.	Ploughboys, 5.30 or 6 to 6.30. Others, 6 to 6 or 7.	½ hour.	1 hour.
Martley	Rev. H. J. Hastings	Yes.	Summer, 7 to 6. Winter, 4.30 to 5.	½ hour.	1 hour.
Norton	C. Randell, Esq.	Yes.	Boys, summer 6 to 6; winter, 8 to 5. Women, summer, 7 to 8; winter, 8 to 4.	—	—
Rock	Rev. A. James	Within 1 mile.	Summer, 7 to 6. Winter, 9 to dusk.	2 hours.	
Salwarpe	Rev. W. W. Douglas	Yes.	8 a.m. to 6 p.m.	½ hour.	1 hour.
Upton-on-Severn	Rev. R. Lawson	Yes.	Summer, 5 to 7. Winter, 6 to 6.	½ hour.	1 hour.

Answers to Printed Questions.

Mr. Norman.

E. i.

QUESTION (*h*). Does the demand upon their physical powers injuriously affect their health and constitution?

To this question I received 56 answers in the negative, in addition to the following:—

HEREFORDSHIRE.

STANTON-ON-WYE.

3. *Rev. H. W. Phillott.*—I think they have scarcely time enough for sleep.

SURREY.

BYFLEET.

4. The *Rev. N. J. Spicer.*—Yes, as I believe, interferes with the growth of boys, and the health of women.

STOKE D'ABERNON.

5. *Rev. F. P. Phillips.*—I think ultimately it does, telling most as they advance in life.

WANBOROUGH.

6. *Rev. G. Chilton.*—The women employed in field work look old much sooner, especially mothers of families.

WILTS.

BROAD CHALK.

7. The *Rev. Dr. R. Williams.*—In weakly cases, with poor food, perhaps, yes; but most commonly the lads harden and improve wonderfully.

EAST KNOYLE.

8. *Rev. R. N. Milford.*—I think some of the boys are dwarfed by the long distances they go to and from work.

WORCESTERSHIRE.

HARVINGTON.

9. *Rev. A. H. W. Ingram.*—Ploughboys between the age of 7 and 13 lose physical development in consequence of so much work without adequate food.

MADRESFIELD.

10. *Rev. G. S. Munn.*—Yes, in many instances, and especially when, as in this district, cider is given as a part of wages. They then early acquire the habit of drinking large quantities of cider, which is often their ruin. I should wish to call the particular attention of the Commissioners to the practice in this district of giving cider as part of wages, and the evil consequences of such practice on the whole community; and this, together with insufficient cottage accommodation, is, in my opinion, the chief cause of the low moral tone which prevails.

QUESTION (*i*). Are the young or the females, whether young or grown up, subject to any ill-treatment?

To this I received 61 answers in the negative, in addition to the following:—

HEREFORDSHIRE.

FROME BISHOP.

11. *Rev. W. P. Hopton.*—I am of opinion that very often the boys put under waggoners are ill-used by them.

WILTSHIRE.

CLYFFE PYPARD.

12. *H. N. Goddard, Esq.*—No. They are very independent (the females) about coming to field work at all; much more so than formerly, since male labour has been higher paid.

QUESTION (*j*). Do any special employments injuriously affect females or the young generally?

To this I received 54 answers in the negative, in addition to the following:—

HEREFORDSHIRE.

STANTON-ON-WYE.

13. *Rev. H. W. Phillott.*—Field labour in wet weather is injurious to females.

SURREY.

BYFLEET.

14. *Rev. N. J. Spicer.*—Field work I believe to be most injurious to females, *e.g.*, the fact of standing for so many hours consecutively.

WANBOROUGH.

15. *Rev. G. Chilton.*—Winter turnip cutting.

WILTS.

BROAD CHALK.

16. *Rev. Dr. R. Williams.*—Where the food is sufficient, and the constitution sound, the effect of field labour on both sexes appears physically good.

QUESTION (*k*). Have you any observations to make as to the effect of the employment of females in agriculture on morals, and on their proper training for domestic duties?

HEREFORDSHIRE.

ASHPERTON.

17. *Rev. J. Buckle.*—Their cottages are not as tidy as those that do not go out; and the attendance of children less regular.

BYFORD.

18. *Rev. B. L. S. Stanhope.*—The employment of the mother in field labour does not necessarily influence the tidiness of the cottage, or the attendance of her children at school. One girl is often obliged to remain at home to nurse the younger children; but by providing so that two sisters may attend school in alternate weeks, the education of the family is not hindered.

DOWNTON.

19. *A. R. Boughton Knight, Esq.*—The cleanliness of the children and of the cottages is not so well attended to when the labobrer's wife works on the farm, but I have no reason to believe that the employment of females in agriculture has any injurious effect upon their morals. When the labourer's wife works, elder children are kept from school to attend to the younger children.

FROME BISHOP.

20. *Rev. W. P. Hopton.*—I think there is more immorality amongst the girls who stay at home to make gloves than amongst those who are employed in agriculture.

STAUNTON-ON-WYE.

21. *Rev. H. W. Phillott.*—I think that out of door work is in general injurious to females in a moral point of view, and unfits them for domestic duties. They acquire rude and unsettled habits. The children are neglected, sometimes left without food. But this statement must not be made without exception.

TREVIL.

22. *Rev. A. Clive.*—On comparing the houses of females who have married labourers and artizans, and who have been previously domestic servants, with the houses of those who have been engaged as farm servants and in agricultural work, I find the latter generally cleaner and neater, and their own dress and personal appearance more suited to their work and station; the former are given to dirty finery in their poorest dress.

SURREY.

ALBURY.

23. *Rev. G. R. Portal.*—No one would ordinarily take a person into his house who had been employed in field work.

Byfleet.

24. *Rev. H. J. Spicer.*—Most injurious in many ways. It makes women unwomanly, neglectful of home and children, and induces coarse language and habitual going to the public house.

Carshalton.

25. *Rev. W. A. B. Cator.*—Not conducive to good morals, or to make them efficient servants.

Chiddingfold.

26. *Rev. G. Finch.*—As the gang system is not in force in this parish, and women are not employed to any great extent, I do not find that they are affected injuriously by such moderate employment.

Frimley.

27. *Rev. C. Stonhouse.*—Disinclines the young women for domestic service.

Limpsfield.

28. *Rev. S. Charlsworth.*—I would never sanction the employment of young girls, or even young women under the age of 21, in field labour, except in hay-making. I should wish that no females should be employed, but I doubt the policy of any legislative prohibition after the age of 21 years.

Lingfield.

29. *Rev. J. Thomas.*—I would prohibit female labour in the fields, except at hay and corn harvest, to tie the young hops to the poles, and hop-picking.

Stoke D'Abernon.

30. *Rev. F. P. Phillips.*—I certainly consider field labour tends to lower the tone of moral feeling in women, and to unfit them for their home duties, and also for domestic service.

Wanborough.

31. *Rev. G. Chilton.*—That they rarely, after field work, settle down to the in-door life of domestic servants, and they find great difficulty in getting places.

WARWICKSHIRE.

Allesley.

32. The *Rev. W. Bree*, and *Rev. J. L. Sutton.*—Under present circumstances it tends to lower morals and to impede training for domestic duties.

Barford.

33. *Edward Greaves, Esq., M. P.*—Domestic service in this parish and neighbourhood is readily obtained by girls as soon as they are fit to leave school. I would not allow girls under (say) 16 to be employed in field work except in harvest.

Bubbenhall.

34. *Rev. A. A. Fanshawe.*—Where young females are employed in field work, I think that the want of control under which they live entirely spoils them for domestic duties. I would prohibit females from being so employed, if they were mothers of large families of young children, unless all those children (excepting those who were themselves employed) were under a regular course of education. No unmarried female to be employed at all.

Exhall.

35. *Mr. H. B. Bomford.*—I think females are not quite so well qualified for domestic servants after working in the fields.

Harbury.

36. The *Rev. M. H. Hole.*—I think that home duties are neglected. In some cases the younger children grow up dirty where women are employed; but few work at field work who have large families.

Rowington.

37. *Rev. P. B. Brodie.*—It would be much better morally, I think, if they did not work in the fields, though it helps those in a pecuniary sense who have families, but not much, as their pay is small. It matters less for married women than for young girls, and it would be well if the latter were never employed in field labour under 14, or even at all if possible.

Solihull

38. *Rev. P. M. Smythe.*—I don't think there are any bad effects from the limited extent to which they are employed in this neighbourhood.

Tysoe.

39. *Rev. C. D. Francis.*—I think it has an injurious effect on the morals and manners of the unmarried, and therefore tends to unfit them for domestic service.

Wasperton.

40. *Rev. T. L. Lane.*—Against morals and training for domestic duties. Restriction to married females.

WILTS.

Ashton Keynes.

41. *Rev. R. Bishop.*—Agricultural labour for females without special arrangements of their employers exposes them to great temptations, and ill suits to their moral training.

Berwick St. John.

42. *Rev. C. A. Griffith.*—Of course it depends very much on the individual; but I have noted, I fear I must say in the majority of cases, a certain roughness and rudeness of manner in those who are chiefly so employed, and have been told that the language which goes on must be injurious to the young hands. Still many most respectable females do work, and seem unscathed.

Broad Chalk.

43. The *Rev. Dr. Williams.*—Field labour has a distinctly bad, and at least roughening, more commonly worsening effect upon young unmarried girls, and on account of its effect is piteously deprecated for them by the more respectable class of parents. The employment of young unmarried girls is diminishing from ordinary social causes, such as the demand for servants. It might perhaps be restricted as regards requirement of parental or other protection, but is on the whole to be rather deprecated than forbidden.

Certainly not prohibit women of 30 years old and more, or married, from employing themselves as they like; and very respectable women sometimes lend a hand in the fields. But perhaps prohibit young girls from working unprotected amongst lads and men.

Burbage.

44. The *Venerable Archdeacon Stanton.*—I think it injures their morals, makes them vulgar, coarse, and rude. It unfits them for household work and domestic duties. I would never allow girls to work in the fields except during harvest under the age of 25.

Castle Combe.

45. The *Rev. R. C. Christie.*—When females are employed together in agriculture it gives them a boldness of manner, and slovenliness in their persons and homes. I think no restriction could be recommended whilst the wages are at 9*s.* or 10*s.* per week, and that only during fine weather, and the cottage rent high, for the labourers with families could not pay their way. If the wages were 12*s.* a week, including all weathers, I would much wish to see no females employed in agricultural work, excepting at hay and corn harvest.

Chicklade.

46. *J. Locke, Esq.*—Decidedly hurtful to morals. The demand for labour during the busy times of the

Answers to Printed Questions.

Mr. Norman.

E. i.

year exceeds the supply. I think restriction would be practically useless.

CHRISTIAN MALFORD.

47. The *Rev. R. V. Law.*—In this parish mothers and daughters usually work, when wanted, on the same farm as their husbands or sons or brothers, without injury to their morals.

CLYFFE PYPARD.

48. *H. N. Goddard, Esq.* — The morals of this parish are good, and I believe this will be found to be the case in the generality of agricultural parishes as compared with towns. The girls almost as a rule in this parish go out to service. I am not in favour of any restriction, except that by the falling off of the supply of male labour, wages should improve in proportion to the loss of the earnings of women. Few come out every day, washing keeping them one day at home, exclusive of wet days.

DOWNTON.

49. *Rev. R. Payne.*—I have no doubt that agricultural labour for females tends to a certain roughness and coarseness both of body and mind, and certainly as a rule those who have recourse to it are amongst the least educated and dullest of the population. But I should not be prepared to assert that the number of illegitimate children, or the amount of direct immorality, was much larger amongst those who worked in the fields than others ; but there are not any great number of young unmarried females who work in the fields, for much more frequently the unmarried support themselves by domestic service. If they do not do that, they marry very early, and when they have been used to the fields they grudge giving up the earnings when married, and the consequence is that younger children are left in the care of elder ones, who themselves ought to be at school, whilst the mother is gone to work. I hardly see my way to a restriction that would not be almost a prohibition, unless it were no unmarried female under 25, and no married woman who had a family, unless she had a daughter 13 with a certificate of education. There are a very few single women (with or without bastards) who have earned a livelihood in this manner to whom a prohibition would be a hardship, and if I hesitate to recommend total prohibition, it would be on their account, rather than for the sake of the employer.

EAST KNOYLE.

50. *Rev. R. N. Milford.*—I have observed, especially in the parish of Brightwell, of which I was seven years rector, that field work made the young girls rough and coarse, and impatient of the restraints of home life. I would not allow any married women to work in the field except at hay and corn harvest.

GREAT BEDWYN.

51. The *Rev. J. D. Hodgson.*—I do not think it is necessarily injurious to morals, but decidedly so to their proper training for home duties. [I am in favour of restriction] if the wages of men be raised in consequence, so that a family may do without the earnings of the female portion of it.

LONGBRIDGE DEVERILL.

52. *Rev. W. D. Morrice.* — No perceptible effect on morals. The women acknowledge that there is no eventual profit on field work, on account of the wear of clothes and hindrances to domestic work ; but as their husbands work on the farms they consider themselves attached to the farms in time of need.

STRATFORD-UNDER-THE-CASTLE.

53. *Mr. Edward Waters.*—I don't think that it leads to any bad results here. Where young women are employed with men, as in raking after the hay waggon, bad results do sometimes follow; but they are not so employed here.

WORCESTERSHIRE.

ALVECHURCH.

54. The *Venerable Archdeacon Sandford.*—As in this parish few, if any, but married women are employed in field work, and these are generally in company with their husbands, their character is not much exposed, but their absence affects the comfort of their homes and the welfare of their children to a very great extent. The house work often remains undone till the evening, and the infants and babies are consigned to some busy neighbour or to a small child unfit for the care of other children, and who ought to be herself at school ; if practicable it would be best to allow no females to work in the fields, except married women relieved from the care of children. The rule could be relaxed at hay and corn harvest. Any loss of money would be more than made up by the increased comfort and improved health of the family.

FLADBURY.

55. *Rev. J. Haviland.*—I lived for many years in Cambridgeshire, where I observed the employment of women in agriculture to have a very bad effect on morals, but I have not found it so here.

HARVINGTON.

56. *Rev. A. H. W. Ingram.*—The requirements of modern systems of farming withdraw mothers from the superintendence of their families. This would appear to offer a strong argument in favour of compulsory attendance of their children at school in order to make up to them for the loss of parental training and supervision. None should be employed under the age of 13 ; restrict the employment of females to a defined age ; but by no means prohibit female labour in the fields, which is healthy and brings in income to the support of the family.

MADRESFIELD.

57. *Rev. G. S. Munn.*—As a rule there are no young women regularly employed in agriculture in this parish. The greatest moral mischief takes place during the hop-picking, when most of the population, young and old, turn into the hop yards, where they meet some of the worst of the towns near.

NORTON.

58. *Charles Randell, Esq.*—I do not think it well that girls should be employed in agricultural work ; it certainly is a bad training for household service or domestic duties. Practically no restriction is required.

SALWARPE.

59. *Rev. W. W. Douglas.*—I think it better on the whole that females should not be employed in agriculture ; it is bad for young girls, and when wives and mothers are employed in field work their homes and families are neglected. There can be no doubt that as a general rule the cottages of field workers are less comfortable than those of others. I cannot say that I am (in favour of restriction), though I have said above the less they are so employed the better in my opinion.

60. In addition to the above special opinions the following gentlemen have stated that they are not prepared to recommend that any restriction should be placed on the employment of females in field work.

WORCESTERSHIRE.

Rev. R. P. Turner, Churchill.

Recommendations as to distances and hours of work.

HEREFORDSHIRE.

DOWNTON.

63. *A. R. Boughton Knight.*—I approve of the restrictions of distances suggested in reference to age. In this neighbourhood children and young persons are not usually employed in laborious work, and I do not see any necessity for restriction in their hours of work.

FROME BISHOP.

64. *Rev. W. P. Hopton.*—Boys who are hired by the year in farmhouses have hardly sufficient hours of rest allowed when living in the service of small farmers.

SURREY.

BYFLEET.

65. *Rev. N. J. Spicer.*—Children are not employed here on sufficiently large a scale to call for restriction, at the same time both females and children would be benefited by sharing in any legislation for other parts.

SHALFORD.

66. *Arthur Grenfell, Esq.*—I think three or four miles too far for any labourer to go to and from his work, and two miles too far for boys of 11 or 12 years of age. It is not possible to restrict the hours in hay time and harvest; if they are late a few nights they are not so continuously, and it would never do to enforce the stoppage of work at a certain time, as it might stop the operation, say, with a prospect of wet; boys employed leading the waggon team at hay time if they left at a certain time the rest would have to stop also.

STOKE D'ABERNON.

67. *Rev. F. P. Phillips.*—There is reason for restricting the hours of work, but I fear it could not be done by legislation, but must be left to general education.

Answers to Printed Questions.

Mr. Norman.

E. i.

TITSEY.

67. *G. Leveson Gower, Esq.*—I think that boys should not be employed under 13 as a rule, except for the three summer months, when they may be wanted in the fields. If you must employ young children the distance should be limited, and in that case the table seems a proper one. I should in no case allow children under 13 to work more than 10 hours, including the time allowed for meals.

WANBOROUGH.

68. *Rev. G. Chilton.*—Boys of 10 and girls of 13 can easily walk more than a mile to their work.

WARWICKSHIRE.

TYSOE.

69. *Rev. C. D. Francis.*—I do not think as a rule that children suffer bodily from too long hours at agricultural work, or from being put to work too soon. I think that to make a good labourer it is necessary to go to work (part of the year) very young.

WILTSHIRE.

BROAD CHALK.

70. *Rev. Dr. Williams.*—The hours are not excessive here though the age is often tender.

CASTLE COMBE.

71. *Rev. R. C. Christie.*—No young person should be obliged to walk more than two miles for their work.

CHRISTIAN MALFORD.

72. *Rev. R. O. Law.*—I consider three miles quite far enough for any young person to go to work. The time according to custom in this parish is not excessive.

DOWNTON.

73. *Rev. R. Payne.*—I do not mean that no case ever occurred in which one would not be glad of a restriction, but they are hardly sufficiently numerous, as far as my experience goes, to call for legislative interference, and for these reasons :—

1. In the first place, as I have said, it is carter boys and shepherd boys who supply the most numerous instances of children working too young in agriculture pure, but they are more frequently than not provided by the carters and shepherds from their own families respectively, and of course the carters' and shepherds' homes are always near, and not unfrequently close to the farm.

2. I think parents would, and do shrink from exposing their children to the additional fatigue of long distances for their small wages, even supposing a child could earn 6*d.* a week more by going a long way, it would not be thought worth while.

3. I venture to give a most decided opinion, that if from the reports of other parishes legislation on the subject was shown to be required, it certainly ought to be on a stricter scale than that suggested in the paper of questions. I should be inclined to put one mile for under 12, two miles under 14, three miles above ; but I would not contemplate four miles under any circumstances. I hold it to be an intolerable burden, that any agricultural labourer, man, woman, or child, should habitually have to walk eight miles a day in addition to his work. Artizans may do it occasionally, or their better wages may enable them to keep donkey-carts, &c., but if the agricultural labourer is to receive any protection at the hands of the Legislature, he may certainly, I think, look to a limit of *three miles from his house to that of his employer*, for I would venture to observe that unless this was the rule, some difficulties might arise on larger farms. We have some more than two miles long ; the walk on the farm at least should be out of the employer's time, part of the day's work.

I have answered "No" so far as regards the physical part of the question ; morally I have the strongest opinion that the case of shepherd boys (and if the Legislature would protect men, I should say shepherds also) is one which calls for legislative interference, so far as regards Sunday labour, unless employers of labour can be induced to make improvements without it. I think it a disgrace to a Christian country that a certain number of boys should commence labour at perhaps 8 years old, and from that time till the day of their death, except when invalided, should be totally deprived of all religious education, and very nearly of all opportunity of religious worship. I believe neither shepherds nor shepherds' boys ever enter a place of worship, except sometimes of an evening in the winter months, say October, November, December. I should be afraid to say what the average attendance at public worship on the part of the shepherds or shepherds' boys was in this parish. Except in lambing time there can be no reason why the evil should not be diminished.

NETHERHAMPTON.

74. *Rev. D. Olivier.*—I think that to send a boy of even 14 to 15 three miles and back to work, or of 16 four miles, is a severe tax on his strength at that time of life. The restriction [as to hours of work] should, I think, be regulated by the age of the child or young person, but I fancy 10 hours work is enough for any boy, still less for a girl under 17.

WORCESTERSHIRE.

ALVECHURCH.

75. The *Ven. Archdeacon Sandford.*—It would be best to allow no boy to labour under the age of 11 or 12, and to take no lad under the age of 14 more than one mile from home. Allow no boys under 14, nor any female of any age, to work more than eight or nine hours. In this neighbourhood no female does work longer than this.

HARVINGTON.

76. *Rev. A. H. W. Ingram.*—Legislative interference in such a matter is not proper ; an employer out of consideration to his own interest would not fatigue his labourers by bringing them a long journey on foot. Carts for them would be provided.

NORTON.

77. *C. Randall, Esq.*—No [restriction as to hours]. They certainly are not overworked, and any restriction would apply only to some few days in harvest, when it would be very inconvenient to employers and not liked by the boys, to whom alone it would apply.

QUESTIONS 23 to 26.

III. Recommendations as to requiring some amount of school attendance in the case of children earning wages by employment in farm labour.

Question 24.—The three modes by which the prescribed amount of school attendance of children employed in trades and manufactures is obtained, are :—

By the Factory Act (7 Vict. c. 15, ss. 31–9).

1. By half day at school, and half day at work.
2. By alternate whole days at school, and whole days at work.

By the Print-works Act (10 and 11 Vict. c. 70, ss. 2, 3, 26).

3. By school attendance for a certain number of hours during the preceding six months.

Question 26.—You are requested to state which of such modes of enforcing some amount of school attendance would seem most applicable to the circumstance of your parish and neighbourhood, or whether a combination of one or more of them would better meet those circumstances ; or whether any other mode that you might wish to suggest appears to you preferable.

HEREFORDSHIRE.

ASHPERTON.

78. *Rev. J. Buckle.*—I do not think any compulsion is desirable in this locality, nor if it were desirable do I see how it could be adopted.

Byford.

79. *Rev. B. L. S. Stanhope.*—Having some years ago made an experiment of the half-time system (*i.e.*, half day at school and half at work), I found it inapplicable to agricultural parishes, and the system failed. Possibly a law requiring a certificate of competence in reading and writing before children are allowed to work might be adopted. A register of all holding such certificates might be kept at the school in each parish, and a penalty inflicted on employers of labour if they infringed the law.

Dorstone.

80. *Rev. T. Powell.*—I unhesitatingly advocate an unbroken and uninterrupted school attendance from 7 to 11 years of age.

Downton.

81. *A. R. Boughton Knight, Esq.*—Although it would be very desirable that children should receive some education between the ages of 12 and 15, I think that the services of children of 12 years of age and upwards would not be much sought for by farmers, unless the children came to work each day and all day. I would suggest that children should not be permitted to work in agriculture under 10 years of age; from the ages of 10 to 12 that they might work a portion of their time; after 12 years of age that they might work all their time.

Frome Bishop.

82. *Rev. W. P. Hopton.*—No way appears practicable to enforce education, except forbidding a child to be employed who has not been passed as reasonably educated according to his abilities and powers of learning unless he be 15 years old.

Trevil.

83. *Rev. A. Clive.*—I think that any enforcing of school attendance is impossible, unless the parent is indemnified for the loss of the child's wages consequent on his being at school instead of work.

SURREY.

Albury.

84. *Rev. G. R. Portal.*—I think that no child should be employed for wages under 13, unless he or she has passed the fourth standard.

Bramley.

85. *Rev. H. B. Power.*—The last. I think half day or alternate day attendance would not answer at all in agricultural districts.

Byfleet.

86. *Rev. N. T. Spicer.*—The second [alternate day] seems to be most practicable, though in itself most difficult I apprehend to be carried out.

Capel.

87. *Mr. W. W. Kibblewhite.*—I believe, if any restriction is to be made, that the only practicable one is alternate weeks for an agricultural district.

Carshalton.

88. *Rev. W. A. B. Cator.*—I am of opinion that some system of compulsory education is by all means desirable, but which is most suitable I am at a loss to say.

Chobham.

89. *Rev. S. J. Jerram.*—I fear that the enforcing some amount of school attendance would be attended with insuperable difficulty. I am inclined to think that alternate days would answer best in a widely scattered parish, and half days in those which are more compact.

Godstone.

90. *Rev. G. T. Hoare.*—The third [printworks] appears to be most applicable to our circumstances. The distances preclude the first; and the nature of agricultural employments would make the second very difficult.

Limpsfield.

91. *Rev. S. Charlsworth.*—In agricultural labour, work and school cannot be had on alternate hours or alternate days; a week should never be broken into. In farm labour alternate weeks even would be most inconvenient. I doubt if any provision for combining school and labour be feasible. I think that any rule enforcing compulsory attendance at school after 10 years of age would work unjustly or injuriously both to employers and parents, and would be evaded.

Lingfield.

92. *Rev. J. Thomas.*—Certainly not one or two. They should attend during the winter months. They are scarcely ever wanted at this season.

Oxted.

93. *Rev. A. Brenan.*—The above Acts are hardly applicable to a country parish such as this; it would be sufficient if the children were not employed before 12, and induced to attend the night schools when at work.

Send and Ripley.

94. *Hon. F. Scott.*—Certain number of months during winter, under 11 years of age.

Shalford.

95. *Arthur Grenfell, Esq.*—I should enforce a certain number of attendances per month or per quarter; then a boy could be employed when he is really wanted, and make up for his schooling when he can best be spared.

Stoke d'Abernon.

96. *Rev. F. P. Phillips.*—Of the three, the alternate whole day is preferable, but I doubt any one being practically possible. The best suggestion I can give is compulsory attendance till 11 or 12 years.

Titsey.

97. *G. Leveson Gower, Esq.*—I consider the half-day plan impracticable as applied to agricultural employment. The alternate day plan would very much interfere with the school arrangements, and with the ordinary staff of teachers in a country school, make it very difficult to carry on the work. The third (printworks) is more intelligible, but anything that interferes with regular attendance from day to day is very injurious. It may not be so much so in the manufacturing districts, where the children are more intelligent, but in country districts, spasmodic attendance would be of very little use. If children are to work, they should be required to attend school for six months successively, say the six winter months, and work the other six.

Wanborough.

98. *Rev. George Chilton.*—The half-day plan is much the best for the children. The alternate day plan is preferred by the farmers, and the third (printworks) is preferred by the parents, but neither are so good for the children.

WARWICKSHIRE.

Alveston.

99. *Sir Robert N. C. Hamilton.*—A boy having a certificate at 10 years of age should be considered freed from school. If it is desired to encourage him to continue attendance, it must be made worth his while. He cannot be supposed to give up any of his wages.

Answers to Printed Questions.

Mr. Norman.

E. i.

BUBBENHALL.

100. *Rev. Arthur A. Fanshawe.*—Modes one and two would not be very practicable, as a farmer, who employs a boy, would require that boy's service for the whole working day, and from day to day. I would require a certificate of their having attended a school in the parish where they live for a certain number of days, during a certain number of previous years, say four.

EXHALL.

101. *Mr. H. B. Bomford.*—We should have to do without the boys if we could not have them for the day. So I should think the best plan would be to stay at school till they have learned sufficient.

HARBURY.

102. *Rev. M. H. Hole.*—I am of opinion that compulsory attendance at school would have to be enforced with great caution and consideration; but I believe no employer or labourer would object to no child being allowed to receive wages under 10 years of age, *absolutely* I say receive wages, because it would be difficult to prevent a child helping its parent, *in the parent's own allotment*, and such allotments are very general in this county.

Half-time, as enforced in the Factory Acts, would be simply ridiculous, as no farm work could be carried on if boys were absent half the days in the week. But it appears to me that the Revised Code affords a ready solution of the problem. Let the *haf-time* be for the *year, i.e.*, let every child from 10 to 11, and for such further period as may be necessary to secure its passing the *fourth standard*, be required to attend the 200 times required by this code for children to be presented for examination.

The less busy seasons of the year easily allow of this.

KINWARTON.

103. *Rev. Richard Seymour.*—I should be glad to see a law by which no boy should be regularly employed under 9 years of age, unless he can pass the third standard, nor between 9 and 10 until he can pass the fourth standard. I think the same law should empower the board of guardians to allow, in the case of large families or low earnings, 1*s.* a week and the costs of the schooling to any child between 6 and 10 who, in their opinion, need this help to enable it to forego work and attend school. Without some such help our agricultural labourers cannot as things now are, keep their boys from work long enough to enable them to get the most moderate competency of instruction. I could illustrate this by facts, if it was necessary.

SNITTERFIELD.

104. *Mark Philips, Esq.*—No child ought to be employed who has not attended school regularly up to the time of entering service, at 10 years of age for boys. There is not a sufficient number of boys in this parish for the half or alternate day system.

TYSOE.

105. *Rev. C. D. Francis.*—I think that no child under 12 years of age should be allowed to work all the year round, who has not passed Standard IV., if such work interferes with his attendance at school for a certain number of hours. I do not think that such a restriction would seriously interfere with farm work, as he could make up his hours, partly by attendance at night school, and partly by attendance at day school during slack times of the year.

WILTSHIRE.

ASHTON KEYNES.

106. *Rev. R. Bishop.*—Alternate whole days at school and at work appears to me the best mode of enforcing school attendance, should it be deemed necessary to make education compulsory.

BROAD CHALK.

107. *Dr. R. Williams.*—The first and second modes might operate with doubling the amount of hands; the third seems to imply least troublesome innovations. But the simplest plan would be to require a certificate of certain attainments for all boys employed below 12.

BURBAGE.

108. The *Ven. Archdeacon Stanton.*—The half day is the best.

CASTLE COMBE.

109. The *Rev. R. C. Christie.*—The alternate day plan is to be preferred.

CHRISTIAN MALFORD.

110. The *Rev. R. V. Law.*—The farmers in this neighbourhood would never consent to half days or alternate days, except in the case of two brothers of nearly the same age. I should, therefore, suggest a number of days in the preceding six months.

CLYFFE PYPARD.

111. *H. N. Goddard, Esq.*—A boy in agricultural employment would be valueless to an employer who could not command his services every day, as teams of horses, &c. must stop in his absence.

DOWNTON.

112. *Rev. R. Payne.*—I do not think that any modification of the Factory Acts, such as half or alternate days at school, would in any way suit agricultural districts; but I have always thought that there is a very feasible way of securing education in these districts, viz., that of making it penal to employ any child below a certain age, unless that child was possessed of a certain educational certificate.

I would venture to recommend that the educational certificate should be that of having passed Her Majesty's inspector's examination in Standard IV., and no child until 15 should receive wages until it had obtained that certificate. This plan might require a few additional inspectors, but I see no difficulty whatever in carrying it out.

Let the penalty be 5*l.* or 1*l.* for the first offence, for paying wages to any child under 15 without the educational certificate, recoverable before magistrate, and half to go to the informer; and the magistrates should hold that evidence of work done was sufficient presumptive evidence that wages had been paid, and the thing would be done, for no employer of labour would place himself at the mercy of the child he employed to inform against him, whenever he chose, or indeed any one else. Of course I except the harvest months, say August and September, from this law. The beneficial results would, I believe, be incalculable. The parents would see that their children must be taught, or they would remain dependent upon them so much longer, and they would send them regularly to school, until the examination was passed. If the inspector would be very strict in reading, I would forego the dictation; but I think it would be better to take the standard as it is. The parents would learn sensibly the value of education, and with that perhaps would feel some gratitude towards those who provided it; and so it would tend to restore the balance between managers of schools and parents and children, which has been sorely disturbed by the recent course of action of the Committee of Council, throwing the whole inconvenience of non-attendance, &c. on the managers, and really making them dependent upon the parents and children. I do not think above 5 per cent. of children who have been kept regularly to school would fail to satisfy the examiner in that standard at 10 years of age; if it was 10 per cent. there probably would not be 2 per cent. after 11 if there had been regularity. I imagine that there is no district which has not schools sufficiently near each other, although there may be some where the Government inspector has not at present the entrance. This would be an additional reason for the Committee

of Council waiving all conditions (I should say everywhere, but certainly in smaller parishes) of giving aid and paying for results, however they were obtained. Then all schools would be open to them, and the Government aid would reach all parishes, as they profess to wish.

I doubted much whether I ought not to have put 11 instead of 10. What I should like would be, if a distinction could be drawn, to allow a child of 10 or indeed it might be any age with the educational certificate to earn wages at odd jobs, potato planting, &c., but not to go to a farm, say not work for a man renting 50 acres before he was 11, or even 12. They ought not to have the care of large horses, or be in solitude whole days before 12.

[The following letter was subsequently received from Mr. Payne.]

113. Dear Sir,

In reply to your question whether I should recommend any compulsory attendance at day or night school after a child had gained the certificate proposed, I reply I *do not*.

My principle is to secure an *adequate—i.e.* the best I can—education before labour commences, and then leave it free. I have no objection to a higher standard (if it were thought that the agricultural interests would submit to it) as the condition of receiving wages. I have placed it as low as possible, and should be very glad if Standard VI. even in reading could be substituted for standard IV., but I feel sure that it would be better for the child, and more convenient to the employer, to have it over, so far as compulsion goes, *once for all*. Suppose the question was, whether you would have children working under certain limitations from 9 or 10 up to 13, I feel sure that it would be better for the child and the employer to prohibit it either directly or by way of certificate until 11, and then leave it free. It would cause far less irritation and inconvenience, and would be far more simple and certain in its operation.

Night schools would no doubt be continued and attended voluntarily in many cases, and would probably be far more beneficial than, so far as my experience goes, they have proved hitherto, because you would start with a far greater amount of instruction, and far *more evenly distributed*, a very important consideration when you come to estimate the amount of teaching power required. I think that they should be aided by the Committee of Council in all ways. But I can conceive nothing more hopeless than *compulsory* attendance at night schools. Think of a boy who, having been at work all day is tired and done up in the evening, or of another with greater physical strength and better spirits, who lays himself out for a little fun of some kind after work. I should like to know what power on earth would prevent No. 1 falling asleep, and No. 2 finding his amusement in some way in the schoolroom, as you oblige him to be there instead of out of it.

I should have thought that throughout the Factory Bills the requirements of *attendance*, as distinguished from learning, would have proved a very great defect, but I am sure it would in the country. However, I have already replied to your question, and if at greater length than was necessary pray excuse it, and ascribe it to my sense of the importance of every thing connected with the education of the young in agricultural districts.

I remain,

Yours faithfully,

Downton, Oct. 2. Richard Payne.

Durnford.

114. *Edward Hinxman, Esq.*—I think it is very desirable that boys should be sent to school as long as the circumstances of the parents and the wants of the neighbourhood will allow it. In this county the average age in which this could be done, would be, I think, about 12. I do not think that any of the factory plans are practicable on the widely scattered farms of South Wilts.

Great Bedwyn.

115. The *Rev. J. D. Hodgson.*—I think the alternate day plan well worth a trial.

Longbridge Deverill.

116. The *Rev. W. D. Morrice.*—Alternate days would suit the school managers and children, if they would suit the farmers and there were a sufficient supply of children, which is doubtful. Attendance during preceding six months would seem an excellent plan.

Netherhampton.

117. *Rev. D. Olivier.*—In this agricultural hamlet I should think the half-day system best. I am inclined to think, too, that this mode should be insisted on until a boy or girl was 13, unless he could before that pass under Standard IV. of the Revised Code; in this case he might be supplied with a certificate, and at once allowed to work if a doctor certified he was strong enough.

Stratford-under-the-Castle.

118. *Mr. Edward Waters.*—I think that the most convenient mode is by means of night schools after work begins. I am opposed on principle to compulsion.

Wootton Rivers.

119. *Rev. W. J. Brodribb.*—With considerable doubt I incline to think that the half day would be the best mode.

WORCESTERSHIRE.

Alvechurch.

120. The *Venerable Archdeacon Sandford.*—Allow no boy to work regularly at farm labour until 11 years of age. From 11 to 14 years of age allow eight hours work per diem, and compel attendance at night school from 11 to 16 years of age.

121. [Another plan suggested by the Rev. H. R. Sandford, Her Majesty's Inspector of schools, is as follows:—No child under 10 years of age to be employed. No child under 13 years of age to be employed, unless attending school (*a*) either two hours a day, between 6 a.m. and 6 p.m., five days in the week; or (*b*) four hours a day, between 6 a.m. and 6 p.m., on alternate days or alternate weeks. Boys under 16 to attend night school three hours a week, and boys under 14 to work only eight hours a day.]

Churchill.

122. *Rev. R. P. Turner.*—I should very much doubt whether either of the above plans could be carried out satisfactorily in the case of agricultural labourers, and in this particular parish neither seem needed.

Fladbury.

123. *Rev. J. Haviland.*—I think that the best mode of enforcing school attendance would be to prohibit the employment of children under a certain age (say 13), unless they can read and write fairly. It is a common thing to find young men of 18, 19, and 20 quite unable to read in consequence of not having been sent to school in childhood.

Harvington.

124. *Rev. A. H. W. Ingram.*—The simplest course would be to pass a legislative enactment prohibiting the employment in agricultural labour of boys below the age of 10 and girls below the age of 13; and of boys between the ages of 10 and 13, and girls between the ages of 13 and 15, unless they receive from a licensed inspector a certificate of their being properly instructed in reading, writing, arithmetic, and the first principles of religion.

Answers to Printed Questions.

Mr. Norman.

E. 1.

MARTLEY.

125. *Rev. H. J. Hastings.*—I think it very difficult to apply the half-day system to boys employed in agriculture. The alternate day system would be better, but that would entail the necessity of twice the number of boys being kept, and boys are scarce. Perhaps the third plan of requiring attendance during a certain number of hours between Christmas and 3rd of May. I think that, perhaps, the plan proposed of requiring a certificate of proficiency as a condition of employment might work well.

NORTON.

126. *Chas. Randell, Esq.*—I believe all that can be done is not to allow children to be employed before 10 years of age, and to provide good schools for them. The parents would avail themselves of such schools, and more heartily if not compelled. I doubt the practicability of prohibiting work until an examination in reading and writing has been passed. It would sometimes happen that one of a large family, strong but stupid, could not pass, although better able to earn 3*s.* or 4*s.* a week than others of more intelligence. This would be a hardship which the parents would feel strongly, and would make compulsory education very unpopular.

SALWARPE.

127. *Rev. W. W. Douglas.*—From inquiries I have made I believe that the printworks' mode would work the best. Many of the farmers would not object to let the boys come to school in the winter months, if they might employ them in the summer.

QUESTION 37.—General description of the cottages.

HEREFORDSHIRE.

ASHPERTON.

129. *Rev. John Buckle.*—The cottages mostly consist of kitchen, back kitchen or wash-house, with two bedrooms, one being the landing of the stairs; fireplace in one bedroom; all windows opening. No accumulations of filth, &c. are permitted. Lodgers not taken in without permission of landlord. Each cottage has oven, most have pumps for well water. Good sized gardens, about one-eighth of an acre; pigsties, &c. at end of garden. Owned for most part by Rev. J. Hopton, the principal landowner. Rent from 4*l.* to 4*l.* 10*s.*, depends upon size of garden. Farmers generally allow their labourers several rows of potato ground at a cheap rate.

BYFORD CUM MANSEL GAMAGE.

130. *Rev. B. L. S. Stanhope.*—The land in this parish is principally the property of two landowners, and improvements are being made by them in regard to amount and construction of cottages. The rent varies according to size of cottage and garden; average from 3*l.* 10*s.* to 6*l.* All the cottages recently built have three bedrooms.

DOWNTON.

131. *A. R. Boughton Knight, Esq.*—1. Constructed usually of brick or stone, and contain on ground floor, living room, back kitchen, stairs, and pantry, 12 feet by 15; on first floor, generally three but sometimes two bedrooms, with separate entrances to each, 12 feet by 15. Proper arrangements are made for ventilation and drainage. A garden, pig-sty, and small outhouse attached to each cottage. The cottages are not usually supplied with pumps, but water is obtained at a short distance.

3. In this parish every cottage belongs to myself, and they are let on an average of 1*s.* per week, including garden.

FROME BISHOP.

132. *Rev. W. P. Hopton.*—I have cottages of every description, from one small sitting-room and one bedroom to two good sized sitting-rooms and three bedrooms. Large families are often in small cottages, and the reverse; they have generally good gardens. I have known five grown-up persons live in a cottage with two bedrooms of the worst description, and yet keep it sweet and tidy, as I saw in my weekly visit to one of them, who was for years bedridden. There is amongst landlords a custom of letting the cottages with the farms, and to deliver the inmate, bound hand and foot, to the not tender mercies of the employer; this is a system landlords should never follow.

STAUNTON-ON-WYE.

133. *Rev. H. W. Phillott.*—Most cottages consist of a kitchen and back kitchen and two bedroom, or quasi bedrooms upstairs; but in some cases the second bedroom is only a part of the landing place, and very insufficient in ventilation and light. But several cottages are not so well off as these, and have no second bedroom; the water supply is almost always insufficient. Wells are very difficult to sink in this soil, and most cottagers have to go a long distance for water. The drainage is bad. Most houses have gardens, and some good ones. The ownership is much divided, and the worst cases are those which belong to the small proprietors. Rent is, I think, never lower than 2*l.* 12*s.*, and mounts up to 5*l.* 5*s.*, for three rooms and small garden; only one or two dwellings (outhouses and cellars used as such) carry so low a rent as 2*l.* 12*s.* I should think the average would be 4*l.* or 4*l.* 10*s.*

TREVIL.

134. *Rev. A. Clive.*—The cottages are of all sorts. Newly built ones are generally sufficiently convenient. Some of the older ones, many of which were originally built by the occupiers, are cribbs from roadsides and odd corners of land, to which they obtained a title by prescription, and which have since been bought by adjoining landowners, are bad and inconvenient; they are gradually, but not rapidly, in process of demolition and reconstruction. The worst, however, are those belonging to small freeholders, who cannot afford to repair them.

SURREY.

ALFOLD.

135. *Rev. R. T. Sparkes.*—The cottages at Alfold are mostly old roomy houses, the bedrooms generally insufficient in number and inconveniently arranged; the gardens are very good, with a supply of water.

Rent from 3*l.* to 6*l.* a year. The cottages belong to the tradesmen and landowners; the tenants are expected to deal at the shops of the former.

BRAMLEY.

136. *Rev. H. B. Power.*—The cottages vary very much in accommodation and rent. Those in the village are the worst, and generally without gardens; they also differ in ownership, but I do not believe that any belong to tradesmen with whom the occu-

Answers to Printed Questions.

Mr. Norman.

E.
4.

piers are obliged to deal. In the outlying districts they are let with the farms, as a general rule, and these cottages are pretty good.

BYFLEET.

137. *Rev. N. J. Spicer.*—The cottages have generally three rooms and small scullery, &c. Rent from 2*s.* to 4*s.* a week, or more with good garden.

CARSHALTON.

138. *Rev. W. A. B. Cator.*—The cottages are built of brick and slated; accommodation spare. Drainage very indifferent, now being attended to. Usually two bedrooms and a sitting-room. Water supplied by wells. Gardens not general, but a few allotment gardens; outhouses fair. The owners are retired tradespeople. Rent 3*s.* to 4*s.* a week.

CHOBHAM.

139. *Rev. S. J. Jerram.*—Water supply and garden usually good; in other respects there is much room for improvement, particularly with regard to the number and size of the rooms. I do not think there is much, if any, compulsory dealing. Many of the cottages belong to the labourers themselves. Rent is about 5*l.* to 6*l.* per annum.

GODSTONE.

140. *Rev. G. T. Hoare.*—A few good cottages stand on the estates of the two great landowners; the rest are generally small and crowded into three groups without ventilation or drainage, outhouses, gardens, or water supply. Cheap tenements run up by small speculators rented high. An attempt was made a few years ago to drain the village into the stream which flows near, and some landlords avail themselves of this mode of relieving their houses at the expense of their neighbours. Some of the wells in the village are polluted by the near proximity of cesspools in a porous soil. We have many cottages unfit for human habitation. They are occupied habitually by the most ignorant and disreputable of our people. In such cases the house and its inhabitants act and react upon one another with the worse results.

LIMPSFIELD.

141. *Rev. S. Charlesworth.*—It seems to me that the acreage of a parish is a most insufficient means of testing the number of cottages needed, that it can indeed be no possible criterion, except in the case of *arable land* only and a purely agricultural labouring population. We have 260 houses, about 150 of which are occupied by labourers, many of whom have shifting employments; some are at times carpenters, bricklayers, brickmakers, gardeners, blacksmiths, whilst a large portion of our parish consists of open commons and extensive woods, moreover, many living in our parish go out of it to work, and some not living in our parish may be employed on the land. The amount of population (taking adults and children) is the only estimate upon which a calculation can be made. I estimate that we have one house for every two adults and three children; this is a favourable allowance, and would be ample if we had not some 10 or 12 one-room'd cottages.

LINGFIELD.

142. *Rev. J. Thomas.*—One living room entered by front door, one smaller behind for all domestic purposes, cooking utensils, tubs, and some provisions. Two bedrooms. Water supply very fair. All have gardens, but outhouses are not common. Owned chiefly by landowners. Rent about 2*s.* a week.

SHALFORD.

143. *Arthur Grenfell Esq.*—1. Generally brick. 2. Water supply excellent generally, and as the village is not crowded, and many of the cottages are isolated and probably well cared for as a rule, there is not much complaint, I believe, on these points. Where there is no garden ground accommodation ground is to be had, though on a limited scale, but as such is of great value and a decided boon to the poor, not only employing their spare time and supplying their table with luxuries, but giving them more interest in life and inducement to exertion and honesty. 3. Country landlords generally. 4. Rents are ordinary, but steadily rising.

STOKE D'ABERNON.

144. *Rev. F. P. Phillips.*—1. Some newly built by myself generally good. All three bedrooms; drainage, water, and ventilation considered; brick built; outhouses; garden good size.

2. Many old. Some of timber only being old barns, ill-drained and ventilated, crowded.

3. All the cottages belong to landlords, except perhaps three or four belonging to their occupants.

4. Rent: I allow my tenant farmers to hold cottages for use of men working on their farms under regulations. I fix the rent at 2*s.* per week for cottages of three bedrooms. Other rents about 2*s.* 6*d.* Cottage accommodation is the most important possible question on morality, religion, decency, and physical well being; but the labouring man does not appreciate enough the advantage of a good cottage. He needs to be taught it, partly by education, partly by encouragement, partly by restrictive rules. To do this the landowner and tenant must both act together and on the cottager. Rules should be drawn by the landowner, approved by the tenant farmer, and enforced. Every landowner should supply cottages enough for the farm, and permit the tenant farmer to place his labourers therein; but never ought to let the controlling power slip from his own hands as regards restriction of rent, number of lodgers, cleanness, &c.

TITSEY.

145. *G. Leveson Gower, Esq.*—1. They are mostly old cottages, some farmhouses converted into dwellings. The rooms are large, but the lower story low, the bedrooms being relatively better than the basement. The ventilation and drainage are good.

2. Of the 23 there are only two that have three bedrooms. The two new pair that I propose building will have three each. On the hill the water supply is bad; I provide a soft water tank, and put shooting to all the cottages. In the vale we have wells and the brooks; the water supply may generally be said to be good. The gardens are large usually, and allow of the cottagers growing wheat. The outhouses are convenient; they consist of a woodhouse, bakehouse, and privies with cesspool in the new cottages; in the old ones the oven is generally in the house, and it is only necessary to provide woodhouse and privies. The farmers object to labourers keeping pigs as a rule; perhaps half the cottages are provided with pig-sties.

3. In this parish all the cottages are mine. In Limpsfield, and especially Oxted, the cottages are the property of small tradesmen and others, the consequence is that in many cases the rents are high and the cottages bad. I have often purchased cottages from small owners; I have always found the rents are from 15 to 20 per cent. higher than I should charge for the same kind of cottage, and are taken weekly instead of yearly. Rent for cottages with large gardens 4*l.* 4*s.* I am no advocate for very low rents, but I consider 4*l.* 4*s.* to 5*l.* the most that a labourer earning 14*s.* can afford to pay.

THORPE.

146. *Rev. G. Drury.*—Of the cottages a few are large and good, rooms 14 feet square or more; three have three bedrooms, others have two rooms only, 10 feet square; the ventilation pretty good; no drainage. Water supply in some cases deficient, and bad in quality; good gardens. Bad conveniences, and deficient in number in several cases; the owners are the squire and other landowners. In two cases the

cottages are the property of the labourers; they are both bad.

WANBOROUGH.

147. *Rev. George Chilton.*—1. Brick, tiled or thatched; rooms about 12 feet square; no special provision for ventilation or drainage; rooms low; windows small.

2. Kitchen and back kitchen, two bedrooms, good gardens or allotments, fair outhouses.

3. All belong to the landowner.

4. Rent 5*l.* a year.

WARWICKSHIRE.

ALLESLEY.

148. *Rev. W. Bree.*—Mostly brick, the size of the the rooms too small for the families occupying them. The cottages being scattered over a large area in groups are not generally defective in ventilation and drainage.

Accommodation is often defective, many of the cottages having only one room upstairs, many of them have a garden attached, with outhouses. Water supply generally good.

The greater number belong to small proprietors. Not aware of tenants being obliged to deal with owners.

ALVESTON.

149. *Sir R. N. Hamilton.*—This is difficult to answer; the old cottages are very different from the new, and in the village separate cottages are not built, but blocks more like streets, mostly without gardens. It is not possible to purchase land for cottage building on farms, but in villages bits of land may be obtained, and on these patches cottages or habitations are built on speculation and let out to labourers. They are usually with one room and a kitchen down stairs, and two, or perhaps three, bedrooms above. The rent of the whole house varies from 6*l.* to 10*l.*; lodgers are taken in to make up the rent, and overcrowding is the consequence of high rents.

BUBBENHALL.

150. *Rev. A. A. Fanshawe.*—1. One half of the cottages are sufficient.

2. Number of rooms deficient in proportion of 35 to 20.

Number of gardens deficient in proportion of 33 to 22.

Water supply good.

Outhouses, &c. generally very deficient.

3. Chiefly by small owners of land, and by a charity in the city of Coventry.

4. Rent varying from 1*s.* to 2*s.* per week. The cottage accommodation in the parish is bad. I would prohibit any labourer (with a family of sons and daughters at home) from occupying a cottage with less than three bedrooms. So long as men are allowed to lodge in the houses of the poor, where young women and girls are residing, the morality and health of the labouring poor will suffer.

EATINGTON.

151. *Rev. G. H. Biggs.*—Size very various. Ventilation usually good, because the doors are left open. Drainage bad. There are a few with three bedrooms, the majority two, and some only one. Good water supply from wells. Almost all have gardens or allotments. The greater number have pigsties. About 30 belong to Mr. Shirley; the remainder to small proprietors. None to tradesmen who compel the labourers to deal with them. Rent 3*l.* to 5*l.* a year.

FILLONGLEY.

152. The *Rev. J. L. Morris.*—The cottages are usually built of brick, and slated or tiled, and in a few cases thatched. The drainage is often defective. The better class of cottages have three bedrooms, but there are many with two, and a few with only one; some of them have large families in them. The water is derived from wells. Most of the cottages have gardens; but there are also allotments, which can be had by nearly all legally settled parishioners. The cottages belong to a great number of people. The rent varies from 3*l.* to 5*l.* They pay 10*s.* for a quarter acre of allotment.

ROWINGTON.

153. *Rev. P. B. Brodie.*—The lower room is often very small though usually sufficient; bedrooms are never large enough; ventilation by the windows, rarely opened, and chimney, which is often stopped up; poor people as a rule dislike fresh air in-doors. Drainage often very defective; open drains common, and privies too near the house and very foul. Pigsties never properly cleaned are always a nuisance. Number and size of bedrooms rarely sufficient. Water supply in most cases satisfactory. Most cottages have a garden and out-houses. [The owners are] small landowners and small tradesmen who mostly live at a distance. Cottages built of brick, roofs tiled; bedrooms very cold in winter. Most of the cottages are old and many out of repair. New ones rarely built and those never large enough. I think the Nuisance Act has done some good, but much yet remains to be done. I think the health and morality of the poor is seriously affected by the want of proper room in the cottages. The landlords as a whole only care to get their rent, and do nothing here either for the comfort or morality of their tenants.

SHUSTOKE.

154. *R. F. T. Croxall, Esq.*—The cottages are good and are brick-built with tile roof. Most of them have three bedrooms. The parish belongs almost entirely to two proprietors, and the cottages are chiefly occupied by labourers on those estates. Rent about 4*l.* a year, and lodgers are not permitted. The cottage gardens are good and well kept.

SNITTERFIELD.

155. *Mark Philips, Esq.*—In the village itself the cottages are very much crowded together and the drainage is bad. Water is obtained by pumps and wells. Several tradesmen have cottages which they let; these are generally slightly built and let high. The average rent of a cottage and garden may be called 4*l.* per annum. The landowners' cottages are scattered and generally detached from the main village, and all have outhouses and gardens. Many field gardens are let, about one-eighth of an acre each, and well cultivated. Many pigs are kept, but many old cottages are without convenience for keeping a pig.

SOLIHULL.

156. *Rev. P. M. Smythe.*—In the older cottages there is generally only one room downstairs, and one up. The ownership of the cottages in the village is in the hands of a variety of persons. In the country districts they generally belong to the landowners. I have no doubt that the limited accommodation usual in our cottages has a bad effect on the health and comfort of our labouring poor. It has a tendency also to immorality; but I don't think that it has any effect on education, if by education is meant attendance at school. If by education is meant moral training both at home and at school, no doubt its effect is bad.

TYSOE.

157. *Rev. C. D. Francis.*—The cottages belonging to the principal landowners are in good repair and of sufficient accommodation. This includes about one-third. The remainder are some of them small, but as a rule in tolerable repair. They belong to farmers, tradespeople, &c., and some few to the parish under trustees. Most of them have been much improved of late years, and are fairly supplied with wood barns, pigsties, and outhouses. Rent, 2*l.* to 4*l.* There are

Answers to Printed Questions.

Mr. Norman.

E. i.

still a few very bad in every respect. They have most of them gardens or allotments, some both.

Wellesbourne.

158. *J. M. Mordaunt, Esq.*—Good state of repair, principally brick; moderate size; good ventilation and drainage; good water and gardens. Owners, Lord C. Paulet, Sir C. Mordaunt, H. S. Lucy, Esq. Rent, 1*l.* 10*s.* to 4*l.* There are other tradesmen owners, but I am not aware that the owners are compelled to deal with them.

WILTSHIRE.

Ashton Keynes.

159. *Rev. R. Bishop.*—1. The cottages are constructed generally with kitchen and back kitchen and two up-stairs bedrooms varying in size from about 64 square feet to 156 square feet. The ground floors are of stone; ventilation is often imperfect in bedrooms; drainage generally good.

2. Accommodation sufficient if suitable houses are sought; water supply very good; gardens generally very small.

3. Several of the cottages are owned by the occupants, few by large landed proprietors, and most by men of the labouring class. Tenants are seldom or never obliged to deal with their landlords.

4. Rent of the very poorest houses, generally with one room on the ground floor and one above, 9*d.* per week; of houses with little better accommodation, 1*s.* per week; and of really comfortable cottages with two rooms below and two above, 1*s.* 6*d.* per week.

Berwick St. John.

160. *Rev. C. A. Griffith.*—Construction, sandstone and thatched roof; the majority have small rooms. Accommodation: few have a third bedroom. Ownership: most go with the farms and belong to the squire or the lord of the manor. Some are poor freeholds; some are better freehold cottages, with gardens (about four, generally about two or three, in a row). The average rent is 1*s.* a week.

Broad Chalk.

161. *Dr. Williams.*—Our cottages may be thus classified:—

1. Old farm-houses of small occupancies well preserved, very good.

2. Odd ditto, ditto, cut up, parcelled into three, with barely two rooms in each family's tenement; these are very bad. I have known three or four sons with their dank drying clothes in the bedroom of their parents, and their father bedridden.

3. Tolerable average cottages; about two rooms below, two or three above.

4. Very good new cottages, but the water of these in tanks not always so good as the old deep wells. Mostly the farmer has the control of the cottages, and quite properly as a rule; but a few tenements in which decent old people, past work, might escape the union, are much required on grounds of common humanity. Also the able-bodied labourer's cottage ought to have its plot of land. Cottages in this parish are improving in quality, but not multiplying rapidly enough in numbers. I have roofs burnt off and not replaced; fever caused by overcrowding, or a hundred causes; an old couple living about a year in a lambing shed; others sorely put to or indebted to individual charity for shelter, to escape the dreaded union house.

Broughton Gifford.

162. *Rev. Preb. Wilkinson.*—A large proportion of the cottages is owned by the residents. These are bad in every respect. The landowners have some dozen, but these always go with the land to the farming tenant. They are not cared for by the steward (we have no resident landlord) half as much as the farmer's house and premises. Tradesmen own some 20. The obligation of exclusive dealing cannot now, from circumstances, be enforced; it used to be most shamefully by a beer-house keeper and general storekeeper now dead.

The rent is about 9*d.* a week for a very small place indeed, fit for two or three people. 3*l.* 10*s.* or 5*l.* for cottage fit for a family with, say, garden under a quarter of an acre.

The country folks are far better off than the town-people. Each labourer and even each pauper has a separate house with separate day and night rooms. There is no such thing, as I have known and seen over and over again in towns, as a whole family sleeping and living in the same apartment.

Burbage.

163. *Archdeacon Stanton.*—1. Not well ventilated of necessity. Size of rooms generally 10 or 12 feet square.

2. Generally a small garden; water supply from wells.

3. Generally by landowners; the vicar has some and others also.

4. Rent from 3*l.* to 4*l.* per annum for labourers.

Castle Combe.

164. *Rev. R. C. Christie.*—The cottages, with few exceptions, belong to the lord of the manor, who has recently purchased the property. Ventilation and drainage indifferent. Water supply very bad. Nearly all the poor have allotments of land in addition to their gardens, which they find a very great help to them.

Clyffe Pypard.

165. *H. N. Goddard, Esq.*—With few exceptions the worst cottages are occupied by the owners, having been built at some period on waste land. This parish having a clay subsoil water generally bad. Gardens, including allotments, good; outhouses indifferent.

Rent varies from 42*s.* to 3*l.* 10*s.*, depending in a great measure on the ownership.

Downton.

166. *Rev. R. Payne.*—We have all kinds of cottages, mud, brick, thatched, tiled, slated. Some old cottages have rather larger rooms, but then never more than two and sometimes only one bedroom, or one and a landing. Usually the living rooms are from 10 to 12 feet square with a pantry by the side, and sometimes a place for fuel behind; in this case there are sometimes three bedrooms, but except in quite modern cottages seldom more than two, or two and a landing, where a bed could be placed. Sometimes the fuelhouse is not under the same roof, and then there are only two bedrooms, and in some few cases only one. Never more than one bedroom, and often not that in old cottages; there is therefore very little ventilation, and no cottages have windows to open on the ground floor. Drainage, as the population is generally scattered in this parish, does tolerably.

Accommodation uncertain. There is no one in the parish to take any pains in getting a large family out of a small house into a larger, and they are generally becoming accustomed to it and do not feel the inconvenience, &c.

Water supply generally good. Most cottages have gardens, and a good many that have not have allotments.

Outhouses (privies especially) almost universally in a bad state for health and decency, in not in a few cases disgraceful.

Owned (1) by large landowners; (2) by small people who have built them as an investment; (3) an unusual number owned by labourers.

The third class are generally inferior, not so bad as the worst of class 2, because they (No. 3) are for the most part detached and stand in gardens, but inferior to many of the best of No. 2; indeed, with the exception of the cottages already mentioned, lately built by Lord Nelson, many of the cottages built by cottage

investors have been superior to those provided, and also built by the large landowners.

As to class 1, I would further add, that what appears to me a very injurious practice has been lately introduced, that, namely, that of letting a large number of cottages to the holders of the farms. I do not like the practice of making the tenants sign a paper to turn out at a week's notice when they hold from the landlord direct, I think it likely to interfere with their feeling of security and independence; but I object to it *much more strongly* when that power of turning a man out of house and home is transferred to the tenant farmer, who thus has the means in his power of unfairly coercing the labourer, and thoroughly taking away his independence and freedom of action.

I can suggest no mode of supplying good cottages on self-supporting terms, but that of agricultural labour being able to demand greater remuneration, and then the tenants could afford to pay somewhat higher rents.

DURNFORD.

167. *Edward Hinxman, Esq.*—Labourers generally have their cottages free of rent, this being considered in their wages. Some houses are good, some very bad, but a considerable improvement is going on in this respect. Since the law of settlement has been altered it is becoming almost impossible now for a farmer to get a labourer unless he can offer him a cottage.

A sufficient number of good cottages should be built on every farm by the landlord, and the tenants should be required to keep them in good order just the same as he does the rest of his farm buildings.

GREAT BEDWYN.

168. *Rev. J. D. Hodgson.*—1. New cottages all very good in these respects, and some of those which are older, but most of the old are small and bad.

2. In the new cottages there are generally three bedrooms and two good rooms down stairs, with outhouses and garden ground; wells sufficient.

3. The landowner for the larger part of the parish is the Marquis of Ailesbury.

4. The rents have hitherto ranged from 2*l.* for the poorest cottages to 5*l.* or 6*l.* for the new, but they are being revised considerably for the coming year.

LONGBRIDGE DEVERILL.

169. *Rev. W. D. Morrice.*—1. Size very fair; ventilation usually fair.

2. Accommodation usually fair; water and garden good; outhouses very fair.

3. Many now belong to Marquis of Bath as freeholder, others still leased on lives by smaller owners; very few in the hands of shopkeepers.

4. From 1*s.* to 1*s.* 6*d.* per week; Marquis of Bath's are mostly 1*s.*

WROUGHTON.

170. *Rev. J. C. Waugh, M.A.*—In this large village many of the cottages being in private hands are small and inconvenient; well ventilated, drained, and accompanied by gardens; there are also allotments varying from a quarter to one-eighth of an acre. The rent generally is not excessive..

WOOTTON RIVERS.

171. *Rev. W. J. Brodribb.*—Of the total number of 80 cottages, 30 are decidedly bad in all the respects above mentioned. These have for the most part only one bedroom, which is seldom more than 12 feet square, and in many cases is not ceiled. Of the remaining 50 as many as 10 may be fairly described as good and commodious, having besides the sitting-room two or three bedrooms of a decent size. The rest are somewhat indifferent, but not positively bad, though not sufficiently roomy. Water supply and garden good. Owned for the most part by the occupiers of the land. Rent 5*l.* to 2*l.* a year.

WORCESTERSHIRE.

ALVECHURCH.

172. *Ven. Archeacon Sandford.*—The average size of the rooms is about 14 feet by 10. The ventilation is very bad, there being often only one window in the house which opens, the casement of which is about 36 inches by 18. The drainage is very insufficient, the houses being often damp and privies few and offensive. The accommodation also is inadequate at times, only one bedroom to a family, very rarely indeed three bedrooms. Moreover, when the accommodation is increased, lodgers are invariably taken in unless an express veto is placed on this by landlord. Lodgers, indeed, are often found where there is not room even for the family. The water supply is good, but the wells are not unfrequently affected by soakage from the drains. The privies are often insufficient in number, *e.g.* one for five houses, and offensive. The garden supply is fair, and 22 acres of glebe have been let by the present rector as allotments; a quarter of an acre to each labourer. This answers very well. The cottages are owned partly by landowners and partly by tradesmen (but without the obligation mentioned in the question), and partly manufacturers who reside at a distance, and collect their rents by an agent. It is this last system that is most unsatisfactory. Average rent, 5*l.* or 6*l.*

CHURCHILL.

173. *Rev. R. P. Turner.*—14 cottages belong to the landowners, the rest to proprietors not owners of farms. Water supply fair; drainage middling; gardens to most of the cottages; allotments for those who want them. Rent, in two instances, 6*l.* 10*s.*; generally from 3*l.* 10*s.* to 5*l.*

FLADBURY.

174. *Rev. J. Haviland.*—1. Many of the cottages are deficient in proper drainage and in bad repair.

2. Accommodation small in proportion to families; water supply fair; gardens tolerable; outhouses deficient; frequently one privy for several cottages.

3. Principally owned by persons in moderate circumstances, not landowners.

4. Average about 5*l.* per annum.

HARVINGTON.

175. *Rev. A. H. W. Ingram.*—Either timbered cottages with one good sized bedroom and one small bedroom up stairs, and with flagged sitting-room and small pantry on the ground floor; some of these have only one bedroom; or brick cottages with two or three small low bedrooms upstairs, and kitchen and back kitchen on the ground floor. Several cottages generally built under one roof.

Case 1 (*gross case*). House with one small sitting-room and one small bedroom contains the following inmates all sleeping in the said bedroom. Man and wife; five boys, aged 13, 9, 6, 4, and 2; two girls, aged 11 and 7; and an infant aged 3 months.

Case 2. House with one sitting-room and one bedroom contains, man and wife; two boys, aged 4 and 2; and four girls, aged 12, 10, 8, and 7.

Case 3 (*gross case*). A house with one sitting, one bedroom, and one small ditto, contains, man and wife; four boys, aged 18, 15, 11, 9; and three girls, aged 16, 13, and 6.

Case 4. A house with one sitting and one bedroom contains, father (a widower); two boys, aged 18 and 7; and three girls, aged 15, 12, 6.

Case 5. House with one sitting, one bedroom, and one small ditto contains, man and wife; four boys, aged 13, 10, 8, and 5; and one girl, aged 15.

MADRESFIELD.

176. *Rev. G. S. Munn.*—The cottages in this parish, *i.e.*, taking its ecclesiastical extent, are of all kinds, from the most comfortable to the veriest hovels. In Madresfield proper (Lord Beauchamp's estate) new cottages have been built; more are in course of con-

Answers to Printed Questions.

Mr. Norman.

E. i.

struction; the old ones will be taken down. The new cottages contain three bedrooms, and are in all respects sufficient for their purpose; the village is well drained. Earth closets have been erected at the schools with success, and are to be applied to the new cottages. The bad cottages are some which have been allowed to be built on the waste land on the sides of the road, and afterwards become either absolutely the property of the lord of the manor or leased on lives to the builders or their families, who have not the means to repair, much less to improve.

MARTLEY.

177. *Rev. H. J. Hastings.*—The cottages are many of them old, built up in a slight way on waste land. The new cottages are chiefly put up in a neat way by persons who have a little money to lay out. The ventilation in the old cottages bad; no drainage; ownership, various. A good many belong to the lord of the manor, and many of these old, although new cottages have been built lately. A good many small owners. Rent about 4*l.* 4*s.* The farmers usually let their cottages at a reduced rent. They generally hire cottages with their farms, but the labourers are very glad to get a cottage independently of the farmer.

NORTON.

178. *C. Randell, Esq.*—One-third of the cottages have three bedrooms each. The others two, except two cottages, in which are old people without children. The usual size of living room, 12 by 12. With washhouse and pantry. Hovel, pigsty, and privy. Bedrooms, 11 by 9. All have gardens and allotments. Good water supply, drainage, and means of ventilation. All except four belong to landowner. Rent, 2*l.* 10*s.* to 4*l.*

ROCK.

179. *Rev. A. James.*—The great bulk of the cottages in this parish are small freeholds, and these are the best cottages we have. The cottages which are part and parcel of the farms are the worst constructed and in the worst repair of any we have as a rule. The drainage and ventilation are fair; the gardens in general ample; water supply fair; outhouses (viz., privy and pigsty) pretty general; but the number of rooms and their size lamentably insufficient, either for health or morals.

SALWARPE.

180. *Rev. W. W. Douglas.*—Most of the cottages have two bedrooms, some only one, and common sitting room, which has to do for kitchen and all, and often for washhouse as well. Gardens generally are good. Some are let to farmers, who under-let them to their labourers. Rent, 4*l.* 4*s.*

QUESTION 30. Have you any remarks to make on the subject of cottage accommodation in regard to its effects on morality and education; or on the health and comfort of the labouring poor?

QUESTION 41. Can you suggest any mode by which good cottage accommodation could be provided on self-supporting terms, and involving no disadvantage to the tenant?

HEREFORDSHIRE.

DOWNTON.

181. *A. R. Boughton Knight, Esq.*—In this parish there is sufficient cottage accommodation; the majority of the cottages is in good order. A good cottage no doubt adds to the health and comfort of the labouring poor, and usually induces habits of morality and a desire for education; it must, however, be borne in mind, that the best conducted people are selected for the best cottages. A pair of comfortable cottages, but devoid of all ornament, cannot be built in this neighbourhood under 180*l.* or 200*l.*; for which in my opinion the occupiers cannot afford to pay more than 5*l.* rent, wages being usually 10*s.* to 13*s.*

FROME BISHOP.

182. *Rev. W. P. Hopton.*—I have little doubt that the want of more bedrooms in the cottages has a hurtful effect with regard to illicit intercourse between the sexes, but I do not think it injures the health of the labouring poor, because the cottages, by reason of the outer door, are generally airy.

STAUNTON-ON-WYE.

183. *Rev. H. W. Phillott.*—Cottage "accommoda-"tion" is for the most part bad and insufficient in the numerous cases of small proprietors. Some of these dwellings are unfit for habitation, yet owing to the competition for houses in this parish the rents are very high, probably 25 per cent. higher than in other parishes.

SURREY.

GODSTONE.

184. *Rev. G. T. Hoare.*—This is a question for the great landowners. If they saw their interest (as we see it) in the increase of morality and education, and the consequent diminution of poor's rate and police expenses, one great difficulty would be removed; and it would be discovered that it *pays* to build good cottages.

TITSEY.

185. *G. Leveson Gower, Esq.*—I do not believe that cottages can be built to pay good interest on the outlay, if only a fair rent is charged. At the same time, to a landlord the indirect advantages are very great, and fully compensate for the outlay. A good deal of exaggeration is made use of as to the outlay. I find no difficulty in getting my tenants to pay the 5 per cent. on the outlay for new cottages.

WILTSHIRE.

ASHTON KEYNES.

186. *Rev. R. Bishop.*—By requiring every cottage to possess a garden of suitable size for the maintenance of the family, more comfort might be secured, and a very necessary restriction put upon the number of cottages per acre.

BROAD CHALK.

187. *Dr. R. Williams.*—It is almost a question whether each landowner might not be compelled to find cottages and allotment lands in proportion to his estate. (*a.*) The few cases in which the labourer has had a lease on lives of his own house seem to work very well. It keeps them off the parish. We have an old man of 90, who lives merely on a labourer's savings, and owns his own house. (*b.*) Allotments on easy terms in proportion to each farm would do good. (*c.*) The law of settlement might be abrogated in the sense of expanded; and so the labourer's labour would become worth more to him and to his employer. The above recommendation as to allotments proceeds upon the supposition that the patriarchal system of attachment here prevalent is to continue. But the recommendation of abrogating the law of settlement supposes a more general development in accordance with the broader maxims of social economists. *Either*, I hold, you must care for your peasants, or you must facilitate their movements.

BROUGHTON GIFFARD.

188. *Rev. Preb. Wilkinson.*—The problem to be solved is, how to provide decent cottages for the labouring poor, at such a rent as they can with their present wages pay, and as shall be a fair return on the capital expended. It is idle to adduce charitable or philanthropic schemes. They are of limited application. Any scheme must, in order to be generally applicable, be framed in self-interest. Make it worth the capitalist's while to build cottages, and there soon will be plenty of them. I cannot see what more the legislature can do. By the small Tenements Rating

Act (a very questionable measure in principle), cottages are exceptionally favoured in local taxation. Something may be expected from union rating in the supply of dwellings near work. But the real remedy must come from the labourer himself, from increased providence, self-reliance, and appreciation of decency and comfort. There are indeed improvements observable in the character of the labouring poor (they spend more on clothes, less on beer); but the great and effectual bar to the formation of habits of independence is the existence of a poor law. Why should a labourer provide against sickness and old age, when he has no interest in so doing. If by the age of 65 he is able to cease work and purchase an annuity of 2*s.* 6*d.* a week until death, the guardians very properly, in the discharge of their duty to the ratepayers, give him nothing. If he has lived freely and saved nothing the board give him 2*s.* 6*d.* a week. It is all one, only the careful man has lost a great deal of enjoyment. Out of door relief is a direct premium on improvidence. No class in the community spends so much in proportion to income on personal gratification as the average labourer. He supports all the beer and public houses. It seems to be implied that human nature in him is something different to what it is in other men, that in legislating for him the original motives of action may be ignored, that he will be provident without an object, self-reliant without self-interest.

The low condition of the labourer, whether in respect of wages and external circumstances, or of mental and spiritual enlightenment, is ascribable to the poor law. The first step for his elevation must be its gradual repeal.

I have been an active member of the board of guardians for 20 years, a clergyman in town and country for 27, a county magistrate for 18.

WORCESTERSHIRE.

Harvington.

189. *Rev. A. H. W. Ingram.*—Beds to be let down by night and drawn up into a compact case against the wall by day might be provided for the downstairs sitting-rooms, for the sleeping accommodation of the male children, as in some of the peasants' houses in France, and as an improvement on the Scotch method of making beds in boxes. This would in many instances ensure a commodious sleeping apartment for the boys, and remove them from indecent approximation to the female members of the family. Such boxes might be let out by some society at moderate terms to cottagers, where the members of the family at home require such additional accommodation. I have seen in a nobleman's house a room so provided, used as a servants' hall in the day time, and servants' dormitory at night.

Norton.

190. *C. Randell, Esq.*—Cottages cannot be built on self-supporting terms if let by the landlord directly to the labourer. It is better to let them to the occupiers of the farm, who would generally be willing to pay a higher rent than he charged to his labourer; the convenience of having men living near to their work is well worth 1*l.* or 2*l.* a year. It has been objected that farmers having the control of the cottages might deal harshly with the occupants; but it is not so, on the contrary they look upon them as part of their establishment, and have far more care for them in sickness and misfortune than where the cottages are let by the landlord to the labourer. The remedy for bad or insufficient cottage accommodation is this, build new ones or improve the old ones, on condition that the occupier of the farm does all carting required, rents them from the landlord on such terms as will pay 5 per cent. upon the outlay, and lets them to his labourer not higher than 4*l.* per annum. No tenant worth having will abuse the privilege thus entrusted to him. It could be taken away if necessary at any time; for even where farms were let on lease, the cottages need not be included, but let from year to year. But this necessity I believe would be the exception, not the rule. Self-interest, if no better motive, would make the farmer careful of the welfare of good labourers, while those who are not deserving would change about as they do now. I have 15 cottages for labourers rented with my farm.

Opinions incidentally expressed upon various subjects.

HEREFORDSHIRE.

Trevil.

191. The *Rev. A. Clive.—Education.*—The education is insufficient. The object ought to be, to give a child of 12 years old such a degree of education, that he will feel the value of it, not forget it, and avail himself of future opportunies of improving it. I cannot say that we have done this yet.

SURREY.

Godstone.

192. *Rev. G. T. Hoare.—Night Schools.*—The carters often throw difficulties in the way of boys otherwise willing to attend; want of funds is the great difficulty. The day master can work in the night school, but ought to be well paid for it. We cannot depend upon voluntary teachers for the regularity and discipline which ought to exist n the night school.

At the same we derive much benefit from the help of volunteers, male and female. It would be a great help to us if payment for results *pur et simple* were adopted; we could get teaching done in distant farm-houses, &c. under circumstances which made access to our schools impossible.

Titsey.

193. *Rev. A. Crowdy.—Night Schools.*—Looking on the one hand to the very unfavourable circumstances amidst which farm boys live, and on the other hand to the ascertained beneficial results and capabilities of night schools, I am decidedly of opinion that they might more than supply the deficiency of the day school. The lads are brought under good influences, especially when the clergyman takes a leading part in the school, at an age when they can better appreciate educational helps; and the blending of what is interesting with what is instructive in the subjects, makes the real work of the classes acceptable instead of distasteful I might add that as a means of developing the mental faculities, and humanizing the feelings and manners of these rough lads, I consider the night school has a special value.

WARWICKSHIRE.

Alveston.

194. *Sir R. N. Hamilton.—Education.*—If all children found habitually in the roads collecting manure, or otherwise loitering and playing, were directed to be taken before a justice of the peace, and should it appear that they did not attend any school, and the justice had power to order the parent to elect whether the child should be ordered to attend the National or local school, or be sent to an industrial school, parents would prefer sending them to the former at a cost of 1*d.* or 2*d.* than to the latter, which would take the children entirely from home and cost the parent from 6*d.* a week upwards, according to the decision of the justice of the peace. Out of school hours children may collect "droppings and manure" without interference.

195. *Sir R. N. Hamilton.—Game.*—It is the opinion of some that cottages have been allowed to fall into decay, if not actually pulled down, on estates, to prevent the disturbance of game where it is highly preserved. Game is necessary to induce residence, but its excessive preserving is an evil in many ways.

Answers to Printed Questions.

Mr. Norman.

E. i.

KINWARTON.

196. *Rev. R. Seymour.—Education.*—At least half the boys fail to attain the same amount of instruction as the girls.

WILTSHIRE.

DOWNTON.

197. *Rev. R. Payne.—Education.*—I think about one in four of the agricultural labouring class in this parish are growing up with insufficient education. By insufficient, I mean at least those who cannot read with such ease as to make it a pleasure, not a task. My opinion is grounded upon the state of those who come annually for confirmation, who are for the most part more ignorant than when they left school, but I cannot profess myself in a position to answer with any great certainty. This parish is unfortunately situated as to education, from the opposition in it, and consequent canvassing for children, so that those who do come to day or night schools think they do their teachers a favour, instead of the contrary. Perhaps that accounts for a good deal, but although I think that I have given night schools a fair trial, I have formed a very low estimate of the good which has accrued. Did all start with the certificate of Standard IV. it might be different.

WORCESTERSHIRE.

HARVINGTON.

198. *Rev. A. H. W. Ingram.—Mops.*—A handbill of a Worcestershire statute fair or mop, in 1734, exists. A statute fair is represented in Isaac Bickerstaff's drama of "Love in a Village," middle of the 18th century. The growth of manufacturing towns, by absorbing the labour of the rural districts near them, raised the wages of the agricultural labourer in the neighbourhood. Farmers residing in it therefore sought servants in districts where the population had outgrown the demand for agricultural labour. Mops, then taking the place of the old village wake (become obsolete, in consequence of an alteration of religious views), sprung up as labour markets, in which wages could be regulated by supply and demand, over a large area. To do away with them would lessen the wages of our agricultural youths in certain districts, and close a free and ready outlet for surplus labour. Mops, however, should be shorne of their present immoral influences. Two large rooms should be opened in the town where they are held, on the usual mop day, one for the convenience of female servants and their female friends and employers; the other room for the place of meeting of the male labourers and the masters seeking to hire them. Both rooms should be supplied with tables of refreshments, and the room where the female servants assemble should be under the supervision of a respectable female, and provided with conveniences, which would prevent the recurrence of indecencies which have occurred in towns where the 200 or 300 young females have been assembled for hiring in the streets, with a similar number of youths on the same day. The mop then, where the sexes are separated, and the young servants removed from the immoral spectacles, and hearing the ribald ballads howled in the streets, becomes for the day a large and well conducted registration office, opened just at the time most suitable for agricultural hirings, and not subject to the disadvantages of other registration offices, to which many masters and servants make fruitless journeys. Registration offices cannot be considered at present as substitutes for mops. For the present low wages of the agricultural labourer do not admit of his taking railway journeys to the offices for the purpose of hiring out his own children, on the risk of his not being able to do so. His present deficient education is a bar also to his entering into correspondence by writing with the proposed employers. In a mop where there are many employers bidding for labour, those who are hired know that they obtain the full market value for their services. This is calculated to create a contented feeling in the servants. To hire servants in agriculture on the same terms as domestic servants, as it has been proposed, would be inconvenient. The hiring of the former must be by the year. Farm labour is heavier at one period of the year than at another. It would not answer to a farmer to keep a servant for the light work of the winter, and allow him the liberty of leaving his situation at a month's warning, when the heavier labour of the summer is coming on.

EVIDENCE accompanying Mr. CULLEY'S REPORT.

INDEX to EVIDENCE.—OXFORDSHIRE and BERKS.

OXFORDSHIRE.

Page

APPENDIX A. - - - - 325 to 339
Contains a summary of the answers given in 79 of the Commissioners' Circulars of Inquiry returned from 57 parishes.
Of these circulars,

36	were returned from	Woodstock Union.
10		Witney Union.
1		Chipping Norton Union.
4		Banbury Union.
7		Bicester Union.
5		Thame Union.
1		Wycombe Union.
4		Abingdon Union.
11		Henley Union.

37 circulars being returned by clergymen for their respective parishes, 17 by landowners (of whom 4 are also occupiers of land), 20 by occupiers of land (of whom 19 are also guardians of the poor), 1 by a land agent, and 4 by schoolmasters.
The above summary also contains tabulated labour returns from 35 farms, extending over 16,536 acres, of which 11,238 acres are arable, arranged thus :—

TABLE A. - - - - - 326
Giving in detail the number, age, and sex of persons employed on 35 farms during the spring quarter, with a description of the nature of the soil and course of husbandry, where given by the occupier.

TABLE B. - - - - - 327
Shows how the employment varies throughout the year on the whole acreage (16,536 acres).

TABLE C. - - - - - "
Gives the spring employment on seven farms on which steam cultivation is used (these farms extend over 5,199 acres).

TABLE D. - - - - - "
Gives the employment during the winter quarter upon the same farms treated in Table C.

TABLE E. - - - - - 328
Gives the labour returns for nine parishes, as given by clergymen for their respective parishes.

TABLE F. - - - - - "
Gives the total return of males and females under 18 years employed in farm labour, as given by 9 clergymen for their respective parishes, and 35 occupiers for their farms (taking the spring return in the latter case to represent the average employment for the year.
Appendix A. also contains tabulated forms of School Returns, of which—

TABLE A. - - - - - 336
Gives the school returns from all the parishes (27) in Woodstock Union.

TABLE B. - - - - - 337
Gives the school returns from seven other parishes in Oxfordshire.

TABLE C. - - - - - "
Gives a summary of school returns from 33 parishes.

TABLES D. and E. - - - - 338
Gives the night school returns from Woodstock Union and six other parishes.

Page

APPENDIX B. Nos. 1 to 64b - - 339 to 356
Contains evidence more or less peculiar to the parishes from which it is derived, viz. :—

1. Aston North.
2. Aston Steeple.
3. Barton Steeple.
4. Barton Westcott.
5. Begbroke.
6. Bladon.
7. Blenheim.
8. Cassington.
9. Combe.
10. Deddington.
11. Dunstew.
12. Glympton.

14. Hampton Gay.
15. Kiddington.
16. Kidlington.
17. Rousham.
18. Sandford.
19. Shipton-on-Cherwell.
20. Stonesfield.
21. Tackley.
22. Woodstock.
23. Woolvercott.
24. Wootton.
25. Yarnton.
26. Asthall.
27. Bampton Aston.
28. Black Bourton.
29. Brightwell-Baldwin.
30. Eynsham.
31. Handborough.
32. Minster Lovell.
33. Standlake.
34. Stanton Harcourt.
35. Enstone.
36. Adderbury East.
37. Alkerton.
38. Drayton.
39. Epwell.
40. Hempton.
41. Wardington.
42. Wroxton-cum-Balscott.
43. Bucknell.
44. Cottisford.
45. Kirtlington.
46. Launton.
47. Weston-on-the-Green.
48. Aston Rowant.
49. Little Milton.
50. Shirburn.
51. Waterpery.
52. Stoken Church.
53. Headington.
54. Clifton Hampden.
55. Culham.
56. Nuneham.
57. Toot Baldon.
58. Sandford-on-Thames.
59. Caversham.
60. Hambledon.
61. Henley.
62. Pyrton.
63. Swyncombe.
64. Watlington.

APPENDIX C. - - - - 356 to 366
Contains evidence applicable to areas larger than parishes.

Mr. Culley.

BERKSHIRE.

APPENDIX A. - - - - - - 367
Contains a summary of the answers given in 85 of the Commissioners' Circulars of Inquiry, returned from 61 parishes.
Of these circulars—

51	were returned for	Wantage Union.
10		Faringdon Union.
4		Abingdon Union.
2		Wallingford Union.
8		Bradfield Union.
4		Newbury Union.
1		Hungerford Union.
4		Wokingham Union.
1		Windsor Union.

36 circulars being returned by clergymen for their respective parishes, 12 by landowners (of whom 4 are also occupiers of land), 34 by tenant farmers (of whom 30 are also guardians of the poor), and 3 by schoolmasters.
The above summary also contains tabulated labour returns from 49 farms, extending over 25,762 acres, of which 18,920 are arable, arranged thus—
TABLE A. - - - - - 368
Giving in detail the number, age, and sex of persons employed on 49 farms during the spring, summer, and winter quarters, with a description of the nature of the soil and course of husbandry, where given by the occupiers.
TABLE B. - - - - - 370
Shows how the employment varies throughout the year on the whole acreage (25,762 acres).
TABLE C. - - - - - "
Gives the total return of males and females under 18 years of age, as made to the Assistant Commissioner by clergymen for their parishes and occupiers for their respective farms.
Appendix A. also contains tabulated forms of school returns, of which—
TABLE A. - - - - - 382
Gives school returns from 21 parishes in Wantage Union.
TABLE B. - - - - - 383
Gives school returns from Beenham, Englefield, Bearwood, and Finchampstead parishes.
TABLE C. - - - - - 383
Gives school returns from six parishes (Ardington, Farnborough, Hermitage, Bradfield, Ufton, and Barkham) not included in Tables A. or B.

Page

TABLE D. - - - - - 383
Gives a summary of the school returns from 25 parishes for which all particulars were given.
TABLE E. - - - - - 384
Gives the night school returns for Wantage Union.
APPENDIX B. Nos. 1 to 65 - - 386 to 404
Contains evidence more or less peculiar to the parishes from which it is derived, viz. :—
1. Aldworth.
2. Ardington.
3. Beedon.
4. Blewbury.
5. Brightwaltham.
6. Catmore.
7. Chaddleworth.
8. East Challow.
9. West Challow.
10. Childry.
11. Chilton.
12. Compton.
13. Fawley.
14. Farnborough.
15. Hampstead Norris.
16. Hanney.
17. East Hendred.
18. West Hendred.
19. East Ilsley.
20. West Ilsley.
21. Letcombe Basset.
22. Letcombe Regis.
23. East Lockinge.
24. Peasemore.
25. Upton.
26. Sparsholt.
27. Wantage.
28. Charlton.
29. Grove.
30. Ashbury.
31. Bourton.
32. Buckland.
33. Coleshill.
34. Little Coxwell.

61. Barkham.
62. Bearwood.
63. Finchampstead.
64. Wokingham.
65. Windsor.
APPENDIX C. - - - 404 to 410
Contains evidence applicable to areas larger than parishes.

Nos.
66–71. Resolutions of Boards of Guardians. Wantage, Faringdon, Abingdon, Bradfield, Newbury, and Hungerford Boards. (Nos. 66 to 71.)
72, 73. Medical evidence.
74–78. Relieving officers' evidence.
79, 80. School teachers' evidence.
Evidence given by—
81. J. S. Bowles, Esq.
82. Rev. T. Stevens.
83. H. R. Eyre, Esq.
83. G. C. Cherry, Esq.
84. Resolutions passed at a meeting of Newbury Farmers' Club.
Nos.
85. Letter from J. Walter, Esq, M.P.
86. Letter from H. Tucker, Esq.
87. Sanitary improvement of cottages, by Mr. W. Menzies.
88. Pamphlet on improvement of labourers' cottages, by H. R. Eyre, Esq.
90. Evidence on pauperism.
APPENDIX D.
Contains evidence on subjects interesting to the Commission not peculiar to the county of Berks, viz. :—
91. Loans for cottage building, contracted under authority of Inclosure Commissioners.
96. Earnings at piece-work wages.

OXFORDSHIRE EVIDENCE.

Oxfordshire.

APPENDIX A.

SUMMARY OF ANSWERS TO COMMISSIONERS' CIRCULARS OF INQUIRY.

*THE following answers are collected from 79 circulars of inquiry (43 long and 36 short circulars) returned from 57 parishes in Oxfordshire, of which—

36	circulars	were returned from	Woodstock union.
10	„	„	Witney union.
1	„	„	Chipping Norton union.
4	„	„	Banbury union.
7	„	„	Bicester union.
5	„	„	Thame union.
1	„	„	Wycombe union.
4	„	„	Abingdon union.
11	„	„	Henley union.

37 circulars being returned by clergymen for their respective parishes, 17 by landowners (of whom 4 are also occupiers of land), 20 by occupiers of land (of whom 19 are also guardians of the poor), 1 by a land agent, and 4 by schoolmasters.

I. As to Employment in Private Gangs.

The Assistant Commissioner only received one return of persons employed in private gangs, viz., from Kirtlington parish, where two mixed gangs of boys and girls are employed for four or five weeks in May and June hand weeding corn which has been horse hoed. These gangs are together composed of about 30 boys and as many girls of the following ages :—

14	boys	between 8 and 10	years.
11	„	„ 10 and 13	„
5	„	„ 13 and 18	„
5	girls	„ 8 and 10	„
13	„	„ 10 and 13	„
12	„	„ 13 and 18	„

About one-third of the children live on the farm and two-thirds come from a village two miles distant; the hours of work are from 8 a.m. to 4 p.m., with one hour allowed for dinner; the 60 children are divided into two mixed gangs, each gang being under the charge of a steady married labourer. Speaking of these gangs, Captain Dashwood says :—"I thought of dividing the "sexes, but found it was not advisable, as children of a "family came together and brought their meals together, "the elder children taking charge of the younger. "The children are not subject to any ill-treatment, "nor are they in any way injured by the nature of "their employment; they are never employed in "weeding high wet corn. I do not think that any "legislative enactment is necessary for private gangs. "The state of education of the children is, however, "unsatisfactory; there are schools, but the children "are not very regular in their attendance. My belief "is that the primary schools ought to be supported in "part by a rate to be paid half by the owner and "half by the occupier, so as to get both parties to take "an interest in the management of schools. Under "the present voluntary system too few persons are "really interested; difficulties are also created by the "present special denominational religious teaching."

II. As to the Employment of Children, Young Persons, and Women not in Gangs, either "Public" or "Private," but individually or in company with a few other Persons.

Longer Circular, Questions 22 *a.* and *b.*
Shorter Circular, „ 1, 2, and 3.

The following summary will give the substance of answers to these questions from 79 circulars returned from 57 parishes, the tabulated labour returns being compiled from 9 returns for entire parishes and 35 returns (showing the age and sex of persons employed at different seasons of the year) made by as many occupiers of land whose occupations altogether extend to 16,536 acres situated in eight different unions.

The tabulated forms will show the age at which children begin to be employed, to what extent youthful and female labour is employed as compared with adult male labour, and to what extent the demand for manual labour on farms varies throughout the year. These forms will also indicate to what extent the manual labour on a farm is influenced by the proportion of arable and pasture land, the course of husbandry, the nature of the soil, and the use of steam cultivation.

†Table A. shows the number, age, and sex of persons employed during the spring quarter on 35 farms, extending over 16,536 acres.

Table B. shows how this employment varies throughout the year.

Tables C. and D. show the same particulars for persons employed during the spring and winter quarters on seven farms where steam cultivation is used, extending over 5,199 acres.

Table E. gives the number of children, young persons, and women employed in agriculture in nine parishes, with a population of 3,124, and an acreage of 14,490.

Table F. is a summary of Tables A. and E.

* The evidence from three additional circulars (one long and two short) received after this summary had been completed will be found in Appendix B. under the head of the respective parishes to which they apply, viz., Aston Rowant, Hempton, and Wroxton, making a total of 82 circulars received.

† A very complete Labour Return for 340 acres in Aston Rowant parish arrived too late to be inserted in this table.

Table B.

The following Return shows the Variation in the Labour Returns for the different Seasons of the Year on 35 Farms (given in detail for the Spring quarter, Table A.) The Summer Return includes the extra harvest hands in eight cases; the other Returns include only the ordinary staff for the different seasons of the year. These 35 farms extend over 16,536 acres, of which 11,238 are arable and 5,298 are pasture.

CIRCULAR QUESTIONS.

Long Circular, 22*c*.—"In what kinds of work "are they employed during the different seasons "of the year?"

Short Circular, 1, 2, 3.—"To what extent are "boys, girls, and women employed in agriculture "in your parish?"

SUMMARY OF ANSWERS.

Boys under 10.—"Field keeping or bird scaring." "Stone picking." "Picking twitch" (otherwise couch, or scutch, or squitch). "Pig keeping."

Boys over 10.—Employed throughout the year as carter or ploughboys, driving teams and helping shepherds and cattle men; employed also in the same manner as younger boys.

Girls over 13 are occasionally employed in weeding corn, stone picking, twitch picking, &c.

Women (chiefly married) and girls over 15 are employed in spring in stone picking and weeding; in summer in singling and hoeing turnips, hoeing and weeding corn; in autumn in cleaning land for winter seed crops and cleaning roots, &c.; in winter in cleaning and cutting roots, occasionally in spreading manure and lifting roots. Throughout the year, as occasion serves, they are employed with the threshing machine, and in many villages the whole population, male and female, of all ages, turn out to hay and harvest work. Except in helping their parents at piece work, girls under 13 years of age are rarely employed.

WOODSTOCK UNION.

Rev. E. L. Lockyer, Barton Wescott, says, "All "the boys over 10; no young women; about three "married women. In autumn the whole parish, "men, women, and children, turn out to reap or "glean."

Rev. H. Brooks, Steeple Barton,—"Boys drive and "hold the plough all through the year; occasionally "they scare birds. Women are employed in spring "in hoeing, stone picking, and cleaning fallows; in "summer and autumn in weeding, haymaking, and "harvesting; in winter with the threshing machine "and chaff cutter and in cleaning roots."

H. Barnett, Esq., M.P., Glympton,—"Girls are "employed at 13 to 15 years of age when required "at harvest time and in picking stones. Women are "frequently employed in farm work."

C. E. Thornhill, Esq. (Chairman of Woodstock Union), says, "Except during the time of harvest, "boys under 10 years of age are not generally "employed in this parish or union. In considering "applications for relief I find that the guardians of "the Woodstock union do not, as a practice, ask why "a boy of the family making application, being of or "under that age, is not at work; but if there happens "to be a boy 11 years old or more, such a question "is almost always asked."

WITNEY UNION.

Rev. G. S. Griffiths, Bampton Aston,—"Boys "begin from 8 years of age in spring. Girls are not "often employed."

Mr. H. Bateman, occupier, Asthall,—"Boys are "employed in agriculture as soon as they are strong "enough, and are kept all the year round. Girls "are employed by their parents in time of harvest, "rarely employed by the farmers. I may here state "that girls and boys under 10 years of age are "employed by their parents in harvest time, and in "many instances on my farm children under 10 "years of age have earned for their parents 1*s.* to "1*s.* 6*d.*, and in one or two cases 2*s.* per day. Very "few go out in winter; about 20 may be induced to "go out in the whole parish during hay harvest, but "the majority are very indifferent whether they go "or not."

Mr. H. Akers, Bourton, occupier, says, "Employ- "ment of girls very rare in my parish; occasionally "one or two may be employed for a few weeks tend- "ing sheep or scaring birds. During spring and "summer most of the able-bodied women are em- "ployed in weeding, hoeing, and hay and corn har- "vesting. During the winter months about one- "fourth of them are so employed when the weather "is good."

Mr. Samuel Druce, occupier, Eynsham,—"At 12 "years old boys generally obtain constant employment. "A few boys between 9 and 12 frighten birds and "mind sheep, &c., having only occasional employ- "ment. Girls are not employed. About one woman "to every 100 acres is employed in this parish."

Walter Strickland, Esq., J.P., Standlake, says, "Boys are employed from 9 years upwards at all "times of the year. Girls are seldom employed. "Some women are employed on all the farms, but "chiefly in summer."

Banbury Union.

Mr. W. Chamberlin, owner and occupier, Adderbury,—"Boys are employed from 9 to 10 years of age "as plough boys. Girls are not employed. Com- "paratively few women are employed except in fine "weather, in spring spreading clots, hay making, and "reaping."

Mr. Davis, occupier and guardian, Alkerton,— "Boys are not generally employed in this parish "until 9 years of age; they generally begin at the "spring seeding to keep birds off corn, to mind sheep "on the side of the roads, or as plough boys. No "girls are employed. Women sometimes assist in "hoeing and weeding corn."

Mr. S. Berridge, occupier and guardian, Drayton, —"Boys are not employed under 12 except as 'field "'keepers.' No girls are employed, and I think the "demand for domestic servants is so great that they "go out to service as soon as they leave school, they "being *preferred* from the *agricultural* districts. Wo- "men are employed in light field work from March "till May with their husbands, hoeing corn, then "haymaking and harvest work. In the winter "months you seldom see one employed out of doors."

Bicester Union.

Mr. W. B. Savin, occupier and guardian, Bucknell, —"I never employ boys under 10. I do not employ "any girls. I employ women in common field work, "and very few of those, and principally used in pick- "ing stones on grass land, hay work, &c., but no "employment in the dead winter months."

Mr. Jos. Waters, occupier and guardian, Cottisford,—"Boys are employed at all seasons of the year, "especially at seed time and harvest. Girls are not "employed. Women are chiefly employed in spring "and summer months."

Mr. Thos. Barford, occupier and guardian, Launton,—"Boys from 10 years of age all the year. Girls "not at all. Women in fine weather during spring, "summer, and winter.

Sir H. Dashwood, Bart., landowner, Kirtlington,— "Boys from 8 years upwards are employed from May "to September, and from 10 years upwards in winter "months. Girls are employed in May and June "(in fine weather only) for weeding; in harvest "they assist their parents. A few women are em- "ployed all the year round; they are chiefly married "women."

Thame Union.

Mr. E. L. Franklin, occupier,—"Boys are em- "ployed all the year round, and commence work at "10 or 11 years old. Girls are not employed. Wo- "men are employed during spring, summer, and "autumn."

Mr. John Watson, bailiff, Shirburn,—"Boys from "10 years of age for about two months in spring and "six weeks in autumn to keep birds off newly sown "fields. Girls under 14 or 15 are not employed. "Women are employed throughout the year, varying "in number on this farm from 9 in March to 12 in "July and 3 in December."

J. W. Henley, Esq., M.P., landowner, Waterpery, says, "Boys are seldom employed under 10 or 11 years "of age, except now and then crow keeping for per- "haps three weeks or a month at a time. Not many "girls are now employed in farm work; they get out "to service. Women are employed in haymaking, "harvesting, and weeding. As many as wish to get "work generally can do so."

Wycombe Union.

Rev. H. T. Young, J.P., landowner, Stoken Church, —"Boys go out at 8 years old to drive horses and "take care of pigs and sheep; they are never em- "ployed in the beech woods except to drive teams, "carting the wood, or to look after pigs. Girls are "not employed in field work as a rule; they go out into "the fields in harvest time to help their parents reap "and bind the sheaves; they are chiefly employed at "lace work, at which a handy girl of 14 years old "can earn about 2*s.* per week. Women are employed "at times at stone picking and weeding and reaping "in harvest, but I think the cases are exceptional; "their chief employment is lace making."

Abingdon Union.

Rev. J. Gibbs, Hampden Clifton,—"Boys are em- "ployed (but not permanently till about 11 years "old) as early as 9 years old for bird keeping, pig "keeping, &c., but only during parts of the year; in "winter such very young boys are at home. As a "rule girls are not employed, occasionally the elder "girls of 11 or 12 years old ask leave from school for "a job in the fields, such as scutching, weeding. At "harvest time too the school girls, elder and younger, "go to help their parents by binding up sheaves, &c. "Women are not employed to any extent; they are "not encouraged to work in the fields except at har- "vest time. A few, however, work nearly, if not "quite, all the year round."

The Rev. Wm. Harcourt, landowner, Nuneham,— "No girls are employed here, and no women are "employed on my farm; only five married women "are employed on the other three farms in Nuneham "parish."

Henley Union.

The Rev. Joshua Bennett, Caversham,—"Very "few boys leave our school before the age of 9, and "then they are for the most part only employed in "bird keeping in spring and autumn. As a rule, no "girls under 13 years are employed in agriculture; "the wives of labourers and their eldest daughters "(if they have not left home as domestic servants) "are regularly employed on the farms."

Rev. W. H. Ridley, Hambledon (Bucks),—"Boys "from the age of 9. Girls from 14, but not then so "commonly as boys; they pick up couch, trim swedes "and turnips, hoe corn, &c. At least one-fifth of the "labourers' wives are employed on the farms."

Edward Mackenzie, Esq., landowner, Henley,— "Boys from 10 years old throughout the year. Some "girls from 12 years, weeding and picking couch; "women doing same work as girls."

Hugh Hamersley, Esq., J.P., landowner, Pyrton, —"Boys are generally employed in this parish from

Oxfordshire.
Mr. Culley.
A.
j.

" 10 years of age. Girls leave school about 12 years " old; places for the more intelligent are usually " found in domestic service. Employment in agri- " culture for those so young is a rare exception, and " may be said to be limited to the very few whose " qualities do not fit them for other employment. " Women, both married and single, are employed in " farm labour; the former to add to their weekly " means; the latter are usually those who have tried " domestic service and have failed."

Rev. C. E. Ruck Keene, landowner, Swyncombe,— " Boys are employed from 10 years throughout the " year, some even younger. I have an industrial " school, and the children are employed during the " intervals of teaching on the land allotted to the " school or on my estate. Girls of all ages are em- " ployed in harvest, and also in stone picking, with " their mothers. 22 women are employed generally " on the different farms in this parish."

F. E. S. Viret, Esq., J.P., Watlington, — " It is " very seldom, if ever, except during harvest, that " boys under 11 years are employed in agriculture " in this parish; to the best of my knowledge girls " are not so employed. Women are employed weed- " ing, and at times with threshing machines, and as " usual in hay-time and harvest; occasionally some " of the women are employed in spreading manure, " to which they make no objection."

CIRCULAR QUESTIONS.

Long Circular, 22 (*d*).—" Do they live on or near " the farms on which they work? If not, how " far have they to come from their homes to " their daily work?"

Shorter Circular, 4.—" To what distance do the " children, young persons, and women employed " on your farm and in your parish generally go " to work?"

17 witnesses say the labourers are "near" their work; 20 witnesses say the labourers live within a mile of their work; 2 witnesses say "one mile;" 13 witnesses say from $1\frac{1}{2}$ to 2 miles; and 2 say from 2 to 3 miles.

CIRCULAR QUESTIONS.

Long Circular, 22 (*e*) and (*g*). *Short Circular*, 5. —" What are the hours of work?"

The answers to these questions given in 55 circulars (some examples of which will be found below) show that *for men* the most usual hours of work are from 6 a.m. to 6 p.m., with two hours allowed for meals, in summer, and from 7 a.m. to 5 p.m. in winter, with one hour allowed for meals, making a working day of 10 hours in summer and nine hours when there is sufficient light in winter. In many cases the work commences at 7 a.m. instead of 6 a.m., the men breakfasting at home and having only one hour allowed for meals; in some cases they cease work at $5\frac{1}{2}$ p.m., having only $1\frac{1}{2}$ hours allowed for meals instead of two hours, thus again bringing up the working day to 10 hours. In some parishes the working hours appear to be reduced to nine hours, work ceasing at 5 p.m. instead of 6 p.m., with the same allowance of time for meals. Carters, cattle-men, and shepherds, with their attendant boys, have to begin work at 5 a.m. in summer and remain at work till 5 or 6 p.m., as the case may be; other boys over 10 years of age have the same hours as ordinary men. Where horses, as is commonly the case, work from 7 a.m. till 3 p.m., only resting for 20 minutes or half an hour at 12 o'clock to let the ploughman have his luncheon, the carter boy comes to the stable at 5 a.m., is allowed from 6 to 7 o'clock for breakfast, drives his team, with a short interval, till 3 p.m., and then has till 4 o'clock for dinner, and again goes to work till 5 or 6 p.m.

The most usual hours of work for women are from 8 a.m. till 5.m. in summer, and 4 p.m. in winter; in many parishes, however, especially in Bicester union, they cease work at 4 p.m. as well in summer as in winter, in each case the hour is allowed for dinner. In hay-time and harvest these hours are considerably lengthened for extra wages, and when with the threshing machine women's hours are the same as those for men.

WOODSTOCK UNION.

Mr. Hutt, occupier and guardian, Water Eaton,— " Women work from 9 a.m. to 4 p.m. for nine months " during the year, during the other three months in " harvest and hay time from 8 a.m. to 7 p.m., wages " varying from 4*s.* to 6*s.* per week."

Mr. R. J. Newton, occupier and guardian, Kidlington and Begbrooke,—" Day men work from 6 a.m. to " 12, and from 1 p.m. to $5\frac{1}{2}$ p.m.; carters from 5 " a.m. to $6\frac{1}{2}$ p.m.; women from 8 a.m. to 12, and " from 1 p.m. to $5\frac{1}{2}$ p.m. One hour is allowed for " dinner and half an hour for breakfast for those who " begin work at 6 a.m."

H. Barnett, Esq., M.P., landowner, Glympton,— " The ordinary times for men are from 6 a.m. to 6 " p.m. in summer, and from 7 a.m. to 5 p.m. in " winter; two hours in summer and one hour in " winter being allowed for meals."

C. C. Dormer, Esq., Rousham, landowner,—" Boys " who are employed keep the same hours as men, " viz., from 6 a.m. to 6 p.m., except in harvest, when " the hours are unlimited."

Mr. Thos. Taylor, occupier and guardian, Shipton, " —Women work from 8 a.m. till 4 p.m., except in hay " and corn harvest, when they work from 8 a.m. to " 6 p.m.; in the former case they are allowed one " hour and in the latter $1\frac{1}{2}$ hours for meals."

Mr. Smith, occupier and guardian, Wootton,— " Boys, 7 a.m. till 5 p.m.; women from 8 a.m. to 5 " p.m.; $1\frac{1}{2}$ hours being allowed in each case for " meals."

WITNEY UNION.

Mr. Bateman, occupier and guardian, Asthall,— " Boys come early and go home to breakfast, then " work till dinner time, after dinner assist the stable- " men, watering the horses and other light duties, " more as training work to fit them for higher duties. " The women profess to be at work at 8 a.m., take " *two* hours in the day for refreshment, and think it " hard to be kept after 6 in summer or 4 in spring " and autumn."

Messrs. Jos. and Saml. Druce, occupiers, Eynsham,—" Women work from 8 a.m. to 5 p.m., taking " one hour for dinner."

Mr. A. Ackers, occupier and guardian, Bourton,— " Boys in winter 7 a.m. to 6 p.m., in summer one " hour longer (one hour's interval for dinner). Women " 8 to 5 in summer, 8 to 4 in winter, one hour's " dinner interval. In haymaking and corn harvest " occasionally work later."

Rev. R. W. Higgs, Handborough,—" Usual hours " of work in summer 6 a.m. to 6 p.m., in winter " 7 a.m. to 5 p.m. They have an hour for dinner, and " generally breakfast before leaving home for work."

BANBURY UNION.

Mr. W. Chamberlin, occupier and guardian, Adderbury,—" Women work from 8 to 5, except in hay time " and harvest, when they work from 8 to 7, or later " when very busy. Men from 6 to 6, except shep- " herds and carters."

Mr. Davis, occupier and guardian, Alkerton,— " Boys above 10 years of age from 5 a.m. to 5 p.m. in " the winter months, and 6 p.m. in the summer months. " One hour, 6 to 7 a.m., given for breakfast, and from " 3 to 4 p.m. for dinner" (applies to team boys, G. C.)

Mr. Saml. Berridge, occupier and guardian, Drayton,—

" Men, 7 a.m. to 5 p.m. } Longest hours in har-
" Women, 8 a.m. to 4 p.m. } vest, 6 a.m. to 9 p.m."

BICESTER UNION.

Mr Jos. Waters, occupier and guardian, Cottisford, —" Boys, 7 a.m. to 5 p.m. Women, 8 a.m. to 5 p.m."

Sir H. Dashwood, Bart., Kirtlington,—" Women " from 8 a.m. till 4 p.m., with an hour for dinner."

Captain Dashwood, occupier, Northbrook,—" Men,

" 10 hours (6 a.m. to 6 p.m. with two hours' rest); " women, 7 hours (8 a.m. to 4 p.m., with one hour for " dinner). Women threshing 10 hours with extra " pay."—(On this farm "Scotch" hours are kept, G. C.)

THAME UNION.

Mr. John Watson, bailiff, Shirburn,—"6 a.m. to 6 " p.m. for boys, two hours for meals."

Mr. E. L. Franklin, occupier, Little Milton,—" Women 8 a.m. to 5 p.m."

ABINGDON UNION.

Rev. E. Peel, Toot Baldon,—" Men, 6 a.m. to " 6 p.m.; women, 8 a.m. to 5 p.m."

HENLEY UNION.

Hugh Hamersley, Esq., landowner and occupier, Pyrton,—" Boys being employed with the carters or " shepherds take the regular time with them from 5 " to 5 in summer, and from 6 to 5 in winter, two " hours off for meals. Women commonly work from " 8 a.m. to 5 p.m., with one hour allowed for dinner."

CIRCULAR QUESTION 22 (*h*).

" Does the demand upon their physical powers in- " juriously affect their health and constitution?"

22 witnesses answer "No." 1 witness says "Yes."

CIRCULAR QUESTION 22 (*i*).

" Are the young, or the females, whether young or " grown up, subject to any ill-treatment?"

21 witnesses (all who answer the question) say "No."

CIRCULAR QUESTION 22 (*j*).

" Do any special employments injuriously affect " females or the young generally?"

21 witnesses say "No."

WOODSTOCK UNION.

Rev. J. Hoskyns Abrahall, Combe, says, " Gloving " is an employment well nigh universal among the " girls, and begins at their eighth year. From the " fluctuations in the glove trade it is not a very re- " liable means of subsistence, and seems to give " occasion to immorality, from the fact that the girls, " when it is dark and they can no longer work, walk " out and meet the youths, who are then returning " from their work."

Rev. F. Robinson, Stonesfield, says, "That the " sedentary habit of the glove maker tends to render " the young women less robust."

WITNEY UNION.

Rev. R. W. Higgs, D.C.L., Handborough, says, " The health is materially affected by the sedentary " occupation of glove making; in it all the women " here are employed."

CIRCULAR QUESTION 22 (*k*).

" Have you any observations to make as to the " effect of the employment of females in agricul- " ture on morals and on their proper training for " domestic duties?"

Two witnesses answer that the effect is generally bad.

Four witnesses answer "No."

Other witnesses answer as follows:—

WOODSTOCK UNION.

Rev. J. H. Brookes, Steeple Aston,—" I think it " certainly tends to rub the bloom off their womanly " modesty, it also unfits them for domestic service; " in fact, I believe this employment does tend in some " degree to promote the difficulty of finding good " domestic servants. As to married women who are " mothers, I believe it would answer to them better in " the long run to stay at home and guide their children " and household well."

Rev. C. Reade, Cassington,—" I think that the " effect of such coarse labour is to destroy the gentler " qualities of a woman's nature."

Rev. Jos. Dodd, Hampton Poyle,—" Upon the whole " I do not think it desirable that women should be " employed too much in the fields. The advantage to " them is but small, as their domestic concerns must " suffer."

The Ven. Archdeacon Lower, Kidlington,—" Agri- " cultural female labourers are almost always married, " and they compare favourably for morals with other " classes."

WITNEY UNION.

Rev. H. Gregory, Asthall,—" Restriction in our " parish does not seem to be required. Very few " females—about half-a-dozen only—go out to field " work, and I think the habit is of itself dying out. " Stone picking on ploughed lands and turnip clean- " ing are dirty and cold operations for females, but " those who go out don't complain, say it is healthy, " and not being up to earning money in other way, " are glad to do so in this."

W. Strickland, Esq., J.P., Standlake,—" No, young " girls not being so employed here."

CHIPPING NORTON UNION.

Rev. John Jordan, Enstone,—" I do not see how " any restrictions of this sort could be imposed with- " out depriving families of their means of subsistence. " If female labour were to be at all prohibited, hay " and corn harvest are the most perilous seasons for " morality."

BICESTER UNION.

Mr. W. B. Savin, Bucknell,—" Yes; but it is not " advantageous to the tenant farmers to employ them, " and they are more required in domestic service, " where the morals and conduct are generally looked " after."

F. D. Hibbert, Esq., J.P., Bucknell,—" Certainly, " indoor places as servants are easily obtained."

Sir H. Dashwood, Bart., Kirtlington,—" When " females are employed under the superintendence of " the farmer restrictions appear unnecessary."

Rev. W. J. Dry, Weston-on-the-Green,—" No. " Does not apply to this parish, as no children or " young persons are employed."

THAME UNION.

Mr. E. L. Franklin, Little Milton,—" Girls are " seldom employed and not wanted in these parts."

Mr. John Watson, Shirburn,—" I think no restric- " tion should be placed on the employment of women. " The local doctor informed me that women employed " in the fields are generally more healthy than others " not so employed."

WYCOMBE UNION.

Rev. H. T. Young, landowner, Stokenchurch,—" I " should say it was desirable, and under no circum- " stances would I allow them to work in mixed gangs. " When I say this I refer to other parishes rather " than the one in which I live."

ABINGDON UNION.

Rev. J. Gibbs, Hampden Clifton,—" As a rule the " employment of females in agriculture is most unde- " sirable. It is said in the case of young women to " lead to much coarseness and immorality, and in the " case of mothers of families it is noticed that when " they work in the fields their families remain un- " cared for and their homes are untidy and neglected."

Rev. Wm. Harcourt, landowner, Nuneham,—" I do not think the employment of married women " who have young families at home to be right in a " moral point of view, and I think the employment " of young men and women together in the fields " injurious to themselves and useless to the farmer."

Rev. C. Rankin, Sandford,—" Yes, for I think " great evils result from mothers leaving their families " all day to go to work."

Rev. Ed. Peel, Toot Baldon,—" Especially of the " *young*. I do not think *they* ought to be employed " in field work at all. It is *most* demoralising to " young girls."

HENLEY UNION.

Rev. J. Bennett, Caversham,—" I consider it " most prejudicial, if not actually demoralising, for " young females to be employed in agriculture at all.

Oxfordshire.

Mr. Culley.

A. j.

" They are subjected to many temptations to go wrong, " and frequently do so."

Rev. W. H. Ridley, Hambledon.—" It is very " injurious to them *morally;* they gain coarse, " rough, immoral habits. It is very injurious " *physically;* they get rheumatism very extensively. " It is very injurious *domestically;* their homes and " families are miserably neglected. It is very " injurious *religiously*, for they are so tired that they " use no religious opportunities on week-days or " Sundays."

Hugh Hamersley, Esq., J.P., Pyrton,—" It would " not be desirable that young girls should be generally " employed in agriculture; the association with the " older women, who frequently are not of the best " class, would not tend to improve their morality or " render them fit for the duties of after-life. I do " not think it would be desirable, neither is it needed, " to place restriction on their employment in this " parish."

Mr. G. Dixon, occupier, Swyncombe,—" Most " desirable, as nothing tends to lower the character " of our agricultural women as early employment in " the fields, throwing them in the way of unprincipled " young men, and forming intimacies which in most " cases leads to the ruin of the former. This is my " experience in this parish."

Rev. C. E. Ruck Keene, Swyncombe,—" It is still " more important in the case of females, and I believe " the field employment is most prejudicial to the " character of females, and with young girls there is " not even the excuse of profit attached to their " labour. The constitutional objections, though great " in themselves, are slight compared to the coarse " habits contracted by association in the fields with " those of the other sex."

CIRCULAR QUESTIONS.

Long Circular, 22 (*l.*) Taking into consideration the demand for labour in your parish and neighbourhood, and the pecuniary resources of the agricultural labourers, are you prepared to recommend that any restriction should be placed on the employment of females in field work?

If so, would you limit the restriction to females of a defined age, or would you prohibit female labour in the fields altogether, excepting at hay and corn harvest?

Short Circular, 7.—Is it desirable to place any restriction on the employment of females, and especially of the young, in agriculture?

11 clergymen answer that no legislative restriction is desirable, 21 occupiers and landowners answer to the same effect. 2 clergymen answer that female labour should be confined to hay time and harvest. 4 clergymen answer that female labour should be confined to married women, or single women of a certain age, and 2 occupiers give the same answer.

Other witnesses answer as follows :—

Rev. J. H. Brookes, Steeple Aston,—" Yes, and " with this I would extend the small allotment or " cottage-garden system, and let the women give " their spare time in fine weather to doing light work " in their husband's garden."

Rev. J. H. Abrahall, Combe,—" The people of this " parish are so poor that one is not disposed to " recommend any restriction of their means of " subsistence."

Rev. C. S. Peel, Rousham,—" The females em- " ployed in agriculture do not usually go to service, " nor are those *regularly* employed on farms as a rule " good managers."

" There is no reason why they should not be as " moral as others in the same class of life."

Rev. F. Robinson, Stonesfield,—" I do not observe " any difference between those engaged in agricul- " ture and those otherwise engaged."

Rev. L. A. Sharpe, Tackley,—" Farm-work makes " them of rougher, untidier habits in married life " than service."

Rev. W. A. Plumptre, Woodstock,—" The employ- " ment of girls in the glove factories totally unfits " them for domestic service and for home manage- " ment."

The Rev. S. Edwards, Woolvercott,—" They are " not generally employed, only at hay harvest and " 'squitching' time, and this occasional field-work " does them no harm. Their employment as rag- " cutters at the mill is far more deteriorating to their " morals and home virtues."

WITNEY UNION.

Rev. S. Gregory, Asthall,—" No ill effects of " such employment have come under my knowledge, " but of necessity it precludes 'proper training' for " domestic duties."

Rev. R. W. Higgs, D.C.L., Handborough,—" There " can be no question as to its debasing effect on " morals, and its being detrimental to training for " domestic duties."

CHIPPING NORTON UNION.

Rev. John Jordan, Enstone,—" When females get " associated with males in field labour it leads to " immorality, but field employments do not spoil " females for domestic duties, as gloving and lace- " making do."

BICESTER UNION.

Capt. Dashwood, Kirtlington,—" I do not think " field labour is at all injurious unless the homes are " far distant from the place of labour; it is generally " supposed that it causes the families and cottages to " be more untidy, but from experience I believe that " those who are respectable and orderly housekeepers " remain so, and the slovenly would, if not at work, " be only idling their time, and their families and " homes would generally remain dirty and uncared " for."

Rev. J. Dry, Weston-on-the-Green,—" I have the " greatest possible objection to the employment of " young females in agriculture, and I use every en- " deavour to prevail on parents to send their children " to service. Most of the young girls begin service " at about 12 years of age."

Rev. W. Nuttall, Shirburn,—" My own parish only " shows me that where the mothers work the chil- " dren are neglected."

CIRCULAR QUESTIONS.

Long Circular, 22 (*m.*) Taking into consideration the demand for labour in your parish and neighbourhood, and the pecuniary resources of the agricultural labourers, are you prepared to recommend that any restriction should be placed upon the age at which boys should be permitted to be employed in farm labour?

If so, please to state the age below which you would recommend that boys should not be so employed.

Short Circular, 6. Is it desirable to place any restriction on the age at which boys should be permitted to work on the land, and if so, at what age would you place the limit?

1 clergyman, 1 landowner, and 6 occupiers answer that there should be no restriction.

14 clergymen, 3 landowners, and 5 occupiers would restrict employment to boys over 10 years of age.

1 clergyman, 1 landowner, and 2 occupiers would limit employment to boys over 11 years of age.

2 clergymen and 5 occupiers think that boys should not be employed under 12 years of age.

2 clergymen think boys should not be employed under 14 years of age.

Other witnesses answer as follows :—

WOODSTOCK UNION.

C. E. Thornhill, Esq., J.P., Wootton,—" Having " regard to the rate of wages in this district, it would " not be fair to ask the labourer to keep his boys idle " after 10."

Mr. Smith, occupier, Wootton,—" I think it requires " no restriction, as they are not wanted until 10 " years old permanently."

WITNEY UNION.

Mr. H. Bateman, occupier, Asthall,—" If this parish " is a fair sample, I should say 'No.' My experience

" tells me that a boy at 10, if healthy, is quite fit for " field work."

Mr. H. Akers, occupier, Bourton,—" I do not think " more than one or two boys are employed in this " parish under 10 years, and those only occasionally, " such as pig or sheep tending.

" I would suggest 10 years as minimum age for " boys to work on the land."

BANBURY UNION.

Mr. Davis, occupier, Alkerton,—" I have never " seen any ill effect from boys going to work too " young, but I think they grow and gain strength " from the exercise they take; weakly boys often " improve in health after they commence work."

BICESTER UNION.

Mr. Jos. Waters, occupier, Cottisford, says, " Not " unless you intend to keep them at school, for in " most of the large and populous villages they will " be the greatest nuisance we shall have to contend " with; if you intend to compel them, I would say " till they can read and write fairly."

Sir H. W. Dashwood, Bart.,—" No boys should " go to work in the winter under 12, or in the " summer under 8, except when assisting their parents " during harvest."

Rev. W. J. Dry, Weston-on-the-Green,—" I would " restrict the age to 10, but as it often happens that " a boy of 9 is physically stronger than one of 10, " I would allow a boy of 9 to go to work if he could " read and write fairly."

WYCOMBE UNION.

Rev. H. T. Young, landowner, Stokenchurch,—" I " do not think boys ought to go to work before they " are 11 years old, and then only to tend sheep and " pigs or pick stones. The going to plough is much " too hard work, it stunts their growth and makes " them prematurely old. From want of strength, " moreover, they frequently have bad accidents with " horses."

ABINGDON UNION.

Rev. J. Gibbs, Hampden Clifton,—" It is most " desirable, for the boys' sake, that they should not " leave school before 12 years of age. Those who do " so seem to lose all the good and useful knowledge " which they have been taught and to lapse into " ignorance. But, on the other hand, in many cases " a restriction on the age at which they may be per- " mitted to work would tell very hardly on parents " with large families, to whom an extra 1*s.* 6*d.* or 2*s.* " is of immense importance."

Rev. Wm. Harcourt, landowner, Nuneham.—I " think it desirable, where practicable, that children " should be kept at school till 12 years of age, and " I think it highly desirable that young persons after " that age should have some schooling provided for " them to which their employers should contribute. " Farmers could send their lads whom they employ " to school, without inconvenience, from the middle " of October to the end of February, for four seasons, " at 6 p.m., and the parish schoolmaster might school " them for 1½ hours, being compensated for the extra " demand upon his time, and perhaps allowed to " deduct an hour from his previous work."

Rev. E. Peel, Toot Baldon,—" Very desirable. I " should place the limit at very lowest at 10; better " still at 12."

HENLEY UNION.

Hugh Hamersley, Esq., landowner, Pyrton,—" I " cannot see that it is desirable to place a limit on " age; when boys become too old for the control of " the village school they are better at work, and in " large families their earnings are almost a necessity."

Rev. C. E. Ruck Keene, landowner, Swyncombe,— " It would be desirable to place restriction, if pos- " sible, but without some extraordinary inducement " I cannot see, in an agricultural parish, how it could " be acquiesced in by the parents, partly from repug- " nance to any interference with their domestic ar- " rangements, but more especially from inability to " maintain their families without the earnings of the " children."

CIRCULAR QUESTION.

22 (*o.*) Do you see reason for recommending that any restriction should be placed upon the hours of work of children and young persons employed in agriculture; and if so, what amount of restriction would you propose?

15 witnesses say, "No."

2 witnesses say, " 10 hours exclusive of meal times."

2 witnesses say, " 6 hours per day."

CIRCULAR QUESTION III.—23 to 25.

III. As to requiring some amount of SCHOOL ATTENDANCE in the case of CHILDREN earning WAGES by EMPLOYMENT in FARM LABOUR.

23. The Commissioners being instructed to inquire to what extent, and with what modifications the principles of the Factory Acts can be adopted in reference to children employed in agriculture, " especially with a view to the better education " of such children," your opinion is invited on the following points:

24. The three modes by which the prescribed amount of school attendance of children employed in trades and manufactures is obtained are—

By the Factory Act (7 Vict. c. 15. ss. 31–39).

1. By half day at school and half day at work.
2. By alternate whole days at school and whole days at work.

By the Printworks Act (10 & 11 Vict. c. 70. ss. 2, 3, 26).

3. By school attendance for a certain number of hours during the preceding six months.

25. You are requested to state which of such modes of enforcing some amount of school attendance would seem most applicable to the circumstances of your parish and neighbourhood; or whether a combination of one or more of them would better meet the circumstances; or whether *any other mode that you might wish* to suggest appears to you preferable.

Of 43 Longer Circulars returned for Oxfordshire by clergymen for their parishes,—

2 circulars say, "No restriction necessary."

4 circulars say, "Factory Act (No. 1)."

1 circular says, "Factory Act (No. 2)."

3 circulars say, "Print Works Act (No. 3)."

2 circulars say, " Print Works Act, with a dif " ference of 6 to 12 months."

2 circulars say, " Print Works Act, with a dif " ference of 12 months according to choice of parents " and slack time of work."

Others answer as follows:—

WOODSTOCK UNION.

Rev. J. H. Brookes, Steeple Aston, says, "I do " not think any one of these plans practicable. To " enforce any of them by law would go far to dis- " courage the employment of boys on farms alto- " gether; the uncertainty of our climate and the " corresponding uncertainty for farming operations " make (1) and (2) quite impossible. I think (3) " less impossible; but it could not be carried out " without giving great dissatisfaction to the em- " ployers and doing serious injury to the discipline " of the school."

Rev. H. A. Collier, Combe, says, "The system of " alternate weeks at school and at work has been tried " in this parish, and met with some success. Such " an arrangement is more convenient both to the " farmer and the schoolmaster, and quite as well for " the children."

Oxfordshire.

Mr. Culley.

A.
j.

Rev. J. Hoskyns Abrahall, Combe,—"I am in "favour of a free elementary education provided by "the State, and as regards children compulsory in "the absence of a better education. Evening instruc- "tion should, I think, form a considerable part of the "instruction given."

Rev. Thos. Curme, Sandford, says, "If children "might not legally be employed until they could read "well and write parents would send them to school, "that the children might earlier earn wages."

Rev. G. J. Brown, Shipton-on-Cherwell, says, "I make it a rule to admit no one to my night school "under 12 years of age; up to that age, or nearly so, "they should in my judgment be kept at the day "school. At all events I should not be inclined to "let them go to work till they had learned to read "and write with facility."

Rev. L. A. Sharpe, Tackley, says, "All children "should be obliged to attend school till 8 years old or "longer, till a certificate of competency in reading, "writing, and arethmetic can be given. It is no use "to forbid doing work unless the educational test is "added."

Rev. C. S. Peel, Rousham, says, "I would compel "attendance at school up to 10 years of age, and "after that age leave attendance at a night school "optional. It would be difficult to enforce the Fac- "tory and Printwork Acts in agricultural districts."

Rev. S. Edwardes, Woolvercott, says, "Modes (1) "and (2) would have the effect of lowering the stan- "dard of education in the school generally. I have "had occasion to observe in preparing young persons "for confirmation that many have improved them- "selves in reading, &c. after leaving school. Perhaps "the best method (if the Committee of Council would "allow it) would be to *substitute* an evening for an "*afternoon* school."

Witney Union.

Rev. H. Gregory, Asthall, says, "Perhaps in small "rural parishes, as a step in the right direction, "one day in the week at school would be sufficient. "The loss in earnings would not be great, and I "think by degrees parents would wish to give up "more for their children's schooling."

Bicester Union.

Rev. W. J. Dry, Weston-on-the-Green, says, "I "would restrict the age of children going out to "work to 10; but it often happens that a boy of 9 is "physically stronger than one of 10. I would allow "a boy of 9 to go to work if he could read and write "fairly."

Henley Union.

Rev. A. R. Hogan, Watlington, says, "I think "any of the above modes would be very inconvenient "in an agricultural district; but if the children were "required to be at school (for their whole time) from "December 1st to March 1st it might be very bene- "ficial, there being little to do on the farms during "that period."

Rev. D. G. Compton, Wroxton, Banbury (in a circular returned too late to be put in its proper order), says, "I should judge that none of these three "ways would be so suitable for an agricultural dis- "trict as the rule of boys going to school regularly "till they are 10 years of age, and then going out to "work if they will, with the obligation of attending "the night school during the winter months."

Circular Question.

Longer Circular, 27. How far is the school attendance affected by the distance that the children have to go to school?

13 circulars say "Not at all."
9 circulars say "Only on wet days."
5 circulars say "Slightly."
3 circulars say "Considerably."

Woodstock Union.

The Ven. Archdeacon Lower, Kidlington, says, "The children from the hamlets of Thrupp and "Water Eaton are absent about one-third of the "time."

Rev. C. S. Peel, Rousham, says, "Some families "make distance an excuse for not sending their "children to school, but it is doubtful if they would "be sent were a school near at hand."

Circular Questions.

Longer Circular, 28. How far is the school attendance affected by the pecuniary resources of the parents?

Shorter Circular, 8. What means of education are provided in your parish for the children of the agricultural labouring class? Do they take advantage of them? If not, are there any other causes besides early labour to which you attribute their non-attendance?

The following answers include those given to the first question and the latter part of the second:—

29 witnesses say "Not at all."
5 witnesses say "Very little."
11 witnesses say "Considerably."
11 witnesses say "The non-attendance is to be "attributed to the indifference of parents."
4 witnesses say "The non-attendance is caused by "the early labour of children."

The Rev. C. Reade, Cassington, says, "To a cer- "tain extent: a free but compulsory system of educa- "tion is best suited to us."

The Ven. Archdeacon Lower, Kidlington, says, "At least one-fourth are absent, but it is more owing "to the carelessness of the parents than to their "poverty."

The Rev. C. S. Peel, Rousham, says, "In cases of "large families assistance as a rule can always be "obtained by parents towards the expense of school- "ing."

The Rev. S. Edwards, Woolvercott, says, "Occa- "sionally a child is kept from school by the state of "his shoes. The attendance is worse in the case of "some who are above the rank of agricultural la- "bourers. Of course when there is a large family "the children leave school early, but while they are "on the books of the school their attendance is regu- "lar. The parents contrive to find the school pence, "even when they have to take credit at the shop, 2*d.* "per week for each child. The presence of artisans "and farmers keeps up the standard of education."

The Rev. W. A. Plumptre, Woodstock, says, "There is a fund at the rector's disposal for paying "for the schooling of the poorest children (about 30 "in number), and this ensures their attendance."

Circular Question.

29. Are any efforts being made for the industrial training of girls, in connexion with elementary education, with especial reference to preparing them for their domestic duties?

19 circulars say "No."
5 circulars say "Sewing only."

Henley Union.

The Rev. A. R. Hogan, Watlington, says, "Yes, "in the Countess of Macclesfield's private training "school at Watlington for servant girls."

An account of the industrial schools maintained by Mr. Ruck Keene at Swyncombe and by Lady Macclesfield at Watlington will be found in the general evidence received from those parishes.

Circular Question.

30. Have you any remarks to make on the subject of cottage accommodation, in regard to its effect on morality or education; or on the health and comfort of the labouring poor?

The following answers also include those given to a portion of the Short Circular, question 9.

12 witnesses say that overcrowding is evidently prejudicial to health and morals.

Rev. C. Read, Cassington, says, "Overcrowding "should be met with legislative interference. The "fault lies with the poor themselves, and I think "that until we have a better educated class of labourers "legislation cannot be regarded as interfering un- "necessarily."

Mr. S. Berridge, occupier and guardian, Drayton, says, "Parents and grown up sons and daughters, when "they come home at certain times of the year, sleep "in the same room, which makes them insensible of "any sort of delicacy or moral propriety."

Mr. Joseph Waters, occupier and guardian, Cottisford, says, "In my opinion this ought to be the first "step towards national education: first improve the "dwellings and then educate, as what is the use of "education when you find six or seven grown up "people of all sexes and in all conditions of life sleep- "ing in one small room, which is no uncommon "case."

Rev. H. T. Young, Stokenchurch, says, "Over- "crowding leads to moral results which are shocking."

Circular Question.

31. How many cottages per hundred acres are considered sufficient for the accommodation of the persons employed on the land in your parish?

9 witnesses answer this question where the cultivation is described as chiefly arable or mixed.
3 say that 4 cottages per 100 acres are necessary.
3 say that $3\frac{1}{2}$ „ „ „
3 say that 3 „ „ „

Circular Questions.

32. Is there that proportion of cottages in the parish?

33. If not, what is the proportion?

circulars give no answer.
26 circulars say "Yes."
5 „ „ "Yes, and more."
2 „ „ "Nearly so."
12 „ „ "No."

Woodstock Union.

Mr. R. J. Newton, occupier and vice-chairman of guardians, Kidlington, says, "Four cottages are con- "sidered sufficient for the accommodation of persons "employed on the land in my parish, and fewer would "do if they were attached to steadings with an extra "bedroom for young men. Not having cottages on "my farm costs me 1*s.* a week extra for seven carters, "and their work is not so well done, nor can be. I "pay carters 13*s.* a week."

Circular Question.

34. Are the cottages conveniently situated with respect to (*i.e.*, not more than a mile from) the farms on which the work is to be done?

circulars give no answer.
42 circulars say "Yes."
5 „ „ "No."

Circular Question.

35. Is there a sufficient number of cottages with two bedrooms, or three bedrooms, and a sitting room, for the larger families?

15 circulars say "Yes."
4 „ „ "Scarcely."
6 „ „ "No."

Circular Question.

36. Are the cottages crowded, either with members of the family, or with lodgers?

27 circulars say "Yes."
24 „ „ "No."

Circular Questions.

Long Circular, 37. Give a general description of the cottages in your parish in respect of,—1. Construction (including size of rooms, ventilation, and drainage). 2. Accommodation (including number of rooms in proportion to the family, water supply, garden, outhouses, &c.). 3. *Ownership, i.e.*, whether by landowner, or by tradesmen with whom the tenants are obliged to deal, or by other person or persons. 4. *Rent.*

Short Circular, 9. What is the condition of the cottages in your parish and neighbourhood? Are they sufficient for the supply of the labour required? Are they conveniently situated with respect to the farms? Are they overcrowded, and have any evil results to morality come under your notice in consequence? Are they well supplied with water, and well ventilated?

The answers to these questions will be found in the general evidence from the respective parishes; the following summary will, however, indicate the general bearing of the evidence.

The cottages are described (in number) pretty equally as "good or fair" and "bad." Rooms are generally described as small, and in most cases the accommodation is described as insufficient for the larger families.

Ventilation is generally described as fair; in 7 cases it is described as bad.

Drainage is usually described as "bad;" in 5 cases it is said to be good.

Water supply generally good; bad in 6 cases.

Most cottages have gardens or allotments, though in some cases the allotment land is let at high rents, and in some cases there is no provision either of gardens or allotment ground.

Outhouses are seldom mentioned, and are very deficient in many villages.

The ownership of cottages generally rests with the landowner, but this is more particularly in the small close parishes; the cottages in the larger open villages commonly belong to small tenement holders and tradesmen; there is, however, no instance mentioned of a tradesman compelling his tenant to deal with him. Cottage rents vary from 9*d.* to 2*s.* 6*d.* a week, being lowest for the accommodation in the case of landowners' cottages, for which 1*s.* a week is a very usual rent, and highest in the small towns and open villages, where they belong to speculators.

Circular Question.

38. If there is deficient cottage accommodation, is any progress being made towards increasing it?

9 circulars say "No."
5 „ „ "Yes."
2 „ „ "More than sufficient accommodation.

Capt. F. L. Dashwood, Kirtlington, says, "My "landlord having just purchased the estate belong- "ing to one of the Oxford colleges is shortly going "to build some more cottages."

Circular Question.

39. Is the Union Chargeability Act (28 & 29 Vict. c. 79. March 1866) having any effect in causing an increase of cottage accommodation?

12 circulars say "No."
1 circular says "Yes."

Woodstock Union.

Mr. Wm. Wing, owner and occupier, Steeple Aston, says, "The effect of the Union Chargeability Act is "to increase cottages in parishes formerly *close*, and "to diminish the demand in the open parishes. I "and my son have each of us a good cottage un- "tenanted in the neighbouring parish (open) of "Steeple Barton."

Bicester Union.

Rev. W. J. Dry, Weston-on-the-Green, says, "The "Union Chargeability Act has indirectly reduced our "rates, as neighbouring proprietors are supplying the "cottage deficiency. In past years, from having a "superabundance of labourers, the maintenance of "the sick and aged employed in outlying parishes "fell heavily on us."

Circular Question.

40. By the Act 27 & 28 Vict. c. 114., July 1864, the Inclosure Commissioners are authorized to advance public money for the improvement of land, including, by s. 9, "The erection of "labourers' cottages, * * and the improvement "of and addition to labourers' cottages."

Oxfordshire.

Mr. Culley.

A. j.

Have you any remarks to make upon this Act in regard to any additional facilities, or any reduction of cost, that might cause greater progress to be made in supplying the want of good cottages?

The Rev. P. Maurice, D.D., Yarnton, says, "I "have no remark to make on account of the apathy of "the owner and the extreme poverty of the labourers "themselves."

Capt. F. L. Dashwood, Kirtlington, says, "No; "my landlord has erected cottages under the In- "closure Commissioners, and has found no diffi- "culties."

Circular Question.

41. Can you suggest any mode by which good cottage accommodation could be provided on self-supporting terms, and involving no disadvantage to the tenant?

Eight circulars say "No."

Woodstock Union.

The Venerable Archdeacon Lower, Kidlington, says, "I think if a company were formed and mem- "bers took out shares in small sums it would pay "interest at 5*l.* per cent. on a good cottage and gar- "den provided for the poor."

The Rev. C. S. Peel, Rousham, says, "It does not "seem possible to build a good cottage that will re- "munerate the landlord and not be burdensome to "the tenant. In Oxfordshire, where wages are low, "1*s.* a week is the highest rent a labourer should "pay, if he is to live well, *i.e.* have sufficient food "and firing, coals cost him 18*s.* 6*d.* a ton, with a "station a mile off."

The Rev. E. L. Lockyer, Westcott Barton, says, "The compulsory sale of improper cottages to Go- "vernment or some building company for the purpose "of erecting proper cottages."

The Rev. P. Maurice, D.D., Yarnton, says, "I "cannot suggest anything that seems to me feasible "owing to the peculiar nature of the ownership of "the soil."

Circular Question IV.

42. It would be of great assistance towards forming a correct judgment upon the question of requiring some amount of school attendance in the case of children earning wages by employment in farm labour if you could furnish the Commissioners with precise information, or with an approximate estimate, relating to the points embodied in the following tables.

43. Approximate number of children of the agricultural labouring class in attendance at elementary schools in the parish of .

The following tables will give a summary of the information given to the Assistant Commissioner in answer to this question (the answers to the shorter circular question 8, which involve no school returns, will be found in the general evidence from each parish). The expression "Agricultural Labouring "Class" was always pointed out by the Assistant Commissioner, and the returns asked for as of that class only.

Table A. shows all the children of the named class, with their respective ages and sexes, at any elementary school (as far as the Assistant Commissioner could ascertain) in Woodstock union.

Table B. shows the numbers, ages, and sexes of children in average attendance at seven other elementary schools for which returns were made.

Table C. is a summary of Tables A. and B.

Table A.

Woodstock Union.—Day School Returns.

Name of Parish.	Population.	Acreage.	In Summer.								In Winter.

TABLE C.

Total number of children under 10 years of age and between 10 and 13 years of age (of the agricultural labouring class) in average attendance in summer and winter at all schools for which returns separating the ages and sexes were made to the Assistant Commissioner.

These returns (including four small parishes in Woodstock union in which there is no school) are from 33 different parishes, with a population in 1861 of 19,012, and an acreage of 63,359.

In summer—

Boys under 10 - 695
„ 10 to 13 - 127 } 822
Girls under 10 - 711
„ 10 to 13 - 185 } 896
} 1,718.

In winter—

Boys under 10 - 699
„ 10 to 13 - 144 } 843
Girls under 10 - 689
„ 10 to 13 - 185 } 874
} 1,717.

CIRCULAR QUESTION.

44. Approximate number of children of the agricultural labouring class neither at school nor at work.

Rev. J. H. Brookes, Steeple Aston,—"Of girls kept " at home to help at house work, as their mothers " say, we have a good many; few boys are neither " at school nor at work."

Mr. Chas. Howett, Steeple Barton:—
" 6 boys between 8 and 10 years.
" 8 girls „ 8 and 10 years.
" 12 „ „ 10 and 13 years.

"These numbers are not affected by the change of seasons."

Rev. Thos. Curme, Sandford:—
" 2 girls between 8 and 10.
" 2 „ „ 10 and 13."

Rev. E. L. Lockyer, Barton Westcott:—
" 6 boys between 8 and 10.
" 6 girls „ 8 and 10."

Rev. H. Gregory, Asthall:—
" 6 or 7 males and as many females."

CIRCULAR QUESTION.

45. Approximate number of young persons of the agricultural labouring class growing up with insufficient education.

Rev. J. H. Brookes, Steeple Aston,—" There are a " good many such; the cause is generally parental " negligence; in some cases knowledge once acquierd " has been lost; in others the boy has been taken from " school too early."

Mr. Chas. Howett, Steeple Barton, says, "25 males " and 30 females. Their knowledge is of the most " meagre description, chiefly arising from the fact " that their was no National school in the village till " within the last two years."

Rev. C. P. Collier, —" Imperfect, from leaving " school too early."

Rev. Jos. Dodd, Hampton Poyle,—" Nearly all, for " they go to work too soon."

Rev. Thos. Curme, Sandford, says, " 12 males and " 8 females read very badly or not at all."

Rev. P. Maurice, D.D., Yarnton,—" None but are " able to read and write a little."

Rev. C. W. Bartholomew, Glympton, —" Those " who have grown up in the parish are all fairly " taught, but occasionally a strange shepherd or carter " comes in from some other parish with neglected " children."

Rev. J. Dry, Weston-on-the-Green, —" Sadly " deficient."

CIRCULAR QUESTION IV. 46 to 51.

46. Is there an evening school in your parish?
47. How many weeks in the year is it open? At what periods of the year?
48. How many nights per week?
49. How many hours per night?
50. What is the number of scholars?
51. What are the subjects of instruction?

Tables D. and E. will sufficiently illustrate the answers to these questions.

The total number of evening scholars receiving instruction in the 33 parishes, for which Table C. gives a summary of the day school returns, is 389, exclusive of Wroxton, for which the number of scholars is not given.

Oxfordshire.

Mr. Culley.

Thame	Shirburn	5	11	15	2	2

* At Weston-on-the-Green the children under 16 are taught three nights per week and the young persons over 16 on the remaining three nights.

In all of these six evening schools the subjects of instruction are reading, writing, and arithmetic.

Circular Question.

52. Do you consider that the evening school adequately supplies the deficiencies of the day school?

12 circulars say "No."
1 circular says "Some good."
6 circulars say "Yes."

Woodstock Union.

Rev. C. W. Bartholomew, Glympton, says, "No; "but when they have been taught it keeps up the "knowledge fairly."

Rev. W. B. Lee, Wootton, says, "It would if all "the boys attended the day school till the age of "12."

Circular Question.

53. What do you find to be the principal difficulties in the way of maintaining an efficient evening school?

7 circulars say "Want of teachers."
2 circulars say "Want of funds."
2 circulars say "Weariness after work."
4 circulars say "Ignorance of the value of education and want of parental discipline."
4 circulars say "Low wages and late hours."
2 circulars say "Dependent on the clergymen as "teachers."

Woodstock Union.

Rev. H. A. Collier, Bladon, says, "An evening "school to be efficient should be held every night "in the week except Sunday. It is impossible for

" the clergyman of the parish to give so much time " to it, therefore it must either be kept up by a large " staff of voluntary teachers or by regular paid " teachers. A really efficient evening school would " be of immense benefit to boys between the ages of " 12 and 18, both morally and intellectually."

Rev. J. Hoskyns Abrahall, Combe, says, " It was " found that the meeting of the boys and girls in " going and returning from the school has given " occasion to somewhat rude conduct on the part of " the former, and on this being stopped by the sepa- " ration of the boys and girls, both the boys and girls " have ceased to attend the school. I hope, however, " to overcome this obstacle."

Rev. C. W. Bartholomew, Glympton.—" I have " found no difficulty, as I make it a personal matter. " No one teaches but myself, and no scholar absents " himself without giving me an excuse. Besides the " regular instruction I generally read some story " from which they may get amusement and instruction " as well."

Rev. D. C. Compton, Wroxton.—" The difficulty of " combining lads of 16 and upwards with those of a " younger age."

Rev. W. Nuttall, Shirburn.—" There is no diffi- " culty; all attend well."

Oxfordshire. Mr. Culley. A. j.

OXFORDSHIRE EVIDENCE.

APPENDIX B.

B.

Numbers 1 to 64b.

Containing: Answers given to the questions in Commissioners' circulars of inquiry, which ask for a description of the state of cottages and supply of garden or allotment ground, and such other evidence as is peculiar to each parish; evidence about schools which is not given in Summary A. (especially of industrial schools); evidence as to the wages and earnings of labourers; evidence given by the labouring class themselves; and extracts from circulars which were returned too late to be inserted in Summary A.

Woodstock Union.

1. Aston North - Pop., 296 - Acr., 1,272.

[All the cottages in this village appear to belong to the chief landowner, who has 50 for about 850 acres of land let in farms. One estate of 150 acres has no cottage. The cottages are several of them new, and the village in a pretty good state.—G.C.]

2. Aston Steeple - Pop., 736 - Acr., 1,870.
With the hamlet of Middle Aston.

Rev. J. H. Brooks says, " We have plenty of good " water everywhere. Gardens are wanting to a good " many of the cottages. More allotment gardens are " needed though we have already many of them. A " very considerable number of our cottages belong to " very small proprietors; hence they are many of them " built on insufficient space, unprovided with proper " outlets, kept in wretched repair, and very highly " rented. One room down stairs and one above " fetch 1*s.* 6*d.* a week, and further accommodation " implies a proportionally higher rent; the smallest " scrap of garden or outhouse is taken into account " and paid for."

2a. *Mr. W. Wing* says, " Some of the cottages are " overcrowded, and I fear we have some bad cases " of female profligacy. Many cottages are without " gardens of any size, but there is no lack of con- " veniently situated allotments."

2b. [The chief landowner for about 1,100 acres of farm land has about 15 cottages let at moderate rents; he supplies about 22 acres of allotment ground, of which another proprietor also supplies 17 acres. One estate of 300 acres has four cottages. About 100 cottages belong to 25 small proprietors. Rents vary from 30*s.* to 100*s.* a year.—G.C.]

3. Steeple Barton - Pop., 859 - Acr., 2,832.
Cultivation chiefly arable.

Mr. Charles Howett, schoolmaster, says of the cottages, " They are constructed of stone generally; the " rooms are about 10 feet by nine feet; they are badly " ventilated and badly drained. They have generally " two rooms on the ground floor; one of these is the " living room, the other serves as a pantry; two bed- " rooms. There are several instances where there is " only one room on the ground floor and but one " bedroom. The water supply is very deficient. " There are no gardens near the cottages, but an " allotment ground outside the village. There are " no outhouses. By far the greater portion of the " cottages are owned by petty tradespeople. There " is no actual agreement that the tenant shall be " obliged to deal with his landlord as far as I am " aware, but it is looked for by the landlord, and such " a system certainly exists. The average cottage " rent is about 1*s.* 4*d.* a week. The cleanest, most " regular, and best of my scholars live in clean, tidy " houses, whereas the dirty and irregular ones inhabit " the contrary. In this village, where, on the whole, " the cottage accommodation is bad and the water " supply deficient, fever of a more or less aggravated " form is always lurking about."

[In this parish there are about 150 cottages let at rents varying from 30*s.* to 80*s.* a year, many of them very bad. These cottages belong to about 40 different persons, many of them small tradesmen. The chief landed estate, having about 1,300 acres let in farms, appears to be represented by 10 cottages; and another estate of about 500 acres has apparently no cottages belonging to it, with the exception of one landowner, who for about 120 acres has seven cottages, and lets 11½ acres in allotments and the 10 cottages named above. The landowners in this parish leave the necessary supply of cottages to private or speculative enterprise. In Steeple Barton there are 10 very poor cottages with one bedroom each and one room down stairs. These cottages are let at rents varying from 2*l.* to 3*l.* per annum, viz., one let at 40*s.*, two at 52*s.*, one at 53*s.*, six at 60*s.* One of these cottages is inhabited by nine persons, two by eight persons each, and the remaining five by five persons each.—G. C.]

3a. *Edward Bull*, labourer, has a very bad cottage; gets 10*s.* a week, and works at Worton; has about 2½ miles to go to his work.

3b. *Mrs. Thos. Smith:* " We have a very bad cot- " tage; the rent is 1*s.* 4*d.* a week, with a little bit of " land. There are a good many as bad houses here, and " a many men out of work. My husband has two chains " of allotment land. I believe all the poor people " have mostly."

3c. *Mrs. Ann Smith* has a very poor house, with one bedroom, for which she pays 10*d.* a week, with no land; herself and three grown up sons at home.

3d. *George Grunsley* (ploughing, his son driving team): " I am a carter, and get 10*s.* a week, and 1*s.* " extra for Sundays. I have four children at home. " This boy with me is the eldest at home; he is 12. " He was at school a short time, but he had to come " out to work at 9, and he can't neither read nor write " much now. I have charge of seven horses, and he " and another lad help me. My boy has 3*s.* 6*d.* a " week, and his money and mine is all that is coming

Oxfordshire.
Mr. Culley.
B. j.

" in. It ain't much living, the way we have to get " on. Bread is about all we can get, and about 2 lb. " of bacon for the family for a week. There is some " people half starving in Barton. Some of them can't " get work, and some won't work; but there's a good " many as would work if they could get it. The " girls do a bit of gloving, and some of them get out " to service. I have one out at service, and I have a " girl of 7 at home that ought to be at school, only I " can't afford to send her. Our hours for horses are " just now 7½ a.m. to 3½ p.m., and we only stop about " five minutes in this cold weather and eat a bit of " bread at 12; in summer they (horses) go from 7 to " 3, and we stop a bit longer. I have to be in the " stable at 5, and I'm not done generally till 7. My " boy comes out at 6½ and goes at 5."

3e. The following evidence was given to the Assistant Commissioner by the wife of a farm bailiff in Steeple Barton parish (a Scotch woman):—

" We have no women workers just now. In harvest and lifting potatoes we have three or four. Our men have 15*s.* a week, and a gallon of beer a day for four weeks in harvest. Horses and men work from 6 a.m. to 6 p.m.; day labourers from 6½ a.m. to 6 p.m. Horses and their men rest from 11 a.m. to 1 p.m. in summer, and from 11½ a.m. to 1 p.m. in winter. Day labourers rest one hour for dinner and half an hour for breakfast. The difficulty of working the Scotch hours is that the men live so far from their work. Wages were dropped round here 1*s.* a week lately (Dec. 3, 1868). If the men here get a shilling extra, they cannot take it home and make a good use of it; it goes in drink to a certainty. The Scotch have nothing to drink with; they get their money twice a year and have a good warm dinner every day (referring to payment in kind). It's the awfullest place in harvest this ever was. The men get a gallon of beer, and they get drunk and won't work, and go about swearing at everything. Some of our men have drunk two gallons a day. It costs near 60*l.* a year for beer for this bit of a farm of about 300 acres."

3f. *Thos. Harley* has a wife and four children (eldest 9), living in a cottage with one small bedroom, for which he pays 1*s.* 4*d.* a week rent. " My girl of 9 " goes to the parish school and pays 4*s.* a quarter. " They lock the school door and turn the children " into the street for two hours in the middle of the " day, and we are two miles from the school. I lost " a child lately, I believe from catching cold from " this plan. Farmers about here keep one carter, and " all the rest bits of halfling boys at 2*s.* 6*d.* to 4*s.* a " week each; the shake of the plough nearly knocks " them over. Each carter on this farm has charge of " a pair of horses."

3g. Of six men resting for dinner on Col. Bowyer's farm in Barton, two, both young men, could neither read nor write.

3h. Both Steeple and Westcott Barton require some action on the part of the inspector of nuisances.

3i. 27 young men out of work in the two Bartons at the time (Oct. 28, 1868) of the Assistant Commissioner's visit.

4. Westcott Barton - Pop., 302 - Acr., 920.

Rev. E. L. Lockyer says of the cottages, " They " are very bad, very small, and average perhaps of " three rooms. No spring water. They are mostly " built on a small area adjacent to a running brook, " which forms the water supply as well as drainage. " They belong chiefly to small tradesmen who are un- " able to keep them even in a proper state of repair. " The state of cottage accommodation is the great " drawback to improvement in the parish. They are " quite sufficient in number; it is size and quality " which is so bad."

4a. [Assistant Commissioner's note.—About 50 cottages, belonging to about 12 different persons (all small tradesmen, &c.) having from one to 12 cottages each. In this parish the landowners appear to have no cottages; the largest estate has about 300 acres let in farms. Some of the cottages are in a very bad state.]

4b. *Mrs. Albert Smith* (husband a farm labourer): " He has only done a day or two's work since harvest." Man aged 21.

4c. *Wm. Smith*, aged 21, carrying home acorns to sell at 6*d.* per bushel: Has done no work for five weeks; " harvest wonderfully forward and no turnips; " 27 of us this morning out of work."

4d. In Steeple and Westcott Barton, joining one another, I saw many very poor cottages. Great want of an inspector of nuisances here. 27 young men said to be out of work.

4e. *Mrs. George Smith:* My husband is out of work, " and has only done a month since harvest if it were " all put together; it's almost starvation; there are " 27 of them out of work here (two Bartons) this " morning."

House with one bedroom, no land, rent 1*s.* 2*d.* a week; no offices. Several houses in a very bad state with no land.

5. Begbroke - Pop., 104 - Acr., 623.

One landowner has eight cottages for about 140 acres of farm land; the other landowners are represented by one cottage amongst them for about 400 acres of land let in farms. The parish is not sufficiently supplied with labourers' cottages, there being 10 for about 640 acres of land in mixed cultivation. This is one of the many small parishes in Woodstock Union, so small that the officiating clergyman did not think it necessary to make any return to the Assistant Commissioner, as it " could not, being so small, be of any " importance in drawing up statistics for a report on " the Union."

5a. [There is a small dame's school, as will be seen from a return made by the mistress.—G. C.]

5b. *Charles Byles*, farm labourer: " My cottage be- " longs to one of the landowners; I pay 3*l.* a year for " it and a small garden. The cottage is a very poor one " with two bedrooms, one very small, both against the " thatch. I get 11*s.* a week all the year round; I'm " a cattle man, and work on Sundays as well. All " men here get 11*s.* I have no Michaelmas money. " In harvest I have to go milking in the morning " and at night, for which I get 6*s.* a week, and " I go reaping with my boy between times. Last " harvest I earned 14*s.* a week besides the 6*s.* for " milking, but it was so excessive hot we could not " work hard in the middle of the day; that extra " harvest money is all the chance I have in a year of " adding to the 51*s.* a week. I have seven children. " The eldest boy, 13, has 3*s.* a week regular; he drives " a team and does any odd job; the next boy, 11, is " doing nothing, I can't get him anything to do at " this time of year; the next two (eldest 9) are at " school."

6. Bladon - Pop., 666 - Acr., 1,350.
Cultivation is mixed.

Rev. H. A. Collier says, " Several of the cot- " tages in this parish contain a sitting room and three " bedrooms; they are built of stone, have slated roofs, " and good ventilation. Others are good convenient " cottages, but have only two bedrooms; a very few " others are bad, having only one bedroom, and in " one instance no back way out at all. Nearly all the " cottages are the property of the landowner. Rent " from 1*s.* to 1*s.* 8*d.* a week."

6a. Mrs. Wilsdon has five children, one bedroom, and no back door; pays 8*s.* for 20 poles of allotment; her husband has been more or less out of work for five weeks.

6b. [Bladon and Hensington.—This parish supplies labour to one or two parishes round, especially Blenheim; the chief landowner has 35 cottages (his land let in farms in the parish, being about 750 acres); some of these cottages are new, and built with a desire to give every necessary accommodation to the labourers and their families.—G. C.]

7. Blenheim - Pop., 118 - Acr., 2,940.

This parish consists almost entirely of Blenheim Park. There are eight labourers' cottages, some of which are attached to the Park farm; all of these cottages are good. A great part of the labour required is supplied by surrounding parishes.

7a. The following information was supplied to the Assistant Commissioner by Mr. Napier, agent to the Duke of Marlborough:—

Allotments.

"There are 914 allotments and 360 cottages on the "Duke's estates in Oxfordshire; a few of them are "20 poles each; the greater portion are 40 poles "each. They are let at an average rent of 2*l.* per "acre, the landlord paying rates and taxes."

Wages and Earnings.

"I find there are 35 able-bodied men employed on "the Duke's farm all the year round, viz.,—

2 foremen at 20*s.* 6*d.* per week } Including house-
2 cattle men at 16*s.* 6*d.* ,, } rent and firing.
2 shepherds at 21*s.* ,, }
9 carters at 13*s.* 3*d.* ,, Some of these have

a cottage and firing free, which would make their wages 15*s.* 9*d.* per week.

20 labourers who earn 14*s.* 6*d.* each per week, being often employed at piece work, which is paid for at the rate of,—

Price of Piece Work.

8*s.* 6*d.* per acre for hoeing turnips.
4*s.* 6*d.* ,, ,, corn crops.
From 8*s.* to 14*s.* per acre for reaping.
From 8*s.* 6*d.* to 15*s.* per acre for mowing and carrying hay.
Thatching is done at 11*d.* per square.

8. Cassington - Pop., 433 - Acr., 2,990.
Cultivation mixed.

Rev. C. Reade says, "The cottages vary; some are "tumble-down and little better than piggeries; "landlords of such an abomination ought to be subject "to a severe fine. The rent exceeds by far the value "of such tenements."

8a. [The chief landowner in this parish has about 20 cottages for 1,140 acres of farm land (eight or nine of the best of which are occupied by railway labourers). Another estate of 300 acres has five cottages; the remaining cottages belong to small tenement holders. Ch. Ch. Coll., Oxford, has 80 acres without a cottage. Cottage rents vary from 2*l.* to 5*l.* a year.—G. C.]

9. Combe - Pop., 627 - Acr., 1,450.
Cultivation chiefly arable.

There are some very poor cottages in this village, which supplies some labour to Blenheim.

The chief landowner has 32 cottages for about 1,100 acres let in farms; he supplies 16 acres of allotment ground.

Some labourers have no allotment or garden, and several of the cottages belong to small tenement holders. Rents vary from 52*s.* to 90*s.* a year.

9a. *Rev. J. Hoskyns Abrahall* says of the cottages: "Size of rooms about 10 feet square, the ventilation "sufficient, the drainage defective, the number of "rooms insufficient, the water supply good, the "gardens not always attached to the cottages; if so "they are small. The outhouses are sufficient, but "I wish they would follow me in the adoption of "earth closets. The cottages are chiefly in the hands "of landowners; many, however, are in the hands "of other persons, resident and non-resident; none "of the owners are tradesmen with whom the "tenants are obliged to deal. The average rent of "cottages is 4*l.* 10*s.* As to morality, it seems to "me to be much affected for the worse by the in-"adequate accommodation."

9b. *Mrs. John Horn* (husband a farm labourer): "My husband has 10*s.* a week, he had 11*s.* up to "last week (Oct. 27); he gets hoeing by "the great," "I don't know what he has in hay time; I can't tell "what he earns in harvest, he never tells me. I pay "1*s.* 8*d.* a week rent; we have two bedrooms. My "husband has half allotment, one chain at 3*s.* 6*d.*"

9c. *Mrs. Walter Huckens*:—"My husband is a farm "labourer; he has 10*s.* a week if they make all time; "sometimes he loses a day or two days from wet and "they take it off. He works for Mr. Baker; last "week he had only four days. I have two children, "one 6 years old, the other 3. I can't say what "my husband gets in piece work; in harvest, if I "help him with a little boy, we can cut and tie an "acre a day, and we got 9*s.* an acre last harvest; the "crops was light, the rabbits had eat so much, you see "sir, or we would have got 10*s.*; we had a fortnight "at this. After this fortnight he had no more harvest "work. Sometimes we have a month. We pay 1*s.* 4*d.* "a week rent. We have no allotment ground; if we "could get an allotment it would help a good deal— "most of the labourers have allotments. I never was "at school. I went to field work about 12. My "husband tries to teach me to read. My children "should be sent to school to 12; I wish I had been. "I have been at work hard all day at gloving, I havn't "earned 5*d.* They begin learning to glove at 8."

10. Deddington - Pop., 2,024 - Acr., 3,990.
Cultivation chiefly arable.

Rev. J. Turner says, "The cottages are owned "by landlords and only a few by tradesmen. The "garden accommodation is very meagre, but there "are allotments which the cottagers rent. Rents of "cottages vary from 1*s.* 6*d.* to 2*s.* 6*d.* a week."

10a. The following is from the Assistant Commissioner's notes on this parish:—Deddington with its hamlets is an open parish into which labourers have been driven from surrounding close parishes; there are about 240 cottages belonging to about 50 owners, the three largest estates, approaching 300 acres each, not being represented by any cottages; several of the cottages in Deddington proper are very bad; in Grove Lane, commonly called Hell Lane, are seven or eight houses with no back door, a sink in front of the cottages, and one watercloset for the lot; the whole place has a horrid stench. Rent of these cottages 1*s.* 2*d.* a week; they belong to small tenement holders. The inspector of nuisances certainly does not do his duty.—G. C.

10b. *William Wheeler*, farm labourer:—"Himself, "his wife, and three sons, eldest 16, in one very small "bedroom. For this cottage, with two rooms and no "back door, Wheeler pays 1*s.* 3*d.* a week. The next "cottage to this is equally bad, and is inhabited by a "man, his wife, and three children. One watercloset "serves both cottages. Wheeler's eldest son, 16, can "neither read nor write; the two others can read a "little."

10c. Evidence of inspector of police:—"In the pa-"rishes of Deddington, Dunstew, North Aston, and "adjoining parishes, women are employed on farms "at 8*d.* a day for eight hours work, between 8 a.m. "and 5 p.m., with an hour for dinner.

"Boys are chiefly employed to drive ploughs. They "begin to go out to work at 7 years of age. "Their hours of work begin at 6 a.m. Boys under "9 are paid 1*s.* a week; at nine they are generally "raised to 2*s.* a week. Cottage accommodation in "some parishes is very limited."

11. Dunstew - Pop., 407 - Acr., 1,600.
Cultivation chiefly arable.

The chief landowner is the only cottage owner, having 64 cottages for about 1,400 acres let in farms; he also supplies 12 acres of allotment ground, 20 poles being the ordinary size of allotment, let at 6*s.* 6*d.* a year. The Church farm of 180 acres has no cottage, and any deficiency of labour probably arises from this cause. Most of the cottages are in good condition, there are, however, a few poor ones with one bedroom, such as those occupied by John Claver and Jonas Stock-

Oxfordshire.
Mr. Culley.
B.
j.

ford; John Claver having a wife and four children, and Jonas Stockford a wife and six children, his eldest daughter being 18 and eldest son 15.

11a. *William Irons*, an old labourer: "Several of the "farmers have one or two cottages for carters attached "to their farm steading. I dare say its better for the "people that live in them, but it fetches fresh people "into the parish sometimes, when there's plenty "of people in it. The boys go to plough here some-"times not much higher than the plough handles, "the farmer gets them at 3*s.* 6*d.* or 4*s.* a week, and "so they are cheaper than men."

11b. The Assistant Commissioner saw in one field three ploughs working, one a swing plough with a man and pair of horses, the others wheel ploughs with two boys and three horses to each; the eldest of the four boys was 14, who with the carter looks after the eight horses.

12. Glympton - Pop., 153 - Acr., 1,232.
Cultivation chiefly arable.

The chief landowner has 22 cottages for about 950 acres of farm land. Magdalen College, Oxford, has 70 acres, and the glebe 55 acres, without any cottage, and as there is no other cottage proprietor there are therefore not cottages enough to supply the labour of the parish; those which there are are well cared for, as well as the persons living in them, by the chief landowner, who charges a small rent (30*s.* a year), and supplies allotment ground at the rate of 3*s.* a chain (30*s.* an acre), the usual allowance to a family being two chains.

12a. *Henry Barnett, Esq.*, M.P., Glympton Park, says, "The cottages in the parish are sufficient in ac-"commodation, and well ventilated and conveniently "situated with regard to the farms, and not over-"crowded. This cannot be said of many cottages "in the neighbourhood, but evil results to morality "from overcrowding have not come to my notice, "Our cottages have either gardens or allotments of "lands generally attached to them. The rents are "very low, and often paid by the produce of apricot "trees planted against the houses."

12b. *Mrs. James Lowe* (husband cowherd to Mr. Barnett): "My husband has 11*s.* a week, Sundays "and all. I have five children, eldest nearly 9; three "are at school. My husband pays schooling himself, "1*d.* each per week. We pay 30*s.* for cottage and "garden of five or six poles. None of my children "earn anything; we have nothing except what my "husband earns; he gets 1*l.* over for the harvest, and "nothing else extra in the year. He goes very little "to harvest. Ordinary labourers get 10*s.* a week, "men who go with the machine get 12*s.* We have "two chains of allotment ground, for which we pay "3*s.* a chain."

12c. *Mrs. Castle*, husband a farm labourer: "My "husband has 12*s.* a week; he goes with the engine "when required; he gets piece work in harvest, fagg-"ing and shocking, and thatching. He took cutting "and shocking wheat this year at 10*s.* or 11*s.*, I don't "justly remember which. My son, 16, has 9*s.* a week. "My boy of 9 is at school; he goes crow keeping for "a week perhaps at a time, and gets 4*d.* a day. Our "allotment is two chains; we pay 3*s.* a chain for it, "and 30*s.* a year for our cottage."

13. Hampton Poyle - Pop., 125 - Acr., 772.
Cultivation is mixed.

Rev. Jos. Dodds says of the cottages, "Most of "them are of moderate size, but ventilation and drain-"age defective. Accommodation and water supply "fair. Gardens good generally. The cottages are "for the most part owned by the landed proprietors, "by whom a few of the cottages have within the few "last years been much improved. The rents vary "from 1*s.* a week to 1*s.* 6*d.*; some are paid annually. "Some pay but a slight quit rent to the lord of the "manor."

13a. [Assistant Commissioner's note.—The chief landowner has six cottages for above 500 acres let in farms. Another estate of 200 acres has three cottages.]

14. Hampton Gay - Pop., 67 - Acr., 620.

The chief landowner has one cottage for 420 acres. Wadham College has six cottages for 200 acres.

15. Kiddington - Pop., 205 - Acr., 2,450.
Cultivation chiefly arable.

The Rev. J. G. Brown says of the cottages that, "The accommodation and construction is fair. All "the cottages belong to the landlord. The rents are "moderate, and they have a fair quantity of garden."

15a. *H. L. Gaskell, Esq., J.P.*, Kiddington Hall, says the "cottages are good, well supplied with water, "and well ventilated. All the cottages have good "gardens and allotments."

15b. [All the cottages, of which about 36 are inhabited by labourers, belong to the chief landowner, who has about 1,500 acres let in farms. There are therefore not sufficient cottages to supply the labour of the parish. The rectory farm has no cottage. 11½ acres are let in allotments, and the cottages are well looked after by their owner.—G. C.]

16. Kidlington - Pop., 1,622 - Acr., 5,010.
Cultivation mixed.

The Ven. Archdeacon Lower says of the cottages, "The greatest portion are constructed of "stone walls with slated roofs, some with stone walls "and thatched roofs. A very few are of wood and "plaster. The larger number of them have one sit-"ting room and two bedrooms. Many have one sit-"ting room and three bed room; some have only one "sitting and one bed room. There is a good supply "of water to most of them, also gardens and out-"houses. The owners are mostly middle-class per-"sons. The rents are dear, from 1*s.* 6*d.* to 2*s.* 6*d.* "per week. There ought not to be less than two or "(if possible) three bedrooms in labourers' cottages."

16a. *Mr. Hutt*, guardian for Water Eaton, a hamlet of Kidlington, says of the cottages, "They are, I should "say, about an average, but short in number. They "are well supplied with water and well ventilated. "They have all gardens."

16b. In Kidlington, with its hamlets of Gosford, Water Eaton, and Thrupp, one landowner for about 1,250 acres of farm land has apparently 14 cottages; another for 800 acres has 16 cottages; another for 240 has seven; and Exeter College also has seven for about 550 acres. There are a few very poor cottages in the parish, and six small thatched cottages with one bedroom about the centre of Kidlington village; rents 1*s.* 6*d.* a week. In one of these there sleep in the small bedroom—

Father and mother,
Two grown up sons,
Two grown up daughters,
Three little children.

Rents are high in this parish, ranging from 3*l.* to 5*l.*

16c. *Mr. R. J. Newton*, occupier, and vice-chairman of Woodstock Board of Guardians:—

"The hours of work for men and boys are from 6 a.m. to 5½ p.m. in summer, with one hour for dinner and 15 or 20 minutes for breakfast. In winter they work from light till dark. Carters come in summer at 5 a.m. and remain till 6½ p.m.

"Women work from 8 a.m. till 5½ p.m., with one hour allowed for dinner.

"Wages.—I pay my shepherd 13*s.* a week, besides certain allowances which make his wage worth on an average 16*s.* to 17*s.* a week for the year. I pay carters (of whom I have seven) 13*s.* a week. They are only allowed to take piece work in harvest, when they have about a fortnight's cutting, and for another fortnight receive 4*s.* a day for leading. Their harvest earnings would be worth a little over 5*l.*, and their average wage for the year about 14*s.* a week. I pay ordinary labourers 11*s.* a week. They earn at piece work about 2*s.* 3*d.* a day for six weeks hoeing

corn, and about 2*s.* 6*d.* to 5*s.* a day for six weeks hoeing turnips. In hay time for about a month they earn about 2*s.* 6*d.* a day; in harvest they earn 4*s.* 6*d.* a day for about four weeks; and their total earnings would be about 33*l.* a year, or, say, an average of 12*s.* 8*d.* a week.

"Women working from 6 a.m. till 5½ p.m. have 10*d.* per day.

"Boys of 11 or 12 get 3*s.* 6*d.* a week.

"Of the Factory Act modes of providing for school attendance for boys who are employed in farm labour, the provision under the Printworks Act is the only one applicable to farm labour, and would be improved by substituting twelve for six months, so that children might attend school when there was no demand for their services in farm labour. I think, however, it would be better to let them remain at school up to 11, and then let all legislative interference cease. About four cottages per 100 acres of land are required for the accommodation of persons employed in agriculture in this parish. Fewer would do if attached to the farm offices, with an extra bedroom for a young man. I have to pay my carters 13*s.* a week instead of 12*s.* because they live so far from my farm, and their work is not so well done as it would be if they lived near, nor can be."

16d. *Mr. Scroggs*, occupier and guardian: "The "summer staff on my farm is the same as in winter, "except in hay-time and harvest; all my labourers "live near the farm. I have two cottages let with "with the farm which belong to the duke. I think "no boy should be employed in farm labour under 10 "for the sake of education. I use two horses abreast "in spring and summer, but three in a line in autumn and winter; we don't want so many teams, "and it eases the horses, and lets us use colts or mares "in foal without over-working them. Two horses "abreast can do as much as three in a line, and if I "had a large farm I would always work two abreast."

Wages.—"I hire one carter by the year; he has "13*s.*, and 1*l.* at Michaelmas, and for about five "weeks in harvest he has 15*s.* a week; he pays 1*s.* "a week for his cottage and about a chain of ground. "I pay ordinary men 11*s.* a week, and 1*s.* extra to "Sunday men. The Sunday men have no chance of "increasing their wages, except in harvest, when "they have a fortnight's cutting, receiving half-pay "for milking during the same fortnight. Two men "work for me by the piece, but they don't seem to "care to earn much more than if they worked by the "day."

16e. *Mrs. Bowerman*: "My husband is a milkman, "and has 12*s.* a week. We pay 1*s.* 9*d.* a week rent; I "have only one bedroom and no back door. Four "cottages here have each one bedroom; down further "the cottages have two bedrooms, and they don't "pay but 1*s.* a week because they belong to the "farms. Each farm has four cottages. We don't do "much gloving here; women either work out or "mind their children. We do a bit of fagging, but "by the time we get better victuals and a drop of "beer there aint much left, enough to buy us a pair "of shoes maybe. Last week I got 3*d.* for a bit of "sewing, so we had 12*s.* 3*d.*, and I spent it this "way,—

	s.	*d.*
Meat - - - -	3	7½
Bread - - - -	3	0
Rent - - - -	1	9
Tea, sugar, flour, soap, and soda	3	7½
Boy's schooling - -	0	2
	12	2

"So I had a penny left."

16f. *Thomas Grace*, a farm labourer, about 60 years of age (working for Mr. Newton): "I have 11*s.* a week. "I have to walk four miles to Wootton to my house, "and it takes me three hours a day going and coming, "besides my work; but I would not live here if they "had a house to give me. I would not like to leave "my parish where I have been all my time; younger "men would leave, I dare say, but I would rather "walk the four mile."

16g. December 8.—Two lads, 18 and 15, attending sheep folded on swedes; two women (both married) pulling, topping, and tailing swedes. Women work eight hours for 8*d.* Lad, 18, can read a little, gets 6*s.* a week in winter; lad, 15, has 4*s.* 6*d.* a week in winter.

16h. *Mr. Hutt* states the wages of farm labourers to be from 11*s.* a week for ordinary labourers to 16*s.* a week for cattle men, with additions in harvest.

17. Rousham - Pop., 131 - Acr., 920.
Cultivation mixed.

Rev. C. S. Peel says, "The cottages are of a good "size, all with two bedrooms; most have a pantry "and a back kitchen. The water and drainage are "both good. A good garden is attached to each "cottage. The landowner is the landlord in all "cases, and the rent varies from 2*l.* to 3*l.* a year; "in a few cases I believe the rent is less."

17a. *C. C. Dormer, Esq., J.P.*, landowner, says, "The cottages have all gardens and generally allotments; in fact, no one wishing for an allotment and "capable of cultivating one would be long without "one."

17b. [There are 25 cottages for 920 acres, and are not sufficient to supply the labour of the parish. All the cottages are good and well cared for.—G. C.]

18. Sandford - Pop., 476 - Acr., 2,240.
Cultivation chiefly arable.

Rev. Thomas Curme says of the cottages, "Two-"thirds of them have two rooms below and three "bedrooms, these belong to landowners; one-third of "them have but two bedrooms, small and ill-ventilated, these belong to individuals (not tradesmen "as above), whose object is to make the most rent "possible with the least outlay. The water supply "is sufficient and the drainage good. Besides some "small gardens there are 20 acres of poor's allotments, allowing half or quarter acre to each. Rent "from 1*s.* 3*d.* to 1*s.* 9*d.* per week."

18a. [One estate of about 700 acres is represented by 20 cottages, one of 500 acres by five cottages, another of 500 acres as well as one of 240 has no cottage.—G. C.]

19. Shipton on Cherwell - Pop., 131, - Acr., 1,060.
Cultivation chiefly arable.

Rev. George J. Brown says, "The cottages in this "parish belong partly to New College, in Oxford, and "partly the the Duke of Marlborough, who has only "within the last year come into possession of them. "The bedroom accommodation is for the most part "insufficient. Repairs have been made and new "privies erected lately. Each cottage has a garden, "and there are allotments granted by the rector and "a large farmer."

19a. [The chief landowner for about 900 acres of farm land has 24 cottages; most of these are very poor specimens, but as the estate has only recently changed hands, after being in the market for four or five years, some improvement will probably soon be made; each cottage has about 15 poles of garden; usual rent of cottage and garden 3*l.* 10*s.* per annum.

19b. 21 cottages occupied by farm labourers constitute the village proper. Of these,—

1 has 2 living and 2 bed rooms,
5 have 1 living and 2 bed rooms,
15 have 1 living and 1 bed room.

Of the latter, one is occupied by a father and mother and five children; one by a father and mother and four children; three by father and mother and three children; and the others by smaller families. In one of these cottages there has recently been, and in another there is typhoid fever, and fever of a typhoid character has been hanging about the village for some time; many of the children have sores about their faces. One well (dry during last summer) in a garden near a pigsty and sewer about 8 feet deep in

Oxfordshire.
Mr. Culley.
B.
j.

Stonebrash is used in common by the whole of these cottages. Eight women from this village were working out on the day of the Assistant Commissioner's visit. Of these, six were married, one a widow, and the other unmarried; they were picking tufts of grass off recently sown wheat, and receive 9*d.* a day for eight hours work. Their statement was that they could not make 1*d.* an hour at gloving, and they liked the farm work best. Seven of these women were dressed in men's coats.—G. C.]

19c. *Henry Stephens*, farm labourer, aged 23, single man:—"I get 11*s.* a week upstanding wages as carter; "I have charge of four horses. In hay time I get 15*s.* "a week for four weeks, and the same in harvest, and "3*l.* at Michaelmas. I have no opportunity of increasing this wage by piece work. I have a rood of "ground at Shipton belonging to the duke at 10*s.* "My brother here (James) is 12; he left school two "years ago, but he goes to night school; he can read "and write; he gets 5*s.* 6*d.* a week for driving the "team; I am teaching him to hold the plough."

[Value of Henry's wage, 12*s.* 9*d.* a week for the year.—G. C.]

19d. *Mr. Thos. Taylor*, occupier, says, "The majority of labourers live in the village, about a mile "from my premises, but this was such a constant "source of annoyance and inconvenience that I have "erected three large cottages (for carters and shepherd) near the farm buildings at a cost of over "500*l.*"

[Mr. Taylor holds his farm on a lease for 20 years. One of the cottages is a sort of lodging house for unmarried carters, looked after by the head carter's wife, who lives in adjoining cottage.—G. C.]

Mr. Taylor gives the following estimate of wages for a year:—

	£	*s.*	*d.*
Engine men, two - -	48	0	0
Head carter - - -	47	0	0
Shepherd - - - -	42	0	0
Herdsman - - -	40	0	0
Ordinary labourer - -	32	10	0

Women 9*d.* a day ordinarily, 1*s.* 3*d.* haymaking, and 1*s.* 4*d.* in harvest.

20. Stonesfield - Pop., 650 - Acr., 1,020.
Cultivation chiefly arable.

Rev. F. Robinson says of the cottages, "They "are built generally of stone and slate; most of them "have two bedrooms upstairs, with one sitting room "and a sort of pantry downstairs. The cottages "belong for the most part to different individuals, "not to any great landowner, scarcely any, if any, are "owned by tradesmen with whom the people are "obliged to deal; most cottages are pretty well venti"lated. The water supply is sometimes short, but "much better than in many places; the people for "the most part have not far to go for it. Most "of the cottages have gardens, and many have "allotments."

20a. [An open village finding labour for some parishes round, and for the stonepits or slatepits. There are 110 labourers' cottages or upwards for less than 1,000 acres of farm land. Stone and slate (what is called Stonesfield slate) being on the spot cottages are better than in most open villages. About 10 cottages belong to the landowners. The Duke of Marlborough provides 17 acres of allotment ground, the Rev. F. Robinson 8 acres, and Church land 6 acres; together, 31 acres, let to 137 tenants.—G. C.]

20b. *Mrs. Gardner*, sewing gloves: "A girl of 16 "could earn 2*s.* to 2*s.* 6*d.* a week, working all day. "Girls begin to earn a little at glovemaking at 10 or "11 years of age. I get gloves from Mr. Money of "Woodstock; he pays in money and has no shop. Mr. "Dagget and Mr. Pritchett make us take out our "money in tea, or candles, or sugar, &c. within a "few pence of what we get. If I want 1*s.* 6*d.* they "make me spend 1*s.* 3*d.* in the shop, or they would "'sack' me, *i.e.*, give me no more work. They sell "sugar at 5½*d.* a pound when we could get it at 4½*d.* "if we had ready money. Candles they charge 6½*d.* "instead of 6*d.*, &c. My boy of 9 gets 2*s.* for "attending sheep and jobbing about. At school "above 10 they are taken to learn."

20c. There is no girl in regular attendance at school over 10 years of age; three boys working on the Duke of Marlborough's farm attend by school during alternate weeks.

20d. Of wages, *Mr. Gardiner*, occupier, says,—"I "pay an unmarried carter 10*s.* a week in winter, 11*s.* "a week in summer, 15*s.* a week for four weeks in "harvest, and give him 2*l.* at Michaelmas. I pay "day men 11*s.* a week."

21. Tackley - Pop., 626 - Acr., 2,850.
Cultivation mixed.

Rev. L. A. Sharpe, says, "The present largest "resident landowner has built some *excellent* cottages. "The rent rather high. Small landlords the hardest."

21a. [One estate having about 600 acres in farms has 26 cottages.

One estate having about 600 acres in farms has no cottage.

One estate having about 500 acres in farms has 15 cottages.

One estate having about 400 acres in farms has no cottage.

Christ Church College has 350 acres with no cottage.

Cottage rents varying from 40*s.* to 80*s.*—G. C.]

22. Woodstock - Pop., 1,201 - Acr., 360.
Cultivation mixed.

Rev. W. A. Plumptre says, "The house accommo"dation is in most cases inconvenient and insufficient, "but the rent is as much as the families with average "work can afford. It is reasonable to infer that with "only one room to sit and wash and do everything "in, the father and boys as they grow up are en"couraged, if not driven, to seek their comfort in "public houses."

22a. Some poor cottages at rents varying from 52*s.* to 100*s.* a year. The principal landowner has 12 cottages.

The following evidence was given by a glove manufacturer:—

22b. "A good sewer makes up one dozen gloves per week, and gets paid 5*s.* to 7*s.* An average woman will earn 4*s.* to 5*s.* a week when she can get constant work, which is rarely the case now. Women for seven or eight miles round Woodstock sew gloves. The Workshops Regulation Act is so troublesome that I do not employ any girls under 13. They, however, work in their own houses."

22c. Of five glove manufacturers about whose customs the Assistant Commissioner made inquiry, three keep stores and expect or compel their glove sewers to deal with them; the two principal manufacturers do not.

22d. *Mrs. John Hawkins*, husband a roadman: "My husband has 11*s.* for winter months, with no "chance of piecework. In summer he had 6*d.* a yard "for breaking stones, but was not allowed to earn "more than 2*s.* a day; he could have earned at least "2*s.* 6*d.* I have six children, eldest girl, 15, at ser"vice, next a girl of 11 at home. I had to take her "away to send the two younger ones to school. My "husband has a month at harvest, and in the spring "he dug stones by the great about 10 weeks, earning "15*s.* to 16*s.* a week. In harvest he earned about "24*s.* a week; I can't say exactly. He isn't any "better off than a farm labourer taking the year "through. If he earns more these long hours he "requires more food. We have never been so bad off "as now, and this tax and all. My girl's money, 2*s.*, "to-night must go to pay tax, and I can safely say I "haven't a penny. My husband has 11*s.*, but the "other roadmen have 10*s.*, and farm labourers have "11*s.* We pay 2*s.* a week for rent."

22e. *Mrs. Wm. Timms*: "My husband is a farm "labourer; he works for Mr. Newton, and has 11*s.* "a week for the winter months, hired by the week,

" Sometimes he hoes by the piece, and gets 2*s.* a day. " In hay time he has 2*s.* a day and a quart of beer. " Last harvest he had only seven days. I can't tell " what he earned. After the seven days' reaping he " went on carrying at 4*s.* a day and a quart of beer, " but they had to buy extra beer in that hot weather; " they stood in need of more. We pay 1*s.* 6*d.* rent " for this room and one bedroom and an attic, and 2*s.* " a quarter rates."

23. Woolvercott - Pop., 617 - Acr., 1,600.

Cultivation is mixed. 8 acres 39 poles of allotments let to 55 holders.

Rev. S. Edwardes says, "There are cottages of " every plan, some good and wholesome, others not " fit for habitation. The worst are those of which " the tenants themselves are owners. In many there " are three bedrooms, besides sitting room and scul- " lery; in others one bedroom for a large family. " Drainage is various. Water is supplied by wells, " some only used for washing. A garden is attached " to the cottage in a few cases. The owners are of " all kinds, large proprietors, college servants, livery " stable keepers, &c. The cottages are inhabited " some by agricultural labourers working in our own " and neighbouring parishes, some by shoemakers, " some by persons employed in the paper mill, some " by Oxford artisans, masons, &c., some by railway " plate layers. Rent from 1*s.* 9*d.* to 3*s.* 6*d.* per week. " One attraction of the village is the large quantity " of common ground, which enables the cottagers to " keep flocks of geese. The thin walls, damp floors, " draughty windows of the cottages foster consumption " and rheumatism. I am not clear to what extent we " suffer with low fever in consequence of the absence " of drainage. The health officer of the guardians " needs a good deal of stirring to make him act."

23a. Some very poor cottages in this village, and rents are high. *The best* cottages are occupied by persons living in Oxford. The village supplies some labour to Wytham, a close parish in Berks.

One estate has 18 cottages for about 400 acres. Christ Church, Merton, and St. John's Colleges have estates in this parish of respectively about 140, 70, and 85 acres.

24. Wootton - Pop., 1,238 - Acr., 3,720.

Cultivation chiefly arable.

Rev. W. B. Lee says, "The cottages are built of " stone. The sitting room is generally about 9 or 10 " feet square, and the bedroom much the same size. " Some of the cottages have gardens, but many are " without. The drainage and ventilation are fair, " but there is a great want of necessary conveniences " and outhouses. The pigsties are a very serious " nuisance, producing dirt and often disease. There " is a fair supply of water from the river and public " pumps. The cottages belong chiefly to landowners, " very few to tradesmen. Rent about 4*l.* a year."

24a. *Mr. Smith*, occupier and guardian, says, "I have " two cottages only on my farm, erected by the Lands " Improvement Company, for which I pay *interest* " and *principal* by the expiration of my lease. This " I have done twice since I took my farm. I think it " would be a very great blessing for the labourers if " there were a great many more cottages on farms. " I think there are sufficient gardens for the cottages. " I have heard nothing to the contrary."

24b. *Mr. Bulford*, occupier:—

" With the exception of having 19 men in summer instead of 18, my summer and winter staff are the same. I have four cottages on the farm, let with it. I don't know how I could get on without these cottages; I wish I had two more. My farm, to house the necessary staff, would require three cottages per 100 acres.

" My shepherd's wage is worth about 16*s.* a week for the year.

" My carters have 12*s.* a week, a house, and potato ground of 20 poles. In harvest this year they had 17*s.* a week for six weeks. Their wage is therefore at least worth 14*s.* a week, putting the cottage and potato ground at 1*s.* 6*d.* a week. Ordinary men I pay 11*s.* a week, and they do piecework nearly all the year through. I would put their total earnings a little under the carters.

" We don't want boys till they are fit to go with horses."

24c. [Assistant Commissioner's Note.—This is a large open parish with many very poor cottages, both in the village of Wootton and in Old Woodstock. A very small proportion of the cottages belong to the landowners. The largest estate has seven cottages for 1,570 acres let in farms; the rector has 10 for about 700 acres; another proprietor has two for 540 acres; and another has 400 acres without a cottage. Balliol College has one cottage for 320 acres; the church- wardens have 15 cottages. The Duke of Marlborough provides 40 acres of allotment ground. Rents vary from 52*s.* to 80*s.*—G. C.]

24d. *Mrs. Chas. Wood*, husband a farm labourer:—

" I have five children; eldest 11, a girl; next 9, a boy. The five are all at the day or infant school. I wish to send my children to school and give them an education as far as lies in my power. The girl could hardly find anything to do, and the eldest boy is too young yet for work. His father says he's not to go while he's 12. My husband has 11*s.* a week. When he's thrashing by the piece he generally gets 12*s.* He does harvesting by the piece. He got 10*s.* an acre last harvest for cutting, tieing, and shocking wheat. I do a little glove sewing, but I have only time to earn about 1*s.* 6*d.* a week. We have one room down stairs and two upstairs. We pay 4*l.* 10*s.* a year for cottage and garden. A girl ought to be 14 or 15 before she is trusted with a glove."

24e. *Mrs. John Boswell*, husband a farm labourer. Has no place now. Carters and shepherds are hired by the year, and he lost his place last Michaelmas. He had 10*s.* a week, and 2*l.* at Michaelmas, paid by the week. House rent free, attached to the farm. He also had what he could earn for nine days in harvest. These people live in a wretched house in Wootton, and pay 1*s.* 6*d.* a week rent, with *no* ground.

24f. *John Dorton*, holding a plough with three horses: " I have charge of four horses, and this boy " helps me. The horses work from 8 to 3 now, and 7 to " 3 in summer. We stop and eat a bit of bread at 12 " o'clock. I have to be in the stable at 5 in the morn- " ing. I send my boy to night school. He is 14 " years old, and has been six years at work come " March. He can't read much, nor yet write much."

24g. *Joseph Bricknell*, aged 15, driving team. Helps a man with four horses. " I can read, but I can't write " much. I was at school five years. I don't go to " night school."

24h. Of three boys picking switch two did not know their age; one was 14. They were getting 8*d.* a day.

24i. An old man in Wootton told the Assistant Commissioner that five or six young men out of work were making a disturbance last week, but that there was work if they liked to take it.

25. Yarnton - Pop., 294 - Acr., 1,613.

Cultivation chiefly pastoral.

Rev. P. Maurice, D.D., says of the cottages, " They are about 50 in number and are badly con- " structed, the greater portion having only two rooms, " a living room with sleeping room over it. Most of " the cottages are thatched, the size of rooms varying " from 12 feet by 9 to about 14 feet square, some " of them even larger, being originally parts of old " farm houses. The ventilation is but ordinary, and " drainage not very bad. The sleeping room is com- " monly under the thatch; no cottage has more than " two bedrooms, scarcely any of them have any out- " houses; they have some good garden ground and " many have an allotment. The water supply is for the " most part sufficient and near at hand. The greater " proportion of the cottages belong to Sir H. W.

Oxfordshire. Mr. Culley. B. j.

"Dashwood, Bart., four belong to a retired trades-man living on the spot, six to a respectable tenant farmer, and 10 are occupied on keyhold lease, paying a small quit rent to the lord of the manor. Rents vary from 9*d.* to 2*s.* a week, one or two being as high as 2*s.* 6*d.* or 2*s.* 8*d.*"

[A statement showing all particulars of each cottage in the parish was sent by Dr. Maurice to the Assistant Commissioner, of which the following is a summary :—

25a. There are 50 inhabited cottages in the parish, of which 30 belong to the chief landowner (who has about 800 acres let in farms, the other landowners having no cottages), 10 are held on keyhold lease at a quit rent, six belong to a tenant farmer, and four to small tenement holder. The rent of the landowner's cottages varies from 40*s.* to 52*s.*, of the others (except the keyhold) from 40*s.* to 100*s.* The size of living rooms varies from 12 feet by 9 feet to 14 feet by 14 feet. 23 cottages have two bedrooms, and 27 have only one. Most have thatched roofs, the thatch rising from within two or three feet of the floor of bedroom. 35 cottages have sheds, the rest have not.

25b. [Five cottages called "the college," with one bedroom each and in bad repair. In the best lives Mrs. Langford, who has two girls aged 12 and 9 at school; is receiving relief, 4*s.* and 4 loaves a week, has two daughters out at service who do not help her, she herself being too ill to work.—G. C.]

25c. *Mrs. S. Cox*, her husband, and six children live in a cottage with one small bedroom open to the thatch, eldest child at home 15 years.

Boy, 15, works on farm and gets 6*s.* a week.
„ 13 „ „ 3*s.* 6*d.* a week.
Girl, 11, at school.
Boy, 9, drives a plough, and has been at work for 12 months ; gets 2*s.* a week.
Two younger children at school.

"My husband gets labourer's pay, 10*s.* or 11*s.* a week, I don't know which; we pay 2*l.* a year rent for our cottage and small garden, and we pay 15*s.* for 40 poles of allotment."

WITNEY UNION.

26. Asthall - Pop., 424 - Acr., 1,180.
Cultivation chiefly arable.

Rev. H. Gregory says of the cottages, "They are "built of stone and slated, with means of ventilation "and drainage. Each cottage has a sitting room and "two bedrooms generally ; nearly all have gardens "and outhouses. The cottages belong to the land-"owners or tenant farmers. The rent varies from "2*l.* 10*s.* to 5*l.* There are four tenements owned by "a man of small means, objectionable in all ways; "they are now unoccupied, and are about to be "taken down and replaced by some of a better "description."

27. Bampton Aston - Pop., 968 - Acr., 3,760.
Cultivation chiefly arable.

Rev. G. S. Griffith gives the following evidence :—

"Bampton Aston, including the hamlets of Aston, Cote, Brighthampton, Chimney, and Shifford, formerly one of the three portions of the vicarage of Bampton, is now a separate ecclesiastical district having in it two churches, one at Aston and one at Shifford; I may also add Yelford, a small adjoining parish, which derives all its labour from Bampton and does nothing for education. (Yelford has only two houses in it, one a farm house the other the rectory, occupied by the clerk, and at the same time a licensed beer shop. Bampton Aston also supplies a good deal of labour to Hardwick parish.)

"There are in Aston - - 125 cottages
„ Cote - - 38 „
„ Shifford - 6 „
„ Brighthampton 18 „
„ Chimney - 2 „

Besides which there are 60 houses. The children of Brighthampton being three miles from this are permitted to attend school at Standlake. The children from Shifford, two miles hence, come here (Aston); those from Chimney (two miles off) and Cote come here. There are two schools, the British in the hands of the Baptists, taught by a mistress and supported by voluntary contributions derived I suppose from the sect in and around the neighbourhood ; the National or parish school, taught by a mistress, inspected by government but receiving no grant, also by diocesan inspector ; it is supported by one Horde's charity, from estate in parish, of value of 6*l.*, share of Bampton charities 3*l.* 4*s.* 10*d.*, a grant from Betton of 5*l.*, and the rest collected from owners and occupiers, towards which the following may be instructive as showing the *proportion* in which they severally contribute :—

"1. *Brighthampton*, 410 acres, rateable value 991*l.*; all owned by St. John's College, Oxford. From them nothing (save 5*l.* lately for heating Shifford Church) for the last *eleven* years; there is a small charity in the place of about 4*l.*, which is given away in sums of from 1*s.* to 10*s.*, *to some few of the inhabitants who have money out at interest.* It is hoped that some day this may be applied to *educational* purposes, and that St. John's College will assist in providing school house much needed there. The vicar and farmers give 5 cwt. of coal to each of the 13 cottagers.

"2. *Shifford*, 860 acres, rateable value 1,227*l.* Mr. Harcourt of Nunham, who, with the exception of a very few acres (these few acres are owned by Christ Church, which college has lately given 3*l.* 3*s.*, Mr. Harcourt giving 5*l.*, towards heating the church), owns all Shifford, last year gave a donation of 5*l.* towards Aston school, which is all that has been given for educational purposes for 11 years from Shifford.

"3. *Chimney.* Mr. M. Atkyns subscribes 2*l.* to Aston school. The property, leasehold (formerly of Dean and Chapter of Exeter Cathedral, who are the patrons of living), will soon fall into hands of Ecclesiastical Commissioners.

"4. *Aston* and *Cote.* In the hands of 63 owners (including vicar, non-resident, receiver of tithes of gross estimated rental 430*l.* 6*s.* 10*d.*). Of these 63, 33 are non-resident 30 resident. Of the 33 non-residents, the whole amount received last year and for many years past for educational purposes has been from three of them, inclusive of the vicar's 5*l.*, the sum of 8*l.*, which represents the ownership of 262 A. 3 R. 37 P., a gross estimated rental of 432*l.* 5*s.* 3*d.* and rateable value of 391*l.* 6*s.* 8*d.*, of which the vicar's portion is in acres 15 A. 2 R. 7 P. Gross estimated rental 498*l.* 6*s.* 4*d.*, rateable value 484*l.* 7*s.* 8*d.* Of the remaining 30 non-residents, two own respectively 1,869 A. 2 R. 33 P. and 356 A. 0 R. 2 P., with gross estimated rental of 2,788*l.* 9*s.* 2*d.* and 566*l.* 17*s.* 3*d.*, and rateable value of 2,531*l.* 3*s.* 11*d.* and 506*l.* 0*s.* 11*d.*; the other 28 having in the main cottage property, and altogether 129 A. 1 R. 30 P., with gross estimated rental of 398*l.* 4*s.* 8*d.* and rateable value of 346*l.* 6*s.* 6*d.* And as of the two former, I can with certainty say, so of the 28 (with perhaps a single exceptional supporter of the British school), I shall hardly be wrong in affirming that they do *nothing whatever for educational*, or indeed, so far as I know, for any other purpose whatever connected with the parish.

"With the above information it will hardly be a matter of surprise to you that with 30 resident owners, mostly little people, a good many either from disinclination or inability doing nothing, and the remainder divided between Church and Dissent, there should be a great difficulty in a financial point of view in keeping schools going at all. Speaking of our parish or national schools, the expenditure last year was as 58*l.* 10*s.* to receipts of 41*l.* 17*s.* 4*d.*, the numbers educated being, boys 42, girls 56, and the numbers at the British school would be about the same.

"Of the 30 *residents* (owners and occupiers) nine contributed something under 4*l.* 10*s.* towards our school; the remaining 21 (beyond our annual sermon and collection of 1*l.* 1*s.* and their share in it) having contributed nothing.

"The *age* of the children in school attendance on a given day may be seen by the following table, which was recently made, and which, being winter time, gives a *higher* age than we are able to keep up when the weather is better and there is any field work for the women and boys, when the bigger girls are kept at home:—

	Girls.	Boys.	Total.
Over 12 yrs. and under 13 yrs.	2	0	2
„ 11 „ „ 12 „	3	0	3
„ 10 „ „ 11 „	2	0	2
„ 9 „ „ 10 „	3	4	7
„ 8 „ „ 9 „	3	3	6
„ 7 „ „ 8 „	9	6	15
„ 6 „ „ 7 „	7	6	13
„ 5 „ „ 6 „	6	4	10
„ 4 „ „ 5 „	4	2	6
„ 3 „ „ 4 „	2	0	2
	41	25	66

"Out of 17 children absent during greatest part of the year:—

Of girls, 10 in number:

7 from 11 years down to 6 were nursing.
1 aged 12 shepherding.
1 „ 8 in service.
1 „ 12 turf-burning.

Of boys, 7 in number:

3 from 9 years to 7 were ploughing or leading horses.
1 aged 8 straw-tying.
1 „ 9 hoeing.
1 „ 8 corn-minding.
1 „ 9 nursing.

"It will be perceived by you from the figures first of all given of the whole number under education, and the numbers last given of those in attendance on a particular day, that a very great irregularity exists in respect to attendance. I beg leave to point out that this most unfortunate hindrance to all progress is caused not only by the demands made on the services of young children for bean setting, bird watching, and the like, but more particularly by reason of the poverty of the parents and their inability when out of work, as with the *irregular* system of hire they so many of them often are, to pay even the weekly penny for each child. For instance, owing to the rapid and early harvest, we have lately frequently had 20 to 50 able-bodied men out of work. The labourers might be divided into three classes.

"1st. Those of regular employment who hold their cottages on the farm under the farmer, the best class, with whom, though the education of their children might be with advantage prolonged, there is as a rule no difficulty.

"2nd. Those who, though of weekly hire, are yet by reason of character able to keep regular work; these do their very utmost in many a noble struggle to hold their own and send their children to school, but too often in the evil day of adversity and failing health sink into the

"3rd class, out of which comes misery of every kind. They are formed out of those whose parents for want of *some better system of hire* have left them to grow up without education of any kind.

"A few years ago I picked up two dozen of such children, persuaded the parents to send them to the school, and paid for them myself all the winter months, but the very week, work having become plentiful, I ceased doing so, they were almost to a child removed —not for work—but because the parents either really could not or else grudged to afford the penny for that on which they set no kind of value at all.

"The employment of *boys* in field work removes them at once from all training or kindly influence; they become but lodgers in their own homes, and if restrained hire themselves out elsewhere, the effect being that the parents knowing this, and that until they marry they are valuable acquisitions to the domestic board, leave them do as they please. The evil of such a state is incalculable; they are men in miniature, and give way to every indulgence of their passions. The *regular* employment of the female parent in the fields adds to the disaster; the home is neglected, the elder girls are kept to mind the baby, and at a very early age going themselves to the field their ruin is most certain. It is hard without a shudder to speak of the morals of this place.

"You will understand that the education is at a lamentably low ebb, when you hear that very few of my male candidates for confirmation (and some also of the female candidates are in the same sad case) can when they come to me say the Lord's Prayer. With three services on my hands each Sunday (four indeed alternately) I am unable to attend the Sunday School; but it is impossible in either Sunday or day school with the infants only that we can master to do any real educational work. And I take it that it is quite impossible, even with those parents who are most desirous to forward their children's interests, to expect it should be otherwise, so long as there is a payment of the school pence on the one side, to be balanced or rather overbalanced by the receipt of a child's food or wage, however small, on the other. I have spoken to a large number of the labourers and the farmers here, and though the latter would resent any excessive interference, neither side, so far as I can learn, wishes for a continuance of the present sad state of things. I believe that they would be pretty generally agreed as to the prevention of all labour under 10 years of age. Some slight restriction as to the employment of women, and especially young women, in the fields, they *might* not object to; but I think they would be strongly opposed to any half-and-half system, by which, as has been suggested, a boy would be one part of the day in the field and another part of it in school."

27a. Mr. Griffith then enters at some length into the evils of a weekly hiring and variable wage, giving instances of very high earnings of day labourers in harvest, and the little good they derived from these earnings, which in some instances have reached 22*s.* an acre for cutting and binding wheat, contrasting the position of day men renting their own cottages with that of yearly hired men living in cottages attached to farms and in the hands of the farmer. He says, "a "regular wage, even if lower and regular work, "would do much to prevent the evils of the present "system, and would greatly assist education. The "only objection I have heard made to it (yearly "hiring by farmers) is, that they might be called "upon to provide medical attendance for their sick "labourers, and at the same time be obliged to pay "them as if at work and supply their places with "men who would have to be paid also."

27b. The following is extracted from a letter addressed to the Assistant Commissioner by the Rev. G. Sandham Griffith, on the 25th of January 1869:—

"Mr. Gillett paid 12*s.* an acre for cutting some wheat last harvest; for barley, scythe cut, he paid 3*s.*; for oats he paid 10*s.*

"Mr. Jefferys put the price of cutting and tying wheat at from 8*s.* to 18*s.* an acre. Round Bampton last harvest he thought most people paid 18*s.*

"Mr. Baker (another farmer) put the price for cutting and tying wheat at from 10*s.* to 18*s.* (he had known 22*s.*).

"Mr. Cudden, of Bampton, put it at from 7*s.* to 16*s.* The 22*s.* mentioned was for cutting and tying an unusually heavy crop, and under perhaps exceptional circumstances, but only tending to prove that the irregularly employed men who are out of work a good part of the winter command very much what they like to ask in a quick harvest. One of our largest employers of men told me to-day that he paid for harvest work less than anyone in the parish, because he kept a larger number of men, but kept them the year through."

Oxfordshire.

Mr. Culley.

j.

27c. In the register of Shifford Church I find that out of 126 marriages that have been solemnized since 1838, and at which 511 names were entered, 256 of them could not sign for themselves ; and that at Aston Church from 1858 to the present time, out of 68 marriages, at which 242 were present, 121, or exactly one-half, could not sign their names. The numbers stand thus :—

	No. of Marriages.	Names entered.	Not Signed by Selves.
Shifford Church 1838–1847	35	140	60
" " 1847–1858	79	316	176
" " 1858–1868	12	55	20
	126	511	256

28. Black Bourton - Pop., 260 - Acr., 2,300.

Mr. H. Akers, occupier and guardian, says, " Cottages generally good, but a few in a bad condition. " All the cottages in this parish have neither good " gardens or facilities for procuring an allotment conveniently situated ; very many have both. Most " of the families, if not all, in this neighbourhood " have a piece of ground set out for allotments conveniently situated."

" There is an efficient school conducted by a competent mistress at a cost of 1*d.* per week for each " child."

29. Brightwell-Baldwin - Pop., 277 - Acr., 1,660. Cultivation mixed.

Rev. G. Day says, " The cottages are old, ventilation not according to modern requirements. " Drainage bad in many cases. Garden ground generally small ; plenty of good water. The whole " parish in possession of the landowner. Rents " reasonable."

30. Eynsham - Pop., 2,096 - Acr., 5,060. Cultivation mixed.

Mr. Joseph Druce gives evidence as follows:—" The " cottages on my farm are good, and have gardens. " Those in the village have also gardens and allotments ; have been let for the last 20 years in this " parish."

" There is a national and an endowed school."

30a. *Mr. S. Druce*, occupier and guardian, says, " I " would give anything to have eight or nine cottages " attached to my farm, and I must have two ; I believe " many more persons would borrow money under the " Enclosure Commissioners to build cottages if the " process was less expensive. Instead of beer I give " malt and hops to my men, and they brew for themselves ; the men like it better, and I have never " any trouble about it."

30b. LIST of the EARNINGS of the STAFF of LABOUR, comprising 24 men, from October 1867 to October 1868, including beer, on Mr. Joseph Druce's farm at Eynsham.

31. Handborough - Pop., 1,059 - Acr., 2,820. Cultivation chiefly arable.

Rev. R. W. Higgs, D.C.L., says, " As a rule here " the cottage accommodation is not what could be " desired either as to number or size of rooms, nor in " many cases the *ventilation ;* but the last three or " four years have shown a MARKED tendency to improvement in the above respects. Landowners " are chiefly the proprietors. I do not know of any " instance of ownership by tradesmen with whom the " dealing of tenants is compulsory."

32. Minster Lovell - Pop., 86 - Acr., 1,938. Cultivation chiefly arable.

Mr. John Freer, landowner, says, " We have in " this parish 85 allotments of land, with a cottage on " each built by O'Connor, and most of the other cottages have convenient gardens. The allotments are " of two, three, and four acres each, and are all occupied. These allotments are let at 2*l.* 10*s.* an acre, " with 3*l.* additional for the cottage. Many of the " occupiers work for wages as well with the neighbouring farmers in the parish.

" We have two dame's schools in the parish for " little children up to about 7 or 8. There are about " 12 children at each school. There is a school for " older boys with an attendance of about 12 boys, " who pay 6*d.* a week. A school is wanted in a " central position for boys of the poor at 2*d.* a " week."

32a. The following evidence as to the O'Connor allotment ground was given by Mr. Freer, who now owns about one-third of the estate purchased by O'Connor, including 26 of the original allotment lands with the cottages built on them :—

" A farm in this parish (Minster Lovell) was purchased by Fergus O'Connor about the year 1847 with money raised by the subscription of shareholders to his land scheme. There are or were something short of 300 acres in the estate, which he divided into 85

allotments of two, three, and four acres, building a three-roomed cottage on each allotment. For the estate he paid about 9,500*l.*, leaving about 5,000*l.* on mortgage. The cottages cost about 90*l.* a piece, and great deal of money was spent in levelling, making roads, and otherwise improving the land. Besides the expenditure in purchasing, improving the land, and building, each allottee received a sum varying up to 30*l.* as head money to start him on his little farm. As long as the head money lasted all went well, but the charge for interest on the debt was a fair rent for the land, and the whole scheme broke down, and was wound up by Act of Parliament four or five years after its commencement. There are now only two of the original allottees left who hold as freeholders, subject to a rent-charge, and one of these has, I believe, just been sold up. The maximum subscription of the shareholders to the land scheme was 5*l.*, and as each man completed his subscription he was put down next on the list for an allotment. When the company was wound up all the subscriptions were lost. This is only one of three or four estates O'Connor purchased, and there are said to have been 70,000 shareholders. After about four years' experience the allottees began to leave their allotments, and for several years many of them were unoccupied. I have purchased 26 allotments, and put three or four together, letting them to one man, who sublets the cottages. A man may get a living off 10 acres, let a fair rent, or he may get a living off, say, two acres, for which he pays no rent or rent-charge. None of those who have these allotments singly at a rent are able to live off them. I let four acre allotments with the house at 13*l.*, *i.e.*, 50*s.* an acre for the land and 3*l.* for the house. Some of the cottages are empty where the allotments are put together and let to one man. A man whom I know purchased an allotment of four acres for 160*l.* 17 years ago (at the first sale), soon paid off 100*l.* of his debt, and has made a living since. He wants 350*l.* for his allotment now, and he could easily get 300*l.*" [The land is a good deal of it on cornbrash, and worth, say, 2*l.* an acre.—G. C.]

32b. The following letter for the use of the Assistant Commissioner was written by Mr. J. S. Price, solicitor, Burford, to Mr. Jas. Napier of Blenheim :—

Dear Sir,

The estate at Minster Lovel was purchased by Fergus O'Connor by auction of Messrs. Wearing, of Oxford, and Pinnock, of Chinnery, I think, for 9,359*l.* or thereabouts, as trustees of the will of Mr. Walker of that place about 1847, and it was agreed that 5,000*l.* of the purchase money should remain on it as a first mortgage. The solicitor of the trustees then informed me that he intended to introduce the Flemish system of farming.

He built a school and laid out the land in allotments of one, two, three, and four acres or thereabouts, erecting thereon long detached rows of cottages with one floor, in number nearly 100.

He soon named it O'Connerville, and introduced principally artisans from the north, who did not like hard agricultural work, so that in most instances a succession of tenants and great dissatisfaction followed.

At this period he was returned for Nottingham in opposition to Mr. Walter, and O'Connerville became the subject of discussion in the House, and I was requested by the Government to get evidence of the state of things and did so. The Government, however, instead of taking evidence in London, sent down authorized persons, who made inquiries on the spot and reported the result.

The interest on the 5,000*l.* being in arrear, the mortgagees offered the farm premises, 297 acres of the land and 82 newly built cottages, for sale by auction, and repeated the endeavour to sell again in June 1851 (of which attempted sale I send you the particulars). Both auctions were in the main abortions. Matters got worse, and I see by a conveyance now before me, dated December 11th, 1858, and made between "Mr. Goodchap the official manager (duly "appointed under an Act passed in the Session held "the 14th & 15th years of Her present Majesty, "entitled, 'An Act to dissolve the National Land "'Company, and to dispose of the Land and Pro-"'perty belonging to the Company, and to wind up "'the Undertaking') of the one part, and Worley "and Major of the other part," that the manager had impeached the title to the property of the latter, and took 30*l.* to confer a good one. O'Connor made two other purchases of considerable quantities of land at Snigsend and Sowland, about 8 or 10 miles north-west of Gloucester, which formed, I believe, part of the same company.

[In the conveyance quoted by Mr. Price, dated 11th December 1858, the Act of 1851 is referred to as providing that all lands, &c. purchased by Fergus O'Connor with the monies of the shareholders of the "National "Land Company" should be considered as bought by him and conveyed to him in trust for the company; and as further providing that the affairs of the company should be wound up by the Court of Chancery, as if it came under the provisions of the "Joint Stock "Companies' Winding up Commencement Act, 1848;" and as further providing that all the estates, effects, credit, &c. of the company should be vested in the official manager appointed by the Master in Chancery. The conveyance also states that Mr. William Goodchap was appointed by the Court of Chancery interim official manager on the 6th of October 1851, and confirmed in the office on the 22nd of the same month.

32c. The order for winding up the National Land Company was made by the Court of Chancery on the 9th of August 1851.—G. C.]

The cottages are built each on its own allotment facing one of the roads which intersect the estate, but standing some distance, say from 50 to 60 yards, back from the road; about 12 of them face to the south, 20 to the north, 20 to the east, and 30 to the west, according to the direction of the roads which they face. They are built of stone and slated, with three rooms in the ground floor each 12 feet square, a piggery, and shed (the pattern being the same throughout, and anything more dreary or devoid of all the picturesque features of a country village I never saw). About 36 of the allotments are of four acres, about 12 of three acres, and only one of the remainder under two acres. Great complaint was made by several of the dwellers on the Charterville that there was no school worth the name. It appears by the advertisement of sale, dated June 14th, 1851, that of 82 allotments of from two to four acres each eight had been sold at a previous sale (whose title was probably that disputed by the official manager (see Mr. Price's letter)), and 20 were already unoccupied.

The following is an approximation to the cost of the scheme :—

	£
Purchase of estate -	- 9,500
Cost of 82 cottages at 90*l.*	- 7,380
Road making, levelling, and fencing - -	- 3,000
Legal expenses - -	- 120
	20,000

[It is, however, said to have cost 22,000*l.*—G. C.]*

32d. Evidence of *John Bennett*, one of the original allottees, whose allotment and cottage have just been sold :—

"Those that paid up a whole share got the first choice of an allotment. I paid up mine, 5*l.* 7*s.* 6*d.* I got one in six months. I never would if I had known what I do now. It has taken me 20 years to learn how a man can live without victuals, and I've just about come to it. Thousands paid up part of their

* I have omitted the head money, which at 7*l.* 10*s.* per acre would increase my estimate to 22,250*l.*—G. C.

Oxfordshire.
Mr. Culley.
B.
j.

share and lost it all, and I believe they were best off. I got 30*l.* head money for four acres.
" They gave 30*l.* for four acres.
" 22*l.* 10*s.* for three acres.
" 15*l.* for two acres.

" My allotment has been sold for 106*l.*, but there is a rent-charge on it of 9*l.* 10*s.* a year."

33. Standlake - Pop., 822 - Acr., 2,495.

Cultivation is chiefly arable, farmed on the four course system.

Walter Strickland, Esq., J.P., gives the following evidence :—" There are some good cottages, some " fairly good, and some very bad. Many of the cot- " tages have gardens, and there are 10 acres of good " land in allotments conveniently situated.

" There is a good parish school for boys and " girls."

33a. [The children from Brighthampton are also permitted to attend Standlake school.—G. C.]

34. Stanton Harcourt - Pop., 661 - Acr., 3,120.

[The Assistant Commissioner did not see much to complain of in the cottages of this village ; many of them have been lately improved by the chief landowner. There is a dame school kept by Mrs. Molyneux and her daughter, where there are about 35 children who pay 2*d.* to 3*d.* a week according to age ; the children are most of them girls, and about 20 of them are over 12 years of age. Mrs. Molyneux and her daughter also teach an evening class five nights a week for four months ; to this school Mr. Harcourt, the chief landowner, pays 10*l.* a year, and gives the schoolroom and mistress's cottage free. At the evening school the pupils pay 3*d.* a week.

34a. There is also a school taught by Mr. William Burchell, with an endowment of 14*l.* 8*s.* a year. At this school one child is taken free from each poor family in the parish. After the children begin to write they pay 3*d.* a week. Mr. Burchell receives nothing beyond the 14*l.* 8*s.* and the children's pence ; he pays 2*l.* a year rent for his cottage, and makes up his living by acting as assistant overseer and postmaster, and measuring land. Neither of these schools appear to be under the care of the clergyman.—G. C.]

34b. Three women (two of them married), drawing and tying straw for thatching, gave the following evidence : " We work from 8 to 5, and have one hour's " rest ; they pay us 8*d.* a day ; we like it better than " slopping. Young women here generally get out to " service."

34c. *Mrs. Burden* (husband a farm labourer), doing slopping (sewing button holes and finishing trowsers for railway workers) : " I earn a tidy bit at it, and " it's better for me with six children than going out " to work ; two of my sons are grown up ; we have " two bed rooms."

34d. *Mrs. Sermon* (husband a shepherd) : " I sew " slops for Mr. Hyde of Abingdon, I can make 2*s.* a " week ; I don't know whether my husband has 11*s.* " or 12*s.* a week, he has 1*s.* more than ordinary men."

34e. [The cottages are thatched, and have back offices and a well about nine feet deep ; they have gardens of about 20 poles.—G. C.]

35. Chipping Norton Union.

Enstone - Pop., 1,198 - Acr., 6,177.

Rev. John Jordan says of the cottages : " They " belong to the lord of the manor, and some to other " parties, but none that compel dealing with them. " Rents vary from 1*l.* 10*s.* to 5*l.*"

35a. [There are some very poor old cottages both in Enstone village and the hamlets, some of them very badly placed.—G. C.]

35b. The following particulars of Ten Cottages in Enstone were obtained for the Assistant Commissioner by the District Superintendent of Police.

Name of Tenant.	No. of Family.	No. of Rooms.	Rent. £ s. d.	Owner.	With or without Land.	Situation.	General Description.	Remarks.
Hitchcocks, Thomas	8	3	2 0 0	Lord Dillon -	Nil.	On a bank -	Stone cottage, thatch, much out of repair.	—

36. Banbury Union.

Adderbury East - Pop., 895 - Acr., 1,900.

Mr. Wm. Chamberlin, occupier and guardian, says, " The cottages are not very good. Some have small " gardens, others none at all. There are about 25 " acres allotments let at about 5*l.* an acre. Many of " the labourers obtain land for growing potatoes on " the farms they work upon, some at no rent, others " at a nominal one.

" There is an endowed school for boys and adults, " at which the curate assists ; a girls' and infants' " schools supported by voluntary contributions, with " a full attendance of children."

36a. The following evidence was given to the Assistant Commissioner by Mr. Chamberlin :—" I have a " carter, 24 years of age, and an under carter, 18, hired " by the year. They live in the house of my farm bailiff, " and I pay him 8*s.* a week for their board, and they " receive respectively 10*l.* and 6*l.* wages at Michael- " mas. Doubtless they are bound to fulfil their con- " tract except in case of sickness, when most farmers " would remove them to their own homes. I believe " we are not compelled to support them during sick- " ness. A man and his wife and four children would " cost in the house an average of 3*s.* 4*d.* per week ; for " the family 1*l.* Out of the house this man would be " earning, say, 12*s.* I pay my men 11*s.* a week, but

" 10*s*. is the average wage of the district. Women " just now work from 8 till 4, and are paid 7*d*. for " seven hours' work. My shepherd, with his wife, " who works out, earns an average of 19*s*. a week. " He has 12*s*. a week, 3*d*. a lamb, and 3*s*. a score for " shearing.

" I let six cottages with one farm, three of them " attached to the farm. A farm of 500 or 600 acres " ought to have five or six cottages attached to it."

37. Alkerton - Pop., 194 - Acr., 704.

Mr. Davis, occupier and guardian, says, " Some of " the cottages are small and not well ventilated. " There is plenty of water in the village. Most of the " cottages have gardens and from one to two chains " of allotment land at 6*s*. a chain.

" There is a school at Shenington, to which children " are admitted free at six years old. The villages of " Alkerton and Shenington join. The rector of " Shenington has held the rectory of Alkerton for " many years, and there is only one school, which is " within half a mile of the cottages of Alkerton."

37a. As to wages, Mr. Davis says, " Average wage " for a year, 12*s*. to 13*s*. per week, with three pints of " beer daily in summer and four quarts in harvest."

38. Drayton - Pop., 186 - Acr., 1,260.

Mr. S. Berridge, occupier and guardian, says of the cottages, " They are very bad. The supply of water " is good. The ventilation of the cottages I need not " mention. Each poor man has a fair portion of " allotment ground at a moderate rent.

" Night schools are very excellent things in an " agricultural village, as boys can attend from 5 till " 8, and I am pleased to see they are attended with " great success in many villages. The provision of " schools is ample. There is a schoolmaster and " mistress. The latter teaches needlework."

39. Epwell - Pop., 358 - Acr., 1,270.

John Hervey, a labourer out of work, has a wife and six children; girl, 15, at service; boy, 14, driving plough, has 2*s*. 6*d*. a week, dropped 6*d*. lately; boy, 11, has 2*s*. a week, and has been two years at work; boy, 8, at school; children, 5 and 3, at home; the two elder boys can read and write: " I have been " getting 10*s*. a week since Michaelmas. I can get " no work now. Large farmers don't employ so much " work now as the small ones used to. In harvest we " fag and tie by the thrave (a thrave is 24 sheaves, " each should be three feet round the band, not " many of them are so much). I have cut a wheat " crop with 50 thraves to the acre, and 30 is a fair " crop. There was a good crop in most parts. We " were paid this harvest 4*d*. per thrave. We can " earn 5*s*. a day. I got about three weeks this year. " After reaping we get 2*s*. 6*d*. a day and three quarts " of beer, not worth more than 2*d*. a quart. Some " buy it at Banbury. I cannot read or write. Many " men can't."

40. Hempton (a chapelry) - Pop., 229.

The following evidence is extracted from a circular returned by the *Rev. P. R. Egerton*, too late to be inserted in Summary A.

" The hour's of work here for men are from 7 a.m. " to 5 p.m., with one hour's rest; for women from " 8 a.m., to 5 p.m., with an hour's rest.

" Hempton is a very poor uncared for place just a " mile distant from Deddington, with no gentlefolk at " all living in it, a few farmers not very well to do, " and a miserable set of cottagers who cannot live with " anything like comfort on their earnings, and in " time of sickness with little or no help except what " I myself am able to give them.

" I consider that the cottage accommodation is very " unsatisfactory, looking at it as a whole. Many of " the cottages are in miserable repair, indeed some " months ago one or two seemed likely to fall, but I " believe some repairs have been done since. It " would certainly seem difficult for a family to grow " up really respectable in most of them, but perhaps " if there were some one who cared for the poor living " among them and looking after them, things might " be better in spite of this. I myself live here at " Bloxham, three miles off, and can hardly ever get " over to them except on a Sunday, so what I can do " for them is but little. The people are badly off and " are very thankful for the little that the children can " earn, but as a rule I think they keep them at school " as well as can be expected, and there are hardly any " who are not either at school or work. My own " opinion about field work for girls or women is that " it is bad and demoralizing, and that girls had better " be out at service and the women at home, but I " don't know what to say about *legislation* on the " subject."

41. Wardington - Pop., 732 - Acr., 2,600.

Jas. Ward, labourer: " Cutting is done by the acre, " and also by the thrave or dozen. By the acre the " farmer *finds* beer (but not by the thrave), and pays " from 8*s*. to 10*s*. This year where I worked we cut " and tied up and set up by the shock (by the dozen, " 22 to 24 inches round the band); we made them 22 " inches by measure. The old measure, 36 inches, is " too big. I pay 1*s*. 2*d*. a week for my cottage, with- " out a hovel or a pigstye, and the cottage belongs to " a man who has a bit of land and about 18 or 20 cot- " tages. I have a bit of potato land belonging to " Col. North, about 20 poles. I don't know what I " should have done without it. The land is 3½ miles " from my house. I can't get any land near. No- " body lets land so cheap as Col. North. I have had " to pay 20*s*. a chain for potato ground, and I pay 2*s*. " to Col. North. Lots of people would pay 20*s*. a " chain. One of our farmers lets land at that rate. " If I had four acres I could get a living off it, paying " a farmer's rent of 50*s*. to 60*s*. without ever having " a horse upon it, except to draw dung. I have " known 2*l*. given for a chain of potato ground " planted."

42. Wroxton-cum-Balscott - Pop., 751 - Acr., 2,900.

Rev. D. G. Compton says, " The cottages in Col. " North's occupation are kept in good repair, and " their drainage, ventilation, &c. is cared for. The " remainder, *i.e.*, the chief part, are held on leases " and lives under Trinity College, Oxford; their " present ownership is in the hands of small farmers " and petty tradesmen, and their state is often very " bad. Trinity refuses to renew any of the holdings, " and this makes the owners the more sparing in " what they lay out. On their dropping into the " college I doubt not there will be an improve- " ment.

" Trinity College, Oxford, holds - 1,604 acres.
" Christ Church, Oxford „ - 328 „

" Trinity subscribes five guineas to the school at " Wroxton and five guineas to the school at Balscott. " Christ Church declines to give any annual sub- " scription, but both colleges subscribed to the re- " building of Balscott school."

42a. The following is extracted from a circular returned too late to be included in the summary of circular answers:—

Col. North, M.P., chairman of Banbury Union: " Wroxton parish is chiefly arable, cultivated on a " five course system. A large quantity of sheep are " kept, and fed on turnips in the winter. Farmers " employ boys from 10 years of age as plough boys; " on my own farm there is no boy under 12. No " girls are employed in farm labour in the parish. " Women are only employed in haymaking and har- " vest, and occasionally in taking up potatoes and " mangel, which latter occupies about 14 days in " the year. Boys work from 6 a.m. to 6 p.m., women " from 8 a.m. to 5 p.m. . . . . The cottages in " the village are generally too small, and are in- " sufficient for the supply of labour; they are con- " veniently situated and well supplied with water.

Oxfordshire.
Mr. Culley.
B.
j.

" No evil results to morality from overcrowding have " come to my knowledge. Few of the cottages have " gardens, but I give allotments of a quarter of an " acre each to all married people. . . . . Except " in a few cases of wilful negligence on the part of " the parents, the children of the labourers take " advantage of the village school, where they can " attend for 1*d.* per week. . . . . It would be " better that boys should not be employed under 12, " but at any rate not under 10, and not then, unless " they can read and write."

BICESTER UNION.

43. Bucknell - Pop., 296 - Acr., 1,670.
Cultivation mixed.

F. D. Hibbert, Esq., J.P., and landowner, says, " It " is well to state that all the cottages, except two " belonging to the rectory farm, are my property. " The supply of water is good. Cases of immorality " are very *rare*. Every cottage has a garden.

" The village school is under the superintendence " of the rector, and is well attended. There is, be- " sides, a night school. It was held 51 nights last " winter; the average attendance was 28."

44. Cottisford - Pop., 269 - Acr., 1,520.
Cultivation chiefly arable.

Mr. Joseph Waters, occupier and guardian, says, " The cottages are of two or three descriptions, from " very bad to very good; some of them are not fit " for human habitation. The cottages have all allot- " ments and gardens.

" We have a very good school provided by private " subscriptions among the landed proprietors, the " rector, and the farmers."

45. Kirtlington - Pop., 725 - Acr., 3,500.
Cultivation mixed.

Capt. F. L. Dashwood says of the cottages, " Many " of the oldest cottages are large and roomy but " badly arranged. On the farms in my occupation " are cottages built on the modern plan, the one " generally advocated, with three bedrooms upstairs; " this plan of cottage does not give satisfaction to the " inmates. My landlord has built his new ones (I " have two on my farm) with one bedroom on the " ground floor and two bedrooms upstairs. The " inmates thoroughly approve of this plan of cottage " in every respect; in this plan the ventilation is " good, and no drainage required. Nearly every " cottage has a garden. The water supply is good. " Most of the cottages belong to the landlord, a few " to small proprietors. I never heard of the tenants " being obliged to deal with a tradesman who hap- " pened to be the owner of the cottage. The rents " vary from 1*s.* to 1*s.* 6*d.* per week. On my farm I " charge 1*s.* 6*d.* a week."

45a. *Sir H. W. Dashwood* says, " There is a national " school (mixed) with a certificated master, and two " infant schools, one in the village and the other in " the hamlet of Northbrooke, for the children of " labourers of two outlying parishes."

45b. As to wages, &c., *Mr. James Scott*, bailiff to Sir Henry Dashwood, says, " I herewith send you a " statement of wages paid to two labourers in the " employ of Sir Henry Dashwood, from Michaelmas " 1867 to Michaelmas 1868.

" No. 1. (Always employed on the farm.)

	£	*s.*	*d.*
" Had 153 days, at 1*s.* 10*d.* a day -	14	0	6
" „ 7 days in haytime, at 2*s.* 4*d.*	0	16	4
" „ 7½ days in harvest, at 3*s.* 4*d.*	1	5	0
" For piecework, winnowing corn, " filling dung, hoeing, mowing, " and fagging corn - - -	20	19	2
" Total earnings -	£37	1	0

" Average for 52 weeks, 14*s.* 3*d.*

" No. 2. (One of our best men employed on the " farm, and sometimes on the estate.)

	£	*s.*	*d.*
" Had 158 days, at 2*s.* - - -	15	16	0
" Piecework for stone digging, hoe- " ing, mowing, and fagging corn -	24	0	0
" Total earnings -	£39	16	0

" Average for 52 weeks (he was two weeks absent), " 15*s.* 10¼*d.*

" No beer is allowed. Any extra job that farmers " in this neighbourhood give beer for we give money, " and I find labourers much easier managed without " it. Neither of the labourers referred to had any " assistance in their piecework."

45c. [Mrs. Simmons (wife of farm labourer), with her daughter, aged 19, and two sons of 12 and 6, gathering acorns by the bushel. None of these children can either read or write or has ever been at school, although the father is regularly employed.—G. C.]

45d. Of wages, *Capt. Dashwood* says, " The labour " on my farms average 35*s.* per acre, but nearly three- " fourths of the arable land is in corn, and no beer or " harvest money is given. The system of giving " beer is, I consider, injurious, and for several years " it has been given up entirely on my farms. Money " is given instead, which gives greater satisfaction to " the employed, and in the long run is much better " for the employer."

46. Launton - Pop., 711 - Acr., 3,550.

Mr. Thomas Barford, occupier and guardian, says, " The cottages are about the average of agricultural " districts; most of them have small gardens, and " most have allotments in addition.

" Two schools are open daily."

47. Weston-on-the-Green - Pop., 459 - Acr., 2,215.
Cultivation mixed, ⅔ arable, ⅓ grass.

Rev. W. J. Dry says of the cottages, " There " are a sufficient number of good and commodious " cottages for the labour required *in* the parish, but " although with one single outlying cottage all the rest " belong to one single proprietor, this parish is yet " the most open one in the district. I believe there " are nearly 40 men and young persons employed on " five or six adjoining farms belonging to Bletching- " don, Oddington, and Chesterton; the consequence " is that some of the cottages are somewhat crowded. " The gardens are good, and each cottage has an allot- " ment of two chains of ground. Most cottages have " outhouses, and all privies; the drainage is good; " rent from 3*d.* to 1*s.* 3*d.* a week."

THAME UNION.

48. Aston Rowant - Pop., 884 - Acr., 2,980.
Cultivation mixed.

Arthur Brown, Esq., owner and occupier, chairman of Thame Union, says (in a circular returned too late for insertion in Summary):—

" The condition of the cottages is fair; they are more than sufficient for the supply of labour, and are not so conveniently situated as they might be; one or two are overcrowded, but no evil has come to my knowledge from it; they are well supplied with water and well ventilated. Most of them have a garden attached to them, and all the parish have an allotment garden. There is a very good school under Government inspection, Sunday and night school. There is not so much advantage taken of the opportunities for education as there might be, but I do not consider that early labour has so much effect on the non-attendance as carelessness on the part of the parents. . . . . Boys are employed at all times of the year to assist in team work, and generally after 11 years of age. Girls are not employed in agricultural work, except for a few weeks in the spring weeding corn, hay-making in summer, and cleaning roots in autumn; in harvest time they work with their families. Women are employed in weeding spring corn for a few weeks, but not to any great extent. . . . If boys are taken to work a very early age it would be desirable to restrict

it to 12 years of age, but in this parish scarcely any go to work at so early an age. The employment of women in this parish is so small that no restriction is required."

49. Little Milton - Pop., 411 - Acr., 1,660.

Mr. G. L. Franklin, occupier and land agent, says, "The cottages are old but are pretty well off for "room and are clean. We have a pretty good supply "of water. The cottages have all very good gardens. "In most parishes in this neighbourhood the poor "have allotments varying in size from 10 to 30 poles. "I find 20 poles to be quite sufficient, and as much "as a labourer can well manage with a garden. We "have some parishes without allotments, but the "labourers in these parishes are mostly supplied with "ground by their employers. There is a national "school."

50. Shirburn - Pop., 292 - Acr., 2,411.

Rev. Wm. Nuttall says of the cottages, "They "have fair sized rooms, ventilation and drainage good. "I could wish in mixed families for three bed rooms. "There is spring water, except on the hill, where "however a well is being sunk. A garden to each "cottage, and allotments besides for which rent is "paid. The outhouse accommodation is fair; they "are owned by landowner; 1*s.* a week is the usual "rent."

50a. [Lord Macclesfield has recently sunk a well in the chalk ridge in this parish for the use of the inhabitants, who were sadly in want of water during the dry weather of last summer; the well is 396 feet deep. —G. C.]

51. Waterpery - Pop., 231 - Acr., 2,620.
Cultivation mixed.

Right Hon. J. W. Henley, M.P., says, "Cottages "are fair; all have gardens and most allotments "besides. There is a mixed school. The boys have "set up an evening school for themselves in the "winter months."

Wycombe Union.

52. Stoken Church - Pop., 1,508 - Acr., 3,037.
Cultivation chiefly arable.

Rev. H. T. Young, landowner and J.P., says, "The condition of some of our cottages is very fair, "but of the generality bad. The ventilation is better "in some than in others, and as to water unless "there is a tank attached to the house there is "nothing but the pond for people to go to. Some of "the cottages have no gardens, but they all have "allotments let out under the enclosure of the waste "which took place some few years ago. The hill "people are not so large in build and frame as the "people in the vales, but they are, I think, quite as "hardy and enduring; as to intellect and morality "I take it they are much upon *a par*.

"There are schools here in connexion with the "church establishment and the nonconformists, and "I think these schools are attended by more than 300 "children."

Headington Union.

53. Headington.

The following is a statement of the wages on Mr. F. A. Davenport's farm kindly given to the Assistant Commissioner :—

	£	*s.*
1. Foreman : 13*s.* a week, 30*s.* at Michaelmas, and 3*s.* extra for eight weeks in haytime and harvest, total - - -	34	10
2. A carter, single man : 12*s.* a week, 20*s.* at Michaelmas, and 3*s.* extra for eight weeks in summer	33	8
3. A married labourer earned - -	36	11
4. Ditto ditto (assisted by his wife and boy he earned 4*l.* 13*s.* in harvest)	33	18
5. A single labourer earned (of which 3*l.* 6*s.* 4*d.* was in harvest, assisted by a girl) - - - -	32	0

[This is the whole permanent staff on a farm of 129 acres, of 69 are arable of good sandy loam and clay, upon which the labour cost 36*s.* an acre.—G. C.]

Abingdon Union.

54. Clifton Hampden - Pop., 355 - Acr., 1,240.
Cultivation is chiefly arable.

Rev. J. Gibbs : "The condition of the cottages in "the parish is fair; there is every desire on the part "of the principal owner that it should be good, and "improvements are made yearly. The water is just "now under examination. In all the new cottages "ventilation is good. Good gardens to most of the "cottages, and allotments also to some of the la- "bourers for potato ground.

"There is a mixed village school with a certificated "master."

54a. Assistant Commissioner's Notes.

Several poor cottages very badly placed in a hollow, down which runs an open ditch, which carries off the sewage of a school (70 boys) and several cottages. Below, where this ditch has been recently closed in, are two thatched and three brick cottages all using a well in front of one of the cottages almost under the sewer or ditch, having another drain passing close to it from some privies placed at the end of one of the cottages. Towards the end of July this year (1868) a typhoid fever broke out in one of these five cottages, and out of 23 inhabitants of these five there have been up to now (December 1868) 13 cases, four fatal; two cases occured at the boarding school, and the boys were sent home; there were five other cases in the village, and two of these occurred in a house near the river, where the well is very shallow (water when I saw it within four feet of the surface), and just over the well a hole into which soap suds, &c. are thrown, and a few yards behind and further up the hill an open cesspool of a privy.

The five badly placed cottages which were most seriously attacked by fever do not belong to the landowner; two other cottages which do belong to him have had the nuisances which were the probable cause of the mischief removed since the Assistant Commissioner's visit. The boarding school is now shut up.

[The village is a very pretty one, and bears signs of the landowner doing his best for the comfort of the people. The difficulty to contend with is evidently the porous nature of the soil above the clay on which the well water rests, and the proximity of nuisances to these shallow wells.—G. C.]

54b. The following evidence was given by *Mr. Harrison*, occupier and land agent :—

"I do not hire men by the year, and I pay my men different wages as I think them worth it, endeavouring to keep up the wage in winter when the families need money most, rather than to pay a high wage in summer, when there is a great temptation to spend it in beer, and reduce it in winter, as is generally the case."

55. Culham - Pop., 474 - Acr., 1,680.

Several blocks of good cottages built lately by Miss Morrell, chief landowner, some with two bedrooms, and some with three; rents 1*s.* 6*d.* to 2*s.* a week.

55a. *William Moore :* "I am a carter for Mr. Harris. "I have nothing to do with looking after horses. I "have 10*s.* a week, and 4*l.* at Michaelmas, and "nothing more. I am hired by the year. I would a "deal sooner have two horses with reins than these "three in line, and I would get on much faster. This "boy has 4*s.* a week and 30*s.* at Michaelmas. He is "14 years old, and can read and write."

55b. One of three women spudding thistles at Culham dressed in men's coats with shawls over and guano sacks as aprons :—"We get 8*d.* a day; we work from "8 to 5. A woman working 8 hours at slopping "wouldn't get 8*d.* worth done, and then they can't "always get work. It costs less in clothes though "to work at slopping, and particularly shoes, but I

Oxfordshire.
Mr. Culley.
B.
J.

" ain't much of a hand at it, no more ain't these " others. .I would a deal sooner earn my living at " field work."

All these women married, and between 30 and 40.

56. Nuneham - Pop., 314 - Acr., 2,079.
Cultivation mixed.

Rev W. Harcourt, landowner, says, "The children " of this parish have schooling and clothes, paying at " an average of 2*d.* a week. Children between the " ages of 4 and 12½ attend."

Mr. Harcourt employs 15 boys, 12 on his farm and three in the garden, but will employ no boy under 12 years.

56a. [A very good school which children attend from neighbouring parishes, chiefly Marsh Baldon, where there is no school; the school shut up at present (Nov. 27) on account of fever at Clifton and Baldon. All the cottages old but nicely kept, with a rood of garden behind them. Labourers are employed from Baldon, &c.—G. C.]

57. Toot Baldon - Pop., 260 - Acr., 2,010.
Cultivation mixed.

Rev. E. Peel: "The condition of the cottages is " greatly improved of late, and Queen's College, " Oxford, to whom they mostly belong, does not " allow them to take lodgers. They are well supplied " with water, and have powers of ventilation if the " inhabitants like to make use of them. With the " exception of four cottages all in my parish have " excellent gardens; these four cottages have no " allotments. We have a very good school."

Sir John Willoughby, a minor, whose estate is in Chancery, owns the cottages at Little Baldon:—"Little " Baldon is in my parish, but being rather more than " two miles from their own parish school the children " go to Nuneham school, which is less than a mile " distant, and also between Little Baldon and their " parish school."

57a. [Assistant Commissioner's note.—At Little Baldon there are a number of straggling old cottages built round a village green, with ponds and manure heaps close to their doors; no great wonder that there is fever in the village. The cottages and estate belong to a minor who is a ward of Chancery.]

58. Sandford-on-Thames - Pop., 376 - Acr., 1680.
Cultivation mixed.

Rev. C. E. Ranken says, "The state of the cot- " tages is generally unsatisfactory. A fair supply of " water, but ventilation and drainage are defective. " Most have small gardens and allotments.

" There is a mixed school under Government with " about 40 in attendance, also an infant school with " about 30. A paper mill in the neighbourhood " employs most of the children and young persons."

Henley Union.

59. Caversham - Pop., 1,783 - Acr., 4,772.
Cultivation chiefly arable.

Rev. Joshua Bennett says, "A very great improve- " ment has taken place in the condition of the cottages " in this parish within the last few years, but in many " of the new cottages lately built the rents are so " high that it necessitates their being taken by two " families. In the more rural districts of the parish " the cottagers have good gardens attached to their " dwellings. We have also allotments of land in " different localities especially set apart, and con- " veniently situated for the use of the labourers and " their families. We have found that giving prizes " for the best kept cottage, and best cultivated gar- " dens, as well as for the different vegetable produc- " tions, has had a most beneficial effect, and has been " attended with most satisfactory results.

" We have schools specially provided for the educa- " tion of the labouring classes."

60. Hambledon (in Bucks) - Pop., 1,464 - Acr., 6,615
Cultivation chiefly arable.

Rev. W. H. Ridley says, "The condition of the " cottages varies much. In some parts of the parish " they are very insufficiently supplied with water. " The doors and windows generally fit so badly that " ventilation is better secured than warmth.

" There are good schools within reach of all, but " they are not so well attended as they might be.

" It seems very hard that while boys go to work so " young (and they must go by 10 or 11 years of age), " yet the Government practically discourages their " attendance at evening schools by not allowing any " grant for those who are under 12. I have several " at evening school this winter who are younger than " this."

60a. Earnings of families.

Thos. Deane, farm labourer. Man 37, wife 34. Seven children; eldest, a girl, 12. Eldest boy, 8. No child earning anything. Man has 12*s.* a week.

61. Henley - Pop., 3,676 - Acr. 1,737.
Cultivation chiefly arable.

Edward Mackenzie, Esq., landowner, &c., J. P., says, "The cottages are very good, well ventilated, and " have water from ponds; they have all gardens.

" There is a parish school."

61a. *Mr. Thomas Hills*, occupier, says of the wages:—Women are paid 10*d.* to 1*s.* a day. Ordinary day-men, 12*s.* a week.

62. Pyrton - Pop., 705 - Acr., 5,140.
Cultivation mixed. About 500 acres in beechwood.

Hugh Hammersley, Esq., landowner, says, "The " cottages on this estate are old, but in good repair, " well supplied with water, and have plenty of fresh " air round them. They have all gardens and allot- " ments in addition, conveniently situated.

" We have a good school for boys and girls, open " to all comers. There is also a Sunday school, at " which the boys who are at work attend. There " is also an evening school in winter for men and " boys."

63. Swyncombe Pop., 445 - Acr., 2,610.
Cultivation chiefly arable.

Mr. G. Dixon, occupier, says, "The cottages are " good. All have gardens, and when wished for " waste land can be had on application to the lord of " the manor.

" There are two schools, and they are more than " equal to the requirement of the parish. The benefit " of one (the Rev. C. E. R. Keene's) is extended to " the district."

63a. [The following is an account of the industrial school maintained by the Rev. C. E. Ruck Keene, landowner, and accompanying a balance sheet of the garden department, which applies to the labour of about 12 boys.—G. C.]

" The Swyncombe Industrial School was founded in the year 1846, and was placed under Government inspection. Land has been set apart in connexion with the school, to be cultivated by the boys when not under mental tuition. Employment is also found for the boys in the gardens connected with the mansion, in the stables, in the plantations, and until recently in the carpenters' shop. It is also intended that a workshop should be kept for rainy days, where other employments may be given to them. A small quantity of stock is kept upon the school farm, and a man is entirely employed in directing and working with the boys, and is responsible for their conduct during the hours dedicated to manual labour.

" The time appropriated to school learning is the half of Monday, Tuesday, Wednesday, and Thursday. Friday and Saturday and the remainder of the four days is dedicated to field or other employments which may qualify the boys for the active business of life.

" When at work the boys are paid by the hour in proportion to their ages and capacities.

"On the other hand, the boys pay 4*d.* per week, viz., 2*d.* for their school instruction; 1*d.* for books, of which all surplus beyond the cost is credited to them; 1*d.* to accumulate in a savings bank, and to be given to them, with the addition of 25 per cent., when they leave the school.

"This being a mixed school, the girls are classed with the boys, and the day is divided between the usual courses of reading, writing, and arithmetic, with religious, geographical, and historical instruction, and the employments suited to their sex, including house work, so as to fit them for service.

"They are credited with the value of their work, which enables them to pay 3*d.* per week until they arrive at the age of 13, when the whole payment is reduced to 1*d.* for the endowments fund, from which they receive on leaving what they have deposited, with the like addition as that given to the boys."

BALANCE of ACCOUNT for Swyncombe Industrial School, Garden Department, Michaelmas 1867 to Michaelmas 1868.

Receipts.

	£	*s.*	*d.*
Trees and shrubs sent to Suffolk and Cambridgeshire	8	7	0
Shrubs and forest trees to estate at Swyncombe	16	11	4
Labour to do., planting	2	10	0
Farm—4 tons of mangold	2	10	0
15 quarters of oats, crop of 1867	15	0	0
6 pigs, 10*s.* each	3	0	0
Labour in harvest	0	10	0
Gardens—Potatoes and other vegetables	19	6	0
Shrubs and plants	5	4	6
Labour by boys	5	12	6
House—Gathering elderberries	0	4	6
Assisting to fill icehouse	0	6	0
By sale of pigs	6	0	0

64. Watlington - Pop., 1,938 - Acr., 3,440.
Cultivation chiefly arable. 560 acres of beechwood.

Rev. A. R. Hogan says of the cottages, "In Watlington they are two stories high, and mostly thatched. The rooms very variable in size, but generally well ventilated. The drainage is not good. The accommodation generally consists of one good sized sitting room, with a scullery or other smaller sized room off it. The bedrooms are seldom more than two or three in number, and when the family is large this number is of course insufficient. The water supply from wells is good and abundant. Gardens are attached to a good many cottages, and outhouses likewise. The ownership is much divided, but not for the most part that of landowners or tradesmen. Rent varies from 1*s.* to 2*s.* 6*d.* a week."

64a. *F. E. S. Viret, Esq., J.P.*, gives further evidence as to cottages as follows:—

Cottage accommodation.

The town is principally composed of small tenements and cottages, the latter chiefly belonging to private individuals. There is abundant accommodation (such as it is) for the labourers belonging to the parish, and a considerable number of the labouring poor. Between 200 and 300 men, women, and children of some adjoining parishes find shelter at Watlington, cottage accommodation being insufficient in their own proper parishes! Until the passing of the Union Chargeability Act this was oppressive on Watlington, now the burden is no longer felt.

There is a good supply of water generally, except in extreme seasons of drought, by means of wells of no great depth, say about 15 feet, and the parish not being extensive, the labourers have no unfair distance to go to their daily work. Those of the working classes who find employment in their own proper parishes have of course further to go, probably from one to two miles. Some of the smaller cottage tenements cannot be said to afford sufficient room for families of children or to be in suitable repair. This however is a very difficult question, and there is nothing excessive in the mortality of the town as far as my knowledge goes.

With respect to the ventilation of cottage dwellings I scarcely know what to say, as there is often a disinclination to open windows, and though so much accustomed to be out in the air during the day, the closeness of their rooms at other times seems hardly to be noticed by the generality of the labouring poor.

64b. Training School, Watlington, Tetsworth, Oxfordshire.

Built by the Earl of Macclesfield in 1864, and opened in January 1865.

Managed and maintained by the Countess of Macclesfied for the purpose of training young girls for domestic service.

Their ages on entrance have varied from 12 to 16 but 14 is considered the most desirable age, and the period of their remaining in the school varies from one to three years, according to their age, strength and proficiency. It is expected that they should be able to read and write on admission.

The school building consists of a sitting room for the matron, large kitchen fitted with Flavel's Leamington kitchener and a large brick oven, pantry, with store cupboards, scullery.

Washhouse, with a copper and wringing machine. No other machinery. Laundry, with ironing stove and mangle. No rooms over the washhouse and laundry, which are at the back of the dwelling house. Upstairs in the dwelling house two large bedrooms and one smaller one for 10 or 12 girls, and a bedroom for the matron.

The whole of the Institution is superintended by the matron (salary 25*l.* per annum), who instructs the girls in all the industrial work and regulates the distribution of it, so that all may practice laundry work, cooking, and housework in rotation. Any spare time in the afternoon and evening is devoted to needlework, and to reading, writing, and arithmetic. They receive an hour's instruction from a clergyman once in the

Oxfordshire. Mr. Culley. B. j.

week, and on Sunday the ladies at Shirburn Castle give them religious instruction.

The girls keep the whole building clean and in order. They bake their own bread, cook their food, and cure their bacon, make and mend their clothes.

Laundrywork is the chief occupation. Washing is supplied from the castle, valued and paid for at the usual rate. Ladies' and gentlemen's washing is also taken in, and charged at the prices usual in the country. This is the only source of income to the school.

The girls are expected to come decently provided with clothing according to a printed list given to them, and unless very poor the parents supply anything they may require while they remain in the school. On their leaving for service, Lady Macclesfield gives them an outfit, worth about 5*l.* 10*s.*, unless (which is rarely the case) they have friends whose circumstances render the gift unnecessary.

In the course of each year the girls are allowed a fortnight's holiday, generally a week at a time, and special leave is given for any particular occasion. Eight of the girls, orphans or children of poor parents, are selected by Lady Macclesfield from the neighbourhood. They are only required to pay 6*s.* a quarter in advance. If she is requested to take in any girls above that number she admits them on receipt of 4*s.* a week, which nearly clears the expense of their maintenance.

In 1866 the cost per head for the matron and eight girls was 4*s.* 2*d.* In 1867, provisions being dearer, it amounted to 4*s.* 6*d.* per head *per week*.

During the last two and a half years 12 girls have been sent to service, four as under laundrymaids, two as housemaids, two as nurserymaids, and four as scullerymaids; each receiving 8*l.* a year, with tea and sugar, &c.

In 1867, the expenditure, everything included, for the matron and nine girls, amounted to 234*l.* The receipts for washing and payments for girls came to about 80*l.* The balance of expenditure was therefore about 154*l.*

In 1867 the expenditure was as follows for the whole year:—

	£	*s.*	*d.*
Weekly bills, flour and grocery	116	0	0
Coal and wood	33	16	0
Gas	3	2	0
Soap, starch, candles, &c.	11	15	0
Furniture, brushes, &c.	7	12	6
Clothing, including four outfits (nearly 6*l.* each)	33	10	6
Miscellaneous articles	3	10	0
Matron's salary	25	0	0
	£234	6	0

OXFORDSHIRE EVIDENCE.

C.

APPENDIX C.

CONTAINING EVIDENCE APPLICABLE TO AREAS LARGER THAN PARISHES.

RESOLUTIONS OF BOARDS OF GUARDIANS.

Woodstock Union.

65. Extract from the Minutes of a Meeting of the Board of Guardians held the 3rd day of November 1868.

Employment of children, &c. Pursuant to notice, Mr. Culley is present and this subject is discussed.

Resolved as follows:—

"In the opinion of this board it is not customary in this union, nor is it to the advantage of the employer or the employed, that children under 10 years of age should be employed in field labour except during the period of the harvest of hay and corn.

"Legislative interference with a view to the restraint of such employment is not desirable.

"It is desirable that the State should afford increased assistance towards the education (not compulsory) of children under 10 years of age, but not of children of a more advanced age."

Witney Union.

November 5, 1868.

66. At a meeting of the board of guardians of the Witney Union held this day.

The Rev. Dacres Adams, chairman, and 12 other guardians.

The following resolution was carried unanimously:—

"That the board of guardians of the Witney union is of opinion that the Factory Acts should be applied to this union so far as that children shall not be employed under 10 years of age."

(Signed) Dacres Adams, Chairman.

Banbury Union.

67. Extract from the Minutes of the Meeting of the Guardians of the Banbury Union held 10th December 1868.

It was moved by the Rev. W. S. Miller and seconded by Mr. Godson:—"That in the opinion of "this board legislative interference is not required in "the education of children employed in agriculture."

There appeared,—

For the motion	10
Against	6
Majority	4

It was moved by Col. North, M.P., and seconded by Mr. Brazier:—

"That the board of guardians of the Banbury union are of opinion that it is desirable children should not be employed under 10 years of age unless it can be shown that each child is physically able and can read and write fairly, in which case they may be allowed to work at 9 years of age."

There appeared,—

For the motion	6
Against it	10
Majority against	4

Bicester Union.

November 6, 1868.

68. At a meeting of the board of guardians of the Bicester Union held this day.

The Rev. W. J. Dry, chairman, and 13 other guardians being present, Mr. Culley, Assistant Commissioner on the Commission appointed to inquire into

the employment of children, young persons, and women in agriculture, with a view to ascertain with what modifications the principles of the Factory Acts may be applied to such employment, having explained to the Board the different modes by which protection from physical injury and school attendance are provided for under the Factory Acts, and what is meant by modifications of those principles, the following resolution was carried unanimously:—

"That the board of guardians of the Bicester union is of opinion that the principles of the Factory Acts should be applied to this union, so far as that children shall not be employed under 10 years of age unless it can be shown that a child is physically able and can pass a certain school examination, *i.e.*, read and write fairly, in which case it may be allowed to work at 9 years of age."

(Signed) W. J. Dry,
Chairman.

Henley Union.

69. Extracts from the Minutes of the Board.

"November 10, 1868.

"Mr. Viret gave notice that he will, on Tuesday next, move that the board of guardians of this union is of opinion that the Factory Acts should be applied to this union, so far as that children shall not be employed under 10 years of age."

"November 17, 1868.

"Mr. Viret's motion, of which the clerk stated he had sent a notice to each of the guardians, was not carried."

(The Assistant Commissioner was present by appointment at the meeting of the board held on the 10th, but notice of his visit not having been sent to each of the guardians, the discussion was postponed till the 17th, when the Assistant Commissioner was not present.—G. C.)

MEDICAL EVIDENCE.

70. H. H. Parry, Esq., district medical officer of Woodstock Union, to Geo. Culley, Esq.

Kidlington,
Dear Sir, December 1, 1868.

I have much pleasure in replying to your inquiries concerning children employed in farm labour in this district. I think I may confidently state the health of such children can compare favourably with those otherwise employed. I find on inquiry that boys in this district are sent to work at about 7 or 8 years of age, and girls at 12 or 13, but it is rather a rare thing for girls to go to field labour at that age at all. In the summer time women are very generally employed making hay and in cutting wheat. The hours of labour for women and children are from 7 o'clock in the morning to 5 o'clock in the afternoon. Of course the employment of boys is very light, merely having to drive horses, &c. I cannot attribute any particular disease to farm labour, and the people in this district are as a rule very strong and healthy, living to a great age, frequently to between 80 and 90 years, and even older. The cottages are as a rule too small, with bad sleeping accommodation, but in this respect very superior to the lodgings of the poor in large towns, being generally detached, with, as a rule, good water and fair drainage, though there are exceptions to this of course.

The parish of Woolvercott in my district contrasts unfavourably with others; it lies low, and is very damp, and the women and children there are engaged in a paper mill.

Yours, &c.
(Signed) Henry H. Parry.

71. Extract from a Letter from J. G. White, Esq., M.D., District Medical Officer of Woodstock Union, to G. Culley, Esq.

"There is no reason to suppose that agricultural labour in this district is in any way injurious to the health of those engaged in it. The fact that farm labourers are not so healthy as they should be (leaving vice out of the question) is owing, first, to the low wages, which will not allow men with families to procure food in quantity or of quality sufficient to keep up the standard of health, and they are therefore more easily affected by outside influences inimical to health; and, secondly, the unwholesome state of many of the cottages. It is, moreover, hopeless to expect that this latter evil will be thoroughly remedied so long as the appointment of sanitary inspectors can in any way be influenced by the small owners of cottage property, who are the chief sinners.

"But few women are employed in the fields, neither are many young children. It is a rare event to find a sick child whose illness can be ascribed to its being employed in field labour at too tender an age.

"J. Gregory White, M.D.

"Woodstock,
"27th October 1868."

72. Evidence given to Assistant Commissioner by *A. Batt, Esq., M.D.*, Witney.

"I think that children are employed too young in heavy ploughed land; it tells on them later in life; when they get to be about 50 they go at the knees and are very much bent. Labourers suffer from bad dwellings and overcrowding more than from anything in the nature of their work. On the oolite, wells are often very near the surface, with privies and pigsties too near them; it is very difficult to keep pollution out of wells on the stonebrash, where houses and wells are near together."

RELIEVING OFFICERS' EVIDENCE.

Woodstock Union.

73. *J. Kirby*, relieving officer for Deddington District:—"The cottages are not bad in any parish in "my district; some of the worst cottages are in the "parishes of Steeple and Westcott Barton. None of "the bad cottages belong to the chief landowners, "they belong to small tenement holders, built most "of them many years back. In the two hamlets "of Deddington, Hampton and Clifton, there are "a few bad cottages belonging to small tenement "holders. There has been great improvement in "cottages during the last few years; for instance, in "North Aston, Dunstew, Kiddington, and Glympton, "and the Wortons, which are close parishes; in "Rousham and Middle Aston, also close parishes, the "cottages are very good. In Sandford also the cot-"tages are good, and have been improved lately. "There are barely enough cottages for the agricul-"tural labourers in Rousham and the Wortons. "Farm labourers' wages are from 10*s.* to 12*s.* a week. "Some men are in the habit of going away to work "in summer in Middlesex, and come back in winter. "The smaller the farm the more labour employed, "and the more produced from it. Not many boys "are employed under 10. Girls are not employed "much in my district. A few adult women work "regularly in the fields at about 9*d.* a day. Some "women are glovers; women who work in the fields "do not compare unfavourably with women who are "glovers. Lace-making has died out. All the "tallymen I know are Scotchmen."

74. *Mr. Kent*, relieving officer and inspector of nuisances for Woodstock District:—"There is nothing "to complain of as to the state of cottages in my "district. The worst examples of cottages are in "Kidlington and Tackley. Labourers' wages are "from 10*s.* to 12*s.*; they earn 15*s.* by the piece, "hoeing and jobbing in the barn, &c. In harvest a "man and his wife will earn more than 5*l.* in a "month. Example of this:—Daniel Jolly, his boy of "10, and his daughter Dora, 12, earned 9*l.* during last "harvest. This is their own account, and was "confirmed by their employer at the board. John "Nichols in three years earned 2*l.*, 4*l.*, and 6*l.* in "harvest.

"Gloving.—A girl of 16 in a factory would earn

Oxfordshire.
Mr. Culley.
C.
j.

" from 3*s.* to 5*s.* a week, and at home she might earn " 2*s.* 6*d.*, but the employment is precarious. A " woman earns about an average of 3*s.* It is the " ruin of families ; girls will not go to service, and " become demoralized."

WITNEY UNION.

75. *Mr. H. Staley*, relieving officer for Witney District, says,—" The cottages are pretty fair in my " district ; farm labourers have from 9*s.* to 12*s.* a " week. Carters have 12*s.* There is a good deal of " piece work done in summer. Some labourers' " families are very badly off."

76. *Mr. F. Green*, relieving officer for Bampton District, says,—" The cottages in Bampton are very " bad ; they belong to small tenement holders. The " labourers are badly off, and now not half of them are " employed for whole time, even at 9*s.* and 10*s.* a " week."

77. *Mr. Jas. Merchant*, relieving officer, Burford District,—" Labourers get from 8*s.* to 11*s.* a week, " and some are very badly off. A great many are out " of employment now ; some of them are men who " are away in summer ; others are industrious men " who always live in the district. The increase of " the size of farms lessens the quantity of labour " required. If all the farms were about 200 or 300 " acres there would be plenty of work."

BICESTER UNION.

78. *Mr. George Reynolds*, relieving officer, Bicester District, says,—" The cottages in Arncott are very " bad, built on the waste, and a good many belong to " the occupiers. They have one room above and " one downstairs. Some of the people keep their " cottages clean. The cottages are of wattle and " dab. Some are built on the waste in Black-" thorn, and are very dirty. The cottages on the " waste at Cottisford are of stone and thatch, and are " much more comfortable. There are a great many " men out of work at Launton and Bicester (grazing " parishes ; the small farms at Bicester are about " 200 acres). Some of these men go away in the " summer. There are some men out of work in " Arncott. Labourers' wages in my district are from " 10*s.* to 12*s.* a week. Labourers who have regular " employment are pretty well off. Children generally " go to work on farms at 10 years old ; some go at " 8. They earn at first from 1*s.* 6*d.* to 2*s.* a week. " Ploughboys get from 2*s.* 6*d.* to 3*s.* at first, and as " soon as they can hold the plough they get from 4*s.* " to 6*s.* a week. In some parishes women work out " a great deal, in others they hardly go out at all. " Some girls are lace makers, but they mostly go to " service now."

79. *Mr. Jas. Collingridge*, relieving officer, Bletchingdon District,—" The charge for out-door relief has " very much diminished in my district, the people are " better employed. There are bad cottages built on " the waste in Fencott and Murcott. The wages are " from 10*s.* to 12*s.* for farm labourers. No girls " under 18 years of age are employed in this union. " I think putting farms together rather diminishes " the quantity of labour. There are a few parishes " with men out of work, but generally men who only " like work at extra wages. This is a very excep-" tional year."

HENLEY UNION.

80. *Mr. W. Harding*, relieving officer and inspector of nuisances, Henley District, says,—" The cottages in " part of Hambledon are very bad ; they belong to " the chief landowner. In the district generally the " cottages are fair, and many of them have been " improved lately (in Hambledon improvements are " going on). The rent of the bad cottages, with half " a chain of ground, is about 3*l.* 10*s.* The cottages in " the rural parishes vary from 3*l.* 10*s.* to 5*l.* Most " of them have a garden included in the rent. An " ordinary labourer has from 11*s.* to 12*s.* a week ; " 12*s.* about Hambledon, 11*s.* elsewhere. Carters " have 12*s.* a week, with 50*s.* or 60*s.* at Michaelmas. " These men are hired by the year, from Michaelmas " to Michaelmas. There is no surplus labour in my " district ; any able-bodied man can get work. Some " women, usually married women, work out in spring " and summer, but very little in winter ; a *few* girls " also work out."

81. *Mr. W. Leach*, relieving officer, Caversham District,—" The cottages have been improving for many " years past. Rents near Reading are very high, 4*s.* " and 5*s.* a week. The people sublet part of their " houses to another family. Ordinary rents in rural " districts 1*s.* 6*d.* a week, with garden. Most of the " ordinary labourers in my district get 12*s.* a week, " and there are very few men who cannot get work ; " I don't know of any."

82. *Mr. B. Glass*, relieving officer, Watlington District,—" Ordinary farm labourers have 12*s.* a week. " Carters have their houses free or 1*s.* a week extra " and 2*l.* at Michaelmas. Some women, mostly married " women, work in the fields, and keep their houses as " well as those who do not ; they are industrious " women and get up in the morning, and they get " half a day to bake or wash when they want it. " Girls get out to service when they are big enough ; " at one time they were all lace makers, but they " seem as well off now. A few young men are out " of work, more than I have known for some years, " but these are not good men. Young men are " usually hired by the year, and get from 7*s.* to 10*s.* a " week, with from 30*s.* to 50*s.* at Christmas (*i.e.*, " young men from 16 to 21), and it is men of this " class who have not been hired who are out of work ; " married men are hired by the week. Day men in " harvest get 2*s.* 6*d.* a day and beer for five weeks. " They don't earn much in haytime, as we have not " much hay. Not many boys are employed in the " beech woods. The wood is generally brought out " on wood carts."

SCHOOL TEACHERS' EVIDENCE.

STEEPLE ASTON.

83. *Mr. John Neale*, certificated master for 6 years.

" There are three dames' schools, but the children come to me knowing next to nothing at about 8 years old. I get some at 6 and 7, say half ; those I get at 6 would read, write, and cipher easily at 10, but those I get at 8 would not. These small schools destroy the power of the National school. If I could get all children at 6 they would be able to get as far as the compound rules of arithmetic at 10. Night schools alone would not suffice to keep this up. The least attendance which would suffice to keep up this elementary education would be 200 hours per annum. There is no infant school, and the dames' schools are of no use. The parents who have most children attend best to their education, and I don't think that want of means keeps them away. Some of our boys come two or three miles to school."

STONESFIELD.

84. *Mr. Devonald Griffith*, certificated master teacher for 4 years.

" I think the children in Wales, my native country, are much cleverer than the children here, especially in arithmetic ; they can do reading, writing, and arithmetic easily at 10. I think these children would require half time up to 13. The parents live in Stonesfield, and work in parishes round. The work from here is in Fawler, Combe and Glympton, and Wootton. School attendance is increasing each year, but as soon as the children can earn anything they are taken away. There are 20 men out of work in the village now (October 26) ; they will be much out of work till hay harvest."

WOODSTOCK.

85. *Mr. J. Peck*, certificated master of boys' school, agrees that regular attendance from 5 to 10 would

secure elementary education (as before described, *i.e.*, reading, writing, and arithmetic).

"I think attendance for three winter months would secure this education, if the attendance was regular. One or two children from the Duke of Marlborough's farm attend alternate weeks; two of these are between 9 and 11 years old; they used to come half a week, and I think that was better for educational purposes. We have children of all denominations, and there are no other than the National schools in the town."

WOOLVERCOTT.

86. *Mr. C. Boult*, certificated master for 15 years, has been 12 years at Woolvercott.

Mr. Boult agrees with other teachers as to acquirements at 10 years of age. Does not think attendance during four winter months would be sufficient to secure this amount of education. Thinks regular attendance up to 12 years of age would be quite sufficient.

WOOTTON.

87. *Mr. William Chester*, teacher of boys' school for 18 years.

Mr. Chester thinks boys could read, write, and do first four rules of arithmetic with facility at 10, attending from the age of 5. "I think boys learn more "from 10 to 12 than from 6 to 10. After 10 regu- "lar attendance at winter evening school and Sunday "school would do for some boys, but could hardly be "depended on for all. During the last two years the "age of boys attending school has considerably di- "minished. I have only one first class boy out of "80 who were here last December (October 15, "1868). Children pay 2*d.* a week for schooling, "except 12 on the foundation, who also have cloth- "ing. Two of the same family pay 3*d.* for the "two."

BENEFIT SOCIETIES.

88. In the evidence on this subject from Bedfordshire the Assistant Commissioner quoted some extracts from an interesting paper read at a meeting of the Central Farmers' Club (see the Club Journal, November 1867), by Mr. Charles Howard, of Biddenham. Towards the end of his paper Mr. Howard says, "I confess, after giving the subject some considera- "tion, that I shall prefer to see the Government "grapple with the question of friendly societies, "either by the Post Office or some other agency; "until however such is the case, and it may be "years about it, I incline to the principle of county "or district associations." After hearing this paper read, and the discussion which followed the reading, Captain Dashwood, a large occupier of land in Oxfordshire, who had taken considerable interest in the subject, addressed a letter to Mr. Howard, from which the following extracts are taken:—

"As a tenant farmer, occupying above 1,000 acres of arable land, I have many interests in common with agricultural labourers and tradespeople. Some years back I found the great want of a club founded on safe rules, but on working at it I found that owing to the old parish system of the Poor Law it was impossible for me (being so personally interested in keeping down the rates in my own parish) to join in working such a club, as the wage-receiving classes looked naturally on my efforts in the matter with great suspicion, thinking that I was working entirely to save my own pocket. Consequently I relinquished all interest in the club, with the exception of contributing annually to the funds. In my parish, for a population of about 800, there were two clubs, one established in 1809, the other in 1859 (the latter being a seven years' club). These were both public house clubs, but the old one was removed to the school house in 1863, when the rules were slightly revised. In 1866, the old club having got into a bad state, the committee asked me to assist them, and as the Union Chargeability Bill had been passed, and the parish system happily done away with I consented to try, and with the help of a neighbouring clergyman, who had had great experience in Berkshire with such clubs, and with the assistance of Mr. Finlayson, the Government actuary, and Mr. Tidd Pratt, and his office, I trust I have been able to start the club on a safe basis, and that it now only depends for its success on the good management of its members. The other club is still in a very fair state, but owing to some points in the rules being radically wrong, it will probably fail before many years, and I trust that there will then be only one club for this population of 800, which I believe to be quite sufficient to carry on one club, but perhaps not two, unless the payments were proportionally higher.

"I found the task I had undertaken a most difficult one, as I had both to learn my own work as well as to be able to view every point as the labouring man views it himself, and I must say that with a few exceptions (who were influenced by the old public house party) the members were very shrewd and fully capable of managing their own affairs (as we farmers invariably find), showing also great good sense, fairness, and good feeling, and I felt glad I had undertaken to assist them." . . . . "From the experience gained in revising the rules of this club, I find that club rules (like all other worldly matters) require revising according to the changes in the circumstances of the day, the rate of wages for instance; and that it is wiser to try to pull through, if possible, an old club than to start a fresh one.

"I believe the chief principles on which these societies ought to be founded are:—

"1st. They should not be held at public houses (other places of meeting can now generally be obtained).

"2nd. Clubs should be composed of about 150 members, say from one or more parishes (depending on the population of the district), so as to keep the management as local as possible, that members may be able to overlook one another.

"3rd. They should be entirely managed by the benefit members; the trustees and treasurer being men of substance, and only responsible for the cash placed in their hands.

"4th. There should be a revision of funds and a revision or division of surplus every five years (as this keeps up interest in the club), accompanied by power to raise an extra subscription if funds get too low.

"5th. The tables should include several classes, with different payments in quinquennial periods according to age of entry (worn out old age must practically be looked upon as sickness), few working men remain long quite past all labour, and the rules recommended by Mr. Tidd Pratt in his pamphlet of December 1865, as to the number of weeks of full pay, &c., prevent this charge ever becoming very high.

"6. The *Medical Fund* payment should be ample to cover the expense of making contracts with different medical men, as all members may not like to have the same, and women should be allowed to join this as well as the death fund.

"7. There should be a benevolent fund, to which all payments from honorary members should be carried (as the business funds of the club ought not to trust at all to such payments); to this fund also each member should pay yearly one day's sick pay, and the accumulation from other funds may be transferred to it at the end of every five years. This is a most important fund, as it meets the difficulty of the worn-out-by-old-age members and of cases of long sickness, and assists such without drawing too heavily on the sick fund.

"As to relief allowed by boards of guardians to members of benefit societies, I am sure the common sense of a board will, as a rule, always meet any special case with justice, but at the same time to prove how careful boards ought to be, I know a case (and such is not an uncommon one) where a member who was

Oxfordshire.
Mr. Culley.
C.
j.

paying into a class for 10*s.* 6*d.* a week for sickness, put himself down to an 8*s.* class, saying that the board would make up the difference. In the old parish poor relief days how many clubs have broken up and divided the funds when some old members became expensive, the reason given being that they saw no reason why they should save the parish rates.

"In the case mentioned in your paper of the single man who received 2*s.* 6*d.* a week from a board in Gloucestershire, he deserved only an order for the union house. If more of such cases of men not in clubs were ordered, when possible, *indoor relief* and not *outdoor*, many more of the labouring classes would join clubs; now the careless ones say I shall get (especially if having a family) as much from the board as I shall from a club, and save my payment. We must recollect we are treating with close calculators whom we have pauperized for years past, but I think in the course of a few years, when union rating has made the ratepayers look more carefully into the heavy payments, we shall see a great alteration in the number receiving outdoor relief, that curse of our labouring population, which is the chief cause that one in every 20 of the population of England is a pauper, and in a purely agricultural county as Wiltshire one in every 13. The average of, say, one in 16 of the purely agricultural districts assists much in pauperizing the whole population, as the able-bodied men go to the towns, leaving their parents in receipt of outdoor relief, and thus the spirit of pauperism never dies out. As a rule old people ought never to receive outdoor relief, as it pauperizes their children and grandchildren.

"My experience is, that the more the working man is left to take of himself the better for him and for all classes, and the better he likes it; he (as several members stated in the discussion) likes to be independent, and he has proved it by the carrying on for years these clubs, notwithstanding all the temptations to improvidence and pauperism which the Legislature and the other classes of society have placed before him. . . . . The difficulties in the way of starting large clubs are very great, and few really practical men can be found to give the time and trouble necessary. I know of two large clubs that are not now doing well. The honorary members and managers have died off, and there is no longer, though the funds are good, any life in the concern, as the members have not learnt to look to their own interests, having been taught to lean on others. . . . Another evil in starting new clubs is that all the members are of an age, and then all get old together, when no young ones will join them, this is the great evil of some seven-year clubs (which have the strong point of vitality for a certain number of years, say about 20), in which the balance left in the funds after a division is always the same, though the average age of the members may be much higher. I consider no club ever retains its vitality unless there is a system of *revision* and of *division*, if funds will allow of it, otherwise members are apt to try and get on the funds, and when on to try and keep on, so as to get all they can out, calculating the club will last their time; though Mr. Tidd Pratt's rule of December 1865 prevents this to a very great extent, it also makes other members keen as to getting members off the funds, as all parties will be looking to getting something out of the funds at the time of revision, and it is of no use a club accumulating large funds, as it makes all members careless.

"The having Post Office savings banks and Government annuities makes it unnecessary for the working man to meet anything but actual sickness through the machinery of such clubs. The agricultural labourer, as a rule, cannot pay for an annuity, but if he has a sickness club, and any savings in the Post Office, he is in a comfortable position, and if he has funds enough he might then buy an annuity. But the savings bank alone is of little use, as a few weeks' illness would soon eat away the savings of a considerable time. As to Government forming sickness societies, at present I do not see that such is possible, or indeed necessary. As to the tables, I should prefer adopting those that have been found to have stood the test of years in my own or a similar district. Actuaries in general are obliged to put their rates too high, and they really have few good guides for such clubs, as all the receipts hitherto have been so mixed up with subscriptions from honorary members, and the outgoings with extra payments. The actuaries frequently limit the tables to the age of 65. This is impracticable and unnecessary with an agricultural population."

89. The following Notes on Benefit Societies were also kindly given to the Assistant Commissioner by Captain Dashwood.

"Some clubs provide annuities for old age, but the labouring man, as a rule, cannot and will not pay for this, except under the 1*s.* 4*d.* system recommended in Mr. Tidd Pratt's rule of December 1865, and with the help of a benevolent fund, past labour being looked on as sickness, as in the Essex club rule, which says '*While incapacitated from labour by sickness, accident, old age, or otherwise.*' How can labourers be expected to pay in for annuities when their parents, if alive, are probably in receipt of from 2*s.* 6*d.* to 6*s.* a week out-door relief, and doing as they like, working in their gardens and allotments, &c."

"The principle of the deposit class (on the savings bank plan) is very good indeed, but as all clubs have hitherto been on the insurance principle, this plan is so new to all parties that it is not worth adopting, as it also destroys the mutuality of the life system. The great advantage of the deposit system is that it is a great check on members trying to get as much sick pay out of the funds as possible, but this can be met otherwise to a great extent; if Government ever formed sick-pay societies, it could only be done on the deposit class, as each member is a check on himself, but I cannot think Government ever will or ought to interfere in such matters. The deposit system was adopted by the Abbot's Ann Club in Hampshire in 1831, and afterwards by the Wilts and Hants County Club, but, according to letters which I received in March last from the secretaries of the two last-mentioned clubs, it has received no support.

"In January 1868 I received a letter from Mr. Howard, enclosing one from Mr. Clutton about the Victoria Club, Reigate. Mr. Clutton in his letter stated that Mr. Tidd Pratt considered this club to be one of the best in England; at the same time he stated that the public house clubs were too powerful for them. I examined the rules and found them very faulty; half the management was in the hands of honorary members. The members were struck off at the age of 65. There were only 300 members; funds, however, very good, 5,000*l.*, the yearly subscriptions from honorary members being large.

"I believe as useful clubs as any in England are the Manchester Odd Fellows and the Foresters; both of these clubs are for life, and keep their tables and rules revised up to the experience of the day. The Manchester Odd Fellows recommends the system of revision every five years."

90. The following is the opinion of the *Bishop of Oxford* on the application of the principle of the Factory Acts to agricultural labour for educational purposes, as expressed to the Assistant Commissioner.

"I think that, if the Factory Act principle is to be applied to farm labour, a child should be allowed to work half time at 8, whole time at 9 (if it can produce a certificate that it can read and write well), and whole time at 10 under any circumstances. Such a modification of the principle of the Act would quicken the sense of parental responsibility, and tend less than merely fixing an age (such as 10 years) under which no child should work to make parents depend on State aid, and would cause less necessity for an educational rate, which I think would at once stop voluntary aid, and put an end to religious teaching in our schools. It would be a great pity to check the

active charity which is now doing so much good, and run the risk, by stopping religious teaching in the schools, of bringing such teaching to be considered by the parents as only a matter of concern to some parsons and women."

91. The following "Notes" on Popular Education were given to the Assistant Commissioner by the Rev. C. E. Ruck Keene, of Swyncombe, as explanatory of Mr. Keene's views upon a question in which he has taken a very active interest (the Assistant Commissioner holds himself responsible for any defect in the arrangement of the notes).

"The question of popular education seems to have attained, after many experiments and much theoretical discussion, spreading over many years, a point which promises to be followed by some effective action. The real difficulty of the subject, and the various opinions maintained in reference to it, have hitherto stood in the way of any simultaneous movement, though the important resolution of 1839, which had the sanction of the House of Commons, and which empowered the State to give its powerful aid to the movement, was so far of infinite use, inasmuch as the great establishments for training masters, which grew out of it, and the contributions which were afforded towards the building schools and the incomes of the officers belonging to them, cleared the way for the diffusion of education in a manner which private efforts could hardly have attained. The State measure was obviously experimental, and the necessity of altering its rules from time to time was no doubt contemplated, and in all probability has not yet ceased. And it is to be hoped that ere the Code has become quite perfect the State may be relieved, by general consent, from much of its heavy pecuniary charges and responsibilities, and its interference may be more satisfactorily supplied by the self-action of the different parts of the country, upon some well-defined system, and yet free from the Procrustean measure which cannot make adequate allowance for the varied circumstances of the different localities.

"The addresses which have been made to the constituencies generally, and more especially as pledges to the Parliament now elected, argue strongly in favour of a tendency towards some great measure of national progress in the direction here alluded to. We may reasonably suppose that there are good grounds on which the subject of education has been so frequently alluded to, either from the personal convictions of the candidates on this great subject, or from the anticipations that the question itself has the sympathy of the constituency. It appears that though there may be an infinite variety of thought (practicable or the reverse) which the subject may call forth, the principle and the more general character of such thought may be assumed to be as follows in their classification.

"The first is to continue the present system with such large modifications as may carry its operations deeper into the ranks of the uneducated, involving the questions of the denominational element, or of a more enlarged conscience clause.

"The next suggests the adoption of pure and simple secular education, aided, of necessity, by State assistance, and leaving the religious and moral training to the ministers of the various religious bodies.

"Another transfers all aid and consequent interference to the rates of each parish or district, coupling the new responsibility with restrictions upon the employment of children under certain ages, and requiring certificates of school attendance before employment may be given or accepted.

"There are, of course, strong reasons adduced by the promoters of these and other schemes in favour of each, and all deserving of attention; but there are questions of great difficulty equally applied to all, and there are peculiar difficulties involved in each, which would require much modification before they could be made acceptable.

"The first general difficulty which we have to meet and combat is the comparative indifference of parents in agricultural parishes upon the real end and objects of education, and the more than indifference of the employers of the labouring class, and the consequent limited extent of education to which those who even admit the abstract requirement would circumscribe it.

"In regard to the various schemes suggested, the first seems to have the advantage for the present, as we can hardly consider that the plan of a national education is sufficiently ripe to be able to run alone. The ideas on the main subject require more time for any welding together or compromise of such widely divergent views, and the aid and influence of Government is still wanting to keep the balance. The Government, for the time being, responsible as it is to Parliament, and having the command of the ability and experience of the country, is more likely to arrive at some safe conclusion; or if the plans of the moment are found upon trial to be defective, the remedy is more likely to be found and applied under its control, than where individual attempts are made, amidst the class of infinite divergence of opinion, backed by resolute prejudice. Whilst the State lends its aid, the control, more or less, of the working of any system must be allowed, which under any other circumstance would not be submitted to. Thus the opportunity of settling some general principle upon which education should be carried on would rest with the proper authority.

"The object, however, should always be kept in view, that as soon as possible the voluntary principle should be recognized, and reliance given to the unfettered energy of individuals, who may take the work in hand, subject to some general and well approved rules, but with power to adapt the education to the peculiarities of each locality.

"The secularization of education, backed by a State provision, though advocated by many intelligent persons, as much in despair of any adequate measure being adopted to meet the great want of the country as from any other cause, has met with favour in the cities and towns. But in rural districts this has found but little sympathy, and has rather added to the difficulties which surround the subject, by raising a feeling that the promoters attach but little importance to religious teaching. This feeling may pass away in time, and fresh adherents may be added to the secular system; but amongst the objections to be raised against it we must not forget the serious discouragements which the chief workers in education of the day, and more especially the clergy, would experience from its adoption, and in many cases the zealous co-operation hitherto given would fail. It has not been without a well-founded hope that a union with those whose divergence from us is not of a serious character in the process of education might be effected by an arrangement of the religious teaching on the week days, and by leaving Sunday open, if required, for domestic or other teaching, independently of the school, but this hope (so desirable to be realized) would fade away under the secular system.

"It may be observed also, that where the State grant is entirely relied upon there is a tendency, even now, to canvass for pupils, so as to get a larger share of public money. This would be greatly increased (with all its attendant evils, apart from the money question) when rivalry of sects, and the discouragement which those who have hitherto interested themselves as the advocates of combined religious and secular teaching had embittered the warfare.

"In the general management of the school supported by the Consolidated Fund, the trustees or committee men would find great difficulty in maintaining due discipline, where every person would claim a prescriptive right to participate in the public grant, and the authorities, in every exercise of the most legitimate discretion, if the result was distasteful to the parents, would be liable to some legal process.

Oxfordshire.

Mr. Culley.

C. j.

"In reference to the third scheme, which throws the charges upon the rates of the parish or district, and restricts the ages of those children who may be employed in work, and requires a certificate of school attendance, it would appear that if the objection to a State payment was supported on any valid ground, and security required that education had been enforced, coupled with it, the charge upon the local rates could not be expected to have other effect than that of raising a still greater difficulty in the way of a popular education with those who are as yet but faintly impressed with the necessity of such an undertaking. Any claim upon the general resources of the country is more easily submitted to and liable to less question than a direct charge upon the parish rates.

"Under this scheme, as well as the former one, it is apprehended that the voluntary system, on which so great dependence is placed at present, would fail to be supported; and in both cases, more especially in the latter, the scope of education would inevitably be reduced beyond even the present level, and beyond the limits which the Legislature would consider sufficient.

"The emoluments of the labourers in the rural districts do not appear generally to be adequate, or at all events sufficient, to admit of any practical abstraction from the wages of a family by withdrawing some of its members who now contribute to the general stock, whilst the diligence and practical results of a compulsory education, coupled with legal restriction from work, would bear but a scant reference and palliative to the ill feeling gendered by an apparently arbitrary enforcement of a measure which would abridge the comforts of a family without enlisting a full sympathy in the object of it.

"In all cases of popular education I am of opinion that there should be a mixture of manual employment with the mental training. It relieves the irksome sameness of elementary education through the day, and in so doing allows the mind during the shorter period of tension to be more capable of digesting its lessons, whilst the bodily exercise and the incipient fitness for the employment and trade to which the child may afterwards be called, will always be found most advantageous to its future career.

"In towns, where the wages of the parents may be more adequate for devoting a part to the training of their children, and where the great advantage of education may be more readily admitted, the compulsory system of the Factory Acts would probably meet with little general resistance or even disapproval. But in the majority of rural districts it could hardly be expected that such favourable circumstances could be met with to encourage any compulsory scheme of education, unless tempered by some plan of relief from the effects of loss of the child's earnings when at school. Whatever training may be deemed practicable beyond the early days of infancy, the same mixed employment, calling for the workman's aid as well as the schoolmaster's, seems at least, upon the same principle as that recommended for the urban population, to be required, and perhaps in a greater degree from their more laborious natural employments.

"If compulsory education is to be enforced upon them, the manual labour which may be made a part of the school business should be of a remunerative character, so that the child or its parents may participate in its results.

"There are not wanting examples to show that, under some favourable circumstances, the combination of work and mental learning may be adopted with advantage, and that children may be enabled, as a sort of apprentices, to fit themselves for their future work as comparatively skilled labourers when they leave school.

"There are of course great difficulties at present attending any scheme of this kind, and, if adopted at all, the sympathy of the farmers and others must be gained rather than turned in an opposite direction by any hasty legislation. Our condition, and the peculiar opinions which prevail, and which vary much in town and country, are circumstances not favourable for the general adoption of any compulsory system.

"The argument founded on the presumed analogy between our people and that of other countries who have long since adopted the compulsory measure, seems to fail from the real difference rather than the similarity of our relative positions and character.

"The wants of the people of a higher scale of intelligence are not denied by any thoughtful men, but the right way to remove the blot upon our national character is not yet so clear as to justify our adopting a step which may retard rather than advance the solution of the great problem of national education, and I cannot but think that it is safer to advance by some periodical improvement as our experience advances, than to take some insufficiently considered step which may retard the much desired object."

92. EXTRACT from a Letter from the Rev. L. A. Sharpe, of Tackley, to George Culley, Esq.

"The education question calls for immediate attention. Compulsory education, instigated by rewards, and only by implication by punishment, seems imperatively required.

"No child should be permitted to go to daily labour till it can read and write, that could be accomplished by eight years of age. A certain number of cubic feet of air ought to be required according to the occupants of a cottage, and a fine imposed for overcrowding.

"How to reconcile good cottage accommodation with low rents and small wages is a problem; the price of cottage building cannot be reduced without inferior accommodation."

The following letter was addressed to the Assistant Commissioner by Sir Henry W. Dashwood, Bart., late Chairman of the Woodstock Union, in answer to a letter in which the Assistant Commissioner had proposed certain questions touching the condition of agricultural labourers to Sir Henry as a landowner who has taken a more than usual interest in the condition of the labourers on his estate and in the working of the poor law. "

93. "Kirtlington Park, Oxford,

"DEAR SIR, January 7, 1869.

"I WILL endeavour to answer as concisely as possible the questions you have sent me."

93a. Question 1. *Do you admit that the condition of the agricultural labouring class is unsatisfactory; and if so, to what do you attribute the unsatisfactory state?*

"I know that on January 1st, 1868, in this (Bicester) union one person out of every 18 was receiving relief from the rates, and that in one union of this county one person out of 11 was thus relieved.

"I cannot say that the present state of the agricultural labouring class is satisfactory. The pauperized state of this class originated, I believe, from the old law of settlement, and the lax system of administering relief, which encouraged persons to trust to the parishes for relief instead of relying upon their own exertions, thus reducing the provident to the level of the improvident, and encouraging the improvident to continue their thriftless ways. I question whether the liberal system of out-door relief to old people advocated by many, is not entailing the evil upon future generations. It is becoming the means of granting pensions indiscriminately to *worthy* and *unworthy*, and places the worthy man, who has by good conduct earned assistance from his children or other sources of private charity, on a level with the *unworthy*, who has forfeited all such claims, and it will discourage the labourer from making any provision whatever for old age."

93b. Question 2. *How would you improve the condition of the agricultural labouring class? Do you think it can be improved by legislation?*

"Whatever improves the agriculture of a district must also improve the state of the people living in the district. Improved agriculture implies improved cultivation, expensive and often complicated machinery and implements, superior horses, valuable stock, &c.; all these require responsible and intelligent labourers, who can only be retained by fair wages and cottages within easy distance of their work. To no class of labourer is health more essential than to the agricultural; it is impossible that he should be equal to his work unless he is well paid and properly lodged, but his condition will not be lastingly improved, no matter how wages may rise, until he becomes more provident and self-reliant. Will this take place unless the poor law is more strictly carried out and out-door relief brought down to a minimum? That the agricultural labourer can and will help himself is proved by the number of benefit societies which have been established and exist in spite of too easy administration of the poor law. Moreover we find that as a rule the most skilled labourers, such as thatchers, drainers, stonemasons, &c., come from open parishes where they have had to rely upon their own exertions.

"The late modification of the law of settlement and the Union Assessment Act having made the labour market practically free, the only legislative alteration which I consider might now be beneficial to the agricultural classes is that all rates should be paid half by the owner of property and half by the occupier (as is the case with regard to the poor rate in Ireland), and this is, I believe, the key to the proper administration of the rates, as it would be the means of inducing the owner, who is permanently interested in the welfare of his property, to co-operate equally with the occupier and his more temporary interests. Under the present system the payment of rates falls directly on the occupier, indirectly on the owner, the onus and responsibility of administration almost entirely on the occupier, who thus is obliged to bear more than his share of the burthen, and the owner is but too apt to shirk the performance of one of the most important and perhaps the most disagreeable of his duties as a magistrate, viz., that of acting as a poor law guardian."

93c. Question 3.—*What can you suggest as to primary education?*

"1st. That good primary schools for children up to 12 years of age should be established throughout the kingdom, the expenses to be met by rate (as before suggested, half from owner and half by occupier). 2nd. By payments from the children. 3rd. By assistance from Government. If the school passed the requirements of the Government inspector, who should examine at least twice a year, a grant should be made from the Consolidated Fund of one-third of the expenses. Existing endowments might go toward assisting the education of the older pupils, night schools, &c. The area for each school and general management of extra endowments might be controlled by a district board, perhaps the board of guardians might undertake these duties. As Government would contribute to the maintenance of the schools, they would of course also have a voice through their inspectors.

"The present state of voluntary education is not satisfactory; the maintenance of a school (if there is one) falls upon the clergyman or principal resident, not necessarily on the proprietor, and if none of these persons choose to undertake the responsibility of maintaining a school, the labouring population must remain untaught. When clergyman and proprietor undertake the entire management of a school, it is seldom they are able to enlist any assistance in the management and supervision, even from the parents. Under a rating system it may be presumed that all classes being interested, they will watch over the management, and endeavour to obtain good results for their money. The more persons who can be interested in the supervision the better, as then errors of management or misconduct of the teachers could not long continue without being discovered.

I am, dear Sir,
Your obedient servant,
HENRY W. DASHWOOD."

To G. Culley, Esq.,
&c. &c.

94. EXTRACT from Letter from Lord Camoys, Chairman of the Henley Union.

"As far as I know the labouring class are not so badly off in the Henley Union as they are in other parts of the country; we have scarcely any able-bodied men in the house at the present moment. Wages are moderate, and I believe satisfactory, and at the same time wheat has sunk in price; the farmers also can give and do give ample employment.

"Children in general are sent to school, but of course there is a disposition to take them from school when the interests of the employers seems to require it.

"Cottage accommodation is good in my neighbourhood, but there are over the face of the union cottages much too inferior for the comfort, health, and morality of the inmates. Cottages are everywhere too few, hence crowding and long distance from work. The rents of some of these poor cottages are too high, but the scarcity of them has a tendency to keep up their rents."

95. EVIDENCE given by C. E. Thornhill, Esq., J.P., Chairman of the Woodstock Union, and Vice-chairman of Quarter Sessions.

95a. *Cottages.*—"The cottage accommodation in this union varies very much; in some parishes it is far above the average, in others it is very indifferent, but on the whole it improves; bad cases of overcrowding are not common, so far as I am able to ascertain from the relieving officers of the union; the amount and quality of accommodation is always an important matter of consideration when a question arises whether relief shall be given in or out of the workhouse."

95b. *Allotments.*—"There are some good allotment fields in the parishes round Woodstock on the Blenheim estate, and many of the tenant farmers allow the men regularly employed such pieces of ground to grow potatoes, &c., but in my opinion a systematic provision of good sized allotments would tend very greatly to the amelioration of the labourer's condition, and it has often occurred to me that it might work well if the Legislature would give to each board of guardians power to purchase land for this purpose, conferring on them the power of purchasing (otherwise than by compulsion) contained in the Lands Clauses Consolidation Act. If every family had a good allotment, the boys of the family would have profitable occupation, fitting them for their future life, compatible with their attendance at school. I don't know whether the public provision of allotments (of course at a proper rent) is bad political economy, but I have a great opinion of its practical value; the difficulty in handling it would be that farmers, at least the more ignorant sort, dislike the system as giving the men feelings of independence, and such a tendency on their part would make them as guardians lukewarm in carrying out the permissive provisions of an Act of Parliament if such an Act should ever be passed; still I think that it would work, and I don't think that the landowners would, as a rule, be adverse to selling land for this purpose."

95c. *Yearly Hiring.*—"I believe the Oxfordshire custom as to payment of labourers during sickness is as follows:—A purely agricultural labourer hired for a year would almost always be hired at *weekly* wages, and if he should fall sick, he would lose his wages during his absence from work. But a domestic labourer, if I may so call him, hired at *yearly* wages, and being in the house, would, if sick, be sent home

Oxfordshire.
Mr. Culley.
C.
j.

during his sickness, receiving his wages, but losing his keep.

"The law applicable to the construction of such contracts would, I apprehend, be governed very much by the custom of the country as to matters of detail not clearly expressed in the contract itself."

96. The following opinion as to the treatment of resident and vagrant paupers was given by Mr. Thornhill at a meeting of the Central Farmers' Club on the 1st February 1869, when an interesting discussion took place on pauperism and vagrancy.

Pauperism and Vagrancy.—Mr. Thornhill (Chairman of the Woodstock Board of Guardians) said,—"Vagrancy was attributable partly no doubt to indiscriminate charity, but partly also to the vagrant tastes of a large portion of the human race; and if they wanted to check it, they must not merely try to induce the charitable to button up their breeches pocket, but also endeavour to make the trade of the vagrant disagreeable to those who followed it. Perhaps there was no better way of arresting indiscriminate charity than to convince the public that there was a universal system throughout the country under which every man who was really destitute could obtain relief. That brought him to the present state of the law of settlement and removability. The system had, as they all knew, been gradually undergoing a change for some years past, and now no man was removable if he had lived in the union for a year. Supposing the law of settlement and removability to be abolished altogether, there would be two distinct classes of paupers to be dealt with. They might deal with the resident paupers as they did now; but the class of vagrants must clearly be dealt with in a different manner. The one class might be called the resident, the other the non-resident paupers. Dealing with the resident paupers as they did now, how were they to deal with the vagrant? His opinion was that, instead of giving him a night's lodging, they should receive him for not less than fourteen days, during which he should be kept steadily at work every day under regular taskmasters, and live separately from the other paupers. If at the end of the fourteen days he had earned enough to provide himself with clothes, or the means of travelling by railway, and wished to leave, the money might be so applied for such purposes; but if, on the other hand, he said at the expiration of the fortnight that he had nowhere to go, and wished to remain, he might be allowed to stay on the same conditions as before, for a further period, and his case should afterwards be brought before the board. That was treatment which would not be injurious to the man who really desired to earn an honest living. If such a man, after his probation, wished to try his chance in another part of the country, the board of guardians might give him what was called under Mr. Baker's system a ticket-of-way, and he would then have a night's lodging at any workhouse to which he came on the specified route, as he would now. If a man who had been relieved for fourteen days in the manner he had suggested should be found within six or eight months acting as a vagrant, let him be sent to prison, any act of begging being treated as vagrancy. Thus they might convince the public that there was one universal system of relief throughout the country, under which no one could starve, while at the same time relief would be administered in a form which would be unpalatable to the true vagrant."

Yearly Hiring.

97. Copy of Letter from R. B. B. Hawkins, Clerk to the Justices of the South Wootton Division.

Woodstock,
Dear Sir, December 21, 1868.

In the Woodstock Union farm servants hired by the year at weekly wages are not unfrequently taken before the magistrates for breach of contract in leaving service. But the question of maintenance has not arisen.

Believe me,
Geo. Culley, Esq., &c. &c. Yours very truly,
R. B. B. Hawkins.

South Wootton Division, Oxon.

98. Return of Summary Convictions for the Year ended 30th September 1868.

Vagrancy Act.	Game, Trespass, &c.	Larceny.	Master and Servant Act.	Bastardy.	Wilful Damage.	Drunkenness, &c.	Assault.
38	10	5	3	4	6	5	5

99. Letter from Capt. C. Mostyn Owen, Chief Constable of Oxfordshire.

Chief Constable's Office, Oxford,
My dear Sir, January 13, 1869.

In reply to yours, there are many statute or hiring fairs in this county, and I cannot see any objection to them. Farm servants must have their recreations as well as their betters, and those who attend such fairs are generally well conducted and as sober as persons of the country working class are when they can get beer. Girls will get sweethearts and occasionally have bastard children in spite of all Acts of Parliament.

Yours truly,
C. Mostyn Owen.

100. Evidence given by the Inspector of Police at Witney.

"There are some very poor and highly rented cottages in Witney; a very poor cottage will let at 1*s.* 9*d.* a week, the cottages in the country round are better and cheaper. I was stationed for seven years at Henley, where more women are employed in the fields than here. Women about here also do gloving and slopping. There are several men out of work at Filkins and Aston; they are a class of men who go away to work in summer and come back to their parishes in winter. There are no men out of work at Minster Lovell, they have bits of land, three or four acres each. The Local Board of Witney appoint the same man inspector of roads, nuisances, and lodging-houses, and the lodging-houses do not conform to the Act of Parliament. In Witney we have an average of 13 tramps daily, and they seem daily to be on the increase."

Pauperism.

101. Statement of the Proportion of In-door and Out-door Paupers and Population in the Unions of Oxfordshire, giving the Population and Acreage of the Unions and Number of Acres per Head of Population.

Union.	Population.	Acreage.	Acres per Head of Population.	Proportion of Paupers to Population.
Henley	18,200	61,662	3·38	1 in 11
Thame	15,305	54,997	3·59	1 in 15
Headington	17,107	24,637	1·44	1 in 17
Oxford	19,960	2,930	·14	1 in 20
Bicester	15,555	64,127	4·12	1 in 18
Woodstock	14,236	47,913	3·36	1 in 15
Witney	23,227	70,169	3·02	1 in 14
Chipping Norton	17,296	76,418	4·41	1 in 15
Banbury	30,171	75,324	2·49	1 in 13
County of Oxford	171,233	479,267	2·80	1 in 15
England	20,066,224	37,324,883	1·86	1 in 19

102. NUMBER of PAUPERS relieved on the 1st of January 1868.

	Proportion to whole Population.	Increase since January 1st, 1867.
England - -	1 in 19	8·0 per cent.
Oxfordshire - -	1 in 15	5·1 „
Berks - - -	1 in 16½	1·6 „
Bucks - - -	1 in 14	4·4 „
Beds - - -	1 in 14½	14·4 „

WOODSTOCK UNION.

103. Pop., 14,236. Acreage, 47,913.

Expenditure for Half-year ending Lady Day 1868.

	£	s.	d.
In maintenance - -	938	1	0
Out relief - - -	4,037	12	0
	£4,975	13	0

About 7*s.* per head of the population.

104. No non-resident relief is given.

The board have a byelaw to the effect that they will not relieve the paupers of another union nor repay the cost of relief to paupers settled in this union, but resident elsewhere. There is no special rule that if children are not sent to school relief to their parents is withheld. (Evidence of Mr. W. M. Duke, clerk to Mr. Hawkins, clerk of the Woodstock Union.)—G. C.

105. The following table shows the effect on rates in three close and two open parishes in Woodstock Union by the change from parish to union chargeability, by giving the charges for relief of the poor levied on these parishes for the two years before and after union rating was introduced (as given by Mr. W. Wing).

	Open Parishes.		Close Parishes.		
	Steeple Aston.	Stonesfield.	Rousham.	Glympton.	Over Worton.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
For two years before union rating - -	431 3 7	419 18 3	164 10 7	118 10 4	55 0 9
Ditto after ditto - -	473 7 8	191 2 7	266 11 9	233 4 6	163 10 9
Difference since union rating was introduced - - increase	42 4 1	—	102 1 2	114 14 2	108 9 4
Difference since union rating was introduced - - decrease	—	228 15 8	—	—	—

The effect of the change is therefore—

To *decrease* the rates in the two *open* parishes taken together from 851*l.* 1*s.* 10*d.* to 664*l.* 10*s.* 3*d.*, *i.e.*, by about 20 per cent., and to *increase* the rates in the three *close* parishes taken together from 338*l.* 1*s.* 8*d.* to 663*l.* 6*s.* 4*d.*, an increase of nearly 100 per cent.

Between the years 1864 and 1866 the rateable value of the two open parishes had increased from 4,305*l.* to 4,493*l.*, whereas that of the close parishes had decreased from 4,563*l.* to 4,534*l.* The rateable value of the groups compared may be taken as equal.

106. LETTER addressed to the Assistant Commissioner by the Rev. HENRY TUFNELL YOUNG.

Mallards Court, Stokenchurch,
Oxon, 16th March 1869.

Night-schools.

MY DEAR SIR,

ON the subject of education I would say I do not advocate the cause of "night schools," so strongly as some do, because I think they are apt to lead parents to neglect to send their children to school at what appears to be the most proper time, namely, when they are too young to work. They look forward to their son getting some education at the night school when he is earning wages, and can pay for himself, and consequently to save themselves expense they neglect to send him to school, and so the boy gets no education as a boy at the day school; and he may or may not get any education at the night school as he grows up. The matter will then rest entirely with himself, and I think it will be found that where one avails himself of the opportunities offered by the night school, many more do not. I think that the "Labour "Regulation Act," cap. 146 of 1867, might be applied with some modifications to the case of children and young persons employed in agriculture.

Cottages.

Next I would remark that the cottage accommodation for the labouring poor is generally speaking so bad that it cannot be sufficiently condemned. Horses and cattle are often provided with a more substantial dwelling than the labouring poor. I am well aware of the stereotyped answer made to every remark about cottages, viz. that it does not pay to build them. Nor does it pay to build farm buildings, but a landlord could not let his farm without them, they being so to speak the fixtures and furniture of the farm, he is obliged to build them, and I think there ought to be cottage accommodation on every farm sufficient for the labourers employed on it, just as there is sufficient stable room, &c. for the requisite number of horses and cattle, &c. I do not think the moral and physical condition of the labourer can be raised and improved until proper dwellings are provided for him. The over-crowded state of many of the present cottages is injurious to health and the constitution, and the intermixture of sex which it causes prevents the nurture of the proper feelings of decency, and where these are wanting chastity will be wanting too. I am satisfied from observations which I have made during a period of 35 years passed in the ministry of the church, that before our teaching and preaching can have the effect we look for we must house the labourer in a better manner.

Public-houses.

Another great source of evil to the labouring classes is the great number of public houses and beer shops. They are the hotbeds of crime, destitution, and poverty. The union and the police courts can bear stronger testimony to this than anything I can say. If it be said that the revenue would suffer if licensed houses were not numerous, my answer is (and I am no teetotaller or any thing of the kind), that the country had better give up all the revenue arising from licensed houses and the sale of spirits, &c., than have to pay as it now does for punishing the crime, and supporting the misery and destitution which they produce.

Oxfordshire.

Mr. Culley.

C.
j.

Illegitimate children.

There is one more point to which I would briefly refer, affecting the law as it now stands with regard to *illegitimate children*. The present law compels the father of an illegitimate child (when affiliated) to pay a certain sum weekly for its maintenance, but relieves him from this liability in the event of the mother of the child marrying, and transfers the responsibility from the real father to the woman's husband. This I think ought to be altered, and that the real father of the child should be obliged to pay for the child after the mother's marriage the same as he did before it.

A woman, if she has other illegitimate children by another man, frequently will not marry because if she does the husband becomes charged with the maintenance of a child not his own, and the man is content to live with the woman in an unmarried state, as it relieves him from the charges of the first illegitimate child, and entails upon him only a limited liability, or indeed no liability at all as regards any children (unless affiliated), which he himself may have by the woman. A woman as a rule does not like to affiliate children by a second man, and so he can and does sometimes leave her without the children having been affiliated; or she may die herself without having affiliated them. In this parish a short time ago a a woman died leaving nine illegitimate children, not one of them affiliated; and we have at this present time a man living here with a woman by whom he has five illegitimate children, and not one of them affiliated, and if anything is said to him he threatens to be off (he is a Gloucestershire man) and leave the woman and children chargeable to the parish. At our petty sessions at High Wycombe a short time ago, we had to send a poor industrious man to prison because he could not keep *three* illegitimate children which his wife had had before marriage, she having run away and left him with the children to support as he best could.

In the endeavour then to mitigate the evils arising from the circumstances alluded to, I would suggest that the father of an illegitimate child should not be relieved from his liability by the marriage of the mother of the child, but that he should be compelled to keep up his payments for the support of the child after the mother's marriage, the same as previously to it. I would moreover suggest that every woman should be compelled by law to affiliate every illegitimate child she gives birth to. If something of this kind is not done, I fear the practice of men living with women without being married to them will increase, as the man, so long as the children are not affiliated, is free from all pecuniary liability and he can desert them and the mother whenever he pleases.

Believe me,

Yours very truly,

G. Culley, Esq. HENRY TUFNELL YOUNG.

BERKSHIRE EVIDENCE.

APPENDIX A.

SUMMARY OF ANSWERS TO COMMISSIONERS' CIRCULARS OF INQUIRY.

The following answers are collected from 85 circulars of inquiry (39 long and 46 short circulars) returned from 61 parishes in Berks, of which—

51	circulars were returned from	30	parishes in Wantage Union.	
10	"	9	"	Faringdon "
4	"	4	"	Abingdon "
2	"	2	"	Wallingford "
8	"	7	"	Bradfield "
4	"	4	"	Newbury "
1	"	1	"	Hungerford "
4	"	4	"	Wokingham "
1	"	1	"	Windsor "

36 circulars being returned by clergymen for their respective parishes, 12 by landowners of whom four are also occupiers of land, 34 by occupiers of land of whom 30 are also guardians of the poor for their respective parishes, and 3 by schoolmasters.*

I. As to the Employment in Private Gangs.

The Assistant Commissioner received no return of children, young persons, or women employed in private gangs.

II. As to the Employment of Children, Young Persons, and Women not in Gangs, either "Public" or "Private," but individually or in company with a few other persons.

Longer circular questions, 22 *a.* and *b.*
Shorter " 1, 2, and 3.

The following summary will give the substance of answers to these questions from 85 circulars returned from 61 parishes, the tabulated labour returns being compiled from 2 returns for entire parishes, and 49 returns (showing the age and sex of all persons employed *at different seasons of the year*) made by as many occupiers of land, whose occupations altogether extend to 25,672 acres situate in seven different unions.

Table A. shows the number, age, and sex, of persons employed during the spring, summer, and winter quarters on 49 farms covering 25,672 acres. This table gives also the proportion of arable and pasture land to which each return applies as well as the nature of the soil and course of cropping where these particulars were stated by the person making the return. It will be observed that the total number of extra hands employed during hay and corn harvest is only given in 10 cases, the other returns for the summer quarter give only the number of persons employed regularly throughout that quarter.

Table B. shows how employment varies throughout the four seasons of the year (with the exception of the different manner in which the summer return is treated). The return for autumn includes only the hands regularly employed throughout that season.

Table C. represents the gross return of children, young persons, and women employed in agricultural labour as given by circulars for parishes and farm returns (taking the spring staff in the latter case as representing the usual staff of a farm).

* Another circular, returned by the Rev. John Blissard for Hampstead Norris parish in Wantage Union, arrived too late to be put in evidence.

Table A.

Return giving Age, Number, and Sex, of Labourers employed on 49 Farms in Berkshire, showing the Variation of is that given

Union.	Parish.	Extent of Farm in acres.			Nature of Soil.	Course of Husbandry.	Spring.												
							Males.						Females.

TABLE B.

The following TABLE shows the VARIATION in the LABOUR RETURNS for the different Seasons of the Year on 49 Farms (given in detail for the Spring, Summer, and Winter Quarters in Table A).. The Summer Returns includes the extra hands employed in Hay and Corn Harvest in 10 cases, the other Return include only the staff employed throughout each quarter of the year. These 43 Farms extend over 25,762 acres, of which 18,920 acres are arable and 6,842 acres are pasture.

Longer Circular, 22 (*c.*) In what kinds of work are they employed during the different seasons of the year ?

Shorter Circular. 1. At what ages, and at what times of the year, are boys employed in agriculture on your property or farm, and in your parish generally ?

2. Are girls so employed ? and if so, how many, at what ages, and in what occupation ?

3. To what extent are women so employed ?

The following is an epitome of answers to these circular questions :—

Boys under 10 are only occasionally employed in "field-keeping," "pig-minding," "sheep-minding," "cattle-minding," and helping their parents in hay and corn harvest.

Boys above 10 are generally employed as carters or ploughboys, helping shepherds and cattle men; they are usually hired by the year from Old Michaelmas day (Oct. 11th) ; they are employed on the downs as carter boys younger than in the vale country and towards the west of the county younger than towards the east. (The Assistant Commissioner found many boys hired by the year in Wantage Union at 10 years of age, but only one under 10.)

Girls under 13 are very little employed in farm labour except in helping their parents at piece work in harvest. Some few are employed on the down farms in Wantage Union, minding pigs and cattle, and doing the same work as boys under 10.

Unmarried women are not much employed, most of them going out to service ; when employed they do the same work as married women, who are very generally employed in light farm labour.

In spring—

In stone-picking, weeding, collecting twitch (or quitch or squitch), bean setting, thrashing and winnowing corn, &c.

In summer—

In hoeing corn and roots, hay-making, harvesting, &c.

In autumn—

In picking couch, stone-picking, pulling and cleaning roots, thrashing and winnowing corn, cutting chaff, spreading dung, &c.

In winter—

In spreading dung, thrashing, winnowing, cutting chaff, and

The following are examples of answers to these questions :

WANTAGE UNION.

P. Wroughton, Esq., landowner, Chaddleworth, says, "Boys are employed at the age of 13, rarely "under this age, though occasionally I hear of cases "in which a boy of 12 is employed, especially in "harvest time. Boys of 13 are employed all the "year round. Girls are not employed in agriculture "in this parish under the age of 13. A few girls "a year or two older occasionally find employment in "stone picking, and in harvest time, but as a rule "their labour is not in any demand. Women are "employed to a great extent, and can find employ-"ment the greater part of the year. Last year "has been a bad year for them, as there has been so "little turnip hoeing for them to do."

Mr. W. Athawes, occupier, Hanney, says, "Boys "from 13 are employed throughout the year, and in

" almost every case they are hired by the year from " Michaelmas to Michaelmas. Girls are seldom em- " ployed, and, when so, at very light work. Women " are largely employed in fine weather; some women " in this neighbourhood are capable of much work, " having been accustomed to farm work from their " youth, and such women are very useful in a farm, " in picking couch, haymaking, hoeing and weeding " corn, and in some cases spreading dung."

Mr. Luke Lowsley, Hampstead Norris, occupier, says, " Boys from 12 years old are hired by the year " from Old Michaelmas day (October 11th). A few " girls are employed at light work with the women, " whose character will not command a situation in " domestic service. Women are employed generally " to do light work. In the field picking stones, " spreading manure, picking squitch, pulling roots, " weeding, &c., and at piece-work with their husbands " hoeing, reaping, and forking and raking corn. In " the barn assisting thrashing, winnowing, &c., and " mending sacks."

C. J. Eyston, Esq., J.P., landowner, East Hendred, says, " Boys are employed in agriculture as soon as " they are capable of work and can earn anything; " the average age for commencing work is about 10. " The elder or stronger boys work throughout the " year, being employed as carter boys, the younger " and weaker boys are employed in 'minding' pigs " and 'bird-keeping.' Girls are not much employed " in the fields, except during the hay and corn har- " vests, and in this kind of work they seldom do " much until they have reached 16. Women are " employed in 'squitching' (*i.e.*, picking couch grass " off the land), in haymaking, in reaping, in supply- " ing the sheaves for machine thrashing, in preparing " the straw for thatching, and in turnip hoeing. In " reaping they only assist their husbands or fathers, " the farmers paying the latter only at a price agreed " upon per acre."

Mr. Kingham Reeves, occupier and guardian, West Hendred, says, " Boys from 9 or 10 are engaged in " the parish from March till October to frighten the " birds, mind sheep and pigs, make hay, and assist in " the lighter work; there are about 20 ploughboys, " hired by the year. Girls from 12 to 18 are en- " gaged from March till October weeding, squitching, " haymaking, harvesting, &c. The labourers' wives " generally go out to work the greater part of the " year, weather permitting."

H. D. De Vitre, Esq., guardian, Charlton, says, " According to the children's own account from 7 " years old, though I believe the farmers say not " before 10 years of age, my informants are boys " attending the night school in this village."

Faringdon Union.

Mr. Heber Humphrey, occupier and guardian, Ashbury, " Boys are employed at nothing except bird " keeping, and then only in spring and summer, till " they are over 9 years of age, when they drive " horses and help shepherding. Girls are not generally " employed, except bird-keeping in spring or summer, " and a little in haymaking, and help their friends at " the piecework in the harvest. But nearly all get " out to service, and as a rule stay at school till they " get a place at service. I should say about one " woman is employed to every 100 acres, but they are " not expected in bad weather, and are not supposed " to make full time as men, so they never ask per- " mission to stay away for their washing or other " household duties, except in hay time or so."

Henry Tucker, Esq., Bourton, high-sheriff, says, " Boys are not generally employed in this parish " under 10 years of age as ploughboys, but are " frequently taken from school at 8 or 9 for 'bird- " 'keeping' in autumn, spring, and summer; those " who go out as ploughboys are employed throughout " the year. Girls are never employed in driving " plough, and seldom at bird-keeping, nor do they go " out to field-work until about 16 years of age, and " then only when accompanied by their mothers or " other married women, for haymaking, tying up " sheaves, wheat hoeing, or picking couch off the " land. Women are very generally employed in field- " work during the whole year; their work is wheat " and bean hoeing, spreading manure, haymaking, " reaping, and steam-thrashing."

Abingdon Union.

The Rev. F. G. Henley, Cumnor, says, " Boys are " very seldom employed regularly all the year until " they are over 10; they sometimes go to 'crow- " 'keeping' and sheep-keeping as young as 9, which " occupies them about half the year. Girls are not " employed at all, except at haymaking and in harvest. " But few women are willing to work in the field; " those that are willing are employed all the year, " weather permitting, except about two months in " winter."

Wallingford Union.

Rev. J. C. Clutterbuck, Long Wittenham, says, " The employment of boys begins at 9 years of age. " Girls are very seldom so employed. The employ- " ment of women is confined to the wives of the men " who work on the respective farms."

Mr. S. Hart, occupier, South Moreton,—" Boys " over 13 years are employed all the year in agricul- " ture. Girls are not employed. Women are " employed in summer and when the weather is " fine in autumn."

Bradfield Union.

Mr. Chas. Witherington, occupier and guardian, Bradfield,—" Boys are hired from Michaelmas to " Michaelmas, and employed all the year; lodging is " found, and a woman employed to cook and care for " them; the boys in this parish are mostly above 12 " years of age. Girls are very seldom employed in " this parish, except to assist their parents cutting " corn. Women are employed constantly for three- " quarters of the year; in the winter quarter very few " are wanted, and very few care to work."

Rev. Jas. Fraser, Ufton, says, " The boys are " either with sheep or horses all the year through. " Women's work is not constant; they are, however, " employed in spring in spreading manure and weed- " ing; summer, in haymaking and corn harvest; " autumn, in pulling roots and acorning; winter, in " spreading manure and serving thrashing machines."

Newbury Union.

G. White, Esq., landowner, Thatcham, says, " Some few boys are employed under 12 years in " 'bird staring,' as it is called here, older boys are " employed as much in winter as in summer; there " is a scarcity of boys for farm work at the present " time. I never employ girls. I have only heard or " two farmers in this union who employ girls fre- " quently; still I am no authority as to what others " do, never having taken an *active* part in farming, of " in inquiring into farming matters. I employ women " in couching, dock drawing, winnowing corn, &c., " but lately there has been more difficulty in getting " them into the fields, as they all find employment in " the paper mill."

Mr. Richard Fisher, Winterbourne, occupier and guardian, says, " The boys employed to drive the " teams are seldom under 12 years of age. A few " younger boys may be employed in guarding fields " recently sown, and in keeping pigs in the stubbles " after harvest. On some farms a few single women " may be employed, but young girls are seldom " employed. Women are not much employed in " agriculture, except in haytime and harvest."

Hungerford Union.

G. C. Cherry, Esq., J.P., Chairman of Union, says for the union, " Boys are employed sometimes at " 9, and generally at 10 years of age; at these ages " they are not at work throughout the year, but " occasionally at harvesting, bird-keeping, pig-tending,

Berkshire.
Mr. Culley.
A.
j.

" &c., and after about 13 years of age they are employed throughout the year, being most frequently hired by the year. Girls under the age of 13 or 14 years are rarely employed in agriculture; when older they are much employed, harvesting, cleaning roots, and weeding corn in the fields and helping in the barn-work." "Women are generally employed in farm labour."

WOKINGHAM UNION.

Capt. Walter, occupier, Wokingham, says: — "Boys are employed all the year round, but not at heavy work. Except in cases of bird-keeping, they rarely commence before ten years of age. For my own part I consider the employment of boys very expensive, and think that they should always be placed, if possible under a respectable task-master. I hope the late Act may enable me after a time to establish a gang-master, under proper regulations." (Capt. Walter does not employ ploughboys.—G. C.) "Girls are not employed in any farm or anywhere in the neighbourhood as far as I am aware. Women are occasionally employed in weeding, haymaking, and harvesting, never at heavy work, nor during bad weather."

Longer Circular (*d.*). "Do they live on or near the farms on which they work?"

Shorter Circular, 4. To what distances do the children, young persons, and women employed on great farms and your parish generally go to work?

29 witnesses say the persons employed live near their work.
3 " " " up to 1½ miles.
5 " " " up to 2 miles.

Others answer as follows:—

WANTAGE UNION.

Mr. John Brown, Childrey, says:—"The utmost distance is 3 miles."

C. J. Eyston, Esq., J.P., East Hendred, says:—"The extremity of the parish lies about 3 miles from the village; occasionally, but not often, they have to go that distance. Average distance from 1 mile to 1½ miles."

Rev. J. F. Collins, J.P., Chairman of Board of Guardians, East Lockinge, says: — "The distance varies very much as the farms are long and narrow."

BRADFIELD UNION.

Rev. A. L. White, Mortimer West End, says:—"As there is no village, the houses being scattered about all over the parish, the people have no real distance to go for their work."

HUNGERFORD UNION.

G. C. Cherry, Esq., J.P., landowner, Kintbury.—"Generally children and women live within easy distance of their work, but some are obliged to go to and from their work distances varying from 1½ to 3 miles each way."

WINDSOR UNION.

Mr. Tait, occupier for Her Majesty, says:—"On this farm (Shaw Farm) not more than a mile in the parish, I should say from 1 to 4 miles."

Longer Circular, 22 (*c.*) What are the usual hours of work upon the land?

(*d.*) "What are the times allowed for meals?"

Shorter Circular, 5. "What are their hours of work?"

10 hours for men
" for boys
8 hours for women
} Are the usual working hours in Berks.

Women, however, in summer and when working with men, as in thrashing, work the same hours as men. Their hours of work are described by:—

17 witnesses as from 8 to 5 in summer and 8 to 4 in winter.
5 " " 8 to 4 in summer and 8 to 4 in winter.
5 " " 8 to 5½ in summer and 8 to 4 in winter.
5 " " 8 to 6 in summer and 8 to 5 in winter.
5 " " 7 to 6 in summer and 8 to 5 in winter.

Other witnesses say 9 hours in summer and 7½ to 8 hours in winter.

Boys who are not carter boys work the same hours as ordinary day-men usually. In summer from 6 a.m. to 6 p.m., with 2 hours allowed for meals. Or from 7 a.m. to 6 p.m., with 1 hour allowed for dinner. In winter as long as light will permit.

From the returns the Assistant Commissioner received it would appear that there is an inclination to increase men's hours to 10½ hours in some farms and to reduce them to 9½ on others; 10 hours, however may be taken to be the working hours of the county for men and boys who are not carters (in charge of horses), shepherds, cattle men, or their assistant boys. The carter, who has charge of horses, should be in his stable at 5 a.m. is allowed from 6 to 7 a.m. for breakfast, works with his horses till 3 p.m. with half an hour allowed at 12 o'clock if he chooses to take it. At 3 p.m. he dines, and at 4 goes back to his stable for at least 2 hours' work; the carter's assistant boy works with his master. Carters or ploughmen who are not in charge of horses except when at work, and ordinary ploughboys, work from 7 a.m. to 3 p.m., with a rest for luncheon, and, having rested from 3 to 4 p.m., go to any odd jobs till 6 p.m. Where "Scotch" hours are worked each ploughman has charge of a pair of horses and works with them from 6 till 12, and from 2 to 6 p.m., or from 6 till 11½ and from 1½ to 6.

Mr. W. R. H. Barker, surgeon and occupier, Wantage, says,—"Women 8 a.m. to 5 p.m., out of which they take one hour for dinner. Carter boys bait their horses from 4 to 6 a.m., then have an hour for breakfast, are in the field from 7 a.m. to 3 p.m. then have an hour for dinner and are in the stables again till 6 p.m."

John Blandy Jenkins, Esq., J.P., Kingston Bagpuze, says,—"Women work from 8 a.m. till 5 p.m., with an hour allowed for dinner. Boys, who are employed chiefly under the carters and shepherds, work from 5½ or 6 a.m. till 6 p.m. or as long as the carter or shepherd likes to keep them."

G. C. Cherry, Esq., J.P., landowner, and Chairman of the Hungerford Board of Guardians, and speaking for the union says,—"Children and young persons, male, keep the general working hours of the district, viz.:—10 hours in summer and as many hours under 10 in the winter as the light will permit; those employed in the stables have to be at their places very early in the morning. The working hours of young persons, female, and women, are 9 hours in summer, and as many under 9 in winter as light will allow; the working hours in harvest are more."

Longer Circular, 22 (*h.*) — "Does the demand upon their physical powers injuriously affect their health and constitution?"

24 witnesses say "No."

1 witness says, "In a few cases."

Others answer as follows:—

WANTAGE UNION.

The Rev. J. S. Wasey, Compton, says, "Yes, by exposure to weather their minds are affected more than their bodies."

The Rev. C. F. Willis, Letcombe Basset, says, "There is scarcely one young man in the village reaching the height of 5 feet 6 inches. I entertain no doubt that, poor living also being taken into account, the physical frame is weakened and the

" growth stunted by the early period in life at which " field labour is commenced."

The Rev. B. Tyrwhitt, East Lockinge, says, "The " carter boys and plough boys are often very short, " and seldom are fine men, buying their own food, " which they eat in a cottage assigned to them."

BRADFIELD UNION.

The Rev. Jas. Fraser, Ufton, says, "I do not think " it does when they are prudent."

Longer Circular, 22 (*i.*)—"Are the young or the " females, whether young or grown up, subject " to any ill-treatment?"

29 witnesses say, "No."

BRADFIELD UNION.

The Rev. Jas. Fraser, Ufton, says, "Not from " their employers, though occasionally a young boy " may be knocked about by a rough shepherd or " carter."

Longer Circular, 22 (*j.*)—"Do any special em- " ployments injuriously affect females or the " young generally?"

23 witnesses say, "No."

1 witness says, "Not physically, but much " morally."

1 witness says, "It unfits them for domestic " service."

Other witnesses answer as follows:—

WANTAGE UNION.

The Rev. Thomas A. Houblon, Peasemore, says, " No, we have only field work."

BRADFIELD UNION.

The Rev. Jas. Fraser, Ufton, says, "I am not " aware of any, though a woman is not a fit person " to serve a thrashing machine."

Longer Circular, 22 (*k.*)—"Have you any obser- " vations to make as to the effect of the employ- " ment of females in agriculture on morals and " on their proper training for domestic duties?"

15 witnesses answer, that it "unfits" them for their domestic duties, and of these 12 also add that the " effect on morals is bad."

Other witnesses answer as follows:—

WANTAGE UNION.

Rev. R. Barnes, Ardington.—"Married women " acquire rough habits and neglect their domestic " duties, and young women become disinclined for " the restraint of house service, and are inclined to " marry too young."

Rev. G. Purdue, Challow.—"'*Field-talk*' is a " common expression in this neighbourhood when " women talk loosely. Six or seven women working " together will talk of matters male labourers would " not mention."

Rev. Jas. Macdougall, Hanney.—"Working in " the fields makes the women more healthy and " vigorous, but it is objectionable on account of the " effect on their morality."

Rev. T. Luck, R.C.P., East Hendred.—"The " moral effect is undoubtedly bad, and I would never " recommend a girl for domestic service who had " been so employed."

Rev. C. F. Willis, Letcombe Basset.—"A respect- " able unmarried female will very rarely seek em- " ployment in the fields, except from the necessity of " maintaining herself when unable temporarily to get " into domestic service. Those who are constantly " thus engaged are invariably the worst educated, " the roughest in manners, and the least reputable in " character. When they have ever taken to the " work they seldom care to go out to service, partly " as knowing they can only obtain inferior situations, " and partly because they do not like to be under " any restraint and to lose the freedom they have " been accustomed to in out-door work. The general " testimony of the more respectable married women " is that, though compelled at times to work in the " fields themselves, they would on no account permit " their children to be so employed, as they consider " the conversation which too often goes on, the free " intercourse with the men which it necessitates, and " the roughness of the work itself to be most injurious " to morals and character."

Rev. T. Lanfear, Letcombe Regis.—"Girls em- " ployed in the field do not, as far as I have observed, " make nearly such good housewives as those who " have been domestic servants. I should think their " employment in agriculture less injurious to their " morals than in the factory."

Rev. B. Tyrwhitt, Lockinge, says, "It is the cer- " tain ruin of the female character; farmers and " farmer's wives admit this; labourers' wives begin " to feel it. They become bold, impudent, scandal- " mongers, hardened against religion, careless of " their homes and children, most untidy, given to " drink, coarse minded, debased, depravers of any " virtuous girl who works with them; they have no " pride in their home or their children, few home " feelings. The children are ragged and quite un- " taught, and a dirty home often drives the husband " to a public house."

Rev. W. Butler, Wantage.—"It seems to be all but " universally agreed that the employment of females " in agriculture is very detrimental to their morals. " I have closely questioned the elder women on this " subject."

FARINGDON UNION.

Mr. E. W. Moore, land-agent and guardian.—"I " believe nothing more injurious to young females " than field employment, especially when the sexes " are mixed. Under proper care during the summer " months I have not found it injurious, especially " when under a mother's eye, but for some time it is " difficult to get them to submit to rules for their " benefit; after a time they are greatly appreciated."

BRADFIELD UNION.

Rev. T. H. Bushnell, Beenham.—"Our girls more " frequently go astray in domestic service than in " agricultural employment."

Rev. T. Stevens, Bradfield.—"The morality of " women engaged in farm labour is quite equal to " that of women in domestic service."

Longer Circular, 22 (*l.*)—"Taking into considera- " tion the demand for labour in your parish and " neighbourhood, and the pecuniary resources of " the agricultural labourers, are you prepared to " recommend that any restriction should be " placed on the employment of females in field " work? If so, would you limit the restriction " to females of a defined age, or would you pro- " hibit female labour in the fields altogether, " excepting at hay and corn harvest?"

Shorter Circular, 7.—"Is it desirable to place any " restriction on the employment of females, and " especially of the young in agriculture?"

Two witnesses say, "Yes."

Four witnesses say, "Young women should not be " employed."

Six say, "Employment should be restricted to " harvest."

Two say, "Females should not be employed under " 15."

Two say, "Females should not be employed under " 13."

Thirty-five say, "No legislative restriction is de- " sirable."

Other witnesses answer as follows:—

WANTAGE UNION.

Rev. R. Barnes, Ardington.—"I do not consider " that any legal restrictions could be applied, the " labour is wanted, though the effect on the labourers " here is too obvious to be overlooked. If any limit " can be effectually carried out it should be between " the ages of 15 and 21."

Berkshire.
Mr. Culley.
A.
j.

Rev. J. Macdougall, Blewbury.—"All females "should go to service. Those employed in the fields "remain in ignorance; they learn nothing, they "know nothing; when they are married they are "poor managers in every respect; the children feel "the effects, the husband escapes to the public house, "and so it gets worse and worse. If females must "go to field labour, it should be confined to the hay "and corn harvest—*better not there.* Nothing really "gained if kept from domestic service, it is in this "they have to see and learn everything, nothing in "the field."

Rev. T. G. Onslow, Catmore.—"I think the em- "ployment of females is beneficial in this parish."

Rev. E. Thompson, Chaddleworth.—"I am not "prepared to recommend any restriction on their em- "ployment, as the number so employed is gradually "diminishing, and I think that, with better cottage "accommodation and the good training which the "children are getting in our national schools, they "will soon cease to be employed at all in field-work."

Rev. G. Purdue, Challow.—"I cannot see how "female labour is to be done without. At the low "rate of wages an agricultural labourer receives, his "wife's or daughter's earnings are a great help. I "would limit girls to 16 years of age, excepting at "hay and corn harvest."

Rev. T. Luck, East Hendred.—"As the whole "question depends upon the moral injury to girls, I "am of opinion that restrictions should be placed on "the employment of females in field-work. I would, "if possible, prohibit female labour in the fields alto- "gether."

Rev. P. Longmore, Hermitage.—"Considering the "very limited pecuniary resources, I am not prepared "to recommend this at present; but for this difficulty "I should think some restriction desirable."

Rev. W. Chambers, West Ilsley.—"Here comes the "difficulty. Farmers need, and often *insist on* the "help of women labourers, and the women want the "money, besides often liking the rough freedom. I "should hardly be prepared to recommend any direct "legal interference."

Rev. C. F. Willis, Letcombe Basset.—"We have "not many unmarried females so employed, and their "services, I am confident, could be dispensed with "altogether. They are employed because they are "idle at home and apply for work; but a farmer will "allow that one man can do the work of two women "and the wages paid will be the same."

Rev. W. J. Butler, Wantage, rural dean.—"I have "no reason to recommend it. All that can be done "is to give them more self-respect and appreciation "of modesty, which, I think, is possible without lay- "ing restrictions on field labour."

Faringdon Union.

Mr. Heber Humphrey, Ashbury.—"Young girls, "as a rule, would not be affected by any such restric- "tion, as undoubtedly the rising generation on taking "their places as women in the world would almost "every one laugh at the idea of field work, just as "nearly all those who have been out in comfortable "service do now."

H. Tucker, Esq., landowner, Bourton.—"As a "question of morality and general well being I think "it desirable females should not be employed in agri- "culture. Yet it is difficult to justify any restrictive "measures which would deprive them of the wages "so earned without securing to them some other "equally remunerative occupation."

Rev. W. Jephson, Hinton.—"I would altogether "prohibit young unmarried women from being em- "ployed in agriculture. The evils of such employ- "ment are notorious. I would also, if it were "possible, prohibit women being so employed at all. "In other countries this is done, and it might be done "here. When they are so employed their home "duties are neglected, and the men's wages are always "lower in consequence."

Wallingford Union.

Rev. J. C. Clutterbuck, Long Wittenham.—"I "think not; in this parish young females with rare "exception are anxious to become domestic servants. "A few find *slop* work from Mr. Hyde's extensive "establishment at Abingdon."

Bradfield Union.

Mr. Charles Witherington, occupier, Bradfield.—"To women I do not think so; to children decidedly "so. But in our district I have never known young "girls under 17 employed, excepting where a man "has a large care of sheep or stock at so much per "week; here he enlists the help of his whole family. "But these cases are very rare."

Rev. Jas. Fraser, Upton.—"I am not prepared to "recommend a restriction by *law*, because I don't "think it would or could be carried out; but I should "be glad if public opinion among farmers discounte- "nanced the employment of girls under 18. If there "were no openings for them on the land, they would "naturally seek more suitable employment in service "or elsewhere."

Hungerford Union.

G. C. Cherry, Esq., Chairman of Board of Guardians, says for the union, "I do not think it "desirable. Domestic service for their daughters is "sought by most parents, but all cannot be so em- "ployed; and in this district for the rest idleness or "farm-work only remains. I do not think that young "females employed in agriculture are more apt to "become bad than those of the same class otherwise "employed."

Wokingham Union.

Captain Walter, occupier, Wokingham.—"Girls "under 14 years should never be employed. Over "this age they might be occasionally under proper "restrictions, and especially if one of the parents is "able to be with them."

Windsor Union.

Mr. H. Tait, Shaw Farm.—"I don't think that "young females should be employed in agriculture, "but certainly not under 16 years, and then the hours "of labour to be restricted to not more than 8 hours "in the day. I don't think that married women "should be employed in the winter months, and when "employed in summer the time should not exceed 10 "hours per day."

Long Circular, 22. (*m.*)—Taking into considera- tion the demand for labour in your parish and neighbourhood, and the pecuniary resources of the agricultural labourers, are you prepared to recommend that any restriction should be placed upon the age at which boys should be permitted to be employed in farm labour? If so, please to state the age below which you would recom- mend that boys should not be so employed.

Shorter Circular, 6.—Is it desirable to place any restriction on the age at which boys should be permitted to work on the land, and if so, at what age would you place the limit?

Of 42 witnesses who answer this question, either simply negatively or affirmatively, 17 say that no legislative restriction is desirable.

Of the 25 who say that such restriction is desirable,

1	would restrict	labour to	boys over 8	years of age.
2	"	"	9	"
11	"	"	10	"
3	"	"	11	"
6	"	"	12	"
2	"	"	13	"

17 other witnesses answer as follows:—

Wantage Union.

Rev. J. S. Wasey, Compton.—"For the boys' sake "I would like to see a restriction, but, taking into "consideration the pecuniary circumstances of the

" parents, I could not advocate it. Boys should not " be so employed under 13 years of age."

Mr. Luke Lowsley, occupier, Hampstead Norris.—" No; as by so doing a great hardship would be created " for the parents. Men with large families would not " be employed, on account of the difficulty of their " supporting them in idleness. Boys are more healthy " and sturdy when brought up in the open air. Boys " are more industrious, and as young men more " fitting for their work when trained young. For " instance, boys brought up in workhouses are puny " eye-servants, often thieving and cheating, although " having a good education."

Rev. J. C. Willis, Letcombe Basset.—" Looking at " the question from an educational point of view I " do not consider that any mere restriction of age " would be sufficient. Careless and indifferent " parents would take no more pains than at present " to send their children to school, and there would " be no power to compel them. But such a restric- " tion might work very beneficially alongside of some " enactment prohibiting the employment of any boy " who could not produce a certificate of having " attended school for a certain period, or of having " attained a certain amount of proficiency. This " would act as an incentive to parents to keep them " regular in attendance, by giving them a direct " pecuniary interest in their children's education."

Mr. W. D. Wasbrough, owner and occupier, Wantage.—" The boys mostly employed go with the " plough teams, dragging over the land from 8 to 3. " I think there should be a restriction. I would " place the limit from 11 to 12, according to size and " strength."

Mr. B. Castle, occupier, Wantage.—" For perma- " nent employment I should say 10 years, and for " temporary employment 9 years.

Rev. W. J. Butler, Wantage.—" I am inclined to " think that no boy should be allowed to work till " after 10."

Faringdon Union.

Rev. W. Jephson, Hinton.—" I think it is most " desirable, if boys are allowed to go to work so " young as 11, there ought to be some half-time " scheme devised, for they soon forget all that they " have learned at school; and if such is the case in " this parish where they do not leave school till " eleven, of course in others where they leave " younger it is much worse. I think a law should " be passed not allowing a child to be employed till " he could read and write, and I would punish " persons who did so employ children."

Mr. E. W. Moore, land agent and occupier, Coles- hill.—" Not under 10 years, and after that age not " until they can read and write."

Abingdon Union.

J. Aldworth, Esq., owner and occupier.—" Begin " at 10 years to go with horses or oxen; at 8 years " for light work," &c.

J. Blandy Jenkins, Esq., landowner, Kingston Bagpuze.—" I think it would be desirable to limit " the age at which boys should work, as they fre- " quently get injured and ruptured; and should say " that 13 or 14 years was early enough."

Bradfield Union.

Mr. Charles Witherington, occupier, Bradfield.— " Eleven years; and they should be able to read and " write, although without night schools they will soon " forget what they have learnt."

Rev. A. L. White, Mortimer West End.—" I think " that it would be well to prohibit boys under the " age of 10 years to work for wages, unless they can " produce a certificate of their being able to read " and write, when all restriction should be taken off. " As the school here is under Government inspection, " H.M.'s inspector could easily grant such certificate " to boys under 10."

Newbury Union.

Mr. T. Tanner, occupier, Welford.—" I would " restrict all boys from going to work until they can " produce a certificate of having attended school " regularly for 3 years, under 13, excepting harvest. " If they can have that, let them work as early as 9. " And they would be better at work after 13 even " if they have no schooling."

Mr. R. Fisher, occupier, Winterbourne.—" I would " have them restricted from work until they have " been some time at school, but the general feeling " is against restriction of any kind."

Hungerford Union.

G. C. Cherry, General Chairman of Hungerford Union.—" I think it desirable to prevent boys from " working at an earlier age than 10 years. Such a " rule will in many cases cause great difficulties, *e.g.*, " where there are large families, it may be of five, six, " or more children under that age, it is not easy to " say how, at the present rate of wages, a man can " support such a family, no one of the children con- " tributing to the family purse. Nevertheless, I " think the rule desirable, with the view of securing " some education. Perhaps exceptions to it might " be permitted in cases of boys proved to have " reached a certain standard of education."

Wokingham Union.

Capt. Walter, occupier, Wokingham.—" As a rule " boys should not be allowed to work under 12 years " of age, with the following exceptions:—Bird-keep- " ing, weeding, and such other light employment, *and* " *never* in these occupations unless they are in the " habit of attending school."

Windsor Union.

Mr. H. Tait, Shaw Farm.—" I don't think that " boys should be employed before they are 14 years."

Longer Circular, 22 (*o.*)—" Do you see reason for " recommending that any restriction should be " placed upon the hours of work of children and " young persons employed in agriculture; and if " so, what amount of restriction would you pro- " pose ?"

14 witnesses say, " No."

Others answer as follows:—

Wantage Union.

The Rev. J. S. Wasey, Compton, says, " Small boys " in this parish have to be in stables by 5 a.m., and " constantly much earlier, 4 a.m.,—too long a day for " little boys, as they do not give over work till " 6 p.m."

The Rev. G. Purdue, Challow, says, " I would " restrict the hours of work of children under 13 to " 10 hours a day."

The Rev. T. Luck, East Hendred, says, " If chil- " dren are not sent to work at too early an age I do " not see sufficient reason for restriction as to time."

The Rev. W. Chambers, East Ilsley, says, " Not as " far as concerns this parish, unless in connexion " with a system of *half-time* education, which I should " like to see introduced, if practicable, from 10 to 13, " or thereabouts."

The Rev. C. F. Willis, Letcombe Basset, says, " I " do not think, from the nature of agricultural work, " that such restriction would be possible, as a general " rule. It would be liable to interfere too much with " the work of the *men*, as in ploughing, &c., &c.; it " would cause great inconvenience on the farm gene- " rally. If they are employed at all they must be " employed full time."

The Rev. T. Lanfear, Letcombe Regis, says, " I " think that if the age of beginning work be not " below 10 years there need be no restriction on the " present hours."

The Rev. B. Tyrwhitt, East Lockinge, says, " The " hours depend upon the ploughing. The boys " mostly 'drive plough,' and the interval between

Berkshire.
Mr. Culley.
A.
j.

" breakfast, about 7, and dinner, between 3 and 4, is " too long. Their dinner, as I have seen, is very " bad, a hunch of bread and cheese, or a little bacon, " or some onions, beer, no table nor drinking vessels, " little comfort, that is, *for the lads in the carter's* " *cottage*, compared with the good warm potatoes of " those who live at home."

The Rev. J. Butler, Wantage, says, "I do not think " that restriction could advantageously be placed on " the hours of field labour. Darkness there for eight " months in the year necessarily brings work to a " close, unlike factories, where gas can be lighted."

Bradfield Union.

The Rev. Jas. Fraser, Ufton.—"I think the long " hours imposed upon *young* stable boys and shepherd " lads ought to be restricted; 10 hours a day (in- " cluding meals) is as much as ought to be required " from a boy under 16."

Long Circular, 23 to 26.

23. The Commissioners being instructed to inquire to what extent, and with what modifications, the principles of the Factory Acts can be adopted in reference to children employed in agriculture, " especially with a view to the better education " of such children," your opinion is invited on the following points :—

24. The three modes by which the prescribed amount of school attendance of children employed in trades and manufactures is obtained are—

    By the Factory Act (7 Vict. c. 15. ss. 31–9).
    1. By half day at school and half day at work.
    2. By alternate whole days at school and whole days at work.

    By the Print Works Act (10 & 11 Vict. c. 70. ss. 2, 3, 26).
    3. By school attendance for a certain number of hours during the preceding six months.

26. You are requested to state which of such modes of enforcing some amount of school attendance would seem most applicable to the circumstances of your parish and neighbourhood; or whether a combination of one or more of them would better meet those circumstances; or whether any other mode that you might wish to suggest appears to you preferable.

The following are all the answers given to these questions in 36 longer circulars returned to the Assistant Commissioner :

Rev. R. Barnes, Ardington.—"The parents being " generally the parties who force the children to work " at too early an age, if no boys were allowed to be " hired who could not read and write, the parents " would be inclined to pay more attention to their " education."

Rev. T. J. Heard, Beedon.—"All three modes are " inpracticable in the case of boys employed in farm " labour. An evening school seems the only means."

Rev. G. Purdue, Challow.—"In the two parishes " with which I am connected I feel certain that no " half time school would work. A good night school " from November 1st to March 1st seems to me to be " the only remedy. The rent, expense of firing and " lighting should be paid by Board of Guardians and " a capitation grant according to attendance."

Rev. J. S. Wasey, Compton.—"I would prefer the " third mode."

Rev. Edmund Price, Farnborough.—"I think it " could not be enforced, nor would it be desirable " when once they had gone to work. I would retain " them at school as long as possible, and would do then " what might be done with Sunday and evening " schools, but think that no interruption of their daily " work would be at all desirable."

Rev. C. C. Luxmore, Fawley.—"Their attendance " at night school three times a week in winter months " and Sunday school throughout the year, is as much " as one can expect."

Rev. A. Pott, East Hendred.—"My own impression " is that neither 1 nor 2 would work here; I think " 3 might, or I should prefer some educational test, " without which none should be employed under a " given age."

Rev. T. Luck, East Hendred.—"I do not think that " the Factory Act could in any way be made to work " well in agricultural districts; all that is necessary is " to restrict the age at which children should be " allowed to go to work."

Rev. John Tucker, West Hendred.—"I am of " opinion that the last of the three modes might " answer, if 12 months were substituted for 6."

Rev. P. A. Longmore, Hermitage.—"The plan of " being required to obtain a certificate from some " government officer of ability equal, say, to standard " 4 of Revised Code, though not without difficulty, " seems preferable to these proposals." (24.)

Rev. E. H. Hansell, East Isley, No. 2.—"Satur- " day being free from school may always be devoted " to work."

Rev. T. Lanfear, Letcombe Regis.—"I do not " believe that any of the modes above suggested " would suit agriculture, I have witnessed attempts " to combine school and agriculture, both failed. If " the boys can be kept to school till they are 10, " instead of going to work at 8 or 9, it will be " enough."

Rev. T. A. Houblon, Peasemore.—"I think the " second mode is far the best."

Rev. W. J. Butler, Wantage.—"I think that if no " boys were permitted to work till after 10, and if " school attendance for a certain number of hours " every twelve weeks (so as to give greater oppor- " tunity to make up the time in the winter), between " the ages of 10 and 12 were enforced, practically all " would be done which legislation can effect."

Rev. T. H. Bushnell, Beenham.—"I do not recom- " mend the adoption of either of the three specified " modes to enforce attendance at school. There is " among the agricultural population, with very few " exceptions, a strong desire to have their children " educated, and a readiness to send them where there " is a good school."

Rev. T. Stephens, Bradfield.—"If children under " 10 years of age, were not allowed to work, unless it " were proved that they could read and write, it " would be enough."

Rev. Jas. Fraser, Ufton.—"The third mode seems " the only practicable one; and even to work that, " with agricultural boys, the *night* school must be " the machinery employed."

Mr. Higgs, schoolmaster, Bearwood.—"During my " experience of 21 years, and 18 years schoolmaster " (mixed) of agricultural parishes, I am certain the " best mode is to enforce strictly punctuality of atten- " dance, for no child can make proper progress in " learning who does not attend school regularly and " in good time, as it is most desirable that those " whose lives are to be passed in business or service " should be early accustomed to punctuality, obedience, " order, neatness, and industry."

Rev. Thos. Mozley, Finchampstead.—"I have no " opinion to offer on the three modes described, " having never tried them or seen them tried. I can " only recommend night schools from Michaelmas to " Lady Day; I have one now in a parish under my " charge, and I have lead them in other parishes for " many years attending them myself for years to- " gether; I have always found them well attended, " much appreciated, and very successful in the " results."

Longer Circular, 27.—How far is the school attendance affected by the distance that the children have to go to school?

The following answers are collected from 36 longer circulars returned to the Assistant Commissioner :—

13 witnesses for as many parishes say "Not at all."
5 " " " "Very little."
2 " " " "In outlying "hamlets."
4 " " " "By weather "and bad "roads."
2 " " " "In some mea- "sure."

Others answer as follows:—

WANTAGE UNION.

Rev. F. L. Currie, Brightwaltham.—"Not appreciable at all; some of the most regular attendants "are from a distance."

Rev. Jas. Macdougall, Hanney.—"Very small "children cannot attend our National School during "the winter months as it is situated out of the village, "but there is a good dame school in East Hanney."

BRADFIELD UNION.

Rev. T. Stevens, Bradfield.—"In bad weather the "attendance is very much affected, as some of the "children have from one to two miles to come; this "in the case of the younger ones is a great draw-"back."

Rev. Jas. Fraser, Ufton.—"Very slightly in fine "weather; but occasionally, in winter, a whole lot of "our children are cut off from their school, sometimes "for a week, by the floods."

Mr. Higgs, schoolmaster, Bearwood.—"This school "is open for adjoining parishes, if parents think "proper to avail themselves of the privilege. At "present there are pupils from Huys, Barkham, "Arborfield, and Swallowfield. The principal part "of the children walk long distances, three scholars "walk 9 miles daily (4½ each way)."

Rev. Thos. Mozley, Finchampstead.—"I should "say that average parents will send their children to "an average school as much as a mile and a half. "Parents above the average will send their children "to a school at all above the average as much as "2½ and even three miles."

Longer Circular, 28.—How far is the school attendance affected by the pecuniary resources of the parents?

The following answers are given in 86 longer circulars returned from as many parishes:—

16 witnesses say "Not at all."
5 " "Not much."

Others answer as follows:—

Rev. T. G. Onslow, Catmore, says, "The school is "free."

Rev. Jas. Macdougall, Hanney.—"We make the "payments so low that there can be no excuse for "parents neglecting to send their children."

Rev. E. Hansell East Ilsley.—"When a child can "earn 1*d.* that is generally considered sufficient "excuse for non-attendance."

Rev. W. Chambers, West Ilsley.—"Very decidedly, "and directly by their need of the children's wages, "especially in the case of large families. The school "fees are a comparatively trifling hindrance."

Rev. T. Lanfear, Letcombe Regis.—"If parents "cannot afford or believe they cannot to pay for their "children they do not send them, but such are greatly "in the minority."

Rev. H. A.Dodd, Sparsholt.—"No payment exceeds "one penny a week from any child. The vicar "makes up a certain sum to the mistress."

Rev. W. J. Butler, Wantage.—"Not materially; "the poorest will often pay more cheerfully than "mechanics with high earnings."

Mr. E. W. Moore, Coleshill.—"Very little; too "often the money is supplied in cases where parents "are well able to pay."

Rev. T. H. Bushnell, Beenham.—"Those who are "unable to pay the school fee are generally assisted "by private charity."

Rev. Jas. Fraser, Ufton.—"Not to any great extent. "The school fee is either paid for, or not exacted "from, necessitous families. Occasionally a child is "absent from 'want of shoes.'"

Mr. Higgs, Bearwood.—"Leave of absence is not "permitted only in extreme cases such as illness of "scholars or parents, and as a *rule* parents appreciate "the discipline of the school."

Shorter Circular, 8.—What means of education are provided in your parish for the children of the agricultural labouring class? Do they take advantage of them? If not, are there any other causes besides early labour to which you attribute their non-attendance?

The following answers are given in 49 circulars returned to the Assistant Commissioner, omitting the first part of the answer in the case of parishes from which school returns have been received, and which are given elsewhere.

WANTAGE UNION.

**P. Wroughton, Esq.*, landowner, Chaddleworth, says, "The school is always well attended, the "parents fully comprehending the advantage of edu-"cation for their children."

Mr. John Burson, occupier, Childrey, says, "There are 3 day schools; 1 for boys, 1 for girls, "and 1 mixed. Some parents are careless, and do "not send their children to school; but on the whole "the attendance is pretty good."

**Mr. Thos. G. Wells*, occupier, Farnborough, says, "As a rule children attend school pretty well, but "some of the parents are too indulgent to enforce "attendance."

**Mr. Stephen Brown*, occupier and guardian, Fawley, says, "Both day and evening school are "well attended."

Mr. Luke Towsley, occupier and guardian, Hampstead Norris.—"There are two schools supported by "subscription; the children generally take advant-"age of them, but there are a few dissenters' chil-"dren and a few neglected ones about in all mischief, "but not at work."

Mr. H. Betteridge, occupier and guardian, East Hanney.—"We have a very good school, with a "certificated master. The girls generally attend "until they go to service, when about 12 years of "age; and the boys the same."

Mr. W. Athawes, occupier and guardian, West Hanney.—"We have a school under Government "inspection. Generally, children attend well; of "course there are exceptions. Some parents say "they *can't* send their children to school; some "*won't* send their children regularly, even if the "weekly payment is given. A night school lately "started will, if well conducted, much benefit the "whole parish."

**C. J. Eyston, Esq.*, landowner, East Hendred, says:—"There are two schools under Government "inspection in the parish; one in connexion with "the Church of England, the other in connexion "with the Roman Catholic Church. The children "attend these schools very regularly with a few "exceptions."

**Mr. Kingham Reeves*, occupier and guardian, West Hendred.—"The children do not reap the full "advantage of the school because of the indifference "of parents."

**Mr. W. Palmer*, occupier and guardian, Letcombe Regis.—"The children attend fairly till they go to "work."

**Rev. J. F. Collins*, landowner, East Lockinge.—"A good day school, of which all take advantage, "and a night school in winter, which is well "attended."

**Mr. W. D. Wasbrough*, landowner and occupier, Wantage, says:—"There are very first-class schools "for boys, girls, and infants, where the greatest atten-

* See School Returns.

Berkshire.
Mr. Culley.
A.
j.

" tion is paid to their education under the superinten-
" dence of the vicar, master, mistress, and a staff of
" teachers. There are also good schools belonging to
" dissenters. Advantage is taken of them very
" generally with the young children, till they can
" earn any money, and then education ceases irrespec-
" tive of age."

FARINGDON UNION.

Mr. Heber Humphrey, occupier and guardian, Ashbury.—" A very good school, well managed and fairly
" attended. No system of boys working part daytime
" and attending school part of day could be practically
" successful; but night schools more attractive, more
" general, and, if not compulsive, made very strongly
" suggestive to parents, would be of great service."

H. Tucker, Esq., landowner (High Sheriff) Bourton.—" There are endowed schools in the village since
" 1842. The infant school under a mistress from the
" Home and Colonial Training School. Children
" are moved into this school at 3 years of age, and
" drafted into the juvenile school, under a master, at
" 6 to 7 years, where they are taught reading, writing,
" arithmetic, a little geography, &c.; and the girls
" are taught plain needlework. Each child pays one
" halfpenny a week. The majority remain till 10
" years of age, some till 11 and 12, and some are
" removed as early as 8 or 9, chiefly for the sake of
" their little earnings. The greater number of
" parents value the education of their children; a
" few, however, are either too careless or too ignorant
" to appreciate it, and do not care to send them.
" During the winter months a night school has been
" held for several years past, and has been well
" attended; the results have been very satisfactory."

Mr. John Dyke, occupier and guardian, Little Coxwell.—" There are day and night schools, both tolerably attended."

**Mr. W. T. Kinch*, occupier and guardian, Eaton Hastings.—" A private school well attended."

Rev. W. Jephson, Hinton.—" A very good school,
" with a master and mistress, and the children are all
" obliged to come; the boys to 11, and the girls to
" 13 years of age."

Mr. Albert Edmonds, occupier and guardian, Longworth.—" There are two schools, to which they are
" admitted by payment of one penny per week. Most
" of the children are sent to school."

Mr. Jas. Lawrence, occupier and guardian, Wiffington.—" There is a boys' and girls' school in the parish.
" Generally speaking the children attend with a few
" exceptions, which is mostly owing to the negligence
" of the parents."

Mr. W. J. Butler, occupier and guardian, Woolstone.—" There is a good school here for the younger
" children, and another (endowed) school for boys at
" Uffington, open to the boys of this parish, which
" are at most times well attended."

ABINGDON UNION.

Rev. F. G. Henley, Cumnor.—" There is a day
" school under Government; the rate of payment is
" 2*d.* where there is only one of a family, where more
" than one 1*d.* a week. Also an evening school. The
" day school is fairly attended. The evening school
" a failure, I think from the boys being tired after
" work, and not reaching home till past 6."

J. Aldworth, Esq., landowner, Frilford.—" A good
" school kept up by subscription, and very well
" attended."

John Blandy Jenkins, Esq., landowner, Kingston Bagpuze.—" There is a school at which five boys are
" taken gratis, and this takes nearly all the boys who
" are able to attend, as they never hardly remain after
" 10 years old, and seldom after 9 years; in fact, just
" when they begin to know how to learn, they leave
" the school."

Mr. J. Fairthorne, occupier and guardian, Longcott.—" Two schools; one for boys, and one for girls,
and night school, all very well attended."

WALLINGFORD UNION.

Rev. J. C. Clutterbuck, Long Wittenham.—" There
" is a daily mixed and infant school, to which chil-
" dren are admitted on the payment of 2*d.* per week.
" Some parents are careless as to their children's
" education; early labour is the only real hindrance."

Mr. S. Hart, occupier, South Moreton.—" The
" school is very well attended by the agricultural
" class."

BRADFIELD UNION.

**Mr. C. Witherington*, occupier and guardian, Bradfield.—" Parish school. I think that it is only
" the lazy and idle boys and girls who do not go to
" school. I have found amongst the majority of
" parents a great desire and wish that their children
" should go to school for a few years, and I believe
" this feeling increases."

W. G. Mount, Esq., J.P., Grazeley.—" There is a
" very good school in this parish, and on the whole the
" attendance is good."

Mr. A. F. M. Druce, occupier and guardian, Burghfield.—" A national day-school; attendance
" not so good as could be wished, their homes being
" so far distant."

Rev. A. L. White, Mortimer-west-End.—" Excel-
" lent school buildings have been provided by
" Mr. Benyon, the chief landowner; this school is
" under Government inspection, and is large enough
" to provide for all the educational wants of the place.
" In addition one of the farmers' wives has kept a
" private school for many years, to which the children
" of men in the employ of her husband or his brothers
" generally go. The parents do not take as much
" advantage of these means of education as they might;
" their own ignorance (in many cases) making them
" indifferent to their children's learning. Want of
" shoes keeps a few away from school for a time. I
" have an evening school this winter attended by 22
" lads and men."

NEWBURY UNION.

Mr. R. Fisher, occupier and guardian, Winterbourne.—" There is a fair provision for education, and
" it is pretty well appreciated."

Mr. Thos. Tanner, occupier and guardian, Welford.—" The schools provided are well attended, and, as a
" rule, education in this parish is, I think, duly
" appreciated."

Mr. G. White, guardian, Thatcham.—" There are
" abundant and excellent means of education in this
" parish of Thatcham. There is an endowed school;
" also a National British Infant and Sunday School.
" The labourer is too poor to keep his child from
" work as soon as he can earn 1*s.* 6*d.* or 2*s.* a week.
" I have resided here since Michaelmas 1859. I have
" never seen wages higher than 11*s.* or lower than
" 9*s.* a week."

HUNGERFORD UNION.

G. Cherry, Esq., landowner, says,—" There is a
" Sunday and day-school for children from 6 to 12
" or 13 years of age, and an infant school for those
" from 3 to 6 years old. They are in the village and
" are far better attended now than 10 years ago.
" The infant school is a great help to mothers by
" allowing them to go to work in the fields. Average
" attendance at infant school 70, at older school 112.
" These schools are maintained by subscriptions and
" are open to all. There is another school in the
" village attended by many. The children of a dis-
" tant part of the parish are received into the schools
" of a neighbouring parish. There is yet, I think,
" much apathy amongst parents as to the education
" of their children; this, as well as early labour,
" prevents the attendance or contracts attendance at
" school."

WOKINGHAM UNION.

Captain Walter, occupier, Wokingham.—" The
" means of education are remarkably good and the

* See School Returns.

* See School Returns.

" schools well attended; where children are neglected " the fault is more on the side of the parents than " the employers; I hope to see a system of com- " pulsory education established where parents neglect " their duty."

WINDSOR UNION.

Mr. H. Tait, Shaw Farm, Windsor Park.—" There " is a school in the park, where all the people em- " ployed in the park can send their children to; " where they are clothed and fed, and taught to " work, the boys in garden work, the girls sewing " and household work, and a grammatical education; " this school is well attended. We have a night- " school at this farm, kept at the expense of Her " Majesty, for the grown up people to attend, which " is also well attended. There is also plenty of " other schools where they can be either free or " cheaply educated, if they choose to take advantage " of it. I blame the parents more than anything " else for the children not going to school; they have " no wish for education."

Longer Circular, 29.—Are any efforts being made for the industrial training of girls, in connexion with elementary education, with especial reference to preparing them for their domestic duties?

The following answers are from 36 longer circulars returned from as many parishes:—

13 witnesses answer "No."
9 " " "Needlework."
2 " " "Knitting and sewing."

Two witnesses from Ardington and Sockinge say that some girls have been sent to a training school by the Honourable Mrs. Lloyd Lindsay. The only industrial school which the Assistant Commissioner saw in Berks was that in Windsor Park, supported entirely by Her Majesty, an account of which will be found in the evidence from Windsor.

Long Circular, 30.—Have you any remarks to make on the subject of cottage accommodation, in regard to its effect on morality or education, or on the health and comfort of the labouring poor?

The following answers are those given in 36 circulars returned from as many parishes:—

Rev. F. H. Lloyd, Aldworth.—" The cottage accom- " modation is insufficient, but better than it was a few " years ago."

Rev. R. Barnes, Ardington.—" The want of accom- " modation in cottages has been and is still a great " source of immorality in this neighbourhood; but this " remark applies less and less every day to this parish " by the increased accommodation beneficial both to " health and morals."

Rev. T. J. Heard, Beedon.—"I would prevent mar- " ried labourers, having families living at home, from " taking *lodgers*. Should like to see a law passed in " reference to cottage building for the labouring " classes. It ought to require at least two bedrooms " to every cottage, and insist on a minimum amount " of cubic space for living and bedrooms; proper " ventilation, drainage, water supply, and privies."

Rev. J. Macdonald, Blewbury.—" By no means " satisfactory; in several cottages a whole family " live in one room below and one *little bedroom* " above, and no notice taken of it. Some of the " children grown up."

Rev. G. Purdue, East Challow.—" The cottage " accommodation in East Challow is very bad. In one " bedroom, 17 by about 17, there are 11 persons sleep- " ing. Father, mother, two grown up daughters " (who have both illegitimate children), a grown up " son, and the rest children. I know that incest " has been committed. We want some authority to " prevent overcrowding. 15 years ago the cottages " in this parish were very bad. The landowner, " C. C. Ferard, Esq., has now so improved them that " we have not a bad cottage left. The effect of the " better accommodation has been that the labourers " have taken a pride in their homes and have im- " proved in morals and in comforts."

Rev. E. Thompson, Chaddleworth.—" Cottage ac- " commodation is the crying evil in this parish."

Rev. C. M. Chaplin, Chilton.—" Most of the cot- " tages are now being improved by Colonel Lloyd " Lindsay, who has bought a great part of the " parish."

Rev. J. S. Wasey, Compton.—" It is very difficult " for health and morality to exist in a parish where " many of the cottages have only one bedroom and " are inhabited by whole families."

Rev. E. Price, Farnborough.—" Nothing beyond " the general complaint that where families are herded " together, as is so frequently the case in agricultural " districts, all feelings of decency and morality are " blunted and the worst results too often follow."

Rev. C. C. Luxmore, Fawley.—" For the most part " the cottages are good; *fire-places* in bedrooms are " desirable in sickness, and by not keeping the young " women at home to work in the fields, the bedrooms " would not be overcrowded."

Rev. J. Macdougall, Hanney.—" Most of the cot- " tages are small and require better accommodation. " How far these things have an immoral effect I can- " not say."

Rev. T. Luck, East Hendred.—" Where the cot- " tage accommodation is insufficient I generally find " a total want of moral perception and general apathy " with regard to the advantages derived from moral " training and education."

Rev. A. Pott, East Hendred.—" Our cottages are " many of them very bad; health and morals greatly " suffer."

Rev. J. Tucker, West Hendred.—" Where there is " insufficient accommodation in a cottage, so that the " bedrooms are overcrowded, *the effect on morality* " *and education is most injurious*, and (though of " less importance) on the health and comfort of the " labouring poor."

Rev. C. F. Willis, Letcombe Basset.—" Insufficient " accommodation is without doubt one of the prin- " cipal causes of the low tone of morality among the " poor. It occurs not unfrequently that the father " and mother, girls and boys, are crowded into the " same sleeping room."

Rev. B. Tyrwhitt, East Lockinge.—" Immorality " is of course increased where there is only one bed- " room for a married man and a large family of all " ages up to 14 or 15. They are entirely ignorant " of the rules of health, but imbibe so much pure air " in the day; they rather like close fusty rooms at " night, stop chimnies and ventilators in bedrooms " *on principle*. Children are very often too crowded " at night in large families."

Rev. T. A. Houblon, Peasemore.—" I think there " ought to be two bedrooms with a fire-place in one " of them in every cottage."

Rev. H. A. Dodd, Sparsholt.—" Many of the cot- " tages are small, and in the case of large families " are certainly overcrowded."

Rev. W. J. Butler, Wantage.—" Cottage accommo- " dation is of all importance. Wretched pigsties of " hovels destroy decency, self-respect, and the love " of home. Nothing is more needful than that some " measures should be taken to prevent small capital- " ists from running up utterly unfit dwellings and " reaping a large per-centage at the expense of " health, life, and morality. I could mention frightful " results of the present system of dwelling-houses."

Mr. E. W. Moore, Coleshill.—" The greatest hin- " drance, but one, to the welfare of the labouring poor. " There are many happy exceptions, but through- " out this district there is an immense deal to be done " in this direction; the morals and health, &c. of the " cottagers are in many instances seriously affected, " and especially in times of sickness."

Rev. T. H. Bushnell, Beenham.—" The effect of " overcrowding *has been* very injurious to morality, " but there has latterly been a great improvement in " this respect. In some instances one decent cottage

Berkshire.
Mr. Culley.
A. j.

" has been made of two old cottages with single " bedrooms being thrown into one."

Rev. Jas. Fraser, Ufton.—" I have the very strongest " opinion upon its effect on the condition of the " labouring poor in *all these respects*."

Rev. A. Roberts, Barkham.—" The accommodation " in the way of sleeping apartments is in some " instances defective, and, in cases where there is a " family, the effect cannot but be injurious."

Long Circular, 31.—" How many cottages per 100 " acres are considered sufficient for the accom- " modation of the persons employed on the land " in your parish ?"

Only four out of 36 circulars answer this question, which is, however, sufficiently answered by the labour returns, which give the proportion of arable and pasture land and the number of adult labourers employed.

Hermitage.—Chiefly arable with a good deal of woodland, three cottages.

Letcomb.—Mixed with some down land, two cottages.

Coleshill—Ditto, larger proportion grass, three to four cottages.

Ufton—Ditto, one-third in wood and coppice, three cottages.

Long Circular, 32.*—" Is there that proportion of " cottages in the parish ?" 33. If not, what is " the proportion ?"

The following are the answers given in 36 circulars returned to the Assistant Commissioner :—

Three witnesses say, " The cottages are sufficient " in number."

Other witnesses answer that,—

" In West Challow there are five cottages per " 100 acres."

" Chilton, there are not enough cottages."

" Fawley, there are 44 cottages for 2,110 acres."

" Ufton, there are 64 cottages for 1,500 acres of " land let in farms, being more than enough."

Long Circular, *34.—Are the cottages conveniently situated with respect to (*i.e.* not more than a mile from) the farms on which the work is to be done ?

The following are the answers given in 36 circulars returned to the Assistant Commissioner:—

13 witnesses say " Yes."

3 witnesses say " Most of them."

Others answer as follows :—

Rev. R. Barnes, Ardington.—" The parish is long " and narrow, and the village nearly in the middle, " but on the whole they are conveniently situated."

Rev. Jas. Macdougall, Hanney.—" In most cases, " but some of our people work in other parishes, one " and a half, three, and four miles off."

Rev. C. F. Willis, Letcombe Basset.—" All of " the cottages with the exception of two lie together " in the village, and the parish extends about two " miles in one direction and one mile in the other."

Rev. T. Lanfear, Letcombe Regis.—" I think so; " three or four cottages are on the larger farms nearer " the work ; men prefer living in those in the village, " though they are farther from their work."

Mr. E. W. Moore, agent to Lord Radnor, Coleshill.—" Pretty well ; we build them for outlying farms " near the homestead."

Rev. J. Fraser, Utton.—" There is not much to " complain of in this respect, though in a few cases " labourers go two miles to their work."

Long Circular, *35.—Is there a sufficient number of cottages with two bedrooms, or three bedrooms, and a sitting room, for the larger families ?

The following are the answers given in 35 longer circulars returned by clergyman for their respective parishes.

6 witnesses say " Yes."

3 witnesses say " Nearly," or " With few exceptions.

14 witnesses say " No," or " Certainly not."

12 witnesses give no answer.

The names of the parishes for which " Yes " is said, are—

Catmore, West Challow, Fawley, Hermitage, East Lockinge, and Wantage (proper).

The names of those for which the answer " nearly " or " with few exceptions " is given, are—

Beedon, Blewbury, Brightwaltham, Chaddleworth, Chilton, East Challow, Compton, Hanney, East Ilsley, West Hendred, East Hendred, Letcombe Basset, Letcombe Regis, and Ufton.

Of Ufton, *The Rev. Jas. Fraser*, says, " Of 64 cot- " tages in the parish, only two have three bedrooms, " and at least 12 have only one bedroom."

Long Circular, 36.—Are the cottages crowded, either with members of the family, or with lodgers ?

The following answers are taken from 35 circulars returned by clergymen for their respective parishes :—

For four parishes, viz., Catmore, West Challow, East Lockinge, and Wantage (proper), it is said they are not crowded.

For four parishes, viz., Farnborough, Fawley, Hermitage, Letcombe Basset, is it said that, only a few are crowded with members of the families, but not with lodgers.

For five parishes, viz., Aldworth, Beedon, Blewbury, Hanney, and East Ilsley, it is said the same cottages are overcrowded.

For two parishes, viz., Chilton and East Hendred, the answer " Yes " is given.

For Letcombe Basset, it is said, " Most of the cot- " tages have two bedrooms and one sitting, but many " families require three bedrooms."

For Ufton, it is said, " Not much with lodgers, but " some of the families are very crowded."

Long Circular, 37.—Give a general description of the cottages in your parish in respect of,—1. Construction (including size of rooms, ventilation, and drainage). 2. Accommodation (including number of rooms in proportion to the family, water supply, garden, outhouses, &c.) 3. Ownership ; *i.e.*, whether by landowner, or by tradesmen with whom the tenants are obliged to deal, or by other person or persons. 4. Rent.

Short Circular, 9.—What is the condition of the cottages in your parish and neighbourhood ? Are they sufficient for the supply of the labour required ? Are they conveniently situated with respect to the farms ? Are they overcrowded, and have any evil results to morality come under your notice in consequence ? Are they well supplied with water, and well ventilated ?

10. Have all the cottages in your parish and neighbourhood good gardens, or, in default of gardens, have all the cottages allotments of land conveniently situated for the use of the labourers and their families ?

The answers to these questions will be found at the head of the general evidence from the respective parishes (being answered for 58 parishes); the following summary will, however, indicate the general bearing of the evidence.

The cottages are described as " good " in eight cases, as " fair " in 10 cases, as mixed " good and " bad," or " various " in 10 cases, as " bad " in 12 cases.

There are said to be a sufficient number of cottages for the supply of labour in 10 parishes, and an insufficient number in eight cases (*see also* answers to Longer Circular, question 32).

The cottages are said to be well situated for the

* The answers given to question 9 of the Shorter Circular, which includes questions 32 to 37 of the Longer Circular, will be found with question 37 of the Longer Circular at the beginning of the evidence from the parish to which it applies in Appendix B.—G. C.

farms in 11 parishes, and badly in five parishes (*see also* Longer Circular, question 34); they are said to be overcrowded in nine cases, and not overcrowded in as many (*see also* Longer Circular, question 36).

The ventilation is described about equally often as "good" and "bad."

The drainage is described in the majority of cases as bad.

The water supply is described as good in 23 parishes; fair in 6 parishes; bad in 11 parishes.

In only two cases the cottages are said to be badly supplied with gardens or allotment ground.

Outhouses are seldom mentioned, in four cases they are described as insufficient and badly placed.

The cottages generally belong to the landowners (especially in close parishes); in some cases they are said to belong to tradesmen, farmers, and the occupiers themselves. No instance is mentioned of a tradesman compelling his tenant to deal with him. Rents vary from 9*d.* to 2*s.* 6*d.* a week, 1*s.* 4*d.* a week being an ordinary landowner's rent, with or without a garden, and 1*s.* 6*d.* a week the most usual rent charged by a small owner for a cottage without garden. Rents are highest in small towns and crowded open villages, and lowest in close parishes.

Long Circular, 38.—If there is deficient cottage accommodation, is any progress being made towards increasing it?

Answers extracted from circulars returned for 36 parishes:—

3 witnesses say "No."
3 witnesses say "Yes."

Others answer as follows:—

The Rev. F. H. Lloyd, Aldworth, says, "Progress "is being made."

The Rev. G. Purdue, Challow, says, "There is "sufficient accommodation."

The Rev. S. Wasey, Compton, says, "Cottage "accommodation deficient, and for the last few years "I am not aware of any increase."

The Rev. Jas. Macdougal, East and West Hanney, says, "A few more cottages have lately been built at "West Hanney."

The Rev. A. Pott, East Hendred, says, "Fairly "sufficient."

The Rev H. Hansell, East Ilsley, says, "Not "enough, complaints are made."

The Rev. B. Tyrwhitt, East Lockinge, says, "Yes, "one or two at Ginge Hamlet are to be rebuilt by "Col. Lindsay."

The Rev. H. A. Dodd, Sparsholt, says, "Several "cottages have been lately built."

The Rev. W. J. Butler, Wantage, says, "Some-"thing has been done, and I think that people are "beginning to feel a craving for better houses."

Mr. E. W. Moore, Coleshill, says, "Necessary "increased attention, but not sufficient; it is an urgent "question."

The Rev. T. Stevens, Bradfield, says, "There are "a few better cottages being built as the old ones are "pulled down."

The Rev. Jas. Fraser, Ufton, says, "Nothing is "being done at present to improve the cottages; but "I hope something will be done before very long."

Longer Circular, 39.—Is the Union Chargeability Act (28 & 29 Vict. c. 79., March 1866) having any effect in causing an increase of cottage accommodation?

Answers extracted from 36 circulars:—

12 witnesses say "No."

Others answer as follows:—

Rev. G. Purdue, Challow, says, "Yes, it induced "one of the landowners to build two cottages."

Rev. A. Pott, East Hendred, says, "There has been "hardly time to test its effect."

Mr. E. W. Moore, land agent, Coleshill, says, "I "can hardly say (the county should be the parish)."

Longer Circular, 40.—By the Act 27 & 28 Vict. c. 114., July 1864) the Enclosure Commissioners are authorized to advance public money for the improvement of land, including, by s. 9, "The "erection of labourers' cottages, * * and "the improvement of and addition to labourers' "cottages."

Have you any remarks to make upon this Act in regard to any additional facilities, or any reduction of cost, that might cause greater progress to be made in supplying the want of good cottages?

Answers extracted from 36 longer circulars:—

4 witnesses say "No."

Others answer as follows:—

The Rev. J. Macdonald, Blewbury, says, "Cottages "do not pay as a rule, no one would like to go to the "expense of building."

Rev. T. Luck, East Hendred says, "I think the "Act should be more generally known to small pro-"prietors, many of whom would be glad to avail "themselves of it if they were acquainted with it, "for people of this class are the only ones who ever "make a profitable investment of their money."

Mr. E. W. Moore, land agent, Coleshill, says, "Government should take measures to render the "cost more reasonable."

Longer Circular, 41.—Can you suggest any mode by which good cottage accommodation could be provided on self-supporting terms, and involving no disadvantage to the tenant?

Answers extracted from 36 circulars:—

2 witnesses say "No."

Others answer as follows:—

The Rev. R. Barnes, Ardington, says, "Some more "stringent powers should be given either to enforce "the improvement, pull down, or forbid the occupa-"tion of some wretched hovels unfit for human "occupation, of which there are some examples close "at hand."

Rev. G. Purdue, Challow, says, "I do not think "that really good cottages can be built in this neigh-"bourhood on self supporting terms. A labourer "with wages at 11*s.* per week cannot afford to pay "more than 1*s.* per week for a cottage."

Rev. J. S. Wasey, Compton, says, "It would be "well if landlords would look upon cottages for "human beings as being as necessary and even more "so than stables and comfortable sheltering for cattle "and other animals. Human beings with souls "should be cared for certainly equally if not before "horses, herds, and swine."

The Rev. A. Pott, East Hendred, says, "I doubt "any money laid out in cottages being a good invest-"ment *directly*. The condition of the labourer must "be improved simultaneously. I think there should "be great and stringent extension of sanitary laws, "and power to close or remove improper buildings."

The Rev. W. Chambers, West Ilsley, says, "No; "I don't think the poor, with their present amount "of wages, are disposed to pay such a rent (or able "to do so) as would make the building of a really "satisfactory cottage a *remunerative* investment."

The Rev. C. F. Willis, Letcombe Basset, says, "I do not think, considering the price of materials "and labour, that cottage building could be made "remunerative, unless a rent were put on incom-"patible with the present rate of wages."

The Rev. T. Landfear, Letcombe Regis, says, "Only by raising the wages of the labourer, which "would enable him to pay for better cottages, and "then better would be provided."

The Rev. H. A. Dodd, Sparsholt, says, "I know of "no such plan. In my experience as the owner of a "few cottages, the necessary repairs swallow up more "than the rent."

The Rev. W. J. Butler, Wantage, says, "I have "myself built six cottages at a cost of 710*l.*, including "the land on which they stand. The tenants pay "2*s.* 3*d.* weekly, and thus yield a per-centage of

Berkshire.
Mr. Culley.
A.
j.

"nearly 5*l.* per annum on the cost. I believe that "this can be done in most neighbourhoods. My "cottages are large enough for comfort; have three "bedrooms, a boarded parlour, and a small bricked "kitchen. Each has a small piece of garden "ground."

Mr. E. W. Moore, land agent, Coleshill, says, "A "difficult point. I think the lodging of the labourer "a more important question than that of live stock; "it should, as a rule, be provided by landowners."

The Rev. Jas. Fraser, Ufton, says, "Building is "very expensive here, owing to the cost of labour "and materials. In this parish, where all the cottages "belong to the landowners, they ought not to be "expected to pay an interest on the outlay of "erection *directly*, but should be considered as part "and parcel of the plant of the farm, as much as "barns or stables or the farmhouse itself."

Circular Question N., 43.—It would be of great assistance towards forming a correct judgment upon the question of requiring some amount of school attendance in the case of children earning wages by employment in farm labour if you could furnish the Commissioners with precise information, or with an approximate estimate, relating to the points embodied in the following tables.

43. Approximate number of children of the agricultural labouring class in attendance at elementary schools in the parish of .

The following tables will give a summary of the information given to the Assistant Commissioner in answer to this question.

Table A. gives the number, age, and sexes of all children of the agricultural labouring classes attending elementary schools in 21 parishes of Wantage union.

Table B. gives the average attendance in four parishes, two of which are in Bradfield and two in Wokingham unions.

Table C. gives returns from six parishes which were not given in such a manner as to enable the Assistant Commissioner to use them in Tables A. and B.

Table D. is a summary of Tables A. and B.

TABLE A.

SCHOOL RETURNS for PARISHES in WANTAGE UNION for which all particulars were given.

* These 17 parishes also have night schools.

† There are 30 boys and girls clothed and educated in these schools; they are admitted from the infant schools when vacancies occur, as they attain the age of 7 or 8, the preference being given to the most regular, and as the charity boys and girls cannot be absent unless for sickness or some urgent cause, and others are anxious to gain admission, the attendance is pretty regular in all the schools.

Table B.

Giving the School Returns from Unions other than Wantage, with the Names of the Parishes, Population, and Acreage, from which such Returns were made, where the Returns were made in such a manner as to allow of being tabulated.

* Ardington, Farnborough, and Ufton also have night schools.
† Hermitage is a hamlet of Hampstead Norris, for which the return arrived too late to be tabulated.

Table D.

Total number of children under 10 years of age and between 10 and 13 years of age (of the labouring class) in average attendance in summer and winter at all the schools for which returns separating the ages and sexes were made to the Assistant Commissioner (except Hermitage, for which hamlet the Assistant Commissioner could not ascertain the population and acreage). These returns are from 25 parishes with a population in 1861 of 14,558, and an acreage of 66,751 (allowing 2,000 acres for Bearwood, for which no acreage was returned).

In summer—

Boys under 10 - 592 } 717
„ 10 to 13 - 125 }
Girls under 10 - 560 } 768
„ 10 to 13 - 208 } } 1,485.

In winter—

Boys under 10 - 607 } 739
„ 10 to 13 - 132 }
Girls under 10 - 534 } 750
„ 10 to 13 - 216 } } 1,489.

Long Circular, 44.—Approximate number of children of the agricultural labouring class neither at school nor at work.

The following answers are all that are given to this question in 36 Longer Circulars returned from as many parishes:—

Aldworth. Population, 275. One boy and three girls in winter, all between 8 and 10 years of age.

Ardington. "Very few. Some girls kept at home "to look after the younger children."

Beedon. Population, 317. "None."

East Challow. Population, 391.

In summer—
Boys between 8 and 10 - 8 } 13.
„ „ 10 „ 13 - 5 }
Girls „ 8 „ 10 - 13 } 20.
„ „ 10 „ 13 - 7 }

In winter—
Boys between 8 and 10 - 5 } 10.
„ „ 10 „ 13 - 5 }
Girls „ 8 „ 10 - 11 } 17.
„ „ 10 „ 13 - 6 }

Berkshire.

Mr. Culley.

A. j.

West Challow. Population, 192.

In summer } 2 girls between 8 and 10.
and winter } 3 „ „ 10 „ 13.

Rev. W. J. Butler, Wantage, says, "There are so "few of any neither at work nor at school that it is "scarcely worth while to fill up this table (I am "speaking of Wantage only); it is however by dint "of very hard work that this state of things is "maintained."

Ufton. Population, 367. One boy between 10 and 13 years of age.

Long Circular, 45.—"Approximate number of "young persons of the agricultural labouring "class growing up with insufficient education."

The following answers are all that are given in 36 Longer Circulars returned from as many parishes.

Aldworth.—Pop. 275. 30.

Ardington.—"Carter boys are hired so early that "they soon forget almost all they have learnt."

Blewbury.—Pop. 639. "From 10 to 20, perhaps."

East Challow.—Pop. 391. "Males 13, females 12."

West Challow.—Pop. 192. "4 males and 3 females. "Can read and write imperfectly."

Compton.—Pop. 590. "The state of the education "of the bulk of the young persons of both sexes "is very bad."

Hanney.—Pop. 947. "About one-third of the "males and one-fifth of the females. We find "our girls stay at school longer than the boys, "who go out to work at a very early age."

East Hendred.—Pop. 889. *Rev. A. Potts*, says, "I should think fully two-thirds are *insuffi-* "*ciently* educated. This is a social question, "there can be no sufficient education in the pre- "sent state of things."

West Hendred.—"There are three or four girls who "carry infants about because the mother is busy; "there are several who come to school very irre- "gularly and do not go to work."

East Lockinge.—Pop. 318. *Rev. B. Tyrwhitt*, says, —"All the males, about 40, I believe; they are "imperfect readers and ignorant of grammar."

Wantage.—"There are very few of our young "people who cannot read and write and do a "simple sum more or less accurately. We endea- "vour to keep the children at school till 12; "this gives them a sufficient grounding."

Beenham.—Pop. 505. Males, 5; females, 3; "not "including farm lads hired for the year from "other parishes."

Ufton.—Pop. 367. "7 can't write, and can only "read very imperfectly."

Long Circular, 46.—"Is there an evening school "in your parish?"

47. How many weeks in the year is it open? At "what periods of the year?"

48. How many nights per week?"

49. How many hours per night?"

50. What is the number of scholars?"

51. What are the subjects of instruction?"

Table E. shows all the night school returns for the 21 parishes for which the day-school returns are given in school table A.

Night school returns were received from the following parishes besides those given in Table E.:—

Ardington, Farnborough, Beenham, Englefield, Ufton, and Bearwood.

No return of an evening school was made from the following parishes for which day school returns were made:—Beedon, Blewbury, Compton, Hermitage, Letcombe Regis, Bradfield, Barkham, and Finchampstead.

Table E.

Wantage Union.—Night School Returns.

Name of Parish.	On the Register.		In average Attendance.						Subjects of Instruction.
	Under 12.	Above 12.	Under 12.	Above 12.	Weeks in the Year.	Periods of the Year.	Nights per Week.	Hours per Night.

Wantage	20		—	—	All the year round.		3	1½	„ „ and Scripture.

Long Circular, 52.—"Do you consider that the "evening school adequately supplies the deficien- "cies of the day school?"

The following answers are extracted from 36 circulars returned to the Assistant Commissioner:—

11 witnesses say, "No."
6 witnesses say "Yes."

Others answer as follows:—

Rev. R. Barnes, Ardington, says "It does some- "thing to cure the mischief."

Rev. F. L. Currie, Brightwaltham, says, "Certainly "not, since attendance is left in most cases to the "will of the boys, especially carter boys."

Rev. T. G. Onslow, Catmore, says, "It is a great "help to it."

Rev. W. Chambers, West Ilsley, says, "Not at "present; but I think it an instrument of great "power if put on a more thorough and permanent "basis."

Rev. T. Lanfear, Letcombe, says, "No; but it is "useful in keeping up the knowledge previously "acquired."

Rev. W. J. Butler, Wantage, says, "The whole "answer depends on what are considered to be defi- "ciencies in the day-school, the meaning of educa- "tion, &c."

Mr. E. W. Moore, land-agent, Coleshill, says, "Yes, to those well grounded before going to work."

Rev. Jas. Fraser, Ufton, says, "It is a very useful "supplementaty institution."

Mr. Higgs, schoolmaster, Bearwood, says, "Yes, "provided scholars reach to standard 4 before they "leave the day-school."

Rev. Thomas Mozley, Finchampstead, says, "I think "a good evening school will go a great way to supply "the deficiencies of the day school."

Long Circular, 53.—"What do you find to be the principal difficulties in the way of maintaining an efficient evening school?

The following answers are extracted from 36 circulars returned to the Assistant Commissioner:—

Rev. F. Ll. Lloyd, Aldworth, says, 1. "The evil "effects of the public house. 2. The indifference of "parents. 3. After a day's labour the boys them- "selves are very often too tired and indifferent to "attend the evening class."

Rev. R. Barnes, Ardington, says, "Boys being "hired so young. Some limit in age for boys who "are hired too young in this neighbourhood."

Rev. T. J. Heard, Beedon, says, "Want of room to "hold one in."

Rev. F. S. Currie, Brightwaltham, says, "The "indifference of parents and the want of power in "employers to compel attendance."

Rev. E. Thompson, Chaddleworth, says, "Having "a good, endowed school, an evening school, is not "so much required in this parish as in the surround- "ing parishes."

Rev. G. Purdue, East Challow, says, "That the "whole burden of the school falls upon the clergy- "man. He has not only to be teacher, but generally "to bear all the expense of books, firing, lighting."

Rev. G. Purdue, West Challow, says, "Providing "the funds so as to obtain a competent teacher. I "am obliged to go to East Challow 1½ miles from my "house for 4 months in the worst part of the year "three nights a week because I cannot raise sufficient "funds to pay a man to take the management of the "night school."

Rev. E. M. Chaplin, Chilton, says, "(1.) Sufficient "and able teacher. (2.) The indisposition of boys "to apply after a hard day's work. (3.) The severe "weather which we often have in winter."

Rev. J. S. Wasey, Compton, says, "Lack of "teachers. Lack of disposition on part of scholars to "attend after day's work. Distance some have to "walk."

Rev. E. Price, Farnborough, says, "The frequent "disinclination of the boys themselves after their "day's work, and, as the days lengthen, their working "in their own gardens."

Rev. Jas. Macdougall, Hanney, says, "1. The "distance of the school from the two villages. 2. "Inability to pay the school fees. 3. Indifference to "self improvement."

Rev. A. Pott, East Hendred, says, "The weariness "and stunted intelligence of the children."

Rev. T. Luck, East Hendred, says, "My night "school is not yet in proper working order, as I "have a difficulty about getting a master, my school, "St. Mary's Roman Catholic School, being a mixed "school and under a mistress."

Rev. J. Tucker, West Hendred, says, "Indolence "and indifference, over fatigue, distance."

Rev. P. A. Longmore, Hermitage, says, "After a "long day's work, often in the wet, the labourer, "after having his supper, is not inclined to make the "effort, especially if the evening school be not close "to his door."

Rev. E. H. Hansell, East Ilsley, says, "Indifference "to education."

Rev. W. Chambers, West Ilsley, says, "If night "schools are to prove of lasting and material benefit, "they *must* be under *regular paid* and *trained* "instruction. At present such work usually falls on "the clergyman in the main; but it costs him far "more in wear and tear than is the benefit derived. "He does not teach the drudgery of spelling, pot "hooks, and addition any better than (if so well as) "less highly cultivated instructors. I believe that "some time night schools will be found as important "an engine of education as day schools. But before "this comes to pass, they will have to be *thoroughly* "remodelled, and the burden of teaching the mere "elements will have to be altogether removed from "the clergyman, leaving for him only the general "management, and occasional teaching of the most "advanced pupils, as is the case at present with day "schools."

Rev. C. F. Willis, Letcombe Basset, says, "1. The "term is too short. 2. The subjects taught cannot "be so various. 3. The same punctuality, order, and "discipline cannot be so rigidly enforced. 4. Boys "are then often learning for the first time what they "ought to have learnt years before, or recovering "painfully what they have once learnt and forgotten, "instead of going on to new and higher subjects. "No doubt the true principle of a night school is, "that it should be a continuation of the day school; "that as soon as a boy has left the one for field labour "he should be admitted to the other; thus there "would be no great break in his education. But "this cannot be always done; for young boys are "tired after a day's work, and besides have too "recently left school to care to come again imme- "diately. Thus they wait a few years until they "begin to discover their ignorance and desire further "instruction, and then they have to begin nearly over "again. It is the elder boys, from about 15 to 20, "who are the most regular and attentive scholars, and "many of them make satisfactory progress. I may "mention, here, that there is growing up among the "more intelligent youths a strong distaste for field "work; and they are desirous of obtaining instruc- "tion with a view to secure what they consider "superior situations,—in the police force, or as rail- "way porters, and such like. Farmers for the most "part are quite alive to this, and it may help to "account for the little interest which they take, as a "rule, in the education of the poor. On their side, "it would seem that the difficulty can only be met by "a higher rate of wages, or the more general use of "machinery in agricultural operations."
